Abbreviation and Advice.

Wednesday is said to be the luckiest day on which to get married. We suppose that is why it is generally written "Wed."—Boston Transcript.

Slavery in Old Rome.

Some of the wealthy Romans had as many as 10,000 slaves.—Indianapolis News.

Both Extremes Unwise.

He who relies solely on warlike measures shall be exterminated; he who relies solely on peaceful measures shall perish.—Sun Tzu.

Sunday Morning Fire Scare

S. S. Widney, living on Widney Avenue, had a fire scare Sunday morning. The members of his household had all left for Sunday School and because of the extreme cold, Mr. Widney remained at home. About ten o'clock smoke begun to show up and Mr. Widney not being able to get out of the house, began to wrap on the window with his stick, thinging he might call some of the neighbors Frank Terman and wife heard the noise but did not make any effort to locate it, thinking that someone was making a little repair. After a few more desperate efforts to bring help, W. E Frederick was passing and he called Mr. Terman to come and help him locate the trouble.

The men entered the house and found Mr. Widney in the dense smoke. They could not get into the basement at first but as soon as the smoke cleared away a little they discovered the smoke pipe had fallen down. This was soon put in place and the danger over. The house was filed with heavy coal smoke and Mr Widney expected that his last call for help would be to break the large window thus attracting the attention of the neighbors who were at home.

L. L. C. Christmas Party

Mrs. E. J. Smith assisted by Mrs. Howard Renner and, Mrs. Harry Randall, very pleasantly entertained the members of the Ladies Literary Club at Mrs. Smith's home on last Wednesday night.

The occasion was the annual Christmas party of the club, and the rooms were very beautifully decorated with the colors and ornaments appropriate for this season of the year.

The lesson was conducted by Mrs. Floyd Reasoner. After the business session, the committee had charge of the social hour. Mrs. Paul Curie favored the club with a beautiful solo and the club quartette sang two selections, one of which furnished much merriment for the majority of those present.

Two of the members then chose sides and each side decorated a miniature Christmas tree. This proved very disappointing to the side that lost as the winning side, led by Mrs. Hadsell, was awarded two sticks of Christmas candy.

Mrs. Floyd Reasoner was proclaimed the club artist and awarded a beautiful bottle of violet perfume after she had so cleverly drawn a vacuum cleaner which was minutely described by Mrs. Chas. Rice. A game of fortune proved to be very entertaining and caused much laughter.

Presents were then exchanged and admired; after which a delicious lunch of pressed chicken, sandwiches, potato salad, olives, pickles, fruit salad with whipped cream, cake, doughnuts and coffee was served.

Twenut-three members answered roll call with responses appropriate to the Christmas season.

To Celebrate Golden Anniversary

Friday, January 2, M. T Bishop and wife will celebrate their Golden Wedding Anniversary at their home in St. Joe. During the forenoon the brothers and relatives will visit them and in the afternoon from one to four o'clock all well wishers may call at the home. No presents desired.

Obituary

Martha Jane Burley daughter of Louisa and Harper Burley, was born in Concord township, DeKalb county, in the year 1852 on November 15, and departed this life at the home of her son, east of St Joe, on Sunday morning, December 21, at the age of 72 years, 1 month and 6 days.

She was united in marriage, by Rev. Erick of Spencerville, to Charles Bennett Leighty on January 25, 1877, at the home of her parents, just west of St Joe on the Burley farm, now owned by D. D Burley. To this union was born five children: Nena Correl, who died on December 15, 1905; James Harper, Frank R and Golden Grace, who live at home and Fred B. of St. Joe. Her life with the exception of four years has been spent in St. Joe and the community. She knew of the pioneer days, of its joys and of its hardships. Mrs. Leighty is the first of the Burley children to have passed on, all having lived their allotted time:—Dennis Burley, St Joe, 79; Mrs. Arline Rhoads, Spencerville, age 74; Mrs. Emma Gibford, Auburn, age 73 and Mrs. Betsy Wise, Auburn, age 70.

The husband, Charles Bennett Leighty, died at his home in St. Joe March 13, 1922.

Funeral service was held from the home Tuesday afternoon, December 23, conducted by Rev. C. H. Havens and Rev. S. D. Steffey. E. H. Kinsey, funeral director. Burial in Riverside Cemetery.

Buckingham Gets Letter From Akins

Centralia, Washington
November 26, 192

Friend Clarence and Wife:

Well after I left the Park my youngest boy took sick in Idaho with his appendix. We had it removed there and it laid us up for two weeks. I did not go to California on account of the drought and the hoof and mouth disease, so when I got to Portland I turned north and stopped at Centralia. This is about half way between Portland and Seattle. This is a great country and is in its infancy yet. There is more water power in Washington and Oregon going to waste, than there is in the rest of the United States, and timber, good night, I won't attempt to tell you.

Well, J. P., my biggest trophy in fishing was an 84 pound salmon, but it is no sport here to fish, for they are so plentiful. I have a pole 12 foot long with a big hook on it, just go down to the river (which is about 100 yards) grab it into one and go home. The most of them run around 30 lbs., but they have caught some that weighed over a hundred. but they are scarce, 80 or 90 pounds are large ones.

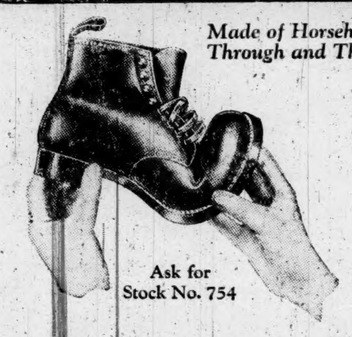
Cattle here are not worth much, but hogs are about as high as back there, but no hogs to speak of I haven't speculated on any thing since I left there. Have been working nearly all the time. Think I will go to California next year. There is lots of game here. Has been 8 bears killed this fall right near town.

I was through this country 20 years ago on the railroad but I had no conception of it whatever till I drove it by auto. Have driven all over western Washington since I located here also I zigzagged north and south coming out from Colorado south to Mon-

(Continued on Page 8, column 1)

WOLVERINE
Comfort Shoe

Made of Horsehide Through and Through



Ask for Stock No. 754

A Shoe That Makes You Forget You Have Feet!

Here is a work shoe so soft and flexible that to wear it is like walking barefoot on velvet. But how it wears! It is all horsehide, double tanned to the softness of buckskin. The tops are of chocolate Wolverine Cordovan, made with almost no place to rip. The flexible single horsehide sole is Goodyear welt sewed. For shop or field work in summer there is no shoe quite so satisfactory. Once tried you'll never be without a pair. Comes in C, D and E widths.

Beams & Co., Spencerville, Ind.

We send you our
New Years Greeting
and give credit where credit is due, so thankfully say that our progress results from the friendship of such folks as you.

Wm. CURIE, St. Joe

Furs Are Used to Trim All Apparel

Fashion creators today acknowledge another reason for trimming gowns with fur than that given by the young woman who said she did it to show she could afford it. Since fur is the distinguishing feature of this season's styles, observes a fashion writer in the New York Times, the best designers in Paris have illustrated the possibilities and the beauty of fur in countless artistic ways. Fancy has had full sway in many of the lovely things from the best-known ateliers.

Gowns of the finest, softest fabrics, deep piled woolens and velvets of luxurious silky feeling, all are helped to the additional suggestion of warmth with fur—fur about the neck, fur bordering the bottom of skirts, fur cuffs in which hands are sheltered, and fur in bands that add lines of grace from throat to hem.

The evidence of fur on gowns, wraps and millinery is almost universal. Almost no coat, evening wrap, street or sports suit is seen without some fur, and those garments in which it is omitted seem to lack interest and modishness. The makers of bonnets, of occasional garments and of accessories have followed the lead of the costume designers, and so there is fur on almost everything that is offered for women's wear.

Variations of Design.

The variations of design in which these directors of style present their models are interesting. Lelong, for example, cuts fur with the abandon with which one might put the shears into flannel; he cuts it into a circular flounce to form the bottom, 18 inches deep, of the silk coat in an afternoon costume. This fur, being beaver, in an ensemble of heavy beige silk, borders also the cuffs of the flaring sleeves, and the high, overturning collar.

Worth likes to trim many things with fur, and most often uses it in straight lines—as often on silk or satin as on the heavier materials. Renee and Doucet have done some particularly charming frocks and suits in colored cloths, bordered and banded, collared and cuffed with the brown furs, fox and skunk.

Lanvin uses the pony skin and other flat furs. Patou has a flair for frocks and coats of soft velvets, and prefers for their triming the superlatively fine furs, especially the foxes in blues and grays. Paul Caret is content to add large bands or squares of fur on a wrap fashioned of handsome wool or silk, and Doeuillet, whose newest models are severely straight in line, cuts his fur in bands which outline a coat all about the edge and at the wrists.

Chenuit, loving the sweep of soft material and the introduction of a scarf, when it is possible, ornaments a gown and coat of full sweeping width with blue fox placed several inches above the hem, and carried in clinging softness around the neck, down the front and all about the bottom. Premet's newest and best things show

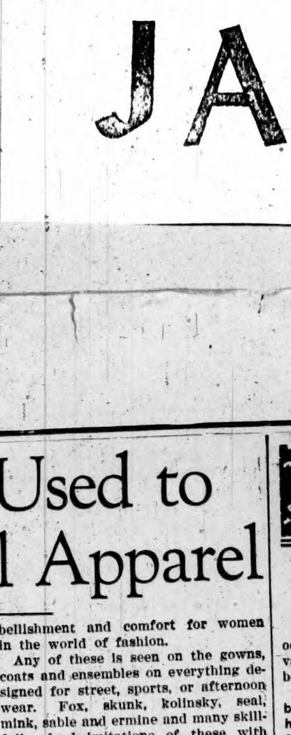
Rich, Soft Pile Fabric Is Trimmed With Dyed Fisher.

great restraint in the use of fur, and some ultra smart suits bearing his stamp are of delightful stuffs, but furless, except for high, enveloping collars and deep cuffs, or, as in some of the softer gowns, just a scarf of lovely fox or priceless sable.

Characteristics expressed by the great number and variety of fur-trimmed garments this season are diverting. Fashionable women wear the coats of every sort of animal, domestic and wild, and these are known by as many names, sometimes most amusing. The latest thing in sports coats is likely trimmed with leopard, or leopard cat, or the entire wrap may be made of one of these, the most popular of the sports furs. Leopards, wildcats, chipmunks, monkeys, opossums, wolves, bears, beavers, foxes, squirrels, goats, gazelles, rabbits and beasties from nearer the barnyard supply embellishment and comfort for women in the world of fashion.

Any of these is seen on the gowns, coats and ensembles on everything designed for street, sports, or afternoon wear. Fox, skunk, kolinsky, seal, mink, sable and ermine and many skillfully dyed imitations of these with catchy names are introduced in evening gowns and wraps. Some of the designers are making the fur trimming of a costume its most conspicuous feature and are using it with extravagance. Worth, for example, does something striking, almost freakish, in trimming an afternoon gown of black satin with jet and two furs, black fox and ermine, and a conspicuous motif formed of ermine tails.

Another creator given to outre types alternates, in an elaborate wrap for formal afternoon or evening wear,



Attractive Slimline Coat of Chipmunk Trimmed With Monkey.

black velvet, cloth of gold and sealskin, broad crosswise bands of these forming the entire garment. In an eccentric tailleur, fur skins and tails, as if trophies of the hunt, form the somewhat startling scheme of decoration.

How Fur Is Used.

Many models present a far more conventional idea in the use of fur—wide or narrow bands, deep cuffs and high, voluminous collars, or the newest rolling shawl collar that follows the line of the coat as it opens from collar to hem.

Gowns of soft satin or crepe, wraps of metal brocades, velvet or heavy silk are made sumptuous by the addition of fur. Black satin trimmed with ermine is thought to be exceedingly smart, and ermine tails and skins are lavishly used on evening gowns and wraps. The amount of ermine and of sable seen on some of the handsomer velvet wraps represents fortunes spent in the new styles. Such garments have a regal appearance.

House gowns, the things shown by some of the best designers, in the subtle weaves, both plain and brocaded, in satin crepes, chiffon velvets and chiffons; the more delicate tea gowns and negligees of the gauze, chiffon, georgette, voile and tissue types take on more chic and style by the introduction of fur. It is cleverly added as trimming for the neck, or bordering the skirt or drapery, and in one model it appears in diamond-shaped pieces of seal appliqued on the front of a coat-shaped negligee of Liberty satin.

Ingenuity seems to be inexhaustible in the number of original ways of introducing fur in the smart toilet. A separate collar, high and deep, is made so that it can be adjusted to the neck of a coat or wrap.

Long Straight Scarf.

Cheruit has brought out some charming examples, and others that are proving their popularity are by Lanvin, one being a particularly amusing design. It consists of a long straight scarf of crepe chiffon that is wound around the neck from front to back, where the ends are crossed and draped to each side of the sleeve, each attached to a wide, flaring cuff of fur that turns back, half covering the lower arm.

Lucien Lelong builds the upper half of a satin wrap of beaver fur, giving the effect of a jacket, hip-length, over a circular skirt, but being in reality a part of the whole garment. Collar in scarf-shape, cuffs and a deep band on the skirt are all of the fur, leaving little of the satin in evidence. Separate pockets are shown on some of the new cloth dresses, a novelty in detail that appears to take the fancy of Berthe, who adds a band of skunk fur to the bottom of a blouse that has no touch of fur elsewhere in the costume.

THE KITCHEN CABINET

(©, 1924, Western Newspaper Union.)

WEEKLY MENU SUGGESTIONS

Menu planning is the scientific method by which well-balanced meals, with variety and a minimum of labor may be served to the family.

SUNDAY—Breakfast: Fruit, eggs, bacon, coffee cake. Dinner: Baked ham, Denver potatoes, apple pie. Supper: Mush and milk.

MONDAY—Breakfast: Orange, oatmeal, cream, buttered toast. Dinner: Baked hash, lettuce salad, custard pie. Supper: Sardines on toast, cookies, tea.

TUESDAY—Breakfast: Grapes, fried mush, bacon. Dinner: Roast of beef, buttered beets. Supper: Baked apples, cottage cheese.

WEDNESDAY—Breakfast: Plums, cereal with top milk. Dinner: Sliced cold roast, curried apples, baked potatoes. Supper: Milk toast, preserves, sponge cake.

THURSDAY—Breakfast: Grapefruit, farina with dates. Dinner: Roast chicken, boiled rice, apple and celery salad. Supper: Canned fruit, baking powder biscuit.

FRIDAY—Breakfast: Bananas, corn flakes, doughnuts. Dinner: Stuffed baked fish, boiled potatoes, steamed pudding. Supper: Omelet with jelly, brown bread, chocolate cake.

SATURDAY—Breakfast: Baked apple, bran, bacon, toast, coffee. Dinner: Beef potpie with vegetables, gelatin jelly with cream. Supper: Creamed dried beef on toast, cocoa.

Denver Potatoes.

Peel even-sized potatoes and cut in halves lengthwise. Scoop out the center with a ball cutter, trim to stand evenly, fill the cavity with butter, sprinkle with salt and paprika and bake in a baking dish surrounded with a little water.

Curried Apples.

Fill six cored apples with one-half cupful of sugar mixed with one teaspoonful of curry powder and one teaspoonful of lemon rind. Bake until tender.

The wood is bare; a river mist is steeping,
The trees that winter's chill of life bereaves.
Only their stiffened boughs break silence, weeping
Over their fallen leaves.
—Robert Bridges.

HOT PUDDINGS

At this season of the year steamed and baked puddings are much enjoyed

A plain pudding with a good well-seasoned sauce will often be preferred to a rich pudding.

Ginger Pudding.—Cream one-third of a cupful of butter, add one-half cupful of sugar gradually and one egg well beaten; mix and sift two and one-fourth cupfuls of flour with three and one-half teaspoonfuls of baking powder, one-fourth teaspoonful of salt and two teaspoonfuls of ginger. Add the dry ingredients alternately with one cupful of milk to the first mixture. Turn into a buttered mold, cover and steam two hours. Serve with:

Vanilla Sauce.—Mix one-half cupful of sugar with one tablespoonful of cornstarch, add one cupful of boiling water, boil five minutes, add two tablespoonfuls of butter, one teaspoonful of vanilla, a few gratings of nutmeg and a little salt.

Cottage Pudding.—Cream two tablespoonfuls of butter with three-fourths of a cupful of sugar. Beat two eggs, add one-half cupful of milk, mix with the butter and sugar, add one and one-fourth cupfuls of flour sifted with two tablespoonfuls of baking powder. Bake in a small sheet. Cut into squares and serve with:

Pudding Sauce.—Mix a tablespoonful of flour with one-half cupful of sugar, add one-half cupful of boiling water and cook until smooth. Add two tablespoonfuls of vinegar, two tablespoonfuls of butter and a grating of nutmeg. Serve hot.

Steamed Cranberry Pudding.—Cream one-half cupful of butter, add one cupful of sugar gradually, three eggs well beaten, one-half cupful of milk, three and one-half cupfuls of flour, one and one-fourth tablespoonfuls of baking powder and one and one-half cupfuls of cranberries. Cream the butter, add the sugar, eggs well beaten. Mix and sift the flour and the baking powder and add alternately to the first mixture; stir in the berries, turn into a buttered mold, cover and steam three hours. Serve with thin cream sweetened and flavored with nutmeg.

Sour Cream Fruit Cake.—Cream one-half cupful of butter with one cupful of sugar. Add one-half of a grated nutmeg, one teaspoonful each of cloves and cinnamon and one-half teaspoonful of powdered ginger. Add a cupful of warm molasses, to which a scant teaspoonful of soda has been added, dissolved in a bit of water, and one-half cupful of sour cream. Add the yolks of two beaten eggs and flour to make a thick batter. Beat in the stiffly beaten whites of the eggs and lastly add one-half pound each of raisins and currants and one-half cupful of nuts, all well-floured. Bake in a tube cake pan well-greased and lined with greased paper. Bake in a slow oven with careful watching.

Nellie Maxwell

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1924, Western Newspaper Union.)

The Fort That Was Built by Indian Slaves

Among the interesting sights in St. Augustine, Fla. (the oldest town in the United States) is a tablet over the entrance to Fort Marion, bearing the coat of arms of Spain and the following legend: "Don Ferdinand the Sixth, Being King of Spain and the Field Marshal, Don Alonzo Fernando Hereda, Being Governor and Captain General of This Place, St. Augustine, of Florida, and Its Province, This Fort Was Finished in the Year 1756. The Works Were Directed by the Captain Engineer, Don Pedro Dé Brazos Y Garay."

But this ancient inscription does not tell the full story of the forts in St. Augustine. From the day in 1565 when Pedro Menendez erected there the first rude fortification to hold Florida against the French, there have been a series of fortresses here. And they have been connected with some stirring scenes in Florida colonial history—with the massacre of Jean Ribaut's Huguenots by Menendez, with De Gourges' terrible revenge and with other incidents which gave this "land of flowers" a baptism of blood.

The first fort erected on the present site of Fort Marion was an octagonal wooden structure named San Juan de Pinos, built as early as 1586. It was this fort which Sir Francis Drake, the famous British navigator, captured without resistance during a flying raid on the "Spanish Main" in that year. A little later a more pretentious structure of stone was begun and it was named Fort St. Mark. In 1638 the Spaniards were at war with the Apalachian Indians, who lived near the Suwanee river, and, having defeated them, forced their captives to work on the fortifications for more than 60 years. When Gen. James Ogléthorpe, the founder of Georgia, laid siege to St. Augustine in 1740, Monteano, the Spanish commandant, had a large force of convicts from Mexico at work on the fort and by this time it was so strong that Oglethorpe gave up the attempt to capture the town.

At the close of the French and Indian war Spain, France's ally, was forced to cede Florida to the British. In 1748 it was given back to Spain, who held it until 1819, when the United States purchased it for $5,000,000. On July 10, 1821, the Spanish flag, which had floated over St. Augustine for more than two centuries and a half, was lowered and the Stars and Stripes went up over Fort St. Mark. Some time later it was renamed Fort Marion in honor of Francis Marion, the famous "Swamp Fox" of the Revolution, and as Fort Marion the ancient fortress remains to this day.

Where Carelessness Cost 400 Lives

At the opening of the War of 1812 there lived at Lake Tensaw, near Mobile, Ala., a wealthy half-breed named Samuel Mimms. His house was built on low, sandy ground, surrounded by a marsh, and around it he had constructed a stockade with an uncompleted blockhouse at one corner.

When the Creek Indians joined the cause of the British the settlers gathered at this fort and in July, 1813, General Claiborne sent a force of 175 soldiers, under Maj. Daniel Beasley, to hold the fort. At first Beasley energetically obeyed Claiborne's orders to strengthen the fort, then allowed the work to slacken when the Creeks failed to make any hostile move. He even became so negligent as to fail to post guards, except at night and, one day when two slaves brought news of having seen signs of a large body of Indians, Beasley ordered them flogged for spreading a false alarm.

The next day, just as the drums beat the noon mess call, a horde of "Red Sticks" (Creek warriors) dashed out of a little ravine near the fort and were within 30 yards of the gate, which stood wide open and unguarded, before they were discovered. Beasley saw them first and ran to shut the gate. As he put his shoulder against the heavy log door the sand, which had drifted against it, held it open for a second. In that instant the Indians struck it, hurled it back, fell upon Beasley with their hatchets and cut him down.

Then the red horde, led by Chief Weatherford, poured into the fort. So desperate was the defense of the soldiers that at first the Creeks were driven back. But Weatherford rallied them and they soon gained full possession of the fort by burning the defenders out from house to house in the inclosure. The slaughter that followed was appalling. Weatherford tried to control his maddened warriors, but he could not hold in check the storm of destruction that he had loosed. Men, women and children went down before the hatchet and scalping knife and, except for 12 soldiers who broke through and escaped into the woods, not a white person of the 450 in the fort survived.

The defenders of Fort Mimms sold their lives dearly, however. More than 400 of the 1,000 Creek warriors who attacked the fort were killed or badly wounded. A year later Weatherford's people were forced to pay in full for the Fort Mimms massacre when "Old Hickory" Jackson defeated them at Tohopeka and blotted out forever the flower of the Creek fighting force.

Daddy's Evening Fairy Tale

By MARY GRAHAM BONNER

COPYRIGHT BY WESTERN NEWSPAPER UNION

SNOW BUNTING

"We are very fond of it along by the ocean," said Snow Bunting.

"We really like to be by the ocean better than inland, though once in awhile we go into the country away from the ocean and whirl about before a snowstorm and through the storm, too, and look and appear as our name would have us look and appear!

"We have clear, lovely calls and we can whistle, too—ever so prettily. Yes, indeed.

"We're friendly with the horned larks. We look beautifully white when we fly, and we go way up to the Arctic regions, at times.

"These facts I was particularly told to tell.

"And someone who saw one of our nests at one time described it in human words to be a lovely cozy nest. This person saw it in an old hollow log. The nest was lined with feathers and was made of grass and white fox hair.

"They say though that we look our best when flying through a snowstorm. Ah, but birds do look very lovely when they fly. Great crowds of birds flying is always a lovely sight. Even starlings when they fly are very beautiful.

"They fly so gracefully and so magnificently.

"I say 'even starlings' for starlings are not so very popular. They have taken such possession of things.

"They push other birds out of the way.

"But they do not bother us at all. However, that is not what I am to talk about. I am going to tell you that spring is soon coming.

"Ah yes, for I heard a secret. Mother Nature whispered it to me.

"She said:

"'Little Snow Bunting, the winter

Snow Bunting Left a Little Song.

season is passing. For what do you suppose I saw today?'

"I asked her in my sweetest voice:

"'What, Mother Nature? Do tell me.'

"'I saw a Mourning Cloak Butterfly,' she said, 'and you know, little Snow Bunting, when they begin to come, I know that Mistress Springtime is really on the way.

"'Of course you know how she meets Winter on her way here, and how they chat and laugh and talk, and what a time they have, puzzling people for all they are worth!

"'But today I saw Mourning Cloak. I must tell you about Mourning Cloak,' Mother Nature continued. 'Mourning Cloak comes when it is very early spring. I often wonder if Mourning Cloak likes to listen to the chatter between Winter and Mistress Springtime!

"'I often think that is it, for surely Mourning Cloak arrives early.

"'Mourning Cloak comes flying through the woods, just a little warm sunlight to encourage him. He flies about and flits here and there, and we can see those wings of his so dark and purple and rich in appearance with their yellow-edged touches.

"'His blue spots are so handsome, too. Oh, Mourning Cloak is a handsomely dressed fellow, and there is no mistake about that. He is one of the best-dressed of my family.

"'He sleeps all winter, hiding away in some cave or under some rock and he wakes up early. Yes, he doesn't wait until the last minute to arise.

"'When Mourning Cloak is a caterpillar he wears a handsome black costume with striking red spots and he feeds on the leaves of willow trees, for he's a rascal then.

"'He has a dangerous appearance then, but he is harmless and not at all like the green caterpillars with the short prickly spines.

"'Ah yes, spring will be along soon, for the Mourning Cloak, the first arrival has come.'

"That was what Mother Nature told me," continued Snow Bunting, "and so I know it must be true.

"And I thought that it might be nice for some of the winter creatures to leave a song for Mistress Springtime. She might be pleased to think she was spoken of—creatures are pleased, I've heard, when they've been asked about, even when they were away."

So Snow Bunting left a little song for Mistress Springtime alone, and only the Breeze Brothers who carried it to her from him heard what the song was about.

Her Red Pimple Dress

Baby has a red-dotted Swiss dress, so on Sunday morning she said: "Mother, I want to put on my red pimple dress."

Rosette Disease Affecting Wheat

Malady Has Been Confined to Two States; Cause Not Determined.

(Prepared by the United States Department of Agriculture.)

A disease of winter wheat known as rosette disease because of the excessive tillering in the spring and because the affected plants remain in the rosette stage an unusually long time, has appeared in Illinois and Indiana in infested fields every year since its first discovery in 1919. For several years the disease took great tolls of the wheat crop in certain sections of Illinois and Indiana, says the United States Department of Agriculture. So far as is known, however, the disease has not been located in any other section of this country. The cause of the rosette disease has not yet been fully determined, but certain control measures have been worked out by the department.

May Ruin Affected Crop.

Farmers' Bulletin 1414 has been issued by the department, covering the subject thoroughly. According to the bulletin, where conditions are favorable for its development, the rosette disease may ruin the affected crop. Usually, however, the disease occurs in more or less irregular, scattered spots of different sizes. In all except the most severely affected fields, the reduction in yield has been less than 20 per cent.

The disease is recognized in the field in the spring by stunted and rosetted plants and by the bunchy, dying plants in the disease spots. All plants affected with this disease produce tillers excessively and look bunchy. At first they are dull blue in color, but they subsequently turn brown and often die.

In late spring, this disease may be confused with Hessian fly injury. In both cases the color of the affected plants is about the same. The rosette disease, however, shows no symptoms in the fall, while the fly causes marked injury. Later, the rosette-diseased plants may be distinguished by the much greater tendency to tiller.

Progress With Control Measures.

Various control measures for the disease have been studied and tested, and important progress has been made. It is known that the soil carries the causal factors, whatever they may be. Attempts to control the disease on infested land by seed treatment, therefore, are useless. Numerous varieties have been studied to determine their relative resistance to the disease. Red Wave, Early May, Shepherd, and Turkey are particularly immune. The general use of these immune varieties on infested land is now serving to control the disease perfectly.

A copy of the bulletin may be secured, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Sour Milk of Immense Value to Poultry Raiser

It is at least possible to reduce the amount of meatscrap in the mash ration if you keep sour milk or buttermilk before the hens at all times. Some have found it possible to do away with the meatscrap entirely, but this is not always a success in cases where it has been tried. It is best to reduce it to about one-half to one-third of the regular quantity called for in the mash, and then allow the sour milk or buttermilk for the hens.

Entirely aside from the food value in the milk, there seems to be a regulative quality to the sour milk. The fowls will remain healthier if given the milk at all times. It stimulates a healthy appetite, particularly for the laying mash. The sour milk seems to do away almost entirely with the difficulties generally traceable to close confinement, such as the clogging of the digestive organs, and for that reason, particularly for flocks in winter quarters, it is hard to overestimate the value of an abundant supply of sour skim milk.

United States Leads in Machinery on the Farm

Farming leads all industries as a user of power and, in turn, the American farmer has more power and machinery at his command than the farmer of any other country, according to E. W. Lehmann, University of Illinois. Most of the machines of production for the farm have been developed during the last 75 years, and in that time the farmer has changed from "the man with a hoe" to a user of power and a large scale producer.

The last twenty-five years especially have seen a marked increase in the use of machinery and mechanical power on the farm.

Garden Recreation

The American people spend millions of dollars annually in recreation. They go on vacations in order to be better fitted to do their work when they return. Others who cannot afford the expense of a vacation trip often find recreation and daily change of scene in their own dooryard, either with flowers or with a vegetable garden from which they draw a supply of fresh and wholesome food.

Work for Increase of Reindeer Herds

Agricultural Department Is Conducting Investigation.

(Prepared by the United States Department of Agriculture.)

Although only about ninety tons of reindeer meat were shipped from Alaska to this country in 1923, indications on July 1, 1924, were that there would soon be a rapid increase in the quantity shipped. In 1923 the entire number of reindeer in the territory totaled about 241,000, according to estimates made in 66 herds. The increase in the number of reindeer in Alaska each year runs from 33 to 45 per cent of the total number of animals in the herd. This percentage can be raised by a better understanding of herd management on the part of the Eskimos and other owners, and better business methods in marketing the meat will result in a higher output. The biological survey of the United States Department of Agriculture conducts important investigational work in Alaska in the interests of the reindeer industry, including studies of diseases and parasites, feeding experiments to determine the nutritive values of different types of native forage, poison-plant problems, herd management, and breed improvement.

Through the establishment of corrals, herd owners are improving conditions in their herds. Co-operative handling and management of some of the herds has been practiced with good results. An additional impetus has been given to the industry by two American companies which are now operating refrigerating plants to receive reindeer carcasses for the purpose of shipping them to markets in the United States through Seattle. One of these companies operates refrigerating barges which can move from one point to another, mainly in the rivers, and the other company has several small cold-storage plants along the coast.

How Producer Can Get More Than Market Price

Start today! Now is the time to start making a market for your products. Start by getting individual customers to buy your products and build up a trade that will last. You may not think that this can be done, but others have done it and there is no reason why you cannot. Put day-old eggs on the market in individual packages. Soon you will see that everybody will want your eggs, and then, when the demand is great enough, your price will also go higher. You cannot expect more than the market price unless you do create this demand for your eggs, thinks D. H. Hall, extension poultry husbandman at Clemson college.

When eggs are 60 cents per dozen, Mr. Hall adds, we never receive calls to find a market—but when they are 25 and 30 cents—we are always called upon to find markets. The law of supply and demand governs the market to a certain extent, but when a person has his own individual market already established he need not worry about a flooded or low market.

Dairy Calves Do Well on Dried Milk Ration

"Raising the Dairy Calf When Whole Milk Is Sold" is the title of Bulletin 215, which was prepared from studies at the University of Minnesota agricultural experiment station, by Dr. C. H. Eckles and T. W. Gullickson of the division of dairy husbandry.

Two plans of experiments were adopted, the first to raise calves on the minimum amount of whole milk or skim milk and the second to raise calves on dried milk, using powdered skim milk, powdered or semi-solid buttermilk, or malted milk. The results clearly showed that good calves can be raised on a very small amount of whole milk and that the manufactured material mentioned can be substituted after the calf has got a start. All the calves used in the experiment were never off feed and were kept unusually free from sickness or digestive troubles.

Dairymen everywhere will be interested in the findings reported in this new bulletin. Copies may be had by addressing the Division of Publications, University Farm, St. Paul.

FARM FACTS

The best corn in 1924 was on fall plowing.

• • •

Seed properly selected is good corn insurance.

• • •

Nix on the burning of leaves; save them for the hungry soil.

• • •

Is farm labor scarce? The hogs will harvest your corn and pay you for the privilege.

• • •

Don't forget that the poultry needs green feed all winter long, caution poultry workers.

• • •

No, time isn't much to a hog, but a warm, dry place in the winter is, and he'll gain faster for it.

• • •

A cow in these good days must be more than just a cow; she must be a proved and profitable producer.

• • •

A bin where two or three hundred pounds of scratch grain may be stored in the chicken house is a labor saver.

POINTS ON KEEPING WELL

RINGWORM

EVERYBODY has seen a ringworm. Many persons have had one. It may happen to anyone; it may afflict any part of the body.

Several little red spots, scaly and elevated above the surface, appear on the skin. They spread from each red spot as a center, clearing up in the middle as they go, until they form a series of red rings, surrounding a patch of white skin. In from three or four days to two weeks after their first appearance the patches are from half an inch to an inch in diameter. The rings may then gradually disappear or may remain stationary, turning to a yellowish brown, or they may become inflamed and very painful.

These spots may be on the face, neck, hands and forearms, on the palms of the hands or the soles of the feet. Ringworm of the scalp causes the hair to fall out in circular patches. Ringworm of the face is popularly called barber's itch.

Ringworm, in any degree and on any part of the body, is due to a little fungus growing in the superficial layers of the skin. It is highly contagious. It may be taken by personal contact or by using toilet articles or clothes of infected persons. It is particularly common in schools and institutions such as orphan asylums, day nurseries and similar institutions where children come in close contact with each other. Barber shops, beauty parlors, hair-dressing establishments, laundries and public baths may spread this troublesome disease. It may also be carried by dogs, cats, rabbits, horses and cows.

Ringworm is a singularly stubborn affliction, and although it usually disappears in from several days to a few weeks, under proper treatment, it is very apt to return, either by a new infection or by some of the fungi being left alive in the skin. It is, of course, more stubborn and more difficult to control on the scalp and face. Here the hair or beard must be cut short or shaved in order to expose the skin.

The skin should be washed clean with hot water and green soap and one of a number of germicides applied. Painting the patches with tincture of iodine is excellent, if one does not mind the temporary disfigurement. For young children the iodine should be diluted with an equal amount of alcohol. Sulphur, salicylic or benzoic acid ointment may be used. Your doctor will tell you which one to use and how strong the ointment should be.

SLEEPING SICKNESS AND AFTEREFFECTS

THE newspapers report a case of "sleeping sickness" in which the victim has been "asleep" for a week or more. The popular belief is that this is a definite disease. It is not.

There is a tropical disease, common in central Africa, popularly called "sleeping sickness," but this is entirely different from the occasional case which occurs in this country. The cases seen here are really a form of meningitis following influenza, in which the most striking symptom is unconsciousness. This condition generally starts with a chill followed by fever, headache and sometimes vomiting. Drowsiness soon occurs, becoming deeper and deeper. During the earlier stages the patient can be aroused, but later on the sleep becomes so profound that the patient cannot be awakened. Delirium and convulsions may occur. The unconsciousness may become deeper and the patient may die without waking, or it may gradually disappear, the patient recovering, but generally with considerable paralysis or serious mental impairment.

Doctor Duncan of London has recently published a report on the results of this condition in 136 cases. Thirty-five died, sixteen recovered but could not be traced after leaving the hospital. In the remaining eighty-three some kind of mental impairment was found in seventy-nine. This varied from defective memory to insanity. Extreme drowsiness was frequent, while others suffered from insomnia. In some cases the disposition was entirely changed. Paralysis of some muscles or spasmodic twitching was also found in some cases. Some patients were depressed and melancholy. Some form of mental derangement was found in nineteen out of twenty patients who recovered.

Children under ten years of age showed a greater tendency to mental impairment than older persons. If the patient lives a year after the acute attack the chances of complete recovery are good.

"Sleeping sickness" is simply an infection of the brain by influenza germs. Every epidemic of influenza produces a certain number of cases. Avoid influenza and you'll never have "sleeping sickness."

Wood in Our Games

In more than thirty varieties about 25,000,000 feet of wood go every year to provide us with skis and billiard cues, snowshoes and tennis racquets, candle pins, bows and arrows and many other things. Wood, says Nature Magazine, does its bit to keep us healthy, amused and lovers of sport and the out of doors.

Wit and Humor

VERY UNGRATEFUL

"Here's gratitude for you," growled Sophmorton.

"What's wrong?" asked Coedna.

"All this month I answered for Gayboy every time he was absent from class."

"Well?"

"I also recited when his name was called."

"What now?"

"Now he complains because he got poor marks."

What He Lacked

The suitor, bony and ugly of face, was pleading his case before Sallie.

"You know I am a self-made man, Sallie. I've made myself just exactly what I am."

"But you didn't have any looking glass when you made your face, did you?" piped up Sallie's four-year-old brother, an unobserved but interested listener.—Capper's Weekly.

MATRI-MONY

"No, sir! No more loans! I haven't a single dollar!"

"Well, if all your dollars have taken unto themselves mates, I wouldn't think of separating them—let's have a couple."

Would Be a Boy

Oh, would I were a boy again,
When life seemed formed of sunny years,
And all the heart then knew of pain
Was wept away in transient tears!

More Help Wanted

"Have you any legal right to interfere to stop a woman on the third floor from screaming at her husband in the night?" asked the tenant of his landlord.

"Are you a neighbor?" inquired the landlord.

"No;" explained the man, "I am her husband."

Very Noticeable Then

"How awkward Alice is. She doesn't seem to know what to do with her hands."

"I noticed that when she was playing bridge."

Need to Hustle

Friend—I suppose you find your wife can live on your income all right?

Newlywed—Oh, yes, indeed; but it's up to me now to make another one for myself.

Large Order

Customer—Can you make life-size enlargements from negatives?

Photographer—Yes, sir. That's just my specialty.

Customer—Good! Then will you enlarge this picture of a whale I took off Greenland during my vacation?

THEY NEVER MISCARRY

Ed—It's astonishing how many different kinds of mail reach the dead-letter office.

Ned (sadly)—Yes—all except the bills.

Grand Old Opera

While "Carmen" always pleases,
As critics freely state,
It needs a few good wheezes
To get it down to date.

Advice

"Doctor, I'm just a bundle of nerves." "Check yourself."—Louisville Courier-Journal.

Losing Weight

"She was a wonderful pianist. Last week she read my palm and told me that I was going to lose 130 pounds."

"Did you?"

"Yes, my wife left me two months later."

Wrong

Tourist (doubtfully)—You're not going to tell me that you are the famous centenarian?

Native—Oh, no, it ain't me—it's my daughter.

NEW YEAR'S MORNING

By Martha Banning Thomas

(©, 1924, Western Newspaper Union.)

BEN SAWYER always came down the back stairs the same way.

New Year's morning was no exception. There was a rush, a clatter and a general tumbling noise—and Ben emerged into the kitchen.

His mother was just putting the last things on the table for breakfast.

"Happy New Year, mother!" called Ben, disappearing into the dining room.

His mother, strange to say, did not reply.

Polly Sawyer, the youngest of the family, and Harry were standing around the dining room waiting for breakfast to be served.

"Mother's sort of queer this morning," whispered Polly to Ben. "She looks just the same, but there's a kind of difference about her. She hasn't said 'Happy New Year' to one of us."

Ben frowned and looked at his boots. "Oh, well, I guess she's a little tired after the party last night. Shouldn't blame her."

Ben really began to feel uncomfortable and he attempted a timid question.

"Mother, don't you feel well this morning?" he asked.

Mrs. Sawyer looked up, surprised. "Why, yes, Ben. What made you ask?"

"You seem so—so sort of, well"—he floundered—"sort of quiet."

"Quiet?" asked Mrs. Sawyer.

Harry and Polly looked at each other uneasily. What was the matter with breakfast, anyhow?

"Yes," said Ben, "and you haven't wished one of us a Happy New Year."

"Dear, me, smiled Mrs. Sawyer. "I'm sorry. I forgot all about it. Well, I'll do it now. Happy New Year, Ben and Harry and Polly!"

But this was not at all what they wanted. She did not say it that way when she meant it. She shouted it up the stairs the first thing in the morning, to get ahead of everybody else.

The children felt strange and out of tune. Mother was always so jolly. It took all the fun out of things to have her this way.

"We had a fine party last night, didn't we?" asked Polly. "Every one said they never had a better time."

Ben looked hard at his mother. He was the oldest and, though careless and noisy, loved her very much. "It was because mother worked so hard to give it to us," he smiled. "Those little cakes were just the ticket, and the ice cream—oh, boy!"

The other children nodded. "Sure thing," mumbled Harry, looking as solemn as an owl.

Mrs. Sawyer glanced from one to another. "Children," she said, "I've got something to say to you New Year's morning. I think this is the best time, for it is the very beginning of the New Year."

"Yes, mother," they all agreed.

"It is the custom to say that we make new resolutions, but I wish we could make new faces."

"New faces!" exclaimed the children together.

"Yes—just that. But new faces are not made from the outside; the molding has to come from within. Faces are made by thoughts, and thoughts are our only tools. I worked for two days to make it a happy one for you and your friends. I grew very tired, but I did not mind that, if it gave you pleasure. You say you had a good time, but this morning is the first I have heard about it."

"Oh, mother!" they wailed, conscience-stricken.

"You take too much for granted, children. And if you don't begin to think a little about other people and what they are doing and feeling, you will grow up having very disagreeable faces. I want you all to try to have 'new faces' this year. Make your eyes see nice things about others; make your mouths say kind words whenever you can. Next New Year's morning I'd like to shout a 'Happy New Year,' and mean it. I want to see happy faces not because you have a good time, but because you have helped to 'shine up' the world for others."

"Yes, mother," replied all the children, and then they got up with one accord and ran around the table and kissed her.

Ready for the Kick-off

A NEW YEAR HOMECOMING

By KATHERINE EDELMAN

(©, 1924, Western Newspaper Union.)

"HAPPY New Year, everybody!" Stella Mayfield cried, as she entered the room, glowing and rosy from the long drive from the station. "My, but it seems good to be home again!"

It was New Year's eve and Stella had been away four whole weeks visiting Aunt Sarah in the city. But if she had been away four years, instead of four weeks, the family could not have made a bigger fuss over her. Everybody was just as excited as could be, all talking at once and wanting to know all about what she had been doing while away.

And Stella had lots to tell them—about the wonderful shops she had visited, the buildings that were taller than the old meadow field was long,

the hundred and one things she had seen and heard during her absence.

"The city must be something like the places in the fairy stories mother reads to us and the heaven our Sunday school teacher tells us about," little Margie cried, her eyes opening to their widest.

For answer Stella took her little sister on her lap, and very solemnly she began, speaking: "Margie, dear," she said, "it was all very wonderful and very beautiful, but when it comes to comparing it with the places you mention I can't see it that way. To me the only place in this world that can compare with heaven or fairyland is this little home of ours here in the valley, and I'm the gladdest, happiest girl on earth to be back here with you all again. I had a lovely visit in the city, but—its not like home." Stella looked shyly, but lovingly, at her mother as she ended her little talk.

Mrs. Mayfield smiled back at her in return, then, going to the window, she looked out at the lovely moonlit landscape. Yes, it was like fairyland, she thought, for everything was covered with a beautiful, glistening mantle of white; a master artist's hand had touched all within view. But Mrs. Mayfield knew that all this would not make Stella think their home the best place on earth if it lacked love and peace and happiness. And there was a deep content and thankfulness in her heart that the dawning of the New Year was bright and rosy and promising for them all, and that she had fulfilled the mother-mission that she felt was hers—to make home the best place on earth for all of her family.

Need Determination

Among the best of New Year resolutions is to save money. It may be easier in 1925 than in any recent year, but the job needs determination and perseverance.

THE NEW LEAF

By MARTHA B. THOMAS

WE TALK about turning over a new leaf at New Years. How about turning over our brains? Most of us work those factories in our heads about half-time and half-capacity. When a new idea walks in we hustle him out before he disturbs the quiet of the place. Why not let him ramble about and stir up the old machinery? If he makes a racket and starts a fight with all the old ideas, let him scrap it out. You can clear up the damage afterwards, and will probably feel amazingly refreshed. The trouble with most of us is a deep-rooted aversion to enlarging the works!

Let's put in a new window now and then, oil up the cogs, find a place for new thoughts and have a grand time with ourselves!

Luther not only turned his brain over when he nailed that famous letter on the church door, but about the whole world, as well.

Newton only needed an apple as a self-starter towards the idea of gravitation.

Shakespeare looked about him at the everyday doings of "high folks and plain folks," and see what he accomplished.

You never can tell whether you're a genius or not until you scrabble around in your own head and produce something!

Starting Off the New Year

By MARY GRAHAM BONNER

THEY had known each other for only a little while. But both of them knew that through the long stretch of years ahead they would grow happier and happier as they knew each other better and better.

It was on New Year's day that they announced their engagement. It was such a beautiful day upon which to announce such a glorious, romantic fact.

"My dear one," he whispered, "no man could care about a girl as I care about you."

"No one could love a man as I love you," she said. "Other girls, I know, could never feel the love I feel. It is a new feeling—to feel so much, such great, great quantities of love for another."

"No one will be as happy as we will be," he said.

"No one," she agreed.

"I don't think any one ever loved as I do you," he said.

"I'm sure no one ever loved as I do you," she said.

For to both of them love was new, even as the year was new.

What mattered it to them that others had said the same—that to everyone to whom love came it came as something fresh and new and beautiful and unusual?

For the continuing of romance in life is like the continuing of the years. They come along, ever, ever new because they carry with them new hopes and new joys.

A New Year's Lesson

By Alec Tupper

(©, 1924, Western Newspaper Union.)

IT WAS New Year's Day and the snow began to fall in blustery fashion about the street corners of Milltown. At the Simmons Corner Grocery the morning business was rather dull and it was now ten o'clock, when Isaac, or "Ike" as he was familiarly called, sat in his dingy, dusty office, shut off by himself, looking over his past year's accounts. The young clerk, "Bill" Wilkins, was a little more idle than usual and he sat quietly on a cracker box, interested in the story of "Huck Finn," having a broad grin upon his round, mischievous face.

"Ike" Simmons, it was true, had a sour disposition, even to a sense of meanness, and sometimes if his friends greeted him kindly, to be obstinate and hateful he would think of some act of meanness to counteract goodness and generosity. If it were not for bargains "Ike's" trade would go on

the decline, but he possessed a keen insight for business and often marked his goods some pennies below the selling price of his competitors. So, on New Year's morning, "Ike" Simmons was in no pleasant mood, and who would dare to wish him a "Happy New Year," and especially in a snowstorm and business dull?

All was quiet within the little grocery office and a great stack of papers was eagerly examined, when "Ike," with his specs laid up high on his brow, leaned over quietly onto his desk in a thinking way. In a few minutes he saw the trapdoor open and an arm with a revolver appeared. Then a face, with a handkerchief covering it, showed to the horror-stricken "Ike" Simmons. A real burglar sprang out! He took a heavy rope and bound "Ike" to the stool. "Now, old Sourhead," the burglar said, "I'm not here only for your money, but to flog you—you, who cares not for the pleasant things of life. You are ugly to your friends. Now I am going to beat you." And he thrashed "Ike" with a heavy rope, and the pain was awful. He knocked "Ike" from his stool.

There was a dull thud. The clerk ran into the office and found "Ike" Simmons struggling on the floor, surrounded by his books and papers. About the same time Lemuel Haskins came into the store and exclaimed: "A Happy New Year, Ike!" "Ike" scrambled up and looked amazedly about him. "Happy New Year, Lem, and many more." Both persons stood aghast! "Ike" Simmons was a transformed being. He had learned, in a brief dream, the lesson of the cost of being unkindly, when the real cost of being kind was nothing, and he kept the New Year happy, and other New Years following, with an increased business to bless his efforts.

Rubber Footwear Time is Here!

Last year we sold heavy of our rubber goods and this year we are planning on more sales than last Stock is well sized and you can get what you like—our latest is the New Self-Acting Lastic fits any shape toe perfectly, for Mens shoes only.

Womens and Childres Rubber Footwear—We have what you need, if you come in time.

Horse-Play.

One of our leading comedians is suffering from a severe cold. "Hoarse chestnut," is the laconic comment of a rival of his.—London Opinion.

Might Even Get Mushy.

"Soft lights in the home would assist in preventing divorces," says a writer. And soft speech is even more effective.—Boston Evening Transcript.

A Good Thing - DON'T MISS IT.

Send your name and address plainly written together with 5 cents (and this slip) to Chamberlain Medicine Co., Des Moines, Iowa, and receive in return a trial package containing Chamberlain's Cough Remedy for coughs, colds, croup, bronchial, "flu" and whooping coughs, and tickling throat; Chamberlain's Stomach and Liver Tablets for stomach troubles, indigestion, biliousness, dizzy spells that crowd the head with dullness and constipation; Chamberlain's Salve, needed every day in every family for burns, scalds, wounds, sores, and skin affections; these valued family medicines for only 5 cents. Don't miss it.

Fish and Game Club Banquet

Saturday evening closed the week's hunting for pests and rabbits by the members of the St Joe Fish and Game Association. The men all gathered at the Logan Hall where Fred Jenkins, George Kinsey and Frank Curie were stationed to score the pests as they were brought in.

The two captains were Lester Coburn and Herbert Curie and they made their selection of the membership at the December meeting. When the counts were all registered the men were taken to the Lutheran church basment where a splendid oyster supper was served them by a class of the Sunday School. When they were all seated the judges announced the results.

	Curie		Coburn	
Kind	No.	Points	No.	Points
Hawk	1	50		
Owl	4	160	2	80
Sparrow	509	2545	628	3140
Crow	2	80		
Rats	4	200	2	100
Weasel	1	30		
Woodch				
Mice	78	780	50	500
Rabbits	31	620	28	560
Total	660	4465	710	4380

The Curie side won by 85 points.

Seventy-four members were present to enjoy the feed and every one felt that the event was a splendid thing to have. There were a number of those chosen on both sides that did not hunt consequently both sides scores were reduced, but the total was far beyond the expectations of the members.

The supper was served in fine style and everyone had all they could eat

The loosers were assessed $1.20 each to pay for the feed.

Christian Church Notes

Bible School at 9:30, communion service immediately following.

The following officers have been elected to serve the Sunday School for 1925:—Supt., Ed Storer, Russell Reasoner; Sec., Verba Haner, Henry Keesler; Pianist, Ethel Lindley, Margaret Goodwin, Chorister, Wid Williams, Nellie Lindley; Librarian, Edgar Lysher, Viola Coburn; Press Cor., Mrs Nina Kees; Enrollment Sec., Mrs Ada Bassett. The school presented Mr. Storer a rocking chair for the splendid and faithful work done the past year.

Harry Kees was elected trustee to take the place of W. H. Northrup, retiring trustee and H. C. Borthwick will be clerk for the coming year.

The Loyal Mens Bible class have elected Frank Scholes as class president and Clinton Lucas, secretary-treasurer. I. Konkle as teacher, the assistant to be appointed later.

The Loyal Sons and Daughters class have retained Sam Keesler as teacher.

Stray Bits of Wisdom.

To succeed in the world, it is much more necessary to be able to diagnose a fool than a clever man.—Cato.

India Thickly Populated.

(© by Western Newspaper Union.)

The New Year

by Anna Deming Gray

(©, 1924, Western Newspaper Union.)

JANUARY 1 was not always New Year's Day, and even now in Greece and Russia it does not arrive until twelve days after the new year has started.

It took longer to agree upon a common day to celebrate New Year's than it did to select a common Christmas.

It was late in the Sixteenth century before January 1 was accepted universally. The more ancient nations had always had a preference for this date, and Egypt, China and Rome celebrated the day with public rejoicing.

In Russia the day was made sacred to Janus and was a time of special sacrifice and prayer at his shrine. He is pictured as a god with two faces, one looking backward and one forward—one youthful and one very old—the Old and the New Year. In Derbyshire an old custom still prevails. At just twelve o'clock the doors are flung wide open and the New Year is ushered in with shouts of welcome.

There are places in England, also, where the Old Year is still swept out, according to an old custom. Men and boys with blackened faces and dressed to look like chimney sweeps, go through the streets with brooms, sweeping.

The practice of burning the Old Year out with huge bonfires still prevails in some places, while in many

districts it is rung out by muffled bells, and just at midnight the bells are unmuffled and the New Year is rung in with joyous peals.

But in no other country is the celebration of New Year's made so important a festival as in Japan. The streets and byways of Tokyo, as well as other cities, look like a vast playground. At a certain time in the day the emperor receives the princes and the princesses of the blood. At another hour all royalty and cabinet members and their wives. The scene is marked with great ceremony.

But all over the city the young people are having quite as good a time as royalty; a festival of pleasure is being held. Sometimes the faces are smudged with paint or ink—scarlet crepe, white silk and brilliant gold flit through all the streets. Very little religious ceremony is observed New Year's day, but upon the third of January the day is given over to worship in the palace, and upon the fourth of January the emperor opens the council chamber and state affairs are begun for the year.

ARRIVAL OF THE NEW YEAR

By MARY GRAHAM BONNER

BEFORE the midnight service which would usher in the New Year there was an organ recital.

The church was very quiet, everything was very still. Only the beautiful chords of the organ sounded. A glorious, lighted star hung down, and the Christmas greens were still wound around the pillars and the pulpit and the Bible reading desk.

Sometimes the notes of the organ were deep and low, again they were high, clear, thrilling.

And to every person came new ambitions, new resolves. As they all joined in the opening hymn of the New Year midnight service they all felt better.

The beauty of the organ's music had touched the soul of each.

(©, 1924, Western Newspaper Union.)

A GOOD RESOLUTION

By Emily Burke Adams

IT WAS New Year's Eve and Uncle Ben—everybody called him Uncle Ben—said he didn't think he'd make a resolution, and then he'd have none to break.

"Well," said Mrs. Smith, his neighbor, who had brought him a loaf of bread, "if I were you I'd make a resolution to marry before another year; I'm going to quit sewing your buttons, so you'd better think about it."

Uncle Ben did think about it, and mused to himself: "Well, if I had resolved long ago to get married, I'd be married. Other folks keep their resolutions. By jolly! I'm going to resolve to marry before a year and I won't break my resolution, either."

New Year's day Uncle Ben put on his best bib and tucker and started to church. As he turned the corner he met Widow Bender.

"Well, Uncle Ben, Happy New Year," said she.

"Thank you, Mrs. Bender, and Happy New Year to you. Mine will be a happy New Year, for I'm going to be married."

"Oh, fine!" said the widow, with a look of disappointment. "My New Year resolution is to get married, if I can."

"Well," said Uncle Ben, "that is a provision in my resolution—if I can."

They looked at each other, kittenlike, talked a short time and went on to church.

Every one was surprised to witness a wedding that morning.

When they were congratulating Uncle Ben he said: "Well, a resolution is a fine thing if you make a good one and stick to it."

New Year Eve

Prosperity begins to shine;
The business outlook's bright;
For everywhere I want to dine
They boost the price tonight.

SPENCERVILLE

School began Monday morning after one week vacation.

Carl Nelson spent the weekend in the F L Beams home.

Paul Dean was a Wednesday night guest in the Rev. S D. Steffey.

Miss Vera Silberg of Garrett, spent her Christmas vacation with relatives here.

For good glasses see Griest at American Building Hicksville, Ohio.

Watch meeting will be held at the M. E parsonage Potluck supper. Everyone invited

J. E. Sturgis, wife and son of Cincinnatti are visiting in the Frank Rhoades home

The Christian Endeavor Society sang Christmas carols to the sick and shut-ins, Christmas morning.

Miss Edith Blaydes, who spent her vacation with her sister at Cherryville returned home Sunday

Misses Ada Bowser and Margaret Koch were guests several days last week at the Gerry Wasson home.

Dr C R. Baumgartner spent Christmas with his parents Mr. and Mrs. L L. Baumgartner of Decatur.

We build Chimney Stacks and do all kinds of Tin Work Roy I. Bowser, Spencerville.

Miss Leone Widdefield of Cincinnatti, is spending her vacation with her parents, Mortie Widdifield and wife.

Samuel Ohl, who has been visiting several weeks at the Frank Wertman home, left for home Monday.

Harry Kinsey, wife and children of Freemont and George Jenkins and wife were Sunday guests of Roy Bowser and wife.

James Reed and wife, Vernie Reed and family and Amos Friend and wife, were Thursday guests in the Wm. Reed home.

Eck Hursh and family and Geo Doll and wife of Fort Wayne, were Thursday guests of Mrs. Matilda Oberholtzer and family of near Harlan.

The following officers were elected Sunday for the Lutheran Sunday School: Supt, Ray Means, Harvey Kimes; Sec., Dorris Beams, Howard Beams; Treas., Mrs. Elizabeth Wearley; Chorister, Mabel Rhodes, Florence Silberg; Pianist, Dorris Rhoades, Garnett Beams.

The following officers were elected for the year 1925 at the Methodist Sunday School last Sunday: Supt, John Koch, Frank Odle; Sec Frank Miller, Janice Wade; Treas., Mrs. Princess Rectenwall; Pianist, Mrs. Audra Wade, LaVern Rhodes; Chorister, Mrs. Lina Odle, Frankie Allen; Librarians, Harry Farver, Lynn Fisher, Forest Brettian and James Vallieu; Cradle Roll Supt., Mrs. Ethel Bowser, Mrs. Gertie Smith; Missionary, Mrs. Emma Smith; Temperance, Prof. Smith; Home Dept., Ray Farver; Adult, Arminta Steward; Junior, Clarice Hahn Teachers: Class No. 1, Mrs. Gertrude Smith No. 3, Mrs. Charles High, Mrs. Lina Odle; No. 5, Ray Farver; No 6, M. H. Howey, Prof. Smith; No. 8, Mrs. Ethel Bowser and Mrs. Clarice Hahn.

NEWVILLE

Both churches held their programs on Christmas eve.

The sleet storm did considerable damage here. Limbs from shade trees and fruit trees were broken down with the ice and the wind.

LUDEN'S
MENTHOL COUGH DROPS
for nose and throat
Give Quick Relief

We wish everybody a glad New Year.

Iven Smith and wife of Mishawaka, spent the past few days with relatives here.

Homer McCullough and wife took Christmas dinner with Mrs Bessie Shaffer and children

Hugh Traxler and wife entertained to dinner Thurday, E E Traxler and wife and Terry Traxler and wife.

Ira Mendenhall and son Harold Dewey Miller, wife and little son Ronald of Auburn and Earl Mc. Donald of Green Castle, Indiana, were Christmas guests in the Jonn Miller home.

Mrs. Daniel Reasoner, Mrs. Orvil Breininger and baby and Paul Smith and wife of Lansing, Mich Fay Smith and wife of Detroit and Karl Richmond and wife of Chicago, were Christmas guests of Omo Richmond and wife.

Ira, Dewey and Bryon Miller went hunting Thursday morning quite early. When they came in a short time before dinner Dewey discovered that his left ear was frozen quite badly. The frost bitten member was soon swolen to twice its natural size.

The program given by the school on Decen ber 19th was fine. Santa Claus made his appearance and treated the pupils and each one received a gift from a fellow pupil. The teachers were not forgotten either and all were made happy. School opened Monday of this week.

CONCORD

Carl Johnson has gone to Fort Wayne to work.

The cold weather kept a good many at hom Christmas.

Ford Jackson and family and Mrs. Chas. Jackson were at Fort Wayne, Saturday.

Miss Cleota Morr is in school again, two miles north of Butler, after her holiday vacation.

Chas. Quance and wife of Fort Wayne, were weekend guests in the Chas. Murphy home.

**Let us repair that Furnace before winter.
Roy I. Bowser, Spencerville.**

Mr. and Mrs. John Fetters entertained their children, Jay Fetters and family and Elza Fetters and family also Glen Draggoo, at Sunday dinner.

Less Sebring and wife of Auburn spent a couple of days last week with Ford Jackson and wife. They also took Christmas dinner with Chas. Jackson and family.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)

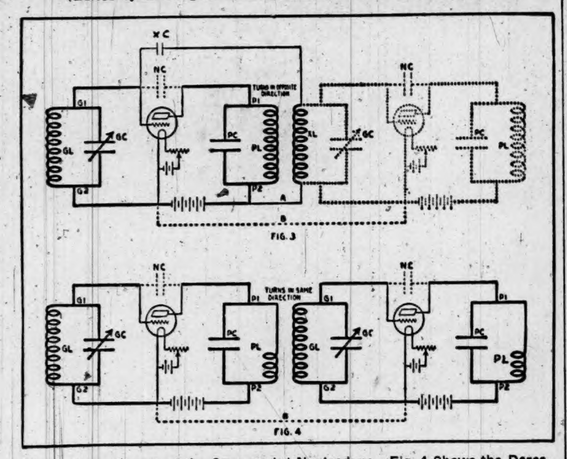

Fig. 3 Shows Circuit of the Commercial Neutrodyne. Fig. 4 Shows the Deresonated Plate Circuit, Which Is Slightly Different From the Neutrodyne.

There are three common types of tuned radio frequency receivers in use today; the type that uses a resistance in the grid circuit to control oscillation, the neutrodyne method in which the capacity within the tube is balanced out by the use of condensers of small capacity, and the deresnadyne method.

The use of neutralizing condensers reduces the volume and quality of the signal somewhat and is usually difficult to adjust properly. The use of a resistance in the grid circuit, such as a potentiometer or "losser" as it is sometimes called, also introduces losses that cut down selectivity and distance. If a receiver can be constructed without the use of either of the above methods, and still be stable and easy to operate, the improved quality and power of reception is considerable.

The deresnadyne type of receiver uses neither condensers nor resistances to control self-oscillation. The plate circuit is detuned, or deresonated, so as to prevent the generation of excessive energy.

With present types of apparatus it is only possible to use a certain amount of energy for clear, undisturbed amplification. Any energy in excess of this amount does not increase the signal strength but does ruin the quality, causing whistling and distortion.

Simple Way of Solving Problem.

Instead of allowing this excess energy to be generated in the plate circuit and then neutralizing or suppressing it in the grid circuit, the deresnadyne principle simply prevents it from ever being generated. This is the simplest and most fundamental way of solving the problem by stopping oscillation at its source in the plate circuit. The result is that the receiver has a beautiful quality and freedom from undesirable noises and at the same time the greatest possible amplification.

To a great many the deresnadyne appears to be very similar to the neutrodyne, but the following will show that it operates on fundamentally different principles. In Fig. 3 the fundamental circuit of the commercial neutrodyne is shown in heavy lines, while the dotted lines represent the next stage. Neutralization is accomplished by means of the coil XL and the condenser XC. In the commercial sets the coil XL constitutes the secondary of the transformer whose primary is the coil PL, and XL is the grid coil of the succeeding tube which is shown in dotted lines. In commercial neutrodynes the connection "A" is absent, this connection being made through the filament lead "B" which connects all stages together.

It will be seen that the neutrodyne circuit would not exist in the commercial receivers unless the stages were connected together by the use of a common A battery to operate all of the tubes.

When the voltage difference between the two ends of the plate coil P1 and P2 becomes great enough to force a transfer of energy back to the grid circuit through the capacity of the tube NC equal to the losses in the grid circuit, oscillation will commence, unless stopped by some special means.

The neutrodyne employs neutralizing condensers for this purpose. The deresnadyne set employs the deresonated plate circuit shown in Fig. 4. This differs from the neutrodyne in that it limits the voltage difference that can be built up in the plate coil between P1 and P2, thereby removing the basic cause of self-oscillation by preventing ducing electromagnetic and electrostatic couplings to a minimum.

How Result Is Accomplished.

This result is accomplished by properly proportioning the coil in the plate circuit with respect to the grid circuit and the incoming signal to which the grid circuit is to be tuned. It is this feature of detuning or deresonating the plate circuit that suggested the name "deresnadyne." Deresonating is effected by reducing the number of turns in the primary of the coupling transformers in the plate circuit to the smallest number consistent with high amplification and at the same time reducing electromagnetic and electrostatic couplings to a minimum.

The connecting wire B in Fig. 4, which is the common filament lead in the commercial deresnadyne set, can be removed and separate A and B batteries used for each stage without affecting the operation. If the connecting filament wires were removed in the commercial neutrodyne receiver, its operation would no longer be free from oscillation because the neutrodyne circuit would no longer be present. In addition to this, the transformers of the deresnadyne can be connected so that their primaries and secondaries have the opposite polarity with respect to one another if essential to the operation of the neutrodyne as shown in the drawings. In the neutrodyne shown in Fig. 3 the transformer turns may run in the same direction if the primary turns are reversed.

How to Make Good Loud Speaker From Posey Pot

By PETER MOMBELLO

For those fans who, having found the price of a good loud speaker prohibitive, are now using a pair of phones on the table or in a fruit bowl this article describes the making of one which will compare with the best on the market. The drawing gives all the necessary parts and their dimensions. The figures given cannot fit every unit or flower pot and should be used only as a guide.

An ordinary phone may be used in place of the loud speaker unit, in which case a clamp should be made to hold the earpiece as shown in the

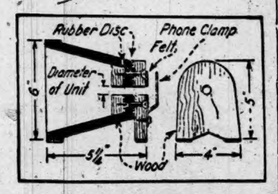

Diagram Showing Necessary Parts and Their Dimensions.

cut. A loud speaker unit is recommended, however, and since this is the only costly part a good one should be purchased. This unit should be purchased first and the holes in the disks and flower pot drilled to fit the diameter of tube of this unit.

The screws should be of sufficient length to hold the wood, felt and rubber disks firmly to the flower pot. The rubber may be cut from an old automobile inner tube. To prevent any possibility of rattling thick felt should be glued onto the spots where the speak[illegible]es the table.

All the parts are to be made so that they will fit into each other snugly, leaving no air spaces. Good glue should then be used to make them as one piece.

For beauty the outside of the speaker may then be painted, but the inside should not be touched. See that the inside is clean and sandpaper it to give a smooth surface.

If properly constructed this loud speaker will be very clear and distinct, with natural, mellow tones of both speech and music.

Shielding Panel Aids in Reducing Body Capacity

When using two and three-circuit tuners employing regeneration in any form body capacity is generally noticed to some extent. Shielding the panel will aid some in reducing this but as shielding the panel decreases the efficiency of the tuner it is not advised. The proper connections for the condensers will also eliminate some of the body capacity, but sometimes not all of it. In the latter case if the negative filament lead is connected to the ground all noticeable body capacity will disappear.

Batteries Placed Near Radiators Soon Dry Up

Have you looked in the storage battery lately to see if the solution is still covering the plates? Batteries placed near radiators soon dry up. Add a little distilled water to each cell now and then and do it before the battery is put on charge. Don't take a hydrometer reading right after you have put new water into the cells, as the reading will be very inaccurate. Read the battery before adding the water or after the battery has been on charge.

It Pays to Have Only Best Parts

Buy Standard Products When Building Set, Advice of an Expert.

By MAJ. HERBERT H. FROST

A chain is no stronger than its weakest link, and a radio receiving set is no better than the poorest part that is used in its construction. One of the greatest drawbacks to radio in its early stages was the large amount of inferior material dumped on the market.

Material that was good enough for general electrical work was not good enough for radio. The amount of energy that is received in the average aerial is so minute that it is one of the wonders of the present age that such a small force can be converted into words and music that are clear and pleasant to the human ear. The amount of current impressed on the grid of the tube is so small that to lose even the least bit through poor apparatus results in greatly decreased efficiency.

Insulation leaks and poor connections that would pass unnoticed in ordinary electrical work must be guarded against in radio. Most of the losses are not in the connections which are made by the set builder; they are in the apparatus which he uses and are losses which he can guard against only by buying good, standard, nationally advertised products.

One of the commonest forms of poor apparatus is the "moulded mud" product, used frequently in the manufacture of sockets, etc. When you buy a socket and are in doubt, rub it against a piece of paper. If it makes a black mark throw it away. This "mud" composition which is substituted for bakelite and hard rubber in cheap apparatus contains lampblack, a high resistence conductor and should never be in any radio set.

The mechanical features of all apparatus should be carefully noted. Sockets should have good, strong phosphor bronze contact springs. It is a good idea to buy a socket that can be mounted either on the baseboard or panel and one that has a ring of soft rubber set into the bakelite to prevent vibration of the tube. This will tend to eliminate tube noises.

Jacks should be selected for their quality and it is especially advisable to see that they are insulated with something better than paper or cheap fiber. Rheostats, potentiometers, plugs, battery switches and, in fact, every small part that goes into your set, is important.

For those beginners who do not understand the mechanical construction of radio apparatus, the greatest safety lies in going to an established, reputable dealer who has his reputation to maintain in his community. He will have apparatus manufactured by reliable concerns which stand behind their products.

The best is cheapest in the end and the satisfaction of a radio receiver that performs is worth a great deal more than the possession of a mediocre receiver which is noisy, non-selective and generally unsatisfactory for the reason that a slight saving has been made in buying the small parts for its construction. Good apparatus is really just about as low in price as poor apparatus, for the reason that the reliable manufacturer takes a small profit on each item and has a much larger volume of sales.

Good Ground Clamp Is Important Attachment

The unseen is usually slighted. In radio this applies especially to the ground connection, for the receiving set. The aerial and lead-in wires are usually given the best of attention, while the ground is liable to be more or less of a makeshift, and once installed, forgotten.

A good ground connection is as important and vital to the operation of your receiver as the aerial. The cold water pipes and the heating system make an efficient source of ground, providing a good contact is made with the metal of the pipes. Simply wrapping the bare wire around the outside of the pipe a few times does not give enough contact. The pipe should be filed or scraped until a bright surface

Ground Clamp in Half-Moon Shape to Fit Over the Pipe.

is obtained, and then a wire securely wrapped around the pipe a number of times and soldered.

As pipes are usually tucked away in inaccessible places it is often difficult to make a good connection in this manner. The most convenient and the best connection can be secured by the use of a ground clamp.

The type of ground clamp illustrated can be used without spoiling the appearance of the pipe or the trouble of obtaining a clean metal surface. It is in a half-moon shape to fit over the pipe, with several notches on the inside to keep the clamp in one position and a threaded screw on the other side. The clamp can be adjusted by tightening up the screw with the fingers, the connection between the clamp and the metal being made as the point of the screw bites its way into the metal, insuring a positive metal contact.

INDIANA BREVITIES

Indianapolis.—Adoption of an immediate state forestry plan that will include the acquisition of large blocks of waste lands for preserves through a suggested levy of a two-mill tax on the $100 over a period of ten years, was urged in resolutions addressed to the legislature and people of Indiana, which were framed by delegates to the state forestry conference. Other resolutions request legislation that will encourage private development of forests, that would tend to reduce loss from forest fires and that would give support to the Clarke-McNary national reforestation bill in the congress. Gov. Emmett F. Branch said in an address at the opening of the conference that he hoped recommendations on state forestry that would be made by the conference would prove useful to him in framing his message to the next session of the legislature.

Indianapolis.—"Analyze the individual needs of the farms," was the advice of Prof. G. I. Christie, director of Purdue university experimental station, in a talk before the joint meeting of the Indiana Horticultural society and the Indiana Vegetable Growers' association at the Claypool hotel. "I doubt if Indiana realizes the real possibilities in fruit and vegetable growing," said Mr. Christie. "It has been considered a corn state, and large sections of it have been devoted to corn and other grains, and not to the right crops. Vegetable growing and horticulture have not been supported by the state."

Portland.—A recent ruling of Judge Roscoe D. Wheat, of the Jay Circuit court, in the suit of Luther L. Johnson and others against the Union Literary Institute, provides that the 120 acres of land owned by the institute be sold and that proceeds be given to the state for the use of state institutions. John Macey, of Winchester, has been appointed to sell the land, which is in Randolph county. The court decision has brought to a close litigation that has been in progress for many years. The plaintiffs were heirs of one of the founders of the institute. They had asked that title to the land be quieted in their behalf.

Indianapolis.—Four days after the death of Gene Stratton Porter, Indiana novelist, at Los Angeles, a letter written by her from Los Angeles, was received by Frank N. Wallace, state entomologist and a close friend. The letter was postmarked at 2 p. m., Saturday, only a few hours before the accident occurred which caused Mrs. Porter's death. In the letter, she expressed the hope that her Indiana home, Limberlost, near Sylvan lake, might become a state park under the supervision of the state department of conservation.

Indianapolis.—A report made public by the state board of accounts reviewing the financial activities of Indiana university for the year ending September 30, shows that the total cost of the new president's home, which has been built on the school campus as a permanent residence for the president of the university, was $74,421.27. Of this sum, $10,000 was given by William Lowe Bryan, present president, and the remaining $64,421.27 was met with money which the school derived from the state.

Indianapolis.—Representatives of the various county fair organizations who will meet in Indianapolis, January 7, to elect five members of the Indiana board of agriculture, will hold a dinner the night of January 6 at the Hotel Severin, it was announced by E. J. Barker, of Thorntown, president of the agriculture board. In addition to the five members to be elected, three places will be filled by appointment by the governor. Governor Branch, it is understood, will make these appointments before his term expires.

Indianapolis.—During the first five months of the fiscal year, which closed September 30, the department of oil inspection of the state board of health collected a total of $74,508.34 in fees from the work in inspecting 355,114 barrels of kerosene and 1,598,070 barrels of gasoline and kindred products, according to the annual report which has been made by James I. Inlow, chief clerk of the department, covering the activities of the department in the fiscal year.

New Albany.—Seven stills, aggregating 800 gallons capacity, were seized and 11 persons, including one woman, were arrested in a raid in Floyd county, ten miles northwest of here. Two hundred gallons of white mule and more than 300 barrels of mash were destroyed. Five stills were found on the farm of Frank Loi in Lafayette township.

Indianapolis.—Officials of the state highway commission received pledges of support and commendation from more than 500 Morgan county farmers assembled to discuss the 1925 road building program and proposed legislation of the commission, at Mooresville.

Indianapolis.—John S. Powell, formerly assistant administrator of the Indiana securities commission, was appointed chief accountant of the public service commission, to succeed Harry Boggs, January 1, by order of the commission, issued at Indianapolis. Boggs resigned to form a partnership with O. C. Herdrich, a public accountant.

Indiana Harbor.—Four young bandits, heavily armed, held up and robbed the soft drink parlor of Joseph Franzak at Indiana Harbor, getting away with nearly $2,000 cash.

Calls Indiana Tax Law Best in U. S.

Indianapolis.—"The Indiana tax law is the best in the United States and I think that I shall recommend few if any changes in the law to the state legislature," said Gov. Emmett F. Branch in his address of welcome to the annual conference of the state board of tax commissioners in the chamber of the house of representatives at the statehouse.

The conference of the state board of tax commissioners and the county assessors at the statehouse voted to recommend to the legislature that the state tax law be amended to provide for the appraisement of real estate for taxation in 1925 and every four years thereafter. The vote was 57 in favor of the motion and 19 against. Under the present law real estate would not again be appraised until 1926.

Indianapolis.—"Indianapolis and Indiana will be among the first of the great corn belt to recover from economic depression," said Roger W. Babson, nationally known business statistician in an interview. He came to Indianapolis to address delegates of the National Association for vocational Education. Mr. Babson predicted a better year for Indiana in 1925, basing his judgment on observations made personally in the state's key agricultural and industrial cities of Kokomo, Frankfort, Lafayette, Terre Haute, Richmond, Muncie, Anderson, Union City and Warsaw.

Indianapolis. — Gov. Emmett F. Branch is devoting part of his time nowadays to the selection of a committee of members of the next legislature to make a survey with state budget officials of the various state institutions, with a vieew to the appropriations which these institutions will ask for or receive under the budget which the legislature will fix for the coming two years. The governor, in selecting this committee, is of the opinion that its members should visit the institutions personally with the budget officials.

Mooresville.—Samuel Watson, age sixty, cashier of the Waverly State bank, died at his home of a gunshot wound. Mr. Watson was found by members of his family in a dying condition in a pasture on his farm, where he had gone with a shotgun to look after some sheep. The physician was of the belief that the gun had been accidentally discharged by the trigger catching on a gate which Mr. Watson had to pass through to get to the pasture. Mr. Watson was prominent in Democratic politics.

Indianapolis. — Two additions to present office forces at the statehouse were announced. Henry Noble Sherwood, state superintendent of public instruction, announced the selection of Hale C. Pickett, for the last three years superintendent of schools in Ripley county, as assistant school inspector, and Eben H. Wolcott, state bank commissioner, announced the appointment of Miss Opal Evans, 1635 Central avenue, as a clerk in that department.

Indianapolis.—An amendment to the present police pension fund law to provide for an increase in the amount of pensions paid may be presented at the coming session of the Indiana general assembly, according to Lieut. Samuel Geddes, secretary of the Police and Firemen's Pension fund, of Indianapolis. The amount of pensions now being paid is the same as it was 20 years ago, despite the increase in the cost of living since then, Geddes said.

Indianapolis.—Orders of the public service commission establishing new schedules of electric light and power rates for the Indianapolis Light and Heat company were issued. They will mean a saving of approximately $200,000 a year to the electric energy consumers of Indianapolis.

Indianapolis. — Arthur R. Baxter, chairman of the commission which is making a study of state boards, commissions and departments, issued an invitation to all persons who have constructive suggestions to make to the commission to submit them as soon as possible.

Indianapolis. — John Wilson Claypool, age sixty-six, an attorney for 43 years, died at his home, 2000 North Pennsylvania street.

Indianapolis.—Bids for the first 25 miles of the 1925 road-building program of the state highway commission were opened in the statehouse.

Elkhart.—Charles Long, forty-five years old, farmer of near North Webster, is in the Elkhart hospital, suffering from a bullet wound in his right lung, which, it is alleged, was inflicted at Tippecanoe lake by James Durham, deputy game warden. Durham says he shot Long when the latter resisted arrest after being caught fishing illegally.

Fort Wayne.—All Fort Wayne held a three-day birthday celebration in official observance of its one hundredth anniversary.

Indianapolis.—February 5 and 6 have been set as the dates of the annual meeting of the Indiana Democratic Editorial association, it was announced by Miss Gertrude Fanning McHugh, secretary of the Democratic state committee, following a meeting of the officers and executive committee of the association.

Indianapolis.—F. I. Odell, of Cannelton, was re-elected president of the Indiana Horticultural society at the close of the annual meeting and Frank Plass, of Vincennes, was re-elected vice president.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1924, Western Newspaper Union.)

Lesson for December 28

THE REVIEW—THE CENTRAL PERIOD OF CHRIST'S MINISTRY

GOLDEN TEXT—"He that hath seen Me hath seen the Father."—John 14:9.

PRIMARY TOPIC—Things That Jesus Said and Did.

JUNIOR TOPIC—Jesus Shows His Wisdom and Power.

INTERMEDIATE AND SENIOR TOPIC—Lesson of Jesus' Central Year.

YOUNG PEOPLE AND ADULT TOPIC—Central Period of Christ's Ministry.

The best way to conduct the review for adults is to present the heart of each lesson. This can be done by making assignments to the members of the class a week ahead, or by asking all members of the class to prepare on each lesson and the teacher to skillfully draw the central teaching of the lesson from the class. The following suggestions are offered:

Lesson I. Having proclaimed the laws of the Kingdom and wrought miracles to demonstrate His power to administer the affairs of the Kingdom, Christ sent forth the twelve to propagate the Kingdom. He had not only power over the chief foes of mankind, sin, sickness, demons, storms, etc., but could give that power to his disciples.

Lesson II. This is the model prayer for the disciples. True prayer is the communion of the human personality with the divine personality. The supreme need is a right relationship on the part of the human. He must be able to say "Our Father." Without becoming a child of God through faith in Jesus Christ, no one can pray acceptably.

Lesson III. The parable of the sower teaches that the measure of fruitfulness from the sowing of the Word of God is determined by the condition of the human heart.

Lesson IV. Although Jesus was a real man and therefore needed rest after His strenuous day of teaching, He was also divine as shown by His power to still the stormy sea by merely speaking a word.

Lesson V. The parable of the Prodigal Son reveals the love of a pardoning God for a sinning race. The central interest is not in the return of a prodigal, but in the loving heart of our Father God.

Lesson VI. In this lesson we see Jesus feeding a multitude with very scanty provisions. It shows that He possesses creative power and therefore is God. While the creation of the food was the Lord's part yet the disciples had to distribute the food created; and on the part of the people it was necessary that they should obey the Lord and eat.

Lesson VII. The central teaching of Peter's confession of Christ is that Jesus is the Christ the Son of the living God.

Lesson VIII. In the transfiguration is portrayed the method of the messianic Kingdom as well as the message of the King to his discouraged disciples. He showed the discouraged and despondent disciples that beyond the cross which they so keenly resented would come into realization the Kingdom which they hoped for.

Lesson IX. The parable of the Good Samaritan teaches that my neighbor is the one who needs my help; and that being a neighbor means to be on the lookout for those in need and to render assistance to the limit of my ability.

Lesson X. The opening of the eyes of the man born blind is an acted parable illustrating in the physical sphere the working of divine grace in the spiritual sphere, as experienced in the salvation of a soul.

Lesson XI. The raising of Lazarus from the dead not only assures us that there will be a resurrection of the dead but that Jesus Christ is the resurrection and the life.

Lesson XII. God became incarnate in order to reveal Himself to the world. God can only be known as the Son reveals Him.

Religious Experience

Not every man who knows something about color is an artist, but a man can hardly be an artist without knowing something about color. Religious experience does not make one competent to deal with all the problems of life, but one cannot deal with them effectually without religious experience. That is why so many professed experts fail.—The Congregationalist.

Glad and Hearty Amen to All

When the heart soil is right, cultivated by the operation of the Holy Spirit, there is no questioning of God's dealings, neither direct, nor through His hands (His leaders), but a glad and hearty amen to all.—Echoes.

Sense of Duty

A sense of duty may not be the highest motive, but the best men are moved by it.—Herald and Presbyter.

Our Confession

We do not receive blessing because of our confession, but we are not blessed without it.—F. E. Marsh.

Ruled

The world is ruled by reason; the Christian is ruled by the wisdom of God.—The Living World.

USEFUL BRAKE LINING TESTING DEVICE

How the United States Bureau of Standards tests the various brake linings used in different automobiles in order that the driver may have the best possible service from his brakes. Photograph shows Carl H. Roeder with the brake lining testing machine which, although it does not attempt to duplicate running conditions, gives a steady run from which comparisons are gained.

ERWIN GREER IS FINED FOR SPEED

Automobile Expert Tells Others to Drive Car Slowly.

(By ERWIN GREER, President Greer College of Automotive Engineering, Chicago).

You who read this little column of mine think that the fellow who writes it is a pretty wise bird. But did you ever wonder why I am able to write so wisely? Well, this particular article cost me over $55 but you get it for nothing.

Two months ago I bought a straight eight, guaranteed to turn up nearly 100 miles an hour. After breaking it in, running around 25 miles an hour for 1,000 miles—as every good motorist does—I decided to take friend wife on a trip through the country. And when we came to a long stretch of macadam I sampled my bus to see what speed it really could turn up. Yes, the car was as fast as the manufacturers claimed. The motorcycle cop who arrested me proved it to the judge.

The judge—an old but experienced motorist—welcomed me with open arms, and his advice ran thusly:

"Your first duty is to impress upon the public the fact that you have a new car. Always drive it as fast as it will go. This gives people the impression you could easily win a race. When turning a corner always do it on two wheels. Everyone loves to be thrilled. Don't push the horn button until you are in the midst of a crowd. It is great sport to see people knock each other down in their haste to keep from being run over. Besides, it makes you as welcome as a mad dog.

"If you desire excitement, try beating a train to a crossing, or run your car into a tree. This will bring you newspaper headlines and it is quite possible that some movie company will offer you a big salary for becoming a stunt man. Always vary your antics. To keep people guessing is the spice of life.

"Fifty dollars and costs! Now get out of here. If I ever catch you speeding again in this county I'll send you up for life!"

And my poor wife drove poor trembling me home with remarks that would shrivel a sheet of steel.

"Now I don't get that new hat I wanted. You an automotive expert, bah! You ought to be engineer of a peanut stand. If you ever speed again I'll tell every automobile editor in the country and then your reputation won't be worth a wooden nickel. Hereafter, you drive to the office via the elevated."

And so, reader, you see by the foregoing that even I—who you think knows all about automobiles—am only a human being after all. Did I tell that judge my right name? I did not! I'd have been given ten years if he knew who I was.

Be satisfied to ride slowly, using all possible forethought and consideration. Don't speed when you come to a straight stretch. You might meet the same judge that I did—and hear him say: "Fifty dollars and costs!"

Cost of Car Operation

The cost of operating an automobile is one of the greatest items in the auto owner's budget and one that is the most watched. A car that burns the least fuel is the most popular car in most cases, and it is the only car for the person with a small amount of money to spend for his pleasure. When purchasing a car this side of the question should be kept in mind by the purchaser and the car best fitted to his pocketbook should be the one purchased. The initial cost will be near as much as the continued cost of operation.

Motor Car Is Fine Piece of Machinery

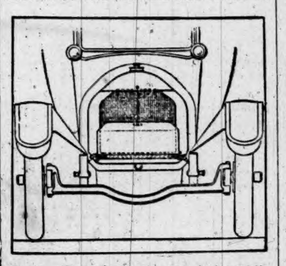
"One trouble with the average motor car owner," says the manager of an automobile service company, "is that he fails to realize that the automobile is a piece of very fine machinery, and that it will render service in proportion to the attention it receives. It is not human, and will not cry out when abused.

"When it becomes necessary, through accident, neglect, abuse, or other cause to make a change, one should seek the advice and services of the dealer from whom he has bought the car. This dealer has the interest of the car at heart more than any other person in the trade. But if distance makes the dealer unavailable, it is cheaper in the end to employ the best mechanic."

Cover for Radiator Is Handy in Cold Weather

The Scientific American in illustrating and describing a radiator cover, the invention of F. M. Cockrell and J. M. Rockwell of Liberty, Mo., says:

This invention relates to a protective cover for radiators of automobiles, whereby to conserve the heat thereof in cold weather and to aid in



Front Elevation of an Automobile Cover, With Invention Applied.

maintaining the water at the proper temperature. More particularly the invention relates to a curtain arranged to wind upon or be unwound from a spring roller, the curtain being adapted to close to any desired extent a front opening formed in the cover.

Hints Worth Remembering in Care of Motorcars

See that your springs are well lubricated, both at the shackles and at the leaves. Apply penetrating graphite spring oil to the leaves. If the shackle bolts are worn, have them replaced before you start.

Inspect your steering gear mechanism. See that the tie-rod is tight, and that the steering knuckle is working properly. If anything is loose have it tightened by all means. Keep your steering mechanism well lubricated.

If your motor has a leather-faced clutch apply neatsfoot oil. A few drops of the oil on your brake bands will help them wonderfully.

If you are touring in an open car, see that your curtains are readily accessible and in good shape.

When dismantling the steering gear, it is important to take out all the control tubes and to remove all rust that has accumulated between them.

Always apply the brakes and then release them, instead of putting them on and then holding them there.

When the tires wear unevenly or so thin that the remaining rubber is not enough to absorb the ordinary shocks of travel, the wheel bearings are very likely to be broken.

When installing a fan belt, always see that the pulleys are in line.

GOOD ROADS

SOUTHERN SISTERS TAKE TIP ON ROADS

The recent visit of a distinguished group of Pan-American road engineers to the United States has resulted in stimulating greatly the laying out and building of good roads all over the western hemisphere, according to information received by Roy D. Chapin, chairman of the good roads committee of the National Automobile Chamber of Commerce.

"The work will not be completed in a day," said Chapin, "but the seed has been sown and the example and the inspiration are there. Lively good roads campaigns are under way in a number of countries. The whole subject will come to a more definite head at the first Pan-American highway conference at Buenos Aires next May. There are particularly optimistic reports from Argentina, Brazil, Cuba, Guatemala, Mexico, and Nicaragua. An encouraging fact is that the leaders are laying out in each case a national system of roads, so that development can proceed logically and effectively.

"The Argentine ambassador to the United States, Dr. Honorio Pueyrredon, who accompanied the Pan-American mission on its American tour, soon will be in South America. He is one of the enthusiastic sponsors of an adequate system of good roads built under a national plan. He is to make good roads one of the important commercial questions which he will discuss with Argentine officials when he arrives home.

"In Mexico a highway association is being formed. In Cuba a bill is to be introduced shortly into congress for the immediate construction of a Cuba central highway. The Cubans are thoroughly awake to the possibilities of good roads.

"A factor of importance is that railroad construction is almost prohibitive in cost in such countries as Colombia, Ecuador, and Peru. The governments of those countries are especially interested in highways which will in part at least take over the usual tasks of the railways.

"In other countries the more normal condition of the motor roads as a valuable and essential adjunct of railroads, for the proper development of the national resources, is to be expected."

Car Owner Wants Smooth Pavement for Pleasure

"The pavement's the thing," opines the modern Hamlet as he steps on the accelerator of his car, looks over the green fields and woods on either side and decides that things are not so deplorable in Denmark after all.

Yes, the pavement's the thing. Any old cow path will not suffice for a road in these days when an automobile ride is the shortest distance between two points. People like to say it with balloon tires nowadays. They want roads that will get them somewhere else—in a hurry—without bumping their heads through the top of the gasoline phaeton.

That means that they must have paved roads and wider roads too. There must be wide pavements so that cars can pass safely and easily. The motorist on the roads today finds that two cars roll where only one rolled before. Such a condition means that automobiles can't pass each other if road builders stick to narrow highways.

And road builders know this too. They're building 'em wider. And the old ones, that were too narrow, even if they were mighty good pavements and served royally when they were built, are being widened by building strips of concrete pavement at the side of the old pavement.

The pavement's the thing, and the motorists are going to have it—they're going to have it wider, too.

Good Road Notes

More than half of New Zealand's 44,000 miles of highways are hard surfaced.

* * *

Congress has appropriated $7,500,000 for improvement of roads in the national park areas.

* * *

The Canadian experts said that our roads are not wide enough, but the driver who is content to keep within the speed limit should be able to stay on them.

* * *

Let us travel over all the countries of the earth and whenever we shall find no facility of traveling from a city to a town, or from a village to a hamlet, we may pronounce the people to be barbarians.—Abbe Reynal.

* * *

Forty-four states are now using trucks in the work of maintaining existing highways.

* * *

Much of the highway work on the mountain passes and elsewhere in the mountainous districts is inside the boundaries of the United States forest reserve.

* * *

Montreal, Canada, is going to replace its white paint directional signs with colored markings inlaid in the roadbeds. Varied colors will be used to denote various routes.

* * *

The Mystery Road

CHAPTER II—Continued

—18—

He threw himself into a chair, declined coffee with unnecessary abruptness, and asked for brandy. Myrtile with a little pain at her heart, no infrequent visitor there, took her place apart from the others, near Lord Hinterleys, and, spreading out the newspapers commenced her evening task.

* * * * * * *

The world seemed a very good place to Lady Mary as, from the depths of her chair under the cedar tree on the following afternoon, she watched Christopher, conducted as far as the terrace by the butler, descend the steps lightly and move across the lawn toward her. He walked with the dignity and assurance of a man whose life is being worthily lived. It was a long way across the lawn, and the girl who waited for his coming had time for a crowd of pleasant thoughts as she watched the approach of the man on whom she had set her heart. Everything that he did and had done in life appealed to her. He had sentiment enough—that was proved by the tenderness for Myrtile to which he had confessed that night at Monte Carlo, a night which she had always remembered as one of the unhappiest of her life. She had long since been convinced, both by his manner and Myrtile's, that the tenderness, such as it had been, had become merged in a purely fraternal and kindly regard. Of his reticence toward herself she thought nothing. He was possessed, as she well knew, of a very high sense of honor, and she had always felt that, however greatly she might have desired to hear his declaration, he would say nothing until he had passed definitely out of the somewhat miscellaneous category of rising young men into the position of one whose future is assured. Today he was the youngest K. C., and a seat in parliament was almost within his reach. She thought of her own fortune with a deep sense of pleasure. It was larger than he imagined, larger than any one else except herself and her father knew. Christopher would be free to make the best of himself, free for all time from any shadow of financial worry. How well he looked, how strong and eager! She held out both her hands as he drew near, and her smile of welcome made her for a moment radiantly beautiful.

"How delightful to see you, Christopher!" she exclaimed. "And what wonderful news! It's just what you wanted, isn't it, and just what we all wanted for you."

He took her hands and stood smiling down at her. Her heart was beginning to beat more quickly. She hoped that he would suggest walking in the gardens.

He did not not sit down, nor did he suggest the gardens. He had looked around for a moment, almost as though disappointed to find her alone. Still her heart did not misgive her. She thought him a little nervous, and she smiled tolerantly.

"You were a dear to telegraph to me at once," she said. "I can't tell you how interested and flattered I was."

"I wanted you all to know," he declared, looking around once more. "How is every one?"

"In excellent health, thank you," she answered. Father is having his usual afternoon sleep. Gerald has been here, but, as I dare say you know, he went away this morning. We must talk about him later, Christopher. I am rather worried—but that can wait. Will you sit down, or would you like to see how wonderful the gardens are?"

He looked at her a little apologetically, yet without the slightest idea of how great an apology was needed.

"I wondered," he said, "if I could see Myrtile."

"Myrtile?" Mary repeated.

He assented a little sheepishly, yet with a rather engaging smile.

"I wanted to see her and tell her about it," he confided. "She won't understand just what it means, perhaps, but she's so much more of a woman now."

His voice seemed to come from a long way off. It seemed all part of a horrible nightmare, something unreal, some black thought, the figment of a nocturnal fancy. Then she was conscious of his standing before her, waiting, expectant, with the eagerness of a lover in his eyes.

"Mytile went down to gather some roses," she told him. "You will find her at the end of the pergola."

He was gone almost before the words had left her lips, gone with some sort of mumbled excuse, unconscious of the tragedy he had created, clumsily obvious of the fierce struggle which had kept her calm and collected. She turned her head and watched him go, watched his long, eager footsteps, saw his tall figure stoop as he entered the pergola. Her fingers tore at the sides of her chair. She looked at the distance between her and the terrace steps. If only she could escape! Her limbs for the time seemed powerless. She sat there with all the healthy color drained from her cheeks, her fixed eyes seeing nothing but the ruin of her confident hopes. She could see herself growing old, marching down the avenues of time, preserving in a certain measure, perhaps, her dignity, but growing day by day a little more jealous and narrow, a little more captious of the happiness of others. There was only one Christopher, and he was there at the bottom of the pergola with Myrtile. Even in her bitterness she did not blame him for a moment. There were a hundred

By E. Phillips Oppenheim

Copyright by Little, Brown & Co.

different ways in which she might have misunderstood him. She had made the foolish mistake of many ignorant young women. She had mistaken companionship, and the desire for companionship, on his part, for the subtler and rarer gift which she herself had been so ready to offer. Christopher, she remembered, had even warned her, more than a year ago, at the villa in Monte Carlo that night when they had paced the terrace together. She had refused to take him seriously, and he had never once reverted to the subject. It had seemed to her, indeed, that he had almost avoided Myrtile during his visits to Hinterleys, and she had commended him for his discretion. Myrtile was sweet and full of charm, but what use could she be as a wife to an ambitious man like Christopher? How she herself could have helped with her sympathy, her social influence, her tact, to say nothing of her great fortune! It was amazing what follies a man could commit for the sake of fancy! She could call it nothing else.

Presently she rose calmly to her feet and walked toward the house. Soon it swallowed her up, the key was turned in the door of her room, the long minutes that passed were her own. She never counted them then, she never dwelt on them afterward. The period of her agony was, in fact, short enough. Her pride came to her rescue. When her maid tapped on the door she had already bathed her eyes, and there remained nothing to denote her suffering but a little tired look about her mouth and a slight weariness of gait. She opened the door at once.

"Mr. Bent is obliged to go back to town almost immediately, your ladyship," the maid announced. "He has asked especially whether he could see you for a moment."

"Tell Mr. Bent that I shall be down in five minutes," her mistress replied.

The maid departed, and Mary turned once more anxiously to the mirror. This was a trial which she had scarcely expected. Her fingers passed over her face, anxious to smooth out its

Presently She Rose Calmly to Her Feet and Walked Toward the House.

lines. Her lips moved, as though she were uttering a prayer. She was, indeed, appealing to herself, to the strength and pride of her young womanhood. When she entered the library where Christopher was waiting for her, she knew that she was free from all trace of disturbance.

"Christopher, you don't mean that you are going to leave us at once?" she protested. "And where is Myrtile? I expected to see you both together."

"I left Myrtile where I found her," Christopher answered, a little harshly. "Will you keep my secret, please, Mary, and forget my visit?"

"Forget your visit?" she repeated wonderingly.

"Myrtile does not care for me," Christopher explained, "not in the way I want her to. It is the same with her now as from that first moment. I thought it was a fancy of which she might have been cured. I find it is nothing of the sort."

At that moment Mary hated herself, hated the joy which swelled up in her heart, hated the sudden dispassionate rush of blood through all her veins, the sense of grotesque, immeasurable relief. She hated the lying words she spoke.

"Oh, Christopher, I am so sorry!" she said. "I do not understand, but I am very, very sorry."

"Myrtile loves Gerald," he continued. "She will love him all her days. She is one of those strange creatures who will never change, to whom love is just one final thing for good or for evil. She loved Gerald when she stepped into the car and we carried her with us along the road around the end of which she had woven all her dreams. She cares for him so much that I am not sure whether, at the bottom of her pure heart, she does not hate me because I once kept them apart."

She laid her hand upon his arm. That sense of sickening joy had gone. She was a woman again, feeling nothing but sorrow for the suffering of her man.

"Christopher, dear," she begged, "Myrtile will see the truth in time. Gerald cares nothing for her, nothing for anybody except himself and his own pleasures. She will understand this presently. Remember, although she has grown so sensible and so gracious in her attitude toward life, she is really only a child."

"In one way she will always be a child," he answered sadly. "Her love will last her time, whether Gerald ever returns it or not."

"There is still your work," she went on, "great, wonderful work waiting for you. And your friends. Don't take this so hardly, Christopher."

He looked down at her with a very forced smile.

"Oh, I shall get over it," he assured her. "I am not the first man who has had to face this sort of thing. It is odd, though, that it should have happened to me."

"You wouldn't like me to speak to Myrtile?"

"Absolutely useless," he replied. "She was really shocked when she knew why I had come. I believe it seems to her a trifle irreligious to discuss the possibility of her caring for any one except Gerald. No, I'm not going to encourage any false hopes, Mary. I've had my answer and there's an end of it. What I want to do is to get away."

"That you can do and shall," she assented. "I did so want to hear about Leeds, but that must be another time. You won't keep away from us because of this Christopher?"

"Or course not," he promised halfheartedly. "I'll write, if I may. There are heaps of things I want to tell you. You won't mind?"

She smiled and let him open the door, taking him by a devious way to the courtyard where his car was still standing.

"There," she directed, "you can go out by the south drive, across the deer park, and you won't meet a soul."

"God bless you, Mary!" he said. "You're a wonderful pal."

"Thank you," she answered simply.

CHAPTER III

—

"Well, thank heavens you haven't forgotten how to hold your gun straight!" Lord Hinterleys remarked, a few days later, laying his hand affectionately upon his son's shoulder. "It is always a treat to see you shoot, Gerald. I used to fancy myself when I was your age, but I could never have touched your performance today."

"You musn't forget the difference in guns, dad," Gerald reminded him, "and the powder. You were pretty useful yourself at those last two drives."

Lord Hinterleys mounted his pony. Gerald shouldered his gun and passed his arm through Myrtile's

"Come along," he invited, "we'll go home through the forty-acre wood. It isn't more than a mile. It seems to me we've been standing about all day."

"I should like it very much," Myrtile assented joyfully.

"We are all coming presently," Mary remarked. "Amos is just making up the bag. Dad wants the exact figures."

"One sees so little of you nowadays," Myrtile sighed. "You are all the time in London."

"You're not going to lecture me?"

"That would not be for me," she said gravely. "If you think it well to be there, it is well. I am only glad that you are here today. It has made your father so happy."

They crossed the meadow and entered the little wood. The path here was so narrow that Gerald took Myrtile's arm again. He was quite unconscious that at his touch she shivered with emotion.

"Myrtile," he confided, "I saw Chris yesterday."

"Yes?"

"Poor old chap," Gerald went on, "he looked absolutely done in. I made him come and have some dinner with me. I don't think he meant to tell me, but it all came out in time. He told me about his visit here."

She walked on, her head uplifted, her face a little tense.

"Yes?" she murmured.

"I'd no idea," Gerald continued, "that he was seriously in love with you, Myrtile. He's such a sober sort of chap really—no lady friends, you know, or anything of that sort. When he takes a fancy to any one, it's a serious affair."

"He is not like you, Gerald," she said quietly.

"You're quite right, he isn't," Gerald acknowledged frankly. "We all have our different hobbies. I candidly admit that the society of your sex has been one of mine. Christopher has never been like that, though. You are his first love, Myrtile."

"It's a great pity," she declared.

(TO BE CONTINUED.)

French Butter Markets

During the months of June, July and August the butter markets of Normandy are an interesting sight to the visitors. The peasants assemble in the market squares of the various towns, almost in military formation, with their baskets filled with large pats of butter, each done up in the whitest of cloths. The buyers walk along the lines and bargain for the wares, tasting samples before deciding. If the prospective buyer is satisfied with the flavor of one morsel he knows he may rely on the rest of it being equally good, for the French law regarding the adulteration of food is very strict, and a fraudulent seller is severely dealt with.

Buckwheat flour for sale, call Harvey Hull, St. Joe phone. 51tf

Shelf paper, white with figured edge, to close out at 5c each, at News office.

Mrs. Jennie Sechler went to Auburn Sunday for a visit with her daughter Mrs. Everett Mavis and family.

Miss Floy Ulm of Butler is spending a few days in the home of her grandparents, F. Scholes and wife.

Ice cutters are at work. The ice measures seven inches thick and is of fine quality. The meat market is the first to pack.

B. V. Widney and wife of Columbia City spent Tuesday night here with Mrs. Alice Copp. Mr. Widney also called on his parents, Mr. and Mrs. H. M. Widney.

On account of our town being without electric lights last Friday night it was necessary to call off the Parent-Teacher meeting. As far as possible the program for this month will be carried out at the next meeting, January 16th.

You can get transfer paper at News office in large or small sheets.

Miss Marie Kinsey is working in the Fort Wayne south side telephone office.

Floyd Ridgway and wife spent from Wednesday until Friday with relatives at Hobart.

Lloyd Miller and wife and Albert Wade, wife and little daughter, of Detroit, have been visiting their parents here the past few days.

The last number of St. Joe H. S. Lecture Course, Joseph Crowell, Impersonator and Entertainer, to be at Methodist Church, Jan. 7th., 8 o'clock.

Lester Pugsley and family spent Christmas at Butler with Mr. and Mrs. Al Jennings Mrs Jennings and son, Albert, spent Sunday here with her children.

Mr and Mrs. Tel Elson entertained at Christmas dinner, Mr and Mrs. Ed Leighty, Fred Jenkins and wife, Fred Elson and wife and Lloyd Draggoo and family.

W. E. Henley and wife entertained at Christmas Day dinner, Howard Williams and wife of Fort Wayne, Mr. and Mrs. Wid Williams and Mrs. Hazel Monroe and children. On Sunday afternoon Mr Henley and family called on the I. E Sherrick family at Auburn. Miss Oneda Sherrick returned home with them and remained until Wednesday

By 1923 the state's annual death rate from the disease per 100 000 population had declined to 94 8 the total deaths in that year being only 2779. In general the same decline was apparant, during the ten year period, in many counties, Mr. Auerbach showed He made public figures to show that in DeKalb county, the death rate annually estimated on the 100,000 population basis, was 91 0 in 1914, while in 1923 the rate was 74 2. estimated on the 100,000 population basis. There were 23 deaths from the disease in DeKalb county during 1914 and 10 deaths in 1923.

Frank Beams and wife of Spencerville were Sunday guests in the Morris Curie home.

Mrs J. P. Buckingham has been spending the past week with her mother at Continental.

F. M. Thornton spent last week with relatives at Elkhart, Edswardsburg and Battle Creek.

Clark Scholes, who is working in southern Indiana, spent holiday week with his parents, Mr. and Mrs. Frank Scholes.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co, Otsego, Mich.

C. R. Brunson came Saturday evening to visit until Thursday with his mother, Mrs A. D. Brunson and other relatives.

Mrs. Mary Davis is now at Portsmouth, Ohio, where she will visit for an indefinite time with her daughter, Mrs. Lee Smith.

Mrs. Wilbur Yeiser and babe went to their home, north of town, Wednesday, after a month spent here at the nome of her parents, Sam Keesler and wife.

Mrs. Wm Quance and baby of Auburn, Mary Quance of Fort Wayne and Juanita Moon of Logansport, spent Friday with Mrs. O. E. Ginther and daughters.

The Junior Endeavor Society under the efficient leadership of Mrs. H. J. Renner, showed the real Christmas spirit this year, by making up boxes of home made candy and some of fruits and then having the Juniors deliver them to the aged people about town Their efforts were appreciated. This is the real spirit to teach the children to show to old age.

George Berry and Lewis Wasson had a narrow escape Sunday evening, a week ago, when the auto in which they were riding, slid into a slow going freight train at Concord. Both brakes were applied but the machine continued to slide sled fashion until it hit the train. Both boys jumped and received minor injuries. The car was wrecked

Miss Pauline Wasson spent her holiday vacation at Rochester, N. Y.

Mrs. Nan Lysher spent Saturday and Sunday at Concord in the Chas. Jackson home.

Mr. and Mrs. George Seavers and children of near Logan, spent Christmas Day with Tom Brunson and family.

Miss Frankie Hickman of Hicksville, came Sunday evening to visit with her uncle Francis Hickman and family.

Mrs. Anna Dilley returned home Tuesday from a few weeks visit at the home of her son, John Dilley and family at Waterloo.

Chas. Miser retvrned to his work at Fort Wayne after visiting his parents, Ed Miser and wife, over the Christmas season.

Dan Kellar broke two bones in his right hand Christmas week, while doing work at the garage. A stubborn little Ford kicked.

The last number of the St. Joe H. S. Lecture Course, Joseph Crowell, Impersonator and Entertainer, to be at Methodist Church. Jan. 7th., 8 o'clock.

Mr. and Mrs. Frank Sechler, John Sechler and family, Ralph Sechler, wife and children and Mrs. Anna Dilley, were Christmas dinner guests of Hollis Dilley and wife

Because of the death of the editor's mother last week, we changed our minds about the publishing of The News. It was our plan to omit the issue of January 1st, but we omitted the Christmas issue.

The DeKalb County Tuberculosis Society will hold a Free Clinic in the assembly room of the court house, Thursday, Jan. 15, from 1 to 4 P M Dr. Eric Crull, of Ft. Wayne in charge. Any one having a severe cough, pains in chest or side, or in a rundown condition are urged to attend the Clinic. All examinations are private and the citizens of DeKalb county, needing it, are urged to take advantage of this Clinic conducted by an experienced physician along this line of disease.

Wedding Celebration in St. Joe Friday

M. T. Bishop and wife, married Fifty Years last Friday--Many relatives there and in the afternoon scores of friends called and extended congratulations. It was a happy day indeed for this couple.

Mr and Mrs. John R. Bishop, Mr. and Mrs. Ed Bishop, Mr. and Mrs. Z. T. Kagey, Mr. Henry C. Hathaway and family, Mr. Simpson Johnson and family, Mrs Alice Zimmerman of Auburn, Mr. Chas. H. Bishop and family of Cleveland, Ohio, Mr. Owley, of California, a friend of Clayton Hathaway and Mrs. Ann Dilley of St. Joe, attended the golden wedding anniversary Friday of Mr. and Mrs. Melvin T. Bishop at St. Joe.

Mr. and Mrs. Bishop, life long residents and among the most respected citizens of that community were the recipients of the well wishes of a host of friends who called during the afternoon when a reception was held at their home. Many called to pay their respects and offered their congratulations. During the hours of the reception refreshments were served, songs were sung and reminiscences were exchanged, greatly to the enjoyment of the couple who have lived a life of wedded happiness and usefulness since their marriage fifty years ago at Spencerville, by the Rev. Ward, Baptist minister of Auburn.

At the noon hour an elaborate dinner was served to the brothers, sisters, children and their families who gathered at the home of the happy couple in celebration of the occasion. Just before the dinner, fifty dollars in gold was presented by John R. Bishop in behalf of the entire family.

The following letters were received by Mr. and Mrs. Bishop on their anniversary:

Dear Mr. and Mrs. Bishop:

An event like you are celebrating only occurs occasionally. Fifty years of wedded life seems like a long, long period. At first the years pass slowly and then at middle life they begin to go faster until finally in later life the years slip by before we are aware of it.

My most intimate acquaintance with you began when we moved to St. Joe and Mr. Bishop was one of the business men of the village. Later we became associated in Church and Sunday School work. Often we have gone across the fields to attend services at the old school house on the corner where the Hollabaugh residence now stands. Later on the church in town was completed.

Many are the pleasant memories connected with the building of that church. There was a faithful band of loyal workers who were always ready to assist in any task that presented itself. None of them were more faithful and earnest than the friends whose golden judilee we celebrate today. Together with the good times we had at the church we often had suppers and entertainments at the Leighty hall across the way. Mr. Bishop was a leader in many of those movements and we often had a hearty laugh over his attempt to make an announcement or introduce a speaker. He invariably got mived up but managed to get out of it in some way. We might relate other interesting instances but time will not permit. As you look back over the past you can not help but feel that your lives have been a success and that God has been good to you. He has made you a blessing in your home, your church and your community; you have come to the eventide of a perfect day and the golden glory that floods your sky is the peace of God. You can not do otherwise than look back on your lives with the consciousness that God has been with you, that the Everlasting Arms have been beneath you and that the Divine benediction is upon you and you look forward with serene confidence to the dawning of that perfect day when faith shall be sight and it will be a noonday forever.

Your Friend,
M. E. Olds.

Dear Friends:

How sweet it seems, to dream the dreams
The lovelit dreams of yesterday;
To hear today, so glad and gay
The wedding bells of yesterday.

In memory it seems like yesterday, when in the midst of a snow storm, a young man, was seen driving by, in a red cutter, with sleighbell's jingling, on his way to claim his bride.

Since learning the date of this Golden Wedding Day, my thoughts have been busy reviewing some of the events which have happened since I first knew the Bishop family.

In memory I see the old home on the farm, where I so often visited, and hear the father's voice calling, "Melvin, get up for breakfast," and I can see the breakfast and almost taste it.

When we came along in later years, and all lived in St. Joe we were associated in church and Sunday School work, and sometimes gave concerts, in which our friend, Mr. Bishop, took the leading part in such classical music as, "My Father and Mother Were Irish" and "Where, Oh Where, Has My Little Dog Gone?" There were other occasions in which we mingled which were of a more serious nature. We enjoyed many good evangelistic meetings together and sometimes in sadness to lay away a dear friend or loved one. The years have dealt kindly with us, and on this Golden Wedding Day we have much for which to thank God and take courage, for

"As we grow old, God's bells of gold
More sweetly sound than yesterday;
Love never dies,--beyond the skies
We'll hear the bells of yesterday.

Your friend,
Ada C. Olds.

To Install Motor For Power

The St. Joe grist mill is going to open its doors and begin operation within a very few days. Monday a number of stockholders were at Fort Wayne and made the purchase of a 50 H. P. electric motor to be installed this week. This will supply one of the great needs of St. Joe and community. Chop grinding will be the first operation and the mill will be put in shape and if the demand is sufficient the flour mill will be operated. Stick by the mill and give it your patronage when you need its products.

Dr. H. N. Sherwood of Indianapolis, state superintendent of public instruction said Friday that his revision of the proposed department budget to provide an increase of from $5,000 to $7,000 in his salary was approved by the board of education at which Benjamin Burris, former superintendent, was present and voted for the increase. He said the increase places the office on a par with the attorney-general, auditor, secretary and treasurer of state in salary.

Choral Members Give Big Surprise Supper

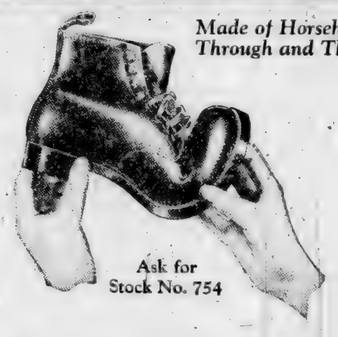
The members of the Choral Society met Monday evening at the home of Mr. and Mrs. C. A. Woodcox and tendered Mr. Woodcox, who is director, and Mrs. Lora E. Leighty, pianist, a fine surprise in appreciation of their most valued services to this organization, thus far in the year. A good crowd was present and all enjoyed the feast of good things. Both honored guests expressed their appreciation of the fine spirit which prompted this display of good will.

Don't forget the Farmers Institute Friday and Saturday.

Nine fatalities from railroad tragedies, including crossing accidents, occurred during 1924 in Noble county, according to an annual report given out by Coroner L. F. Frurip of Kendallville. There were twenty five deaths, resulting from suicide which necessitated the services of the Noble county coroner during the year.

WOLVERINE Comfort Shoe

Made of Horsehide Through and Through



Ask for Stock No. 754

A Shoe That Makes You Forget You Have Feet!

Here is a work shoe so soft and flexible that to wear it is like walking barefoot on velvet. But how it wears! It is all horsehide, double tanned to the softness of buckskin. The tops are of chocolate Wolverine Cordovan, made with almost no place to rip. The flexible single horsehide sole is Goodyear welt sewed. For shop or field work in summer there is no shoe quite so satisfactory. Once tried you'll never be without a pair. Comes in C, D and E widths.

Miles in Other Lands

Miles are not all of the same length. They vary in different lands. Thus, the Spanish, Polish and Dutch miles are three and a half times as long as the English mile, and the German mile is four times as long. They even seem to vary sometimes in one's own country, the last mile of a day's tramp being considerably longer than the first!

For your daughter's sake, use Red Cross Ball Blue in the laundry. She will then have that dainty, well-groomed appearance that girls admire.—Advertisement.

Has Walked Long Distance

Dennis Walker, a track walker at Norristown, Pa., has figured out that in 42 years that he has been walking tracks for railroads he has covered more than 180,000 miles. Mr. Walker does better than 12 miles a day and the exercise has kept him in good physical condition.

The occasional use of Roman Eye Balsam at night will prevent and relieve tired eyes and eye strain. 372 Pearl St., N. Y. Adv.

Town Gets Off Its Time

Glenville, the county seat in Gilmer county, West Virginia, got entirely off its time schedule recently when the janitor of the town hall forgot to get some one to watch the clock when he went on his vacation. Residents depend upon the striking of the clock for their time and no one else in town understood the intricacies of the old clock.

A woman's idea of frankness is to have some other woman say nice things about her.

Showing Wiring Diagram of Receiver Known as the Heteroflex. All Parts Except Tuning Transformer Are Standard Make.

By HENRY F. WORNER

Simplicity of tuning, elimination of extraneous noises and a minimum number of tuning controls are what the radio fan of today is looking for in the line of receiving sets. The set about to be described was designed and built by the writer, and if properly constructed will do all these things.

The hookup consists essentially of an untuned primary circuit, a secondary circuit shunted by a 23-plate (.0005 mfd.) variable condenser and a third circuit is made up of a .0005 mfd. condenser connected in series with a coil.

The wiring diagram of this receiver, which is known as the heteroflex, will be found accompanying this article. All parts except the tuning transformer are of standard make and may be purchased at any radio store.

For the details of construction of this transformer, known as the heteroformer, Figs. 1 and 2 will be self-explanatory. The tubing may be of some standard material, such as radion, or

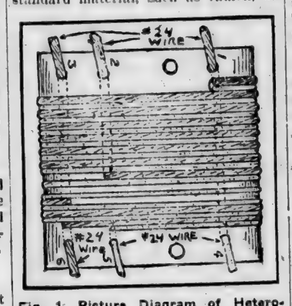

Fig. 1. Picture Diagram of Heteroformer.

any other compound. The holes are drilled exactly as shown in the diagram. All three inductances are wound on the same form in such a way that the largest winding acts as a spacing for the windings of the remaining two coils, which incidentally space the winding of the large coil.

Materials Needed.

The materials required for the construction of this coil are as follows:

An insulating tube three inches in diameter and three inches long.

One-half pound of No. 24 D. S. C. wire.

One-half pound of No. 26 D. S. C. wire.

In winding the coil both spools of wire are slipped over two twenty-penny nails driven into a board which acts as a support. The form is drilled for the terminals, three on each end, a quarter of an inch from the edge and about an inch or so apart. Two mounting holes also are drilled at each end for mounting the finished product to the condensers. Opposite each terminal hole a small hole is drilled a half-inch from the edge to accommodate the wire. The primary consists of nine turns of the No. 24 wire and is connected to the aerial and ground. The coil is on the right of the form. Next in order is the secondary, which is made up of 43 turns of No. 26 wire and is wound for a space of two inches across the form. The third coil is

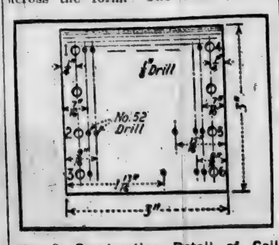

Fig. 2. Construction Detail of Coil Form.

wound in between the secondary coil and adjacent to the primary. It consists of 27 turns of No. 24 wire.

To wind the coil described place one end of the No. 24 wire in the small hole near the larger one labeled 1, in Fig. 1, and one end of the No. 26 wire through the small hole near 2. Commence winding both wires in the same direction side by side until 32 turns have been wound. A temporary tap is twisted into the No. 24 wire for subsequent cutting to form the primary and oscillatory windings. The winding is then continued until 43 turns of each wire are in place. Allow six inches of wire for future fastening.

Next cut the loop twisted into the No. 24 wire at the thirty-second turn and carefully unwind the two inner ends until opposite the small holes previously drilled for passing through the form. If these directions have been carefully followed there should now be two separate windings of No. 24 wire; one consisting of nine turns and another of 27. After passing all terminal wires to their respective positions fasten them permanently.

Use Low-Loss Condensers.

Condensers of the low loss variety should be used, as their efficiency will more than compensate their higher cost. By connecting the rotary plates to the terminals, labeled 2 and 5, the body capacity effects will be materially reduced and this will greatly facilitate the task of tuning in distant stations.

The amplifying transformers for this set should not have a higher ratio than 5:1, and better quality will be had if a 3:1 is used in the second step.

In laying out the apparatus on a panel it will be found best to have the two variable condensers mounted at the extreme left, followed in logical order by the detector, first and second stage tube equipment. A suggested size for the panel is 18 by 7 inches. This ought to be ample for all the apparatus used in this set.

The tuning of this receiver is reasonably simple. It is first necessary to bring the detector rheostat up to the point where self-oscillation begins, then set the third coil circuit somewhere between 0 and 50 degrees on the dial scale. Next turn the secondary condenser slowly till a "swish" is heard, which indicates a station. By carefully tuning the detector rheostat the speech will be heard. The dial settings will read approximately the same for best reception.

In conclusion the writer suggests that all leads be run as short and as direct as possible. Numerous right-angle bends are pretty to look at, but are inefficient for high frequency current paths and should be avoided as much as possible.—New York Herald.

Important Part Played by Your Telephone Jack

The telephone jack plays quite an important part in a radio receiver, during construction, and later on in service. The jack is used to cut the headphones or loud speaker in after any desired stage, and thereby enable the operator to control the volume. Some types of jacks, filament control jacks, are so constructed as to light up the tubes in the receiver when the plug is

Showing a Jack That Has a Number of Superior Points.

inserted, and to break the circuit when the plug is withdrawn.

In the new sub-panel method of set construction the jack should also support the shelf or panel. If the ordinary construction method R can also be used as a brace between the baseboard and the front panel.

When the phone plug is inserted in the jack, the headphones are placed in series with the plate of the last tube and the positive B battery and the rest of the circuit through the primary of the transformer is cut off. When the plug is withdrawn the circuit is again complete through the primary of the next transformer.

The jack is then always in the output circuit of the tube where the most current is handled, making it important that the best of insulation be used, and that the contact points, springs, and dimensions be as exacting as possible. If the insulating material is faulty a serious leakage of energy will take place.

The illustration shows a jack that embodies a number of superior points. The frame is made of heavy brass, nickel plated. The heavy metal frame will remain rigid and will support a sub-panel containing a lot of apparatus. The front of the jack and the base are at right angles to each other so that it can be used to support a sub-panel, baseboard, or be mounted on a table. For the reason that the jack can be mounted either on a panel or a table, it is called a pantab jack. Two holes are drilled and tapped in the base of the frame so that screws can be attached through the baseboard or panel directly to the base of the frame.

Largest Radio Horn

The largest radio reproducing instrument in the world is 11½ feet high and its mahogany bell contains more than 2,500 individual pieces of wood. The aluminum base is larger than an ordinary car wheel.

Charging Unit Is Simple to Build

May Be Placed in Cellar if Radio Set Is Located on Next Floor.

It is a comparatively simple matter for one to build a charging unit as shown. This outfit contains a place for the battery and charger and a panel for mounting the switch and the meters. The parts necessary for the construction of this unit are as follows:

One voltmeter.
One ammeter.
One double-pole, double throw knife switch.
One A battery charger.
One panel.
Two binding posts.

The meters and the switch should be mounted on the panel. Hard rubber or bakelite should be used for the panel material. The switch should be double-pole double-throw of the knife type. This may be obtained at any electrical store.

Recharging Panel and Battery Layout, Volt and Ammeter Connections.

It is advisable to use heavy insulated wire in connecting up the various parts. To make a neat job all connections should be made from the rear of the panel. The dimensions have not been given, because the reader will probably build the unit to fit the space that is available.

The switch is so wired that when thrown up, the storage battery will supply current to the radio set. When the battery runs down it is only necessary to throw the switch to the down position, which on the panel is toward the bottom. When the switch is in this position the charger is connected to the battery. The next operation is to turn on the light switch so that current will be furnished to the charger and in turn a charge will be delivered to the battery. When the battery has been properly charged the switch should be thrown up, connecting the battery to the set and the light switch should be turned off.

If one desires, the battery-charging outfit may be placed in the cellar, providing the radio set is located on the next floor. It is not advisable to run the battery leads for more than 25 feet. If the leads are over 10 feet at least No. 12 or 14 rubber-covered wire should be used for the connections.—New York Evening World.

Manufacturers Unable to Keep Up With Orders

By MAJOR HERBERT H. FROST

The radio industry right now is running away beyond all estimates and expectations. The manufacturers who have been longest in the field had prepared for a record-breaking season, but the season started earlier than was anticipated and few manufacturers are now able to keep their production up to their orders.

Radio apparatus is much better than it ever was. More persons are discovering that it does not require a college course in electrical engineering to make it possible to build their own radio receiving sets.

The most satisfactory feature of this increase in business is that it probably will be permanent. I do not look for the usual drop next summer. By that time the new higher power stations, authorized at the recent radio conference called in Washington by Secretary Hoover, will be in operation. With those high-power stations it will be possible to cut through the atmospheric disturbances which have tended to hamper summer reception.

Also, these high-power stations will make it possible for the farmer to receive his market and weather reports during the daylight hours. Heretofore such reception has been extremely difficult, and this condition kept the farmer from buying radio. At the present time probably not more than 15 per cent of all the American and Canadian farmers have receiving sets. The farmers have had a very prosperous year and I look for a large percentage of them to begin buying radio within the next few months.

Thousands of people also have been waiting before buying sets in the belief that there would be revolutionary changes in receiving sets. The best engineers in the industry are of the opinion that there will be no such change. Development will be gradual and there is no danger of a person buying a good set today and finding it obsolete a few weeks hence.

POINTS ON KEEPING WELL

LIME BURNS THE EYE

THE eye is one of the most sensitive organs of the body. Everyone knows how painful a speck of dust or a grain of sand in the eye can be. Any foreign body in the eye causes irritation, pain and congestion. When the foreign substance also causes burning of the eyeball, it is not only painful but dangerous to the eye and the eyesight.

One of the most dangerous substances which can get into the eye is quicklime. Such accidents are not uncommon among bricklayers, plasterers and others who handle this dangerous substance.

As Ramsay, a recognized authority says, "In case of quicklime, the severity of the burn is due to the fact that the lime usually remains for a considerable period in contact with the tissues and its powerful escharotic action has time to take effect. The slightest particle of it, entering the eye, gives rise to the most intense irritation, leading to spasmodic closure of the eyelids and the copious secretion of tears, a combination of circumstances which is most favorable in ordinary cases for the expulsion of a foreign body, but, which in the case of lime is most unfortunate, because by the firm closure of the eyelids the lime is pressed against the eyeball, while the tears, which originally wash out any foreign body, slack the lime, producing heat which increases the destruction of the eyeball. The lime, in burning leaves a crust on the eyeball made up of calcium carbonate, an insoluble opaque substance, which prevents the light from passing through the cornea and so interferes with vision."

In some cases in which small pieces of lime have gotten into the eye, vision has only been partially affected but, if any large amount of lime has come in contact with the eyeball, the result may be nearly complete loss of vision or even total blindness. Loss of sight is a serious misfortune to anyone, but to a working man it is a calamity and may convert an able-bodied tradesman into a dependent pauper.

The treatment of lime burns consists in the removal of the lime as soon as possible. This is best done by a stream of cold water. Many solutions have been used to neutralize and dissolve the lime. Milk, olive oil, sugar solutions and other substances have been tried with but little success. The best results have been gotten from neutral solutions of ammonium chloride. This substance neutralizes the lime, forming a soluble crust which can be dissolved and washed out. In order to do this properly, however, the eye must first be deadened by a cocain solution and the ammonium chloride must be freshly prepared. This makes it necessary for such treatment to be carried out by an experienced oculist.

In all cases of lime burns of the eye, the eye should be immediately washed out with cold water and the patient should be sent at once to a competent specialist. Such treatment may save the eyesight and prevent the victim from being crippled for life.

ARTHUR BRISBANE ON HEALTH

ARTHUR BRISBANE'S column "Today" is read by many thousands. In a single newspaper column he packs in a few words the latest and most important news. Then with a terse illuminating comment of his own, he makes his countless readers understand the real significance of the occurrence. When such a man talks about educating newspaper readers on health, he is worth listening to. When the Kings County Medical society held a meeting in Brooklyn recently to consider how the doctors could best tell the public how to keep well, they asked Mr. Brisbane to talk to them.

He said: "All publicity is exactly the same. The problem is to get an idea from one mind to another. Medical knowledge is to human life what engineering is to a mechanic or a knowledge of automobile construction is to an automobile owner. The difficulty is to get the knowledge of the expert into the mind of an untrained person in such a simple way that the reader will understand it and will use it so as to add to his life, usefulness and production; so that he may avoid disease and suffering. Long elaborate articles will not do this. Short practical articles each day, carrying a few facts, plainly and simply presented, are of far more value. If you talk to people about the value of oxygen and its importance to the human body, it makes no impression. But tell them that the human body can live 40 days without food, six days without water but only three minutes without air and they'll remember it."

Mr. Brisbane is right. Each of us has his own work and must master the knowledge he needs to do it well. We cannot all of us be specialists and no one can be a specialist in more than one or two subjects. We have to depend on others for knowledge of fields outside our own and we can only read and absorb a limited amount.

Few men can be expert anatomists and physiologists. But everyone can and should know what are the great essential facts about our bodies and how we can best care for them.

FREE To Housewives

Send us your name and we will send you, FREE and POSTPAID a 10 cent bottle of LIQUID VENEER. Wonderful for your daily dusting. Cleans, dusts and polishes with one sweep of your dust cloth. Renews pianos, furniture, woodwork, automobiles. Makes everything look like new. Makes dusting a pleasure.

Health in Argentina

Argentina's new national department of hygiene is using modern methods to teach health to the people. During the last year railroad cars supplied with a radio and a moving-picture outfit, with first-aid, disinfecting material, and with other health supplies were sent through the rural sections of the country. Lectures, posters and advertisements are also used to teach health.

Green's August Flower

The remedy with a record of fifty-eight years of surpassing excellence. All who suffer with nervous dyspepsia, sour stomach, constipation, indigestion, torpid liver, dizziness, headaches, coming-up of food, wind on stomach, palpitation and other indications of digestive disorder, will find GREEN'S AUGUST FLOWER an effective and efficient remedy. For fifty-eight years this medicine has been successfully used in millions of households all over the civilized world. Because of its merit and popularity GREEN'S AUGUST FLOWER is found today wherever medicines are sold. 30 and 90 cent bottles.—Adv.

Mother Dog's Love

Within a garage at Winslow, Ariz., when it was ignited by the explosion of a drum of gasoline, were eight puppies, new-born and helpless. The mother dog ran through the flames, to emerge with one of her offspring. She repeated this eight times, till her coat was burned from her back, her last trip completed with a scorched and dead puppy.

WOMAN SO ILL WASHED DISHES SITTING DOWN

Mrs. Ashcroft's Remarkable Recovery After Taking Lydia E. Pinkham's Vegetable Compound

Covington, Ky.—"I was so weak and nervous I could hardly do my housework as I could not stand because of the bearing-down pains in my back and abdomen. I sat down most of the time and did what I could do in that way—as washing dishes, etc. One day a book describing Lydia E. Pinkham's medicines was put in my mail-box. I saw how the Vegetable Compound had helped others so I gave it a trial. I had to take about a dozen bottles before I gained my strength but I certainly praise this medicine. Then I took Lydia E. Pinkham's Blood medicine for poor blood. I was cold all the time. I would be so cold I could hardly sit still and in the palms of my hands there would be drops of sweat. I also used the Sanative Wash and I recommend it also. You may publish this letter and I will gladly answer letters from women and advise my neighbors about these medicines."—Mrs. HARRY ASHCROFT, 632 Beech Avenue, Covington, Kentucky.

Club Bait for Ice Fishing

Those musky little club minnows are the fisherman's delight. Here you will obtain some of the right length (an inch and a half) that tapered thick to the tail and yet are as active as you could possibly want them. Some of these are almost black in color others of a lighter sheen, says Outing Magazine. There are also shiner minnows—but shiners taken from almost any water are exceedingly tender of flesh and are unable to stand any injury, so they are very poor as lures. The minnow that is the liveliest and that will hold on longest is the minnow that is most sought for and that is the chub.

To Honor Plow's Inventor

Probably the first cast-iron plow ever made in the world was fashioned by Jethrow Wood, a Moravia (N. Y.) farmer, in 1814. Wood failed to receive enough money for his idea to enable him to have a decent funeral but a historical society in the Finger lakes section of northwestern New York is arranging to mark the spot with a tablet.

CHAPTER III—Con

—19—

"You used to seem very of him," Gerald hazarded, "certainly looked after you jol at Monte Carlo."

"Do you mean," Myrtle calmly, "when he came to y in the Hotel de Paris, after per party?"

Gerald was completely tack. She had turned and was at him with her large, serious She was deliberately forcing up the memory of an episode wh had slurred over in his mind.

"I wasn't thinking of altogether," he replied, with tain rare awkwardness. "All te—"

"All the same, what, pleas insisted, after a moment's "I should like you to finish sentence."

"Well, from old Chris' point view, he was doing the chivalrou and all that," Gerald explainuously. "He must have thought, of, that I was going to be a perfect."

"Were you not?" she a

He was amazed at her co She, whose purity seemed rathe reuse with her larger knowlof the world, seemed to be fordim to speak of those very ugly its.

"I am afraid that I car what would have happened," mitted. "I was very much attrac you, and you hadn't the faintes what it all meant. So, you see,lo owe him a very great debt ritude, Myrtle."

"I do not think so," she d.

Gerald was more startlin ever. Her deliberate speech seep bring to him almost a challenge

"You are about the on son in the world who would sat," he observed.

"Perhaps so," she adm "Perhaps, too, I am the only oo is in a position to know."

Gerald was poignantly erested. He looked down at her palm and serious. There was no acolor in her cheeks, no sign of mfusion.

"You mean that you arry that Christopher interfered? at you would have risked my feing—all that I ought to have reniced?"

"I am sorry that Chriser interfered," she said distinctl At that moment I loved you, an did not know that it was wicked fe to love you. If afterward you got tired of me, as you would haveo, then I should have killed myselen I understood. But I shouldve been happy first."

"But aren't you happow?" he asked.

"I am very contente she answered, "and I am very, grateful. I think that no oné in tworld has ever received such wonful kindness as I have. But happh it seems to me, is a thing apart. s a great and a wonderful and a gift. I do not think that very ly people possess it, although theink they do. I should have possed it, for however short a time, Christopher had not interfered."

Gerald was staggered, seemed to him that this girl, walkin sedately by his side, had suddenlecome his monitress; was trying explain to him, as though he were apil, great and elemental things.

"Myrtle," he declared, in surprise me very much. I never amed that you would feel like thatSupposing, then I were to say to youome away from here with me tonow; come up to London and be ncompanion there?"

"You could not do th" she said simply. "You could notffer me so terrible and so ugly an isit. Surely you understand that th I did not know that you did not lo me?"

"I see," he murmured

"I loved you," she went on, her eyes lifted a little to the intering boughs of the trees under whi they were passing, "when you camelke a prince to the gate where I stoodaking with terror, and laughed at y fears. I loved you when you poind to the end of the road and promise to take me there. I loved you in the first few moments, and just as it emed to me then that I had loved yobefore I was born, so I know that I all love you after I die. That is ju the kind of wisdom which even ildren have. Where I was simple andignorant was that I did not understand that love could be one-sided. I thght that love belonged to two people. Now I know very differently."

"Myrtle—" he begat

She checked him gravely.

"Today," she continued, "there is more for me to say han for you, because I am rather glad that you should understand. Only ou must not talk to me about Christopher. I am very sorry, but I think hat he is foolish. I was a peasant child and I knew nothing. But a wie, clever man like Christopher should understand. It seems to me absurd that he should think it possible that I might love him. It is so absurd that I do not believe his love is a real thing. I think that he will soon forget."

"What is to become of you, then, Myrtle?" Gerald demanded.

She looked up at him with a smile.

"What happens to all those others," she asked, "who go through life as I shall go through it? They are very content. Very many pleasant things come their way. They are spared a great deal of suffering. So it will be with me. Now that we have had this talk Gerald, I can speak to you, perhaps, a little more frankly. I watch you so closely that I see things which others might not notice. You were without actual happiness before because you did not understand what happiness was. Now you are unhappy. That is so sad."

"Yes," Gerald admitted, "I am unhappy."

"There is some one for whom you care?"

He had no idea of evading the issue. He replied at once, simply and directly.

"It is Mademoiselle de Poniere, whom I met at Monte Carlo, and who used to go out with me in the car. I have met her again."

"And yet you are not happy?"

"I am not happy," Gerald acknowledged, "because I have not the least idea whether she cares for me or not. She is very mysterious. She has troubles which she will not let me share."

It seemed to him that Myrtle smiled. They were out of the wood now and crossing the park.

"All that you tell me is very strange," she confessed. "I do not pretend to understand it. One hears, Gerald, that in your way you have cared for very many women. That is rather a pity, but, if it is true, you perhaps do not know your own mind. Are you sure that you love this young lady?"

"I only know that she makes me feel and suffer as no one else in the world has ever done," he answered a little drearily.

They were approaching the house now. Myrtle laid her fingers timidly upon his arm.

"It seems to me, Gerald," she said, with a rather pathetic smile, "that we have changed roles. You asked me to

"It Is of Your Father, Why Is He So Troubled About You?"

walk home with you that you might talk to me about Christopher, and now we have finished all that and it is your own affairs only which remain."

"There is nothing about my affairs which even lends itself to discussion," Gerald sighed.

"Not at present," Myrtle assented, "but in the end there must come happiness, because where there is love there is always happiness. May I say one word more?"

"Go ahead," he answered.

"It is of your father. Why is he so troubled about you?"

Gerald frowned.

"I am afraid, Myrtle," he said, "that that is a matter which I cannot altogether explain to you."

"Perhaps you are right," she admitted. "I must dare to say this, though, because, you see, I am with your father many hours in the day, and he is not so strong as he was and so he shows his mind more easily. Something about you is worrying him. That is not right, is it?"

Gerald was silent for a moment. A telegraph boy, who had been riding down the drive which curved through the park, seeing them, had dismounted from his bicycle and was crossing the turf toward them with an orange-colored envelope in his hand. Gerald took it from him, tore it open, and read the few lines which it contained. Then he gave the boy a coin and dismissed him. He looked once more at the message.

"It is good news?" Myrtle inquired gravely.

"Good enough," Gerald answered. "I have been living in a miserable state of uncertainty. Now it will all be cleared up."

"There will be no more trouble, then?"

"I cannot say that," he replied, "but at least there will be action. Next week will see the beginning of the elucidation. I leave for Russia on Tuesday."

* * * * * * *

The change in Pauline's manner, when Gerald was ushered by an untidy-looking waiter into her sitting room on the following afternoon, was almost electrifying. In place of her usual languid greeting, she sprang lightly to her feet and gave him both her hands. The slight sullenness had all gone from her face. There was no living person just then who would not have found her beautiful.

"You received my telegram?" she demanded eagerly.

"And I came to you at once," was the prompt reply.

She drew him down to her side upon the sofa. Her manner and tone displayed an animation entirely new to her.

"Reusser returned the night before last," she said. "He seems to have had a comparatively easy journey, and he reports conditions over there very much more lenient in many ways. He had no difficulty in landing or in making his way wherever he wished to go. On the other hand, the stories he brings back as to the distress and misery everywhere are simply shocking. The country bleeds to death. There are few trains running, no order, no discipline; despotic and arbitrary police surveillance everywhere. But there is also corruption. People, especially the official classes, are looking everywhere for the means to live. A merchant who was imprisoned only a month or so ago on a charge of murder, to which he actually pleaded 'guilty,' was set free the day before Reusser left. It cost him little more than five thousand roubles."

"Did this man Reusser discover where your brother was?" Gerald asked.

"For ten thousand roubles," she answered, "he could have searched every police register in Russia. Paul is at the Fortress of St. Marian, at a small town called Sokar, about three hundred miles south of Petrograd. It is a bad journey, of course, but the place is accessible. The governor of the prison is a Major Krossneys. He is half an Austrian and half a Pole. When he is drunk he is reckless. He is to be managed with ease, but always it is to be remembered that Paul is his chief prisoner. If Paul were to escape," she went on thoughtfully, "he would, without a doubt, lose his post, certainly his promotion; he might even have to flee the country. To buy him would probably cost a sum of money sufficient to support him for the rest of his life. There are still people who would tear Paul to pieces if they knew who he was."

"This Major Krossneys," Gerald inquired, "does he speak French?"

"Fortunately, yes," was the eager assent. "Tell me, Gerald, what do you think of it all?"

"Just this," he replied. "I shall sail on Tuesday. There is a steamer from Hull. In less than two months I will bring your brother back."

Her eyes shone. She seemed to be trembling in every limb. There was ecstasy in her face, passion on her quivering lips. Yet even as he drew a little nearer to her, Gerald was dreamily conscious that she had almost forgotten his presence. It was the thought of her brother which had wrought this transformation.

"If I bring him back to you, Pauline—" he began.

She suddenly seized him by the shoulders.

"Bring him back!" she interrupted passionately. "I make no bargain. I give no promise—you should know better than to ask for any such. All that I can tell you is that I would give my soul to see him again."

Gerald clenched his hands almost in pain.

"Pauline," he pleaded, "for heaven's sake, soften just a little. You keep me all the time in torment. Paul shall be set free—I swear it. If it costs me my fortune, my liberty, even my life he shall be set free. But I'm doing it for love of you. My love is choking me. Soften for one moment. Remember what you will be to me some day. Give me at least a memory to take with me."

She laid her hand upon his. It seemed to him that it was as cold as the snows. Her eyes looked into his. They were soft and beautiful, full of color and sweetness, yet they looked through him as though he were a denizen of some other world.

(TO BE CONTINUED.)

Right and Left Hands

It is a fact not generally known that the fingers of the right hand move much more quickly than those of the left. They are also much more accurate, says London Tit-Bits.

Recent experiments have also proved that the ring finger of the left hand can work more quickly if it is moving in conjunction with the right-hand forefinger. Any two fingers working together, indeed, move considerably faster than one finger working by itself.

The more a person uses his or her fingers, the more adept they become. A pianist or typist will find that, in time the left hand becomes almost as skilful as the right

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Trackless Trolleys

Both England and China, having giving the trackless trolley busses a thorough test, declare them to be a success. They have a capacity equal to that of single-decked motor coaches, and cheaper operation cost is claimed for them as against the gasoline-driven type. Also, they can compete successfully with surface railway lines. The trolley busses have a radius of almost fifteen feet on either side of the wires, including extension collectors.

Truth, crushed to earth, will rise again; and a lie will often do the same.

A prudent traveler never disparages his own country.

All Furnished

"Oh, Mr. Jones," said Miss Dash, "I saw an advertisement saying that you could furnish your home by soap premiums. Every time you buy a piece of soap you get a furniture certificate. I am going to be married, and do you think I could get all my furniture that way?"

"Why, yes, Miss Dash," replied Mr. Jones. "I had a friend who got all the furniture for a six-room house that way. The company only had to send him furniture for one room, the other five rooms were full of soap."—Judge.

Enthusiasm is to a man what powder is to a bullet.

Hope Hampton

This is the very latest picture of handsome Hope Hampton, the "movie" star. However, she is not posing for a "movie" shot—just as a fashion model—for she is wearing one of the latest "scarab" hats—"in turquoise blue and brown, which she brought over from Europe recently"—so the fashion note says.

The Why of Superstitions

By H. IRVING KING

REVENGE ON BACKBITERS

IF YOU have reason to believe that people are slandering you bite the corner of your apron and the backbiters will bite their tongues. This is for women. Another way, applicable to both sexes, is to pinch your ear and the person who is "talking about you" will bite his tongue. These charms work, of course, by sympathetic magic—like causes like. Your apron is a substitute of the slanderous tongue of your traducer: you bite it and the slanderer, by reason of the magic sympathy set up, responds by doing actually what you have done immitatively. Pinching the ear is a good simulation of biting the tongue and reacts upon the backbiter in the desired manner. It is, moreover an especially appropriate act of simulation in such cases because of the connection between tingling ears and "people talking about you"—a superstition which has already been dealt with in this series. These superstitions are widespread as are all the superstitions connected with sympathetic magic. It is worthy of note that while the doctrine of sympathetic magic was one of the earliest results of the efforts of primitive man to establish a relation between cause and effect so a belief in that same magic is the most universal of superstitions today.

A LINE O' CHEER

By John Kendrick Bangs.

OBJECTIVES

SOME folks would go
To Tokyo,
And some to far Peru;
Some to Berlin,
or old Pekin,
And some to Timbuctoo.

Some travelers seek
The Arctic bleak,
And others quaint Japan,
And some there be
Who think Paree
The fairest goal of man—

And I admit
There's much in it—
I, too, rejoice to roam;
But I opine
These feet of mine
Are happiest set for—HOME!

Complete Review Of 1924 Appears Today

What were the important events of 1924?

On another page of this issue of The News you will find the complete story of the year just ended. High spots, in national and international affairs, achievments in industry and labor, disasters, and a complete necrology of world-famous men and women—all this and more in the special feature we present today.

If you have a scrap book you will want to clip out the entire article. Turn to it now, and remember it is but one of the features of your newspaper. The News.

HERE AND THERE

F. M. Monroe is confined to his bed with pneumonia. "Dick" held on to his duties as agent a few days too long before asking for relief. Friday Mr. Winter, relief agent came to care for the office It is hoped that he will soon be out again.

Feed Our Birds Is Necssary for their Preservation.

Feed the birds is the cry of everyone and this has come about by the heavy coating of ice and snow that has been on for so long, making it almost impossible for the song and game birds to get to the ground. Nearly all farmers are feeding the quail but still there are other birds needing attention. Hunters can do a good turn by feeding in places where the birds are roosting. The vocational department of our schools is laying stress upon this, to its boys, urging them to do this one act of kindness to birds when they need help. We can't get along without the birds, even though some of them might be considered pests. Feed the birds.

Christian Church Notes

Bible School at 9:30, communion service immediately following. Preaching by the pastor Sunday evening.

Services will again be held in the church after a period of six weeks since the fire at the church.

The Martha Society will meet with Mrs. Eva Sheffer Thursday afternoon. All members are urged to be present as it will be election of officers.

Oct. 28—James B

JANUARY

L 911
0017

INDIANA BREVITIES

Indianapolis.—George N. Mannfeld, chief of the fish and game division of the state observation department here, called attention that December 19 was the last day of the open season for the lawful shooting of any species of wild game in this state other than rabbits and waterfowl. Rabbits can be lawfully killed up to and including January 9, 1925, but the season closes on waterfowl after December 31. The bag limit on wild duck is 15 a day and on geese, 8 a day. Mr. Mannfeld pointed out that the end of the lawful shooting season on wild game does not mean that fur-bearing animals, such as skunk, opossum, fox, raccoon, muskrat, etc., cannot be killed after December 20. Fur-bearers are not classed as wild game and under Indiana laws may be trapped and killed up to and including February 10.

Evansville.—The grave of James Bethel Greshem, one of the three first Americans to fall in the line of battle after the entrance of the United States in the World war, marked only by a glass fruit jar, is soon to be marked with a government marker, the slab having been sent out, according to a notification received by Greshem's mother, Mrs. Alice Greshem Dodd. Patriotic organizations of the city will likely join in a befitting service at the placing of the marker over the Greshem grave.

Muncie.—Mrs. Nancy J. Wilson, who died a year ago, left an estate of several thousand dollars and included in her bequests a trust fund of $5,000 which she turned over to a trust company to be invested for the benefit of the unfortunate children of Muncie. Interest on the investment for the last year amounted to $300, and the trust company took 15 boys and girls, recommended by public school principals, to a store and spent $10 for clothing for each child. The owners of the store took no profits on the garments sold.

Anderson.—Mrs. William Gladback of Fisherburg, west of here, has a land grant dated 1817, bearing the signature of President James Monroe, in which 160 acres of ground on the present site of Quincy, Ill., was granted her grandfather, Thomas Baxter. Mrs. Gladback may use the historic land grant as a basis for a claim to a share of the valuable property. She claims that when the ground was transferred her grandmother did not sign the deed.

Terre Haute.—Floyd Black, age twenty-eight, said by police to have a long police record, was captured here after a revolver fight in which he was so severely wounded that he was immediately taken to a hospital in an effort to save his life. Black has been hunted five days as an alleged accomplice to his brother, Lester, already under arrest, in an attempted wrecking of the Dixie flyer, crack C. & E. I. train.

Indianapolis.—E. R. Root, Medina, Ohio, one of the speakers on the first day's program of the annual Indiana Beekeepers' association convention at the statehouse, congratulated the beekeepers of Indiana on the support they receive from the state, and asserted that Indiana has the best law for control of disease among bees and the best system of inspection in the United States.

Noblesville.—Edwin B. Murphy, sixty-six years old, nationally known as a poultry fancier, died in a hospital at St. Augustine, Fla., according to a message received here by relatives. Mr. and Mrs. Murphy lived in the southwestern part of Hamilton county and had gone to Florida for the winter.

Columbia City.—The sleet storm has caused thousands of dollars' worth of damage in Whitley county, hundreds of telephone poles being down, while the weight of the ice has tangled scores of branch lines, and demoralized both local and toll service. It will take weeks to remedy the conditions.

Indianapolis.—The state board of tax commissioners refused to approve bond issues totaling $71,000 by Washington township for improvement of two roads on the ground that the cost is excessive. The roads were the Elmer Trester and Layman Graham highways.

Chicago.—Edgar F. Hiatt, former president of the Dickinson Trust company of Richmond, must serve five years in the federal penitentiary at Atlanta, Ga., for defalcations from funds of the bank, it was decided in the Federal Court of Appeals at Chicago.

Henryville.—An epidemic of hydrophobia among horses and mules in this vicinity has resulted in the infection of three men and has become general enough to spread alarm among stock men of this district.

Noblesville.—John Hare, seventy-three years old, local machinist, committed suicide by shooting himself.

Lafayette.—Announcement has been made by President Probst of the C., A. & S. railroad of the decision to erect the company's railway shops in Attica. A plot of ground, the property of William H. Young, has been leased for the site of the plant. Work on the project is to be rushed in order to have the structure for use soon.

Hammond.—A loss estimated at $100,000 was done to the United Chemical Organic Products company of Calumet City by a fire which broke out in the sulphuric acid towers in the plant.

Only Male Voters of State to Be Counted

Indianapolis. — Following a conference with Gov. Emmett F. Branch, Frederick E. Schortemeier, secretary of state, and U. S. Lesh, attorney general, Lewis S. Bowman, auditor of state, announced that the women voters of the state would not be included in the enumeration that must be made of state voters next year to serve as the basis for the apportionment of state legislators in 1927. Only male voters including both white and colored, will be included in the enumeration, he said. The apportionment will be made by the state legislature.

Considerable question had arisen about the matter and Mr. Bowman sought the counsel of other state officials.

The Constitution and state laws provide that male voters shall be counted each six years to form a basis for the reapportionment. Since the federal Constitution has been amended to permit women to vote no step has been taken to include women voters in the Indiana enumeration for reapportionment of legislators.

Indiana has 100 members of the house of representatives and 50 of the senate, which will be reapportioned among the voters in 1927.

Indianapolis.—In refusing to approve of a contract for the sale of the East Chicago and Indiana Harbor Water company, a property owned by C. H. Geist of Philadelphia, to the city of East Chicago for $1,998,000, unless the company in ten days transfers to the city $43,165.69, the balance in the depreciation fund, without increasing the contract purchase price, the public service commission at Indianapolis for the second time in a few weeks has declared its determination not to permit public utilities to capitalize depreciation funds.

Greencastle. — Judge James P. Hughes of the Putnam circuit court in this city, dismissed the criminal cases against the 20 Wabash students who were charged with malicious trespass by a grand jury indictment for painting the DePauw campus November 20. Judge Hughes gave them a lecture and said the cases were dismissed because they had attempted to make good the damages. They paid approximately one-third of the estimated cost of the damage, which was estimated at $5,000.

Indianapolis.—Members of the state board of tax commissioners are preparing to direct all assessing authorities in the state to make an assessment in 1925 of all real estate in Indiana, as well as personal property. The tax board officials said at Indianapolis that such an assessment would be made if they had assurances from the legislature that it would not be necessary for another assessment to be made in 1926, the year when such an assessment would be made ordinarily under the tax law.

Evansville.—Judge Joel E. Williamson, who is very ill, and his wife, also ill, are being rushed home from Paris, France, where they have been visiting their son-in-law, H. Bedford-Jones, Evansville novelist, since last June. Because of the judge's age, his condition is considered critical, and it was his request that he be brought home so that if death came he would be among old friends.

Rockville.—A force of workmen restored normal heating conditions at the State Tuberculosis hospital near here, in order that the 173 patients of the institution might not suffer from the extreme cold. The hospital's heating plant was put out of commission when the pipe in the main water line between the pumping station and the boiler was broken.

Terre Haute.—In a new confession made to W. B. Sloan, chief of police of the Chicago & Eastern Illinois railroad, Lester Black, age eighteen, held in jail here on a charge of attempting to derail the Dixie Flyer for the purpose of robbery, disclosed a plot of he and his brother, Floyd Black, to wreck the train and then rob the dead and injured passengers on the flyer.

Delphi.—The waters of the Tippecanoe river broke through the cofferdam protecting the work under construction at Oakdale and flooded the entire river bed. All machinery that was in the path of the waters was removed before the water reached it.

Brazil.—Robert Scalf, age forty-two, who recently moved here from Kentucky, was found guilty of burglary in the Clay circuit court and was sentenced to the state prison for a term of 2 to 14 years.

Scipio.—The grand jury of Jennings county returned an indictment of first degree murder against Mark Hammond, who lives near this place. Hammond is charged with the murder of Charles McNicholas in July.

Fort Wayne.—Four small children are dead as a result of a fire which destroyed the home of Glen Dunlap, four miles south of Fort Wayne. The home was burned to the ground. The dead are: Von Glen Dunlap, four years old; Vera Aline Dunlap, three; Norman Dunlap, seven months old; June Dunlap, two years old.

Mishawaka.—In an effort to check the wave of crime, C. B. Hartwick, chief of police, instructed members of the police department to shoot to kill every time a person attempted to resist arrest by fleeing or fighting.

IMPROVED UNIFORM INTERNATIONAL Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for January 4

CHRIST'S TRIUMPHAL ENTRY

LESSON TEXT—Luke 19:29-44.

GOLDEN TEXT—"Blessed be the King that cometh in the name of the Lord."—Luke 19:38.

PRIMARY TOPIC—A Great Crowd Praising Jesus.

JUNIOR TOPIC — The Triumphal Entry.

INTERMEDIATE AND SENIOR TOPIC—Making Christ Our King.

YOUNG PEOPLE AND ADULT TOPIC—The Kingship of Christ.

The title given this lesson is somewhat misleading. Strictly speaking, this was far from a triumphal entry. It was rather the official presentation of the King of the Jewish nation. Back of the cry, "hosanna," the awful word, "crucify" was uttered by the same persons who cried "hosanna." Though they were utterly blind to the fact, God was about to carry out His plan of hosanna, which means "save now," through the crucifixion of the Son of God.

I. The Presentation (vv. 29-34).

1. Sending the Disciples for the Ass (vv. 29-31). He told them just where to go to find it and told them how to answer the inquiry of the one who owned it. This shows how perfectly the Lord knows all our ways. He knows our whereabouts by day and night. He even knows our thoughts. He uses unlikely means and insignificant things in the accomplishment of His purpose.

2. The Fulfillment of Prophecy (Matt. 21:4, 5). Some five hundred years before Zechariah had predicted this event. Christ's entry into Jerusalem was an exact fulfillment of this prediction. This is highly instructive to those who would understand the prophecies as yet unfulfilled. Since the prediction of his first coming was literally fulfilled, we can be assured that the prophecy of His second coming will be likewise fulfilled. The first is established beyond a doubt. The second we should as heartily believe. The prediction of Zechariah 14:3-11 will be just as literally fulfilled as that of Zechariah 9:9.

3. Obedience of the Disciples (vv. 32-34). Though the request may have seemed strange, and even unreasonable, they fully obeyed. The true disciple will render glad obedience to the Lord no matter how strange His commands may seem. Obedience to that only which seems reasonable is not obedience at all. May we prove that we are real disciples!

II. The Entry of the King (vv. 35-38).

1. The Disciples Set Jesus Upon the Ass (v. 35). This act of putting their garments upon the ass and setting Jesus upon it showed that they recognized Him as their King (II Kings 9:13).

2. Acclaimed as King by the Disciples (vv. 36-38). Some spread their garments in the way. Others, perhaps having no garments to spare, cut down branches of trees and strewed them in His way, which was no doubt just as acceptable to Him. They praised God for all the mighty works which they had seen and cried out, "Blessed is the King that cometh in the name of the Lord."

III. The Critical Pharisees (vv. 39, 40).

Although swept along by the demonstration of the multitude they deemed it prudent to ask the Lord to rebuke the disciples, as such behavior might be interpreted by the Roman government as an insurrection. To their demand Jesus replied that such homage was not only fitting but necessary. He declared that if the multitude were silent, the very stones would cry out in adoration of him.

IV. The King Rejected (vv. 41-44).

Christ knew what awaited Him in Jerusalem. Though surrounded by loyal hearts, He knew that the rulers of the nations had no heart for Him. His coming trial and death loomed before Him so that He wept over Jerusalem. He knew that awful days awaited it and that loyal hearts would gladly welcome Him if they only knew. He showed that their inability to see Him as their King and Savior would result in bringing upon them the awful horrors of the destruction of their city. He entered the city and rebuked the rulers for allowing the house of God to become degraded by carrying on traffic for gain. The cleansing of the temple only increased their hatred and opposition to Him.

Obey

Obey the voice of God in the Book, the voice of God in your heart, the voice of God as He speaks through circumstances, and His servants obey.—Echoes.

In the Sight of God

The self-important are of no importance in the sight of God.—The Living Word.

Want of Self Reliance

Discontent is the want of self-reliance—it is infirmity of will.—Christian Evangelist.

Smothered Thoughts

Sometimes little thoughts are smothered to death beneath a lot of ponderous sentences.—American Evangelist.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1924, Western Newspaper Union.)

Where "The Man Without a Country" Originated.

Fort Adams, in Wilkinson county Mississippi, deserves a place among the historic forts of the United States because it gave to us the greatest story on patriotism ever written—Edward Everett Hale's "The Man Without a Country." It was from a letter written by Gen. James Wilkinson, commander in chief of the American army in the early days of the republic, at Fort Adams, that Hale got the name Philip Nolan for the hero of his story and many of the scenes in the book are laid in and about Fort Adams.

Although Hale's story is purely fiction, there was a real Philip Nolan, who was in fact a "man without a country" but not, as Hale wrote it, because he cursed the name of his native land. This real Philip Nolan was an Irish political refugee who had not been in his adopted country long before he was joining Aaron Burr in a conspiracy against it and eventually was killed by the Spanish governor of Texas.

The site of Fort Adams has long been a historic one. The first white man to visit it was Father Davion, a Frenchman, who erected a cross there and called it Roche a Davion. It was later called Loftus Heights, after a British major who with 400 men was ambushed there by the Tunica Indians in 1764.

During President John Adams' administration the government bought this site from Francis Jones, who held it under a Spanish grant, and built there Fort Adams, named in honor of the President. There Lieut. Meriweather Lewis was stationed for a while before going to the capital to become President Jefferson's secretary and from there Governor Claiborne and General Wilkinson started for New Orleans for the formal ceremony of receiving the Louisiana Purchase.

In its early years Fort Adams was one of the most important military posts in the Middle West. It was at this fort that General Wilkinson negotiated with the Indians for opening a road from the fort through Natchez to Nashville and that part of the road between Natchez and Nashville became the famous "Natchez Trace."

There is a good story told about one of General Wilkinson's subordinates at the fort. The general had lost his queue and ordered all of his officers to have theirs cut off. Maj. Richard Butler not only refused, but told Doctor Carmichael, the post surgeon, that in case of his death he wished to have a hole bored in his coffin and his queue pulled through it so that the general would know that he defied him even in death!

Grant's "Unconditional Surrender" Note.

"No terms except an unconditional and immediate surrender can be accepted. I propose to move immediately upon your works." That laconic dispatch is famous in American history. Written to Gen. Simon Bolivar Buckner, the Confederate commander at Fort Donelson, Tenn., by Gen. U. S. Grant on February 16, 1862, it gave to the Union commander the nickname of "Unconditional Surrender" Grant.

At the opening of the Civil war the Confederates built Fort Donelson on the Cumberland river and Fort Henry on the Tennessee to protect Nashville, the very heart of the Confederacy, from an invasion from the north. Erected on a hill 120 feet above the river, surrounded by two and a half miles of rifle pits and protected on the river side by three great batteries, Fort Donelson with its garrison of 18,000 men was one of the most important posts in the Mississippi valley.

On February 6 Fort Henry fell before the cannon of Commodore Foote's flotilla of gunboats, but when that commander moved to attack Fort Donelson he was speedily repulsed. Meanwhile General Grant had moved against Donelson and for three days a fierce battle raged during which each army lost more than 2,000 men. On February 15 the garrison tried to cut its way through Grant's lines but was driven back into its stronghold.

The next day Buckner sent a message under a white flag asking Grant what terms he would give if the Confederates gave up the fort. Grant's historic reply was the result. When Fort Donelson surrendered the first great Union victory of the war was won and 14,500 grayjackets marched out and laid down their arms, the largest number of men ever captured up to that time in any battle on the American continent. The victors also took possession of 57 pieces of artillery, although one great prize in the persons of Generals Floyd, Pillow and Nathan Bedford Forrest, the dashing cavalry leader, slipped through their hands when these officers escaped across the river.

The surrender of Nashville and Columbus soon followed. Kentucky and Tennessee were now in the hands of the Union forces and Ulysses S. Grant had started on the military career that ended triumphantly at Appomattox.

ROAD BUILDING

CONCRETE PAVEMENT EASY TO CONSTRUCT

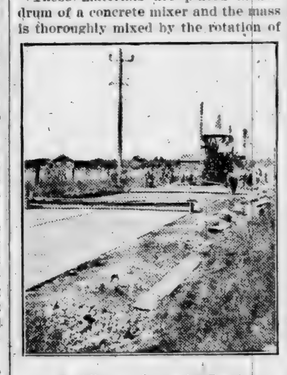
Building a concrete street pavement is a simple operation. Just four materials enter into a concrete pavement—portland cement, sand, stone or pebble and water. These, in certain definite proportions—usually one part cement, two parts sand and three parts stone, with water to produce the required consistency—plus workmanship—make concrete pavement. The cement is manufactured in all parts of the country and is probably the most thoroughly standardized building material on the American market.

Sand is usually found locally. For use in a concrete pavement, it should be clean; that is, it should be free from dust, clay chips and roots of any kind or vegetable matter. The grains should not be coated with any material, such as clay. Each particle should be hard and clean, so that the cement mortar when hardened may hold it in a firm grip.

Stone may be either in the form of pebbles or may be from a stone quarry and broken to proper size in a mechanical crusher. Whatever the form the particles should be hard, clean and tough.

Water must be clean and pure. The amount used in a concrete mixture for street pavement should be limited to that which will just yield a plastic mixture—more than this makes inferior concrete. A safe proportion is not over six gallons per sack of cement.

These materials are placed in the drum of a concrete mixer and the mass is thoroughly mixed by the rotation of



Building a Concrete Road.

the drum, and by blades or paddles inside the drum which assists in "folding" the mass (called a "batch") back and forth, coating every particle of sand and stone with the wet cement. This mixing must continue for at least a full minute after all the materials are in the drum. The batch is then discharged upon the prepared foundation, given the required surface contour with a strikeboard, and rolled with a light metal roller to squeeze out surplus water and to compact the concrete to a dense mass. The final surface finish is usually given by drawing a canvas belt back and forth across the full width of the pavement, thus forming a true, dense surface and one having the skid-proof texture characteristic of concrete. Chemical action between the cement and water causes the concrete to harden, and to make this hardening thorough and uniform the concrete is protected from hot sun and wind with canvas to prevent the water in it from evaporating. Concrete does not harden by drying. So if the concrete is allowed to lose water by evaporation, the cement mixture will be robbed of water essential to the chemical process mentioned. This hardening process goes on rapidly for several days, so the pavement is kept sprinkled with enough water to keep the surface moist for ten days after laying, unless the weather is cool and damp enough to prevent evaporation. Then it may be allowed to continue hardening without sprinkling for ten days or two weeks more, when it will be ready for any traffic to which the streets are subjected.

Road Is Physical Sign to Determine Character

The road is the physical sign or symbol by which you will best understand any age or people. If they have no roads, they are savages; for the road is a creation of man and type of civilized society. If you wish to know whether society is stagnant, learning scholastic, religion a dead formality, you may learn something by going into universities and libraries, something also that is being done on cathedrals or churches or in them, but quite as much by looking at the roads, for if there is any motion in society, the road, which is the symbol of motion, will indicate the fact.—Bushnell.

Big Road Building Plans

Improved roads are now being built in the United States at the rate of forty thousand miles a year. Under the federal highway act of 1921, which is administered by the Department of Agriculture through its bureau of public roads, a program has been established which will give the country a connected system of main highways. Practically every city of five thousand population or more will lie directly on the system and all will be connected with it by improved roads.

A Few Little Smiles

HIS REAL PROBLEM

The father promised he would do what he could for him, but with certain limitations as to the providing of money.

"But," said he, "I hope you will understand that you will never get on in the world unless you adopt a more rigid code of morals and the purpose to keep straight."

"Rigidity sounds very well, dad," agreed the youth, "but I wish you'd make clear to me how a chap's to keep straight while he's trying to make both ends meet."

ONLY BIG MONEY TALKS

"So you don't think money talks much?"

"No; that is, not till it gets big."

Imperfect Job

Of many a self-made man we know
There can be little doubt;
In some respects he'd be improved
Had he given the contract out.

They All Do

Mr. Bacon—Did you hear those measly roosters crowing this morning early?

Mrs. Bacon—Yes, dear.

Mr. Bacon—I wonder what on earth they want to do that for?

Mrs. Bacon—Why, don't you remember, dear, you got up one morning early, and you crowed about it for a week?—The Watchword (Dayton, Ohio).

Safety First

An Englishman was teaching a Scottish business friend how to play golf. On the first tee, he poured out a copious stream of instructions and wound up with the fine old maxim:

"But remember, Sandy, whatever you do, keep your eye on the ball."

"I will that," said Sandy, who had just paid a crown for it. "I dinna trust that caddie o' mine at all."

Fair Play

Jack—Say, Bill. We've been in hard luck, ain't we? I'll tell you wot we'll do. You insure your life in my favor for $1,000 and I'll do the same for you.

Bill—Wot; wot good'll that do us?

Jack—Why, we'll jus' load up our guns, step off 30 paces and see who gets the money.

A Long Toss-Up

At a golf club one Sunday morning a member turned up late. Asked why, he said it was really a toss-up whether he should come there that morning or go to church.

"And I had to toss up fifteen times," he added.—Zion Review.

CONVENIENT JACKS

"When your machine broke down in the street how'd you ever manage to get it fixed?"

"Oh, there are always a lot of jacks standing around that want to help."

That's What

Life is just a-sayin'
Sweetest things to you;
Don't need harps for playin'
And a Georgia fiddle, too!

Brakes Came With Car

He (teaching her to drive)—In case of emergency, the first thing you want to do is to put on the brakes.

She—Why, I thought they came with the car.

Catty Thing!

Coed—How long were you in the Far North?

Freshie—I wasn't in the Far North.

Coed—Excuse me; I thought you were dancing with your snowshoes on.

Anything Will Do

Graduate—I want a good hard job.

Business Man—I have no good hard jobs.

Graduate—Well, just make it a good job, then.

The New Bus Schedule

Two Round Trips to FORT WAYNE:

8:20 in the Morning. 5:20 in the Evening.

Leave Fort Wayne at 7:15 a. m. and 4:00 p. m.

Sunday: Leave Bus Terminal at 4 p. m. and St. Joe at 5:20.

Rev. Bell Loses In Divorce Contest

"Extended comment upon the case is unnecessary because the evidence is so overwhelmingly one way," remark d Judge Endicott Saturday upon the completion of the divorce trial of the Rev. William H. Bell and Mrs. Mattie Bell of Wilmington township.

"I will find against the plaintiff on his complaint and for the defendant on her cross-complaint," the court continued. "I will give the defendant a divorce and the custody of the two minor children, David, 11, and Mary Helen, 5. The evidence does not justify a very large allowance for support, but I will order the defendant to pay to the clerk of the court $4 a week for the defendant's use in supporting the children. Judgment accordingly at the plaintiff's costs.

"I believe it is due the mother of these children to say that not the slightest evidence has been produced here by the plaintiff to show that she has been guilty of any improper conduct whatever," the court said in conclusion.

Weakening Night Coughing Banished Very Simple Way

It is really astonishing how a persistent, exasperating cough that has kept you awake night after night, and is rapidly wearing you down is usually stopped short by a very simple method. Hundreds have found that they can sleep the whole night through undisturbed often the first time they try it.

The method is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring and hold it in your throat for 15 or 20 seconds before swallowing, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. Getting at the cause like this, in a perfectly simple way, it stops the spells almost instantly, you get your best night's rest perhaps in weeks, and in a very short time the whole cough condition is gone.

This simple treatment is splendid not only for coughs and chest colds, but also for bronchitis, bronchial asthma, hoarseness and almost every kind of throat irritation, including children's spasmodic croup. Very economical too, as the dose is only one teaspoonful. On sale at all good druggists. Ask for

DR. KING'S NEW DISCOVERY FOR COUGHS

80 Acre Farm To Sell 24th.

The Lewis Brown estate of 80 acres will be sold at the court house doors on January 24th. For particulars see Orla Baker, administrator. 1t3.

Florence Kagey Underwent Operation

The Warsaw Union has the following to say concerning the operation performed last Monday on Miss Florence Kagey, a former resident of St. Joe: "A pin was found lodged in the appendix of Miss Florence Kagey, when she was operated on Monday morning at the Emergency hospital for appendicitis. Miss Kagey, daughter of Mrs. Lenore Kagey, of Warsaw, had not been feeling well for the past eighteen months and her condition had been pronounced chronic appendicitis. Miss Kagey has been employed at the Jet White grocery on West Market street for the past several months."

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co., Otsego, Mich.

Tri-Township Farmers Institute, Lutheran Church, St. Joe, Indiana, January 9-10th.

Song Leader, Harvey Hull. Pianist, Alice Tuttison

FRIDAY MORNING
9:30 a. m.
Song
Invocation ..... Rev. Steffy
Song
Round Table ..... "Poultry"
Leaders: Mrs. H. M. Widney, Mrs. Dale Shull, Mrs. Fay Strubing, B. P. Repp, Mrs. Frank Johnson.

FRIDAY AFTERNOON
1:30 p. m.
Song
Talk—"My trip to the Fat Stock Show" ..... Frank Shull
Male Quartet: Merritt Sechler, Wm. Stanaan, C. A. Woodcox, H. M. Widney
"What the Dairy Means to the Farmer" ..... Dale Widney
Musical Reading ..... Mrs. Floyd Reasoner

FRIDAY EVENING
7:00 p. m.
Song ..... St. Joe Choral Society
Address ..... Dan Link
Song ..... St. Joe Choral Society
Reading ..... Mrs. Roy Bowser
Entertainment ..... St. Joe Schools

SATURDAY MORNING
9:30 a. m.
Song
Legumes and their uses ..... J. P. Prigg
Male Quartet: ..... Newville Twp.
"Woman's Duty to her Home Community and Country" ..... Mrs. R. M. Brown
Appointment of Committees

SATURDAY AFTERNOON
1:30 p. m.
Song
Report of Committees
"More and Better Corn to the Acre" ..... J. P. Prigg
Ladies Quartet: Arranged by Mrs. Lloyd Wade.
"How to Keep Reuben and Susan on the Farm" ..... Mrs. R. M. Brown
Vocal Solo ..... Mrs. Jean Curie
Benediction ..... Rev. Havens

OFFICERS:
Clyde Hart, President, Spencerville, Ind.
Carl Perkins, Vice-President, St. Joe.
Geo. Beams, Secy-Treas., Spencerville.

Local Briefs

Paul Perry and wife of Auburn, spent Sunday with St. Joe relatives.

Ralph Brown and wife of Auburn were Sunday guests of Francis Hickman and wife.

For good glasses see Griest at American Building Hicksville, Ohio.

Homer Woodcox of Fort Wayne spent over Sunday here with his parents, Charles Woodcox and wife.

Mrs. Carl Bassett and little son, Murray of Fort Wayne, came Sunday evening for a few days visit in the C. C. Bassett home.

Patient's Frank Reply Made Governor Gasp

In the old days a would-be consul became first a student interpreter, and was supposed to acquire a knowledge of the languages of certain countries. When Mr. Wratislaw, who writes his reminiscences in "A Consul in the East," went through this training, he found himself, with four other candidates, dispatched to Constantinople and provided with an assortment of language masters, one each respectively for Turkish, Arabic, Persian and Greek. While at Basra the author was called upon to take part in the ceremony of "opening" a municipal hospital. It was not finished, indeed only the ground floor was built, but so much money had been spent upon it that it was judged politic to declare it open in order to avoid inconvenient questions. Bedsteads, instruments and patients were "borrowed" for the occasion, and the governor went from one to the other questioning them as to their maladies. But even his aplomb failed when, in answer to his query, one cheerfully answered: "Oh, I'm a lunatic!"

Varying Sounds Made by Clock Explained

The two movements of the pendulum of a clock have different sounds, "tick, tock," or "tack, tock," and a clockmaker gives the following reason for the change in sound: The "tick" always marks the moment when the pendulum reaches the extreme point from its perpendicular on its right beat, and the "tock" similarly marks the extreme point on the left swing. The reason for this is that the anchor of the escapement mechanism is above the rotating escapement wheel and in the same plane. Therefore the conditions under which its arms strike the cogs of the wheel are not the same for both arms. One of the arms of the anchor strikes the wheel cogs moving upward, while the other anchor arm strikes against the cogs when the wheel is moving downward. The result of the unequal conditions under which the two arms engage the cogs of the escapement wheel is the cause of the difference in the sounds produced.

Home of Blood Orange

The blood orange, so-called from the deep red color of its pulp, is also called the Maltese orange. An authority on the subject says that these oranges are extensively cultivated in Malta and Provence, but are not restricted to these areas, as they are largely grown in the whole of the Mediterranean region. The cultivation of the sweet orange was unknown in ancient Mediterranean agriculture, neither the Greeks nor Romans having any knowledge of it. The authority mentioned has proved that India was the country from which the orange spread to western Asia and subsequently to Europe. It is very probable that its introduction into Europe may be placed to the credit of returning crusaders. Blood oranges are also now produced in the United States.

Influenced by Light

The discovery that the seasonal blossoming and fruiting of plants is caused by the length of day, made a few years ago by investigators in the United States Department of Agriculture, has been completely confirmed by experiments with artificial light and colored light. Previous to these investigations, normal plants never had been fully developed under artificial light, but it has been shown that under such conditions plants can be grown normally and will produce normal seed.

January 9-10, St. Joe, Tri-Township Farmers Institute.

The scarlet fever epidemic at South Whitley is believed to be under control.

Strayed or Stolen: A small seal brown dog, white spot in breast. Return to W. E. Frederick, St. Joe, receive reward.

Miss Sadie Haner and John Carpenter of Bryan and Velma Kinsey were Saturday night and Sunday guests of A. Haner and daughters.

President Coolidge is making good his campaign propaganda of economy. He vetoed the postal bill calling for increase in salaries. This is no time for increase.

The state automobile department has fixed February 15 as the date when all automobile owners must have 1925 automobile license plates displayed on their cars.

The Methodist Ladies Aid Society will meet Thursday afternoon with Mrs. Belle Barney. As this is the first meeting of the new year let us have a good attendance.

Speeders suffered hard luck in Kendallville during 1924, at least 182 of them did, that being the number fined in Mayor Brouse's court in that city for violation of the speed laws.

The R. H. C. met with Matie Gee last Thursday afternoon with nine members and one guest, Miss Mildred Gee present. The hostess served lunch. They meet in two weeks with Mrs. Cora Walts.

Ye editor and wife were presented a fine dressed rabbit by our good friend Clarence Hart, Monday. He reported that he had killed nearly fifty rabbits on his own ground this winter, showing the bunnies are more than plentiful. Thank you, Mr. Hart.

WANTED—Young men to learn Morse and wireless telegraphy, and railway accounting. We train thoroughly and procure positions with big salaries. Great opportunities for advancement. All expenses low; can earn part. Write today for free catalog. School established fifty years.
Dodge's Telegraph Institute,
Indiana Avenue, Valparaiso, Ind.
2t7.

Mrs. Nina Kees has been in quite poor health for some weeks, although not confined to her bed continually. The cause of her trouble was due to a fall in which she sprained her ankle and still she is suffering severely. The family physician was unable to apply any remedy to relieve the pain, but now she entertains hopes of recovery.

Through the Glad Eyes of a Woman

By JANE DOE

THEY LOVED BECAUSE—

SHE offered to darn all his socks every week, even though she hated darning.

• • •

He took her arm and piloted her across streets that any chicken could have ventured without any danger whatsoever.

• • •

She wanted to marry him right away without waiting till he got a better position.

• • •

He never looked twice at any other pretty girl and preferred her everyday conversation to the most scintillating wit.

• • •

She was horribly upset when he sneezed more than three times.

• • •

He always gave a sigh of relief when they were left alone, even if they said nothing for a whole hour.

• • •

She couldn't eat any breakfast if there wasn't a letter from him.

• • •

He talked over everything with her and made her realize she wasn't to be a mere cypher in his life, but a life partner.

• • •

She was always mooning about in the kitchen making him dainty dishes.

• • •

He didn't talk all his love, but tried to live it.

• • •

She carried his photo in her wrist watch, one in her pocketbook, had another in her bedroom and was peeved because the family said that was more than plenty and wouldn't have him in the parlor as well.

• • •

He saw in her the one woman of his life, and having seen told her so and then proceeded to make himself the one man of her life.

In Society

The members of the Bunco Club were very pleasantly entertained Friday evening by Mrs. Vernie Monroe at her home on Widney avenue.

Progressive Bunco was played the usual length of time, with suitable awards to Mesdames Howard Renner, Chas. Jordan and Paul Curie. At the conclusion of the games a dainty luncheon was served by the hostess. The next meeting of the club will be Jan 9, at the home of Mrs. Virgil Perry.

Three Deaths For The Week

Within a few miles of St. Joe, thus far this week three deaths have occurred. Mrs. James Rickett of northeast of St. Joe, died Sunday morning, funeral service Wednesday afternoon with burial at Spencerville.

Mrs. Dan Kellar died at her home four miles north of St. Joe Monday evening. We did not learn the funeral arrangements.

John M. Henderson, a pioneer of Spencer township, died at the home of his son, Glen, at Woodburn, Sunday evening. Funeral was held Wednesday afternoon.

Lutheran Notes

We are at this time studying the Ten Commandments at the prayer services. Recently we had a study of the commandment, "Thou shalt not commit adultery." We have been requested to give this address at the evening service and have decided to do so next Sunday evening at 7:00. A pure, clean life is the most important thing in the world. Come and hear a careful and chaste presentation of this delicate subject.

Sunday School 9:30.

Prayer meeting Thursday eve at 7:00 o'clock.

S. D. Steffey, Pastor.

G. W. Woodcox is in quite poor health.

Farmers Institute Friday and Saturday, at St. Joe Lutheran church.

MOTHERS—

PUBLIC SALE

Having decided to quit farming, the undersigned will sell at public sale at his residence located one mile west and one mile north of Grabill, one mile east and one mile north of Leo, commencing at 10 o'clock, on

WEDNESDAY, JANUARY 14, 1925

THE FOLLOWING PROPERTY:

2—HEAD OF HORSES—2

Bay gelding 8 years old, weight 1500; bay mare 10 years old, weight 1600.

17—HEAD OF CATTLE—17

Holstein cow 8 yrs. old, freshened Oct. 1; Roan Durham cow 7 yrs. old, freshened Oct. 7; Red Durham cow 3 yrs. old, freshened Oct. 5; Red Durham cow 4 yrs. old, freshened Oct. 20; Jersey cow 4 yrs. old, freshened Oct. 22; Red Durham cow 6 yrs. old, freshened Nov. 4; Red Durham cow 7 yrs. old, freshened Nov. 25, calf by side; Holstein cow 9 years old, freshened Dec. 1, calf by side; Holstein heifer 2 years old, freshened Oct. 1; 3 Durham heifers 2 yrs. old, just bred; 2 Durham yearling heifers. All sound, in good condition and good milkers.

26—HEAD OF HOGS—26

Six brood sows to farrow in January and February; thoroughbred Duroc boar; 19 shoats weighing from 75 to 100 pounds.

70 CHICKENS—50 Single Comb White Leghorns; 20 Barred Rocks, 200-egg strain.

FORDSON TRACTOR AND OLIVER PLOWS—In good condition. Pair Fordson extension rims.

FEED—Six tons timothy, 4 tons clover, 1½ tons alfalfa, some corn fodder, 150 bushels corn in crib, 300 bushels oats, 10 bushels Ito San soy beans, seed corn, one bushel timothy seed.

INTERNATIONAL FEED GRINDER—With 8-inch burr.

FARM MACHINERY, Etc.—Deering 7-ft. cut binder, Osborne 6-ft. cut mower, new McCormick-Deering wind-row loader, tandem disc, 2 good check-row corn planters, I. H. C. corn cultivator, hay rack, 20th Century manure spreader, Oliver 405 breaking plow, Weber 3-inch wagon, box, in good condition; low wheel wagon, spike tooth harrow, Hoosier 12-disc fertilizer drill in good condition, tank heater, 900 lb. platform scales, 2 sets work harness, Meyers barrel pressure sprayer hand power, log chains, 2 sets dump boards, cross-cut saw good as new, shovel plows, 3 A hog houses, self-feeder, oil barrels, four 10-gallon milk cans, No. 12 DeLaval cream separator, ¼ h. p. Robbins & Myers 32 volt electric motor portable, A. B. C. power washer, 32 volt electric iron, three 300-egg Successful incubators, oil burner brooder stove, large iron kettle, 80 ten and twelve-quart galvanized pails, spiles, and other articles not mentioned.

TERMS—Sums of $5.00 and under cash. Sums over $5.00 a credit of one year will be given, first six months without interest, last six months at 7% interest. No goods to be removed until settled for.

LUNCH SERVED BY LADIES AID
Shelter in Case of Storm

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY JANUARY 15, 1925 | NO. 3

Most Men Want Meat

They do not consider a meal complete without **MEAT**—so why not add to its completeness by serving them the best Meats—the kind you get here!

We want to Serve You with the Best

ST. JOE MEAT MARKET,

WILLIAM HARMAN, Proprietor

Attention Feeders!

Tankage in carload lots, also Bran and Middlings, we are giving you the benefit of the carload prices.

Buy your tankage now. We are selling it at cost. We just received a carload of Flour Middlings.

Attention Coal Users

We have in our bins the highest qualities West Virginia, Hocking Valley, Cannel and Hard Coal that money will buy. Buy our Coals and know you are getting the best.

The St. JOE ELEVATOR

Samuel Keesler, Mgr. Grain Dept. **Bert Jackson,** Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

Tomorrow, Today Will Be Yesterday!

The small boy puzzled over this astounding fact, and little realized that he was discovering one of the great principles on which successful basiness and successful lives are founded. Ask a dozen men to summarize the basis of their success, and it could all be boiled down to this—"Yesterday I prepared for today."

Today is the only day in which you can prepare for tomorrow. The clock ticks off the hours, and they will never return. The things you do not start will never be done.

This bank is interested in helping you build successful plans for the future. Come in and see us, and let us tell you about a savings account.

Farmers Institute Was Real Success

From Standpoint of Interest, and Talent. Good Attendance Recorded. Membership 130. Officers re-elected for Next Year.

Many of the leading farmers and farm women of Spencer, Concord and Newville townships, met at St Joe last Friday and Saturday, to take part in the Institute program, and to gather information of the many phases of farmiug, the things that they could best work out, that would yield the greatest returns to them both in production and cash.

The first day was considered valuable because local people discussed the subjects most vital to our local community needs and practices. Nearly every farmer is engaged in the raising of poultry and the discussion was taken up from the following angles:—Cost of Production, H. M. Widney; Housing and Feed Mrs. Mattie Hart; Breeding and Judging, County Agent, B P. Repp; Marketing, Clyde Hart. General discussion followed with plenty of pep and interest.

Friday afternoon Frank Shull gave a description of his trip to the Fat Stock Show at Chicago and visits made to points of interest to the farmer boy. Frank sure did himself justice and evidently got all the things worth while in a trip like this A male quartette followed and then Dale Widney, of Columbia City gave a diary talk "The Milky Way," as shining forth as a bright strip of sky. The dairy cow is the bright spot in the farm life. Why? Because the cash returns are far greater than any other project on the farm, and besides she takes less fertility from the farm Mrs. Flossie Widney gave a vocal solo at this time.

Friday evening the program was started off by the Choral Society followed by Dan Link of Auburn who talked on the needs of the farmer, namely Organization and Co-operation, or more efficient working together. The Choral Society sang another familiar song "Carry Me Back to Old Virginny" in a very pleasing manner. Mrs. Roy Bowser gave a couple of readings in her pleasing way, being costumed to fit the character. The St. Joe schools did themselves justice by the class of readings and music given. It sure pleased the audience.

Saturday morning J. P. Prigg talked on Legumes and their uses, showing how it is necessary to increase the fertility of the soil and the most economical way is thru crops such as clover, alsike, alfalfa, soy beans, cow peas, vetch and sweet clover. The depositing of nitrogen in the soil is necessary, hence the use of fertilizers cost so much that the increase in the crop does not warrant the expenditure. Legume crops are the only solution from a financial standpoint. In concluding the morning program, Mrs. R. M. Brown spoke briefly on Woman's duty to her home, community and country, she said:—The greatest single industry in the world is the building of the home and this is the basis of good government.

A good crowd attended the afternoon program. More and better corn to the acre by, J. P. Prigg and How to keep Reuben and Susan on the farm by Mrs. Brown, the state workers were discussed with interest. St. Joe male quartette, Merritt Sechler, Roy Koch, Wm. Staman and H. M. Widney appeared on the program for the second time and Mrs. Jean Curie sang a solo.

Harvey Hull acted as song leader and Alice Testison as pianist throughout the sessions.

The program committee for 1926 institute is as follows:—Mesdames Hattie Widney, Esther Bowman, W. W. Wilder, Flossie Rhoades and R. H. Conine, A. J. Smith, F. E Rhoads and Frank Baltz.

The officers for next year are as follows: Chairman, Clyde Hart; Vice chairman, Carl Perkins and George Beams, Sec.-Treas.

The membership is 130.

The treasurer makes the following report:

Amt. in treas. from 1924	$105.04
Checking account	31.45
County assistance	13 43
Membership	32.50
Total	$182 42
EXPENDITURES	
Home Bureau for 1924	$25 00
J. P. Prigg, expenses	9 80
Mrs. Brown, expenses	2.80
Church rent	10 00
Printing	5.80
Miscellaneous	8 50
Officers expenses	3 50
Total	$65 50
Balance in treasury	$116.92

Albert Rhoades Dies of Pneumonia

Two miles southwest of Spencerville, on September 13, 1909, a baby boy came into the home of Bernie and Esta Rhoads. He was the second child, and as the first was a girl this made a fine promiee in their family life. Four years later circumstances moved events so that the family moved to Auburn. A sojourn of two years was made and then they moved west of Auburn. Here Albert began school. Following four years of life here, the family moved to the present home.

A year ago last fall, Albert began high school at Auburn. He pursued his school work with credit until this Christmas vacation, when he fell ill. A struggle for life was made, but he lost in the battle and fell asleep as far as his body is concerned Friday morning January 9, having lived 15 years, 3 months and 26 days.

Albert attended church at Concord and took part in all activities. He was faithful and dutiful to his parents. His quiet, unassuming disposition won many friends.

He leaves to mourn his early going, his parents, Joyce, Alice, his grandmother Rhoads and grandfather Boger. Besides other near and distant relatives and hosts of friends.

The funeral was held Sunday afternoon at 1 o'clock from the Concord church, Rev. Havens, officiating. Burial in Riverside cemetery, E. R Kinsey, funeral director.

Notice To Property Owners

The removal of snow from your walks is necessary according to town ordinance Unless you comply with this, I will be obliged to do the work at the expense of the propery owner.

D. C. McCann, Marshal.

The closing number of the senior lecture coure was given last Wednesday evening to a full house and the programs, four in all, were quite well received. The course was well patronized by friends of the school. The programs were varied giving the patrons southern melodiles, lecture, musical, impersonator and entertainment. The Dennis Lyceum Bureau of Wabash held the contract and the local committee finds this company the most fair of any Lyceum entering this field.

County Contests Dates Are Set

Clarence Green, county superintendent of schools, has notified all superintendents of schools in DeKalb county of the dates upon which the music memory and discussion league contests will occur this year. Commencing with the county music memory contest on Monday evening, March 16, which will be held in the auditorium of the McIntosh high school in Auburn, the series will continue until the final contest April 3.

The rural schools in the county will hold a health exercise contest and drills in the McIntosh auditorium also on the night of March 16. Three district contests in the county musical and literary series will be held Friday evening, March 27 as follows: at Garrett, Auburn and Garrett high schools contesting; Butler, Waterloo and St Joe high schools at Waterloo and the schools at Ashley, Spencerville and Corunna at Ashley.

The winners in each of these contests will meet in Auburn Friday evening, April 3, for the final contest to decide the county winners.

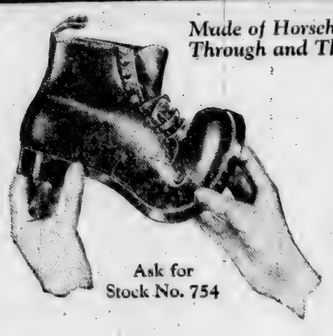
The contests will consist of readings, orations, discussion league event, vocal and piano solos and double quartetts. Orations this year will be on some phase of the constitution. Mr. Green will present the school winning the most events a display cabinet, a prize well worth trying for.—Star.

Mrs. Jane Hull and Mrs. Chas. Reasoner are both on the sick list.

John Leins home on T-C. pike, south of Corunna, was destroyed by fire Sunday evening while they were at Corunna attending services. The house was ten rooms with modern equipment. Only the clothing they wore was saved.

WOLVERINE Comfort Shoe

Made of Horsehide Through and Through



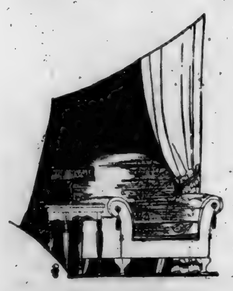
Ask for Stock No. 754

A Shoe That Makes You Forget You Have Feet!

Here is a work shoe so soft and flexible that to wear it is like walking barefoot on velvet. But how it wears! It is all horsehide, double tanned to the softness of buckskin. The tops are of chocolate Wolverine Cordovan, made with almost no place to rip. The flexible single horsehide sole is Goodyear welt sewed. For shop or field work in summer there is no shoe quite so satisfactory. Once tried you'll never be without a pair. Comes in C, D and E widths.

Beams & Co., Spencerville, Ind.

A Cozy Corner



Every home needs a cozy corner where you can go and rest in peace and quiet. Here is a suggestion for furnishing such a nook in your home.

SPECIAL prices on Vellour and Tapestry Overstufts. A real one at..... **$140.00**

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)

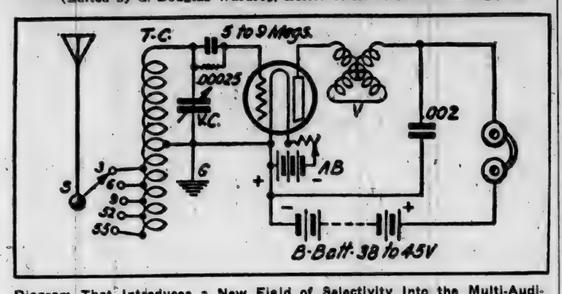

Diagram That Introduces a New Field of Selectivity Into the Multi-Audi-Plex Circuit. Will Interest All Radio Fans.

By LEON W. BISHOP

Those who became interested in the multi-audi-plex circuit have spoken of the wonderful selectivity and volume on distant stations through tremendous local interference.

Here is a diagram that introduces a new field of selectivity into the multi-audi-plex circuit. Directions should be carefully followed in regard to the tuning coil TC. Procure a four-inch dry cardboard tube. Use no shellac or any compound whatsoever on this tube. Wind this tube with 50 turns of No. 20 or 22 double cotton covered wire. A tap is taken at the fortieth turn, which is connected to the plus side of the tube filament and also is grounded. Starting from this fortieth grounded tap, tap every three turns until the fifty-fifth turn, which will leave five taps. This switch S, is connected to the aerial.

With this selective system, it is possible to connect in three, six, nine, twelve and fifteen turns in the antenna circuit. This, under local interference, will enable you to tune out your local stations and still receive from distant points.

Connecting the Taps.

In connecting the taps, the wire may be cut and holes punched in the tube, and the wires drawn through these. By punching holes in the tube and drawing the wires through, you will make the winding much firmer and eliminate the use of shellac or any other kind of goo.

The variometer V may be of any standard make on the market.

The grid condenser should be of the mica type and have a capacity of .00025 mfd. The grid leak should be anywhere from three to nine megohms, a nine megohm grid leak being used for local reception. Do not put on variable grid leaks. It is much better to have a spare grid leak, say for instance, a three megohm and a nine megohm and snap these in at will.

The variable condenser, VC, should be .0005 mf., preferably of the 23 plate type of condenser. Here I might say, condensers that are advertised as having exceptionally low dielectric loss would be best applied in this circuit.

The rheostat should be 30 ohms, and connected in the negative side of the A battery.

The best tube for use in this circuit is the UV201A, although the C301A, UV199 and C299 tubes may be used.

The B battery should be from 38 to 45 volts, depending upon the tube characteristics.

The bypass condenser should be .002 mfd., and preferably of the mica type.

Connecting the Circuit.

In connecting up the circuit, it is best to have the variable condenser on the left hand side of the panel, the variometer on the right hand side of the panel, the switch taps below in the center of the panel. The rheostat may be placed in the center, high on the panel. A panel 7 by 9 should be used. Shielding is of little avail, but the rotary plates of the variable condenser VC must be connected to the ground.

It must be remembered that the lead from the grid on the socket to the grid leak and condenser should not be more than one inch in length. The body capacity effect of this lead is the most critical of the set. The next lead is the one from the plate to the variometer. This should be kept as short as possible.

The A battery, AB, should be four dry cells in the case of the UV201A and C301A tubes, and three dry cells for the UV199 and C299 tubes.

Although the switch points are only three turns apart, they make a vast difference in selective tuning.

In no case can there be more than 15 turns in the antenna circuit. Thus the chance of radiation is almost nil.

Again I wish to warn against the use of shellac on the tuning coil TC.

This circuit may be amplified in the same manner as the multi-audi-plex circuit. The point gained in this circuit is selectivity and the practical elimination of reradiation. The circuit will be immediately noted for its wonderful quality reproduction.—New York Sun.

Series-Parallel Switch—Its Uses in Receiver

The series-parallel switch eliminates the necessity of changing of wires during a test of a circuit. It comes in very handy for a quick change-over from one circuit to another of the head phones. Another use for the series-parallel switch is found when it is used in connection with a battery charger and the battery for the set.

When the switch is in one position the battery is thrown to the charger circuit and when in the reverse direction the battery is connected to the set. The method shown in the accompanying diagram is used in connection with the honeycomb coil circuit. It is used in the primary part of the circuit to throw the condenser across the coil or in series with it.

The honeycomb coil circuit requires the use of such a switch in order to change from medium short waves to

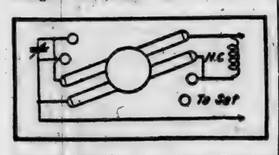

Diagram Showing How Series-Parallel Switch May Be Employed.

longer waves. The switching arrangement allows the use of a certain coil for a wide wave-length range.

An example of the series-parallel switch in honeycomb coil set is shown as follows: Suppose an L-25 coil was being used in the primary to tune to amateur waves below 200 meters and there was an immediate need to go up on the higher wave length of the broadcasters to hear some particular program.

Ordinarily, for amateur work, the condenser would be in series with the coil, but the change would necessitate the condenser being put across the coil. The condenser in shunt with the coil boosts the wave length up without putting in a new coil.

This is a much easier method than hunting around for another primary coil and taking time to plug it into the circuit after removing the first coil from its primary plug. Not alone may this method be used in a honeycomb coil set, but may be used with any variocoupler primary.

It is sometimes desirable to sharpen the tuning of a single-circuit set. This is accomplished by taking the series condenser out of the circuit and connecting it across the primary tap switch and the lower end of the coil winding.

The form of switch shown in the accompanying drawing may be purchased in any radio store, as it is of the standard type. Be sure to make good connections on the back and keep the switch tight, so that it does not wobble out of adjustment.

The contact points may be mounted on the panel, as well as the rest of the switch. The switch points should be kept clean to insure better contact with the switch arms.

The market also affords a series-parallel switch all mounted so that only one hole is necessary in the panel for the center shaft. Such a switch eliminates the necessity of drilling eight holes in the panel, and is recommended where space on the panel is at a premium.—Chicago Daily Journal.

Hints for Constructing Tuned R. F. Amplifier

In constructing tuned radio frequency amplifiers:

Separate the tuning coils to cut down the magnetic and capacity coupling between them.

Use loose coupling between the primary and secondary coils of tuned transformers.

Separate the variable condensers used to tune the various circuits by at least five inches.

Experiment with the coupling between the primary and secondary coils of the radio-frequency transformer to find the separation which gives the loudest signal strength without making the tube oscillate.

Use lamp cord, twisted, for filament leads, and thereby avoid large closed loops.

Keep all battery leads away from the tuning apparatus, and by doing these things it will be possible to build a radio-frequency amplifier that will not oscillate when both grid and plate circuits are in resonance.

Pointers About Makeup of Dry Cell Batteries

A dry cell battery consists of a zinc container filled with chemicals, in the center of which is a brass-capped carbon rod. The zinc can is the negative pole or electrode and the center carbon is the positive pole or electrode. The voltage of a dry cell is about 1.5 volts when it is not in circuit (open circuit voltage) and it is lower when it is in circuit (closed circuit voltage), depending on the cell resistance of the circuit to which it is connected.

To Procure Broad and Sharp Tuning

Radio Outfit Should Tune Sharply—Low-Loss Instruments Aid.

With the ever-increasing number of broadcasting stations in the larger cities the problem of interference prevails.

It takes a mighty good receiver to pick out each individual station without interference from others.

The accompanying sketch shows the difference between sharp and broad tuning. In the upper sketch is shown the dial reading of a broadly tuned receiving set. The hump is very broad. It really represents a tuning circuit in which interference prevails.

The lower drawing shows a "peak" or sharply tuned circuit, in which all of the energy from a certain station is not spread out, but is concentrated in one spot, giving maximum signal strength. The "hump" circuit has a high-loss variable condenser in circuit and perhaps a high-loss tuning inductance.

Both circuits receive broadcasting with good strength, but the circuit with the peak receives all of the local stations without interference, while the hump circuit receives only the nearby stations with interference. A good "low-loss" condenser having reduced radio frequency losses will turn a "hump" circuit to a "peak" circuit.

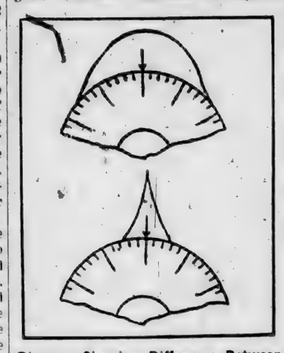

Diagram Showing Difference Between Broad and Sharp Tuning.

Not alone will a low loss condenser sharpen tuning, but it will go a long way toward getting clearer signals. The weaker stations which do not come through when the circuit is full o fresistance paths and other losses will come in clearly with good volume when a better condenser is employed.

Vernier condensers are often a cause of poor results and broad tuning. It is best to use a straight condenser and, if necessary, a vernier dial may be fastened to the shaft of the condenser.

Poorly designed coils are often a cause of broad tuning. It is best to keep all metal from the vicinity of the coil windings. It has become a practice to wind coils in basket weave style with an air core to reduce dielectric losses in the circuit.

In winding coils it is best to plan using No. 18 DCC or No. 20 DCC wire, as it has low radio-frequency losses and good conductivity. This size wire is especially recommended for basket-weave coils.—Chicago Daily Journal.

THE MECHANICAL TELL-TALE

IN A large apartment house not long ago one of the upper-floor tenants discovered that by placing her ear to the radiator she could hear a canary singing in one of the down-stairs apartments. The steam pipes had carried the sound waves throughout the house.

The developments in radio the past year or two have forcibly demonstrated to the people that sound waves are a substantial reality; a tangible something that can be controlled and made use of.

Now that ways have been found, not only to pick up these waves but to amplify them, it behooves the people who originate such waves in the form of conversation to "watch their step," so to speak.

If the steam pipes in an apartment house will conduct the song of a canary bird, it is quite sure that they will also conduct conversation, and we are met with the possibility of our most private talks being picked up and amplified by the gossiper in the sky-parlor.

However, necessity is the mother of invention and privacy is very much of a necessity—at least at times. It would give many of us a thrill if we could sit in our apartments and say what we have often thought of the janitor, knowing he was listening in the basement to the return exhaust pipe, but the future may require a filter that will break up our voices so that they may not be picked up by our neighbors.

(© Science and Invention and Radio News.)

Oil Is an Insulator

Variable condensers, for one thing, should never be oiled. Oil is an insulating liquid and can make some types of condensers inoperative.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1934, Western Newspaper Union.)

Boonesborough, Symbol of Frontier America

Boonesborough is more than Kentucky's most famous fort. It is a national landmark whose palisaded walls symbolize the American frontier and its name stands as a monument to the memory of Daniel Boone, the one great American pioneer. Brief as was its existence, there are few forts in America which have a more romantic history.

In 1775 Col. Richard Henderson, a North Carolina land speculator, sent Daniel Boone to survey a road into Kentucky, the "Dark and Bloody Ground," and to build a fort there. Boone set out with 20 men and, after several skirmishes with hostile Indians, he reached his goal April 1, and on April 29 began building a fort.

Since Boonesborough was typical of all frontier forts, it is worthy of description. At each of the four corners was a two-story blockhouse. A series of little cabins placed close together, with their roofs sloping inward, was built along the sides, and the space in between these cabins was filled up with palisades. There were heavy gates in front and back and the whole fort inclosed a space 260 feet long and 150 feet wide. The walls, which were about twelve feet high, were loopholed for rifle fire, as were the cabins, and there was hardly a nail or piece of iron used in the whole fort.

From the date of its establishment there was always something thrilling taking place. In July, 1776, occurred the capture of the Boone and Callaway girls and their romantic rescue soon afterwards. The next year the Indians attacked Boonesborough and Simon Kenton made his famous rescue of Daniel Boone. In September of that year the British and Indians again besieged the fort after they had called out the frontiersmen for a council, and their treacherous attack under the white flag had failed. During this siege the Indians tried to get into the fort by digging under it. "What are you red rascals doing there?" one old frontiersman yelled to the savages in their own tongue. "Digging," was the return yell. "Blow you all to the devil soon; what you do?" "Oh," was the cheerful reply, "we're digging to meet you and intend to bury 500 of you."

Such were the incidents which make up the history of Boonesborough. After the Indian wars were over this pioneer station lost its importance and never became the metropolis of the state of Kentucky, as it once promised to do. Today Boonesborough is noted as a pleasure resort where hundreds go every year to play—a strange contrast to the grim scenes of savage hatred and bloodshed it witnessed in the days of Daniel Boone.

It Kept the Northwest Under Our Flag

One February day in 1779 the British flag was hauled down from above Fort Sackville on the Wabash river in Indiana. George Rogers Clark had won the old Northwest for the United States. One August day in 1813, an army advancing under the English banner against Fort Stephenson on the Sandusky river in Ohio reeled back in defeat before the withering fire of its garrison of Kentucky riflemen. George Croghan, a nephew of George Rogers Clark, had saved the old Northwest for the United States.

Fort Stephenson barely deserves the name of fort at all. It was only a stockade built at the head of navigation on the Sandusky river, but it was important because it commanded the approach to two important bases of supplies for Harrison's army in the War of 1812.

When General Proctor with 600 British regulars, accompanied by 3,000 Indians under Tecumseh, appeared in northern Ohio, Gen. William Henry Harrison ordered Capt. George Croghan to evacuate this post. But Croghan believed that with his force of 160 men he could hold it against Proctor, and his confidence was shared by his six youthful subalterns, none of them more than twenty-one years of age. Harrison reluctantly gave his permission for the attempt to be made and Croghan set to work to strengthen the old fort as much as possible.

He had only one piece of artillery, a little six-pounder, which the soldier affectionately called "Old Bess," and when Proctor appeared before the fort with a force of 1,200 Indians and regulars and some heavy artillery, a successful defense seemed hopeless. But Croghan refused Proctor's summons to surrender and was not even frightened at the Briton's threat that he might not be able to control his Indians if he had to storm the fort.

After bombarding the fort all night Proctor sent a storming party of 300 men against the walls and although Croghan's men met the attackers with a deadly rifle fire, they came on bravely. Just as they sprang into the ditch surrounding the fort, a masked porthole was thrown open in one of the blockhouses and "Old Bess" poured out a veritable blast of death upon the British. That proved the deciding stroke in the battle. Proctor retreated precipitately. The American supply depots were saved, Ohio was spared the horrors of an invasion by the Indians and historians generally agree that the successful defense of Fort Stephenson saved the Northwest.

Lesson for January 11

THE JUDGMENT OF THE NATIONS

LESSON TEXT—Matt. 25:31-46.

GOLDEN TEXT—"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto Me."—Matt. 25:40.

PRIMARY TOPIC—Kindness Pleases.

JUNIOR TOPIC—Christ's Picture of the Judgment.

INTERMEDIATE AND SENIOR TOPIC—Christ's Picture of Judgment.

YOUNG PEOPLE AND ADULT TOPIC—Practical Christianity.

The subject selected by the lesson committee is "The Last Judgment," but this is an error. According to legitimate textual and contextual signification it is the judgment of the living nations which still lies in the future (v. 32). The idea of a general judgment which is of such frequent occurrence in religious literature and teaching is a fundamental error. It is not once found in the Bible, neither the idea which it is intended to convey. Doctor Pentecost most truthfully says, "It is a mischievous habit that has led the Christian world to speak of the judgment as being one great event taking place at the end of the world when all human beings, saints and sinners, Jews and Gentiles, the living and the dead, shall stand up before the great white throne and there be judged. Nothing can be more wide of the Scriptures." The Bible speaks of several judgments, different in respect to the subjects to be judged, the place of judgment, the time of judgment and the result of judgment.

I. The Judge (v. 31).

It is the Son of God who came and died to redeem the human race. He is now seen clothed with majesty and power sitting upon His throne acting as Judge. Those who accept Jesus Christ now as their Savior shall not come into judgment (John 5:24).

II. The Time (v. 31).

This judgment will take place when the Lord comes in His glory accompanied with a retinue of glorious angels. This will take place after He has gathered the elect remnant of Israel. There will be no resurrection in connection with this judgment.

III. The Place (v. 31).

The prophecy of Joel, the third chapter, and Zechariah 14:1-5, show that it is to be in or near Jerusalem. The angel said to Mary, "Thou shalt call His name Jesus: He shall be great and shall be called the Son of the Highest: and the Lord God shall give unto Him the throne of His father David. And he shall reign over the house of Jacob forever; and of His kingdom there shall be no end." (Luke 1:31-33). As David was a literal king and reigned in a literal place, there shall be a literal judge occupying a literal place of judgment.

IV. The People Judged (vv. 32-45).

These will be the living nations upon earth after the church has been translated (I Thess. 4:16, 17). These are nations to whom the gospel of the Kingdom shall be preached just prior to the coming of the end. "And this gospel of the Kingdom shall be preached in all the world for a witness unto all nations; and then shall the end come." (Matt. 24:14). This gospel is distinct from the grace of God, which is now being preached. The preachers of this gospel will be the Jews (see Revelation 7 and Romans 11). These are the brethren of the Lord in the flesh who move among the nations of the world with the startling message of the news of the Lord's approaching kingdom. Some of the nations will gladly receive the message and kindly receive the kingdom messengers, giving them clothing, food, shelter, etc. Others will persecute them, thrusting them into prison. Here the first will visit the messengers of the King and provide for their wants. At this time the Judge will separate the nations, placing the sheep on the right and the goats on the left hand. The sheep are those who have given proper treatment to Christ's brethren. The goats are those who rejected and mistreated his brethren. If these three classes, the sheep, the goats and the brethren be kept separate, all confusion will be avoided.

V. The Issue of the Judgment (v. 46; Cf. vv. 34-41).

1. The Sheep Entering into the Inheritance of a Prepared Kingdom.

2. The Goats Going into Everlasting Fire Prepared for the Devil and His Angels (v. 46). This judgment shall determine their destiny.

Have Not Yet Seen Him

The fact that none saw Christ after His resurrection except those who loved Him is suggestive that His enemies have not yet seen Him and do not know Him.—Echoes.

With One Hand

God chastens us by many instruments, but with one Hand.—Christian Evangelist.

God Knows

Man takes account of our failure, but God of our striving.—Christian Evangelist.

Today and Tomorrow

CHAPTER III—Continued

—20—

"When I give, I give all," she said. "You do not understand the people of my race. We cannot give in driblets—a kiss here, a caress there, the promise of more tomorrow. God never made Russia like that. When I give, it will be the full glory of love. Bring Paul back to me and you may know what that can mean."

Gerald rose to his feet.

"I should go to my task a stronger man," he complained, a little bitterly, "if you could throw me the dole one might give to a beggar."

She gave him her finger tips. She was standing by his side, so near that the desire to hold her in his arms and take from her lips the one kiss he craved was almost irresistible. At that moment he almost hated her.

"Haven't you even the grace to pretend?" he muttered.

She laughed, wringing her fingers slightly as though his lips had seared them.

"You have been spoilt," she murmured. "The women you have played with have been your too willing slaves. A trifle of homage, a trifle of philandering, a few shadowy caresses—that is all you have known of love. Wait!"

Gerald spent that afternoon in the city, the next few days in making restless preparations for his absence from London. On the afternoon of the last day, he was permitted to see Reusser, and he recognized in him at once the man whom he had seen watching over Madame de Poniere and her niece in Hyde park. The meeting took place in the sitting-room of the South Kensington hotel. Reusser, who leaned heavily upon two sticks, was brought thither by a tall youth, his son, who waited for him outside the door. He was as thin as a skeleton, his cheeks were sunken, and every now and then his voice seemed to die away.

"It is my first day out of the hospital," he told Gerald apologetically. "I caught cold on the way back, and my lungs are not good. Please ask what questions you desire. I am subject to attacks of weakness."

"I understand," Gerald said, "that you reached Sokar?"

"I reached it," he admitted, "but, alas! I was powerless to act. I took with me every penny of money we could scrape together, but by the time I reached the city I was penniless. I lodged at the house of a saddler, whose name you will find in the book I have given you. He took me to look at the fortress. He showed me the room where the brother of mademoiselle lies. He told me much about Major Krossneys, the commandant of the fortress. But of what avail was it? We had not enough money between us to pay for a bottle of wine."

"How do you propose," Gerald inquired, "that I can approach Krossneys?"

"The way is arranged," Reusser replied eagerly. "There is a woman living in the town, half German, half English. Her name is Elsa Francks. Today Krossneys is her slave. You go first to her. Her address is in the little book you have. She speaks English and French, besides her own language; even some Russian. Talk to her frankly. She will bring you to Krossneys. There is one thing, though. You must go as an American. No one will do anything to help you, although they are all greedy for money, if they think that you are English. It will be quite easy, that. There are many Americans in Russia, prospecting. There is a great oil field on the plains south of Kreussner. Some say there is oil there; others deny it. That is how your bribes must be worked. You will buy property. It will be worth nothing. You will find that Krossneys has land to sell; so has Elsa."

"I understand," Gerald said.

"You leave tomorrow?"

"At ten o'clock from King's Cross," Gerald assented. "The boat leaves at night."

Reusser raised his right hand.

"The Father of God speed you!" he said. "Speed is very necessary. The government has kept that young man alive, hoping that some day he would be useful as a bribe or a hostage, but there are still many fanatics in Russia, haters of his race, who would tear him limb from limb if they knew."

"I shall be in Petrograd in a fortnight," Gerald declared, "and at Sokar, I hope, a few days later."

Reusser once more raised his hand and muttered inaudible words. Nevertheless, though his strength seemed departed, he tried to kneel when Pauline came into the room. She raised him to his feet and called to his son.

"All is well," she said, dismissing them. "Take care of your strength, Reusser. You must be one of the first to welcome him."

The man bowed his head and prayed silently. Then his son led him away.

Gerald also rose to his feet. He had nerved himself for this interview.

"I shall have the pleasure of wishing madame farewell?" he asked.

"My aunt sends you her excuses and her prayers," Pauline replied. "She is too agitated to risk a meeting. You do not quite know what this means to us."

"I know," Gerald said, "what its results may mean to me."

She looked at him a little sadly.

"My unhappy country," she sighed, "is today only a furnace of woe and suffering, yet in the jumble of it there are a few millions still who would kneel through the night and pray for you, if they knew your mission. I bid you farewell, Gerald, and every throb of my body will live with you. I have sworn that no word of love shall pass my lips, nor any feeling of love linger in my heart, so long as my brother lies in that fortress. But I am here. I would give you anything that would speed you on your journey. It is for you to choose."

She stood perfectly passive, her arms hanging by her sides. Her eyes looked sadly into his, her lips were composed and still. For a moment the fires burned in his blood. He took a quick step forward. She waited, unmoved, yet without shrinking. So they faced one another for a moment. She extended her hand. Gerald seized it, then dropped it.

"I shall do my best," he promised hoarsely. "Goodby!"

She listened to his departing footsteps; she even moved to the window, watching him leave the hotel and step into his waiting automobile. He was well enough to look at, good-looking as ever in his slim, lithe way, and with his fine carriage. Nevertheless, there was neither love nor pride in her eyes as she watched him. There was something else, which seemed to point back down the avenues of the history of her family, something, perhaps, which had sounded the knell of their doom, generations before. It was there in her lips, her eyes, spelled out in her fixed stare—the cruelty of a race whose heart is given only to passion.

Chapter IV

Gerald, worn out with long and comfortless travel, pulled the long, iron bell outside the closed door of Elsa Francks' house in Sokar, with a sense of relief that the first part of his quest was accomplished. The street was one which formerly had been possessed of some pretensions. The houses were tall, solidly built, and had apparently been occupied by a wealthy class of merchants. They were now mostly let out in tenements. Exactly

Gerald Rose to His Feet and Bowed.

opposite where Gerald stood waiting, men and women—shrunken-looking creatures, most of them—were continually pasing in and out of a broad entrance, from which the gates had been done away with altogether, with sacks or baskets of partly finished boots, and the sound of fitful hammering seemed to denote a factory devoid of machinery. In the center of the road were some rusty rails, around which some grass was growing—the remains of an electric car service. Most of the houses seemed empty or overfull—locked and battered, with broken window frames and closed shutters, or converted into tenement houses. The long street, full of holes and strewn with all manner of refuse, ended in a steep hill. Way beyond it, the so-called fortress, a sinister, gray building of many stories, glittered in the afternoon sun.

The door in front of which Gerald was standing was suddenly opened. A dark-visaged, corpulent woman, dressed apparently in nothing but a petticoat and shawl, thrust out her head. Gerald handed her a card, on which, through the friendly offices of the hotel porter, was inscribed his desire to see Madame Francks. The woman turned it over, looked Gerald up and down with wide-mouthed astonishment, and finally motioned him to enter. As soon as he had done so and stepped into the little cobbled courtyard, she drew the bolt and muttered something which he understood as an invitation to follow her. She pushed open a heavy door on the right, and they ascended a gloomy staircase. The atmosphere was close, almost stifling. There seemed to be no window, or any means of giving light or ventilation. Arrived on the first floor, she threw open the door of a room and departed, with a wholly incomprehensible grunt. Outside, she began to shout, apparently through the door of another apartment. There was a vigorous duet, the other voice shriller but scarcely more pleasant. Then there was silence, followed by the sound of some one moving about in the adjoining room.

Gerald took a seat upon a couch, upholstered in stained purple velvet, over which several soiled coverings of imitation lace had been thrown. The room itself was large and lofty, but scantily furnished. There was a huge undecorated stove in one corner, which, notwithstanding the heat of the day, already exuded fumes of burning coke. The polished floor was innocent of any rug or carpet, and covered with stains and fragments of cigarettes and cigars. There was a piano, littered with soiled and torn copies of music, in a distant corner, a small gramophone with black enamel mouthpiece, blistered by the continual heat of the room. The walls were hung with the faded remains of some former attempt at decoration. The windows were covered with a sort of wire netting, which kept out alike light and air. There was everywhere an odor of stale tobacco smoke, mingled with a strange smell of cheap incense or crude perfume of some sort. Gerald, exceedingly sensitive to surroundings, felt a momentary faintness as he sat and waited for the woman whom he had come to visit. He began to fidget in his place. He walked up and down. He was even meditating an attack upon one of the window fastenings, when he was aware of the sound of heavy footsteps outside. The door was opened. A woman entered and came toward him with an inquiring expression upon her face.

It seemed to Gerald that the newcomer alone was needed to complete the squalor of his surroundings. She was a big woman, coarsely built, and with indications of obesity. She wore a dressing gown of some red material, trimmed with soiled white fur and fastened round her waist with a girdle. Her hair was a bright yellow, abundant but badly arranged. It lay in loose coils upon the top of her head, fastened with some flamboyant ornament. Her features were not ill-shaped, but were partly concealed under a thick coating of powder. She had eyes of a peculiarly light blue shade, large and saucer-like when she first entered the room, but with a habit of narrowing at intervals. She spoke in English, with a strong German accent.

"You wish to see me, sir? I am Elsa Francks."

Gerald rose to his feet and bowed.

"Madame," he said, "I have found my way here under the name of Harmon P. Cross. I have told every one that I am an American, looking for an opportunity to invest money. That story is not true. It is my wish, if you will allow me, to be perfectly candid with you.

"You can sit down," she invited, regarding Gerald with suspicion not unmixed with favor. "I will hear what you have to say."

She threw herself in a lump at the far end of the sofa, and pointed to a battered horsehair easy-chair.

"Bring that to the side of me," she continued. "I do not hear very well and it is some time since I listened to English. Tell me what you want?"

"I have a further confession to make," Gerald began. "I am an Englishman."

"There are Englishmen and Englishmen," she said indulgently. "Some are different from others. You are not like those whom our officers have had to correct in the streets and cafes of Berlin. Now what is your business, please?"

"It is very difficult to state," Gerald admitted frankly, "and I am only emboldened to approach you because in these difficult times, and in Russia especially, one needs money. If you will do me a service, I can find you a great deal of money.

Gerald's methods had at any rate succeeded in exciting the interest of the woman he had come to visit. Her becarmined lips were parted; her pale eyes were filled with the light of cupidity.

"There is not much we would not do for money, nowadays, over here," she declared, laughing hardly. "You are a very interesting man. Go on."

"Major Krossneys is a friend of yours," Gerald said.

"Ho, ho!" the woman laughed. "So you dabble in politics, eh? Never mind, Krossneys is my friend. What of it?"

"He is the governor of the fortress here," Gerald went on. "He has a great number of prisoners under his care."

"One hundred and thirty-seven," Elsa Francks replied promptly. "I see some of them exercising when I am at the fortress. What he keeps them alive for, I cannot imagine. They crawl about the yard like lice. What about these prisoners?"

Gerald moved his chair a little nearer. The woman smiled at him graciously.

"If one of them should escape," he remarked significantly, "there would be a great deal of money."

"What do you call a great deal of money?"

"I do not bargain," Gerald replied. "I know very well that the escape of a prisoner is a serious thing. I have at my disposal the sum of ten thousand pounds."

The woman started so that she nearly rolled off the sofa. She sat suddenly upright. She was too stupefied for emotion.

(TO BE CONTINUED.)

All That Survives One

To be rich to be famous? Do these profit a year hence, when other names seem louder than yours, when you lie hidden away under ground along with the idle titles engraven on your coffin? But only true love lives after you, follows your memory with secret blessings or defends you and intercedes for you. Non omnis moriar, if dying, I yet live in a tender heart or two: nor am lost and hopeless, living, if a sainted departed soul still loves and prays for me.—Thackeray.

ROAD BUILDING

LACK OF SIDEWALKS IS RURAL MENACE

Why should people walking along our highways be compelled to walk in the path of a trackless locomotive? This is the question that is agitating many who use American highways—from the motorist who rounds a curve to find in his path a number of children returning home from the country school, to the country lad who has to use the highway in getting to the cow pasture and the suburbanite who walks over it to make a call upon a neighbor.

In certain sections of America the rural towns are so close together and the population is so dense that the country roads are used constantly by pedestrians for lack of sidewalks. This is true particularly of all the New England states and New York, New Jersey, Pennsylvania, Delaware, Maryland and other states. In New Jersey at the present time the matter of constructing sidepaths along the highways is being seriously agitated as the result of numerous accidents to pedestrians on the highways.

State highway departments have given considerable thought to the proposition, and it is not improbable that the state legislature will authorize the department to undertake the construction of sidepaths, along some of the principal highways at least. It is declared that waterproof and dustproof paths can be constructed very cheaply of asphaltic macadam and that pathways of that kind will not only keep pedestrians out of the way of automobiles and trucks, but will afford a roadway for bicyclists as well.

Resolutions were recently adopted by the New Jersey Association of County Engineers recommending passage by the New Jersey legislature of a law authorizing the laying of sidewalks along all state and country roads and authorizing condemnation of property for the purpose where there is insufficient width. It is proposed that the act be not mandatory, but that it give discretionary powers to the boards of county commissioners with respect to country roads and to the state highway commission where state highways are involved. In New Jersey, the proposition has been welcomed by motorists and pedestrians as well as public officials.

Wider Roads Safeguard Life of Motor Drivers

Everybody recognizes that the value of human life cannot be estimated.

Safeguarding of human life, therefore, by preventing accidents, is one of the most important problems confronting the modern highway builder. He must build highways so as to avoid congestion. Elimination of congestion is vitally important now, with the constant extension of paved road systems, bringing an increase in the number of motor vehicles and making the speed of travel much greater.

At present the number of automobiles is increasing more rapidly than the paved highways to carry them are being built. This is bound to cause congestion of the roads as they now are. And congested traffic conditions mean that travel at the speeds necessary to highest efficiency will be likely to cause accidents.

The solution of the problem lies in more roads and wider roads. Wider roads are particularly important to accommodate the greater number of motor vehicles. Every motorist—you in particular—must help to make highway travel more pleasant and more safe by working for wider roads.

Already steps have been taken in many parts of the country to build new paved roads wider and widen old ones by adding new strips of pavement at the side. Old concrete pavements which were built 16 or 18 feet wide are being increased to 20 feet or more by laying new strips of concrete at the side of the old pavement.

This movement must be continued and extended to make motor-vehicle traffic safe and efficient.

Constructing Highways in Great Hoosier State

In order to salvage as far as possible the original investment in the existing gravel and stone roads as bases for new motor highways the Indiana state highway department has lately embarked upon a more extensive program of bituminous construction, divided into two classes, one of which is known as "surface treatment" and the other as the "penetration method." Under the former method the surface of the road is treated with asphaltic materials. Under the latter a top course of asphalt is constructed by having the asphaltic binding material penetrate, under compaction, the gravel and stone in the base.

Building Many Highways

Improved roads are now being built in the United States at the rate of 40,000 miles a year. Under the federal highway act of 1921, which is administered by the Department of Agriculture through its bureau of public roads, a program has been established which will give the country a connected system of main highways. Practically every city of 5,000 population or more will be connected with it in the near future by improved state or county roads

CAP AND BELLS

PARTICEPS CRIMINIS

The history teacher was giving her pupils some special instruction, and incidentally asked the question what was the approved system of training of a lawyer or barrister in England.

The star pupil of the class lifted his hand and was told to rise and proceed.

"He read law," said the star pupil, "and then started practice for himself or hooked up as an accomplice in some established firm of lawyers."

BEING TAKEN OUT

Wife—There's that pretty Miss Flyrt in bathing again with Mrs. Brown's husband. Don't you think she's going too far?

Hubby—Looks like she's being taken out by the tied.

Chemical Identity

Our diamonds from carbon grow.
The time may be in sight
When to a jeweler we'll go
To buy our anthracite.

Overheard

An old lady being shown around Rochester cathedral by one of the vergers, arrived at a tablet in the nave in memory of Charles Dickens.

"Oh," she said, "I never knew that Dickens was killed here."

"He wasn't, madam," replied the verger, "but why do you ask?"

"Why it says, 'This tablet was erected by the executors.'"—London Morning Post.

A Bad Break

Flora—What's the trouble between Percy and his girl?

Fauna—He was calling on her the other evening and as he was leaving she handed him his hat and cane and he absent-mindedly tipped her a quarter.

Flora—Only a quarter! The tightwad.

Admiration Society

He—Do you know what I admire most about you, beloved?

She—No.

"Your lovely eyes."

"And do you know what I admire most about you?"

"No."

"Your exquisite taste."

Patience and Patients

Mrs. Brown—I admire our doctor immensely. He is so persevering in the face of difficulties that he always reminds me of Patience sitting on a monument.

Mr. Brown—Yes, but what I am becoming rather alarmed about is the number of monuments sitting on his patients.

"BUSINESS AS USUAL"

"I understand that you and Kitty are not speaking to each other."

"It's not so. We can be ever so much more mean and catty to each other when we're on speaking terms."

Sad Philosophy

In human nature traits we see
Which bid us stay prepared—
Some people peaceful be
Unless you keep 'em scared.

Not Altogether Fluttering

Madge—How could you tell that sharp-tongued Mrs. Weeks that she reminded you of a flower?

Herbert—So she does, but I didn't say it was a snapdragon.

Grasping an Opportunity

"Is that a particular friend of yours you spoke to?"

"Why, yes."

"Why don't you ask him to join us, then?"

"Oh, this is so sudden! He's the new minister."

Emaciated Body

Whipple—I saw a horribly emaciated body last night.

Stipple—Great heavens! Where?

Whipple—On a flivver.

SICK 3 YEARS WITHOUT RELIEF

Finally Found Health by Taking Lydia E. Pinkham's Vegetable Compound

Columbia, S. C.—"Your medicine has done me so much good that I feel like I owe my life to it. For three years I was sick and was treated by physicians, but they didn't seem to help me any. Then I took Lydia E. Pinkham's Vegetable Compound and got strong enough to do my housework, where before I was hardly able to be up. I have also taken the Vegetable Compound during the Change of Life and it has left me in good health. I recommend it as the best medicine for women in the Change of Life and you can use these facts as a testimonial."—Mrs. S. A. HOLLEY, R. F. D. No. 4, Columbia, South Carolina.

Why suffer for years with backache, nervousness, painful times and other ailments common to women from early life to middle age, when Lydia E. Pinkham's Vegetable Compound will bring relief? Take it when annoying symptoms first appear and avoid years of suffering.

In a recent country-wide canvass of purchasers of Lydia E. Pinkham's Vegetable Compound over 200,000 replies were received, and 98 out of every 100 reported they were benefited by its use.

It is impossible to make some men feel cheerful about tomorrow if they have to go to a party.

Many a man fails because he never tries.

Hall's Catarrh Medicine

Don't wait for time to heal that itching rash

NEGLECT of even the slightest skin rash, roughness, chafing or soreness may have serious consequences. Painful, disfiguring complaints like eczema, ringworm, etc., all start in a small way.

The safest plan is to keep a jar of Resinol Ointment ready to use at the first sign of skin trouble. It promptly stops itching and reduces inflammation and burning. The tiny pores readily receive this soothing ointment, and its healing influence is carried far below the surface of the skin.

Resinol Soap is a favorite with thousands who like its generous lather, so refreshing and cleansing. At all druggists.

RESINOL

Porter's Pain King
A Liniment

Powerful, penetrating and soothing, this time-tried remedy brings quick relief from menacing coughs and colds. For other uses read the directions with every bottle, now.

Use it today

Since 1871 The Geo. H. Rundle Co. Piqua, Ohio

FOR OVER 200 YEARS

haarlem oil has been a world-wide remedy for kidney, liver and bladder disorders, rheumatism, lumbago and uric acid conditions.

Life of John M. Henderson is Ended

John M. Henderson—a life long resident of Jackson township—a son of Samuel and Lettie Henderson, was born in Jackson township, DeKalb county, Indiana, July 3, 1844, and passed away at the home of his son, Glen C., Woodburn, Ind., Monday morning, January 5, 1925, aged 80 years, 6 months and 2 days.

In 1870 he was married to Adeline Keyes of Carroll county, Ohio, to which union were born five children: William Riley, Josephine, Mable, Glenn C. and Kathryn. Of these, his wife and three children have preceded him to the Great Beyond.

There remain to mourn their loss two children, Glenn C. of Woodburn and Kathryn Lindstrom of Pleasant Lake; one sister, Elizabeth Stafford of Elkhart and numerous nieces and nephews.

Funeral services were conducted Wednesday morning at the M. E. Church of Spencerville—where he held his membership—by Rev. Fisher of Woodburn assisted by Rev. Brown of Spencerville. Interment in the family lot at White City Cemetery. Roscoe Walter, undertaker.

Local Banks Get County Money

For the next two years the county funds will be distributed among nine of the banks of the county, each paying 2% on the monthly balances.

St. Joe Valley bank of St. Joe, $30,000; bond of $30,000 with Wm. Curie, Kate A Leighty, J. R. Shilling and Ray Reasoner as sureties.

Farmers and Merchants State bank of Spencerville, $20,000; bond of $10,000 with F. E Rhoades, L. B Fisher, A W. Beerbower, S. M. High, A. H. Peters, John E. Ulm, W. P Steward, R. B. Renn and C. G. Rectenwall as sureties.

The evidence in the suit of Jas. J. Malone against Don P Hindman and the United States Fidelity & Guaranty Co., on an account for wages was heard in part Saturday by Judge Endicott and then was taken under advisement. The similar suit of Charles B. Lawson against the same defendants was heard also and taken under advisement.

An increase of about 10 per cent in the mortgage deduction from the assessed valuation of land in the state is proposed in a bill being drafted at the instance of several farm organizations. Under the present law the exemption is limited to $1,000. The new bill provides that the maximum exemption shall be 75 per cent of the mortgage debt, but the exempted amount must not exceed 37 per cent of the assessed valuation of the land.

BEN SAWYER always came down the back stairs the same way. New Year's morning was no exception. There was a rush, a clatter and a general tumbling noise—and Ben emerged into the kitchen.

His mother was just putting the last things on the table for breakfast.

"Happy New Year, mother!" called Ben, disappearing into the dining room.

His mother, strange to say, did not reply.

Polly Sawyer, the youngest of the family, and Harry were standing around the dining room waiting for breakfast to be served.

"Mother's sort of queer this morning," whispered Polly to Ben. "She looks just the same, but there's a kind of difference about her. She hasn't said 'Happy New Year' to one of us."

Ben frowned and looked at his boots. "Oh, well, I guess she's a little tired after the party last night. Shouldn't blame her."

Ben really began to feel uncomfortable and he attempted a timid question.

"Mother, don't you feel well this morning?" he asked.

Mrs. Sawyer looked up, surprised. "Why, yes, Ben. What made you ask?"

"You seem so—so sort of, well"—he floundered—"sort of quiet."

"Quiet?" asked Mrs. Sawyer.

Harry and Polly looked at each other uneasily. What was the matter with breakfast, anyhow?

"Yes," said Ben, "and you haven't wished one of us a Happy New Year."

"Dear, me, smiled Mrs. Sawyer, "I'm sorry. I forgot all about it. Well, I'll do it now. Happy New Year, Ben and Harry and Polly!"

But this was not at all what they wanted. She did not say it that way when she meant it. She shouted it up the stairs the first thing in the morning, to get ahead of everybody else.

The children felt strange and out of tune. Mother was always so jolly. It took all the fun out of things to have her this way.

"We had a fine party last night, didn't we?" asked Polly. "Every one said they never had a better time."

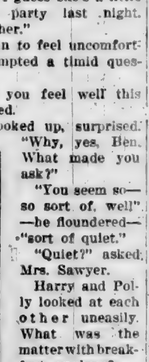
Ben looked hard at his mother. He was the oldest and, though careless and noisy, loved her very much. "It was because mother worked so hard to give it to us," he smiled. "Those little cakes were just the ticket, and the ice cream—oh, boy!"

The other children nodded. "Sure thing," mumbled Harry, looking as solemn as an owl.

Mrs. Sawyer glanced from one to another. "Children," she said, "I've got something to say to you New Year's morning. I think this is the best time, for it is the very beginning of the New Year."

"Yes, mother," they all agreed.

"It is the custom to say that we make new resolutions, but I wish we could make new faces."



"New faces!" exclaimed the children together.

"Yes—just that. But new faces are not made from the outside; the molding has to come from within. Faces are made by thoughts, and thoughts are our only tools. I worked for two days to make it a happy one for you and your friends. I grew very tired, but I did not mind that, if it gave you pleasure. You say you had a good time, but this morning is the first I have heard about it."

"Oh, mother!" they wailed, conscience-stricken.

"You take too much for granted, children. And if you don't begin to think a little about other people and what they are doing and feeling, you will grow up having very disagreeable faces. I want you all to try to have 'new faces' this year. Make your eyes see nice things about others; make your mouths say kind words whenever you can. Next New Year's morning I'd like to shout a 'Happy New Year,' and mean it. I want to see happy faces not because you have a good time, but because you have helped to 'shine up' the world for others."

"Yes, mother," replied all the children, and then they got up with one accord and ran around the table and kissed her.

THE NEW LEAF

By MARTHA B. THOMAS

WE TALK about turning over a new leaf at New Years. How about turning over our brains? Most of us work these factories in our heads about half-time and half-capacity. When a new idea walks in we hustle him out before he disturbs the quiet of the place. Why not let him ramble about and stir up the old machinery? If he makes a racket and starts a fight with all the old ideas, let him scrap it out. You can clear up the damage afterwards, and will probably feel amazingly refreshed. The trouble with most of us is a deep-rooted aversion to enlarging the works!

Let's put in a new window now and then, oil up the cogs, find a place for new thoughts and have a grand time with ourselves!

Luther not only turned his brain over when he nailed that famous letter on the church door, but about the whole world, as well.

Newton only needed an apple as a self-starter towards the idea of gravitation.

Shakespeare looked about him at the everyday doings of "high folks and plain folks," and see what he accomplished.

You never can tell whether you're a genius or not until you scrabble around in your own head and produce something!

Starting Off the New Year

By MARY GRAHAM BONNER

THEY had known each other for only a little while. But both of them knew that through the long stretch of years ahead they would grow happier and happier as they knew each other better and better.

It was on New Year's day that they announced their engagement. It was such a beautiful day upon which to announce such a glorious, romantic fact.

"My dear one," he whispered, "no man could care about a girl as I care about you."

"No one could love a man as I love you," she said. "Other girls, I know, could never feel the love I feel. It is a new feeling—to feel so much, such great, great quantities of love for another."

"No one will be as happy as we will be," he said.

"No one," she agreed.

"I don't think any one ever loved as I do you," he said.

"I'm sure no one ever loved as I do you," she said.

For to both of them love was new, even as the year was new.

What mattered it to them that others had said the same—that to everyone to whom love came it came as something fresh and new and beautiful and unusual?

For the continuing of romance in life is like the continuing of the years. They come along, ever, ever new because they carry with them new hopes and new joys.

(©, 1924, Western Newspaper Union.)

Through the Glad Eyes of a Woman

By JANE DOE

THEY LOVED BECAUSE—

SHE offered to darn all his socks every week, even though she hated darning.

• • •

He took her arm and piloted her across streets that any chicken could have ventured without any danger whatsoever.

• • •

She wanted to marry him right away without waiting till he got a better position.

• • •

He never looked twice at any other pretty girl and preferred her everyday conversation to the most scintillating wit.

• • •

She was horribly upset when he sneezed more than three times.

• • •

He always gave a sigh of relief when they were left alone, even if they said nothing for a whole hour.

• • •

She couldn't eat any breakfast if there wasn't a letter from him.

• • •

He talked over everything with her and made her realize she wasn't to be a mere cypher in his life, but a life partner.

• • •

She was always messing about in the kitchen making him dainty dishes.

• • •

He didn't talk all his love, but tried to live it.

• • •

She carried his photo in her wrist watch, one in her pocketbook, had another in her bedroom and was peeved because the family said that was more than plenty and wouldn't have him in the parlor as well.

CONCORD

This has been a very snug winter since it began, plenty of snow.

The finest box stationary in town on display at News office From 5c to $1 00.

Ford Jackson, wife and baby spent Sunday in Auburn with the latter's parents, Less Sebring and wife.

Miss Ilene Johnson has been complaining for a couple of weeks but is a little better at this time.

Mrs. Floyd Farver and children of Auburn are here visiting her sister and family. Mr. Farver is working in Fort Wayne.

Roy Kellar and family visited his mother at Butler Sunday. Mrs. Kellar returned home with them and remained until Monday.

Mrs Libb W sson came Monday evening to spend a few days with her sister, Mrs. Ira Bone.

You can get transfer paper at News office in large or small sheets.

SPENCERVILLE

Mrs Arline Rhoades is spending a few days in the home of her son northwest of Concord.

Moses Oberholtzer and family and Mrs. Matilda Oberholtzer were Friday guests in the B. F. Markle home

David Wertman and Hugh Sutter of Mansfield, Ohio, were Saturday and Sunday guests of Frank Wertman and wife.

Mrs. Cora Steward was called to Mansfield last week by the death of her youngest brother, Cloyd Barr. She was accompanied by her daughter, Mrs. Roscoe Walter.

Members of the C. C. club spent a very enjoyable afternoon at the home of Mrs. Maude Beams, Friday. All enjoyed the social hour Mrs. Rebecca Beams was a guest. The next meeting will be at the home of Mrs. Georgia Jenkins.

Arrangements have been made to haul the Coburntown scholars to this place. On Monday morning the grades were re-arranged with Mrs. Wilder in primary room teaching the first and second grades, Miss Walker in the intermediate room teaching the third and fourth grades, Miss Lake in the annex teaching the fifth and sixth grades and William Lake in the grammar room teaching the seventh and eighth grades. Prof. Smith will have his classes in the domestic science room.

Lettuce Grown in Greenhouses

Crop May Be Raised in Inexpensive Buildings With Good Results.

(Prepared by the United States Department of Agriculture.)

Crisp, tender lettuce, such as may readily be produced in greenhouses and be placed in the hands of the consumer within a few hours from the time it is harvested, is increasing in popularity. The crop may be grown in simple, inexpensive greenhouses, says the United States Department of Agriculture, but correspondingly better results can be had when a large greenhouse is used.

Lettuce growing in greenhouses is the subject of a new bulletin just issued by the United States Department of Agriculture as Farmers' Bulletin 1418. The purpose of the publication is to make available to present and prospective lettuce growers information which has been gathered from successful growers of greenhouse lettuce and other forcing crops and to bring together in one publication descriptions of the best practices in the production of the crop.

Essentials for Success.

Success in the growing of greenhouse lettuce, says the bulletin, depends on the use of a soil well supplied with organic matter and available plant food, the control of disease and insect enemies of the crop, the use of varieties and strains adapted to the needs of the grower and the market to be supplied, and the closest attention to every detail of the management of the crop.

Satisfactory financial returns can be secured only when a well-grown high quality crop is packed in an attractive manner in containers of suitable size and placed in the hands of consumers in the shortest practicable time.

Suitable Structures.

Lettuce is not particular as to the type of forcing structure in which it is grown, and it is produced in many kinds of greenhouses, but cucumbers and tomatoes, being very particular as to their growing conditions, require greenhouses of a special type. Owing to the fact that the vegetable-forcing industry usually includes the production of several crops, it is necessary to use structures suited to the requirements of all crops. Lettuce, cucumbers and tomatoes are the crops to which the most attention is devoted, and they comprise a large proportion of the annual value of the vegetable forcing crops grown in the United States. Naturally the houses must be made to suit these difficult crops, which must have a rather high and very uniform temperature and freedom from draft, thus necessitating excellent heating equipment. While such houses are not absolutely essential to the successful production of the more hardy types of lettuce, it is unquestionably true that the crop thrives better in good greenhouses than in very simple structures. Those proposing to grow lettuce as their main crop will find is advantageous to build a good type of greenhouse.

A copy of this bulletin may be secured upon request, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Important Facts on Making Good Lawns

The latest in lawn making, according to experiments of the Department of Agriculture, is summed up in the two paragraphs below:

1. Seedling plants tend to go to seed at the same time old plants mature and seed, the season being determined by either the temperature, or the length of daylight, or both. Seedlings of late-sown seeds thus have little chance to develop strength before they are called upon to reproduce, and this exhausts them.

2. Seed must be covered if it is to germinate, and where it is thrown upon an established lawn, a top dressing is required to insure coverage. This should be sand or loam well enriched.

Fact No. 1 shows the danger of delaying seeding, denying seedlings a chance to spread out and become well established. This is especially noticeable in dry seasons, often exhausting the young grass. If snow-covered, prepared soil is seeded, the seeds settle into the honeycombed soil and are covered deep enough to germinate.

Fact No. 2 emphasizes the importance of covering the seed in order to insure germination, showing the necessity of having a loose layer on top.

Preparing the Soil

In England and France gardeners are far ahead of our American gardeners in soil preparation. When spading their land for planting they fork it over very carefully, mixing in quantities of manure so carefully that it becomes incorporated in the soil itself. Because of this careful preparation these European gardeners are able sometimes to grow more on one acre than our American gardeners grow on five acres.

Interest in Petunias

The revival of the popularity of the petunia, for years one of the garden standbys, has been a feature of gardening for the last two years. The introduction of the Rosy Morn bedding petunia, with its wonderful wealth of bloom and its certainty to flower in almost any situation, has done much to revive interest in this popular old-fashioned flower.

Improving Old and Worn-Out Pastures

Lime and Phosphorus Are Elements Most Needed.

There is much discussion about the improvement of old and worn-out pasture lands. In theory a good pasture gives the cheapest feed that a dairyman can possibly find. It would mean a great saving on hay and grain if the pasture could be made to double its yield. It seems easy, but the fact that improvement is slow in spite of the evident advantages shows that it is not always practical. The following note from Professor Eastman of the New Hampshire college is to the point:

"Possibly you realize also that our pasture rejuvenation problem is a rather big one in the sense that pastures are not very valuable per acre, and that treatments of lime, seeding, etc., are likely to be rather expensive. For instance, perhaps the average pasture in New Hampshire can only be pastured at the rate of one animal unit for every five or eight acres of land. If such pasture is worth from $5 to $8 a season, the rent is only $1 an acre, and the little that can be done to improve pasture land so often encumbered with rocks and stumps, as ours is, for this amount of money, is apparent. I realize the other argument just as keenly as anybody that pasture takes the place of much more expensive feed, but so long as there is any pasture available it is very hard to get farmers to lay out very much money on improving the pasture conditions with so little direct returns."

That idea must be considered when we come to discussing pasture improvement. Lime and phosphorus are the elements generally needed to bring in more and better grass, and in sections far from limestone deposits the expense must be considered.

Stone Fruits Subject to Numerous Diseases

(Prepared by the United States Department of Agriculture.)

Various diseases occur on such stone fruits as peaches, apricots, nectarines, plums and cherries during marketing. It has become of increasing interest to growers, shippers, carriers and receivers of such fruits to know the names and causes of these diseases, how they behave in transit and storage and how they can be controlled. Farmers' Bulletin 1435, issued by the United States Department of Agriculture, discusses these diseases of stone fruits, giving most attention to the market phases of the problem. Field phases, however, are considered when reference to them helps explain conditions which may arise during the marketing process. A copy of the bulletin may be had free of charge upon request, while the supply lasts, from the United States Department of Agriculture, Washington.

Heeling in Trees

When you buy trees and plan not to set them until toward spring they should be heeled in. To have them handy to set when you are ready they should be heeled in in upright position in a single row, and each bunch with the labeled tree the last to be set. To do this begin each row with the labeled tree and when all of that variety are set leave space enough after it to give room for removing it when you want it, and then set the labeled tree of the next sort. By this method you can set any trees you wish at any time and keep them labeled in the row until the last tree is set. Heel the trees in rather deeply, and work the soil in about the roots well, almost as thoroughly as if you were setting them, and you will have them in fine condition.

FARM FACTS

Mossy-cup oak or burr oak is one of the finest of shade trees and thrives in many regions of little rainfall.

• • •

Petunias will produce satisfactorily in places and under conditions where many other flowers will not grow. They also do well in window boxes.

• • •

Hens go on a strike in the face of increased wages. Correct and generous feeding along with comfortable quarters will usually return them to the job.

• • •

The basis of success in the live-stock business is a high-class sire. Better sires mean a better herd and economical production of meat, milk, wool or eggs—and this means larger profits.

• • •

Annual flowers successful in partial shade and that do well as basket flowers are sweet sultan, clarkia, platycodon, godetia, Drummond phlox, pansy, sweet alyssum, lupine and forget-me-not.

• • •

Dahlias are among the showiest of late summer flowers requiring an abundance of moisture and cool nights for best results; hence, they are usually not planted until June so they will not become stunted by the heat of summer.

• • •

In selecting seed for vegetables it is a good plan to be sure that you are getting the kind that will give the best results. To do this it pays to deal with responsible seedsmen, if you have not saved seed from your own plants. In the latter event you know just what to expect.

POINTS ON KEEPING WELL

X-RAY FOR WHOOPING COUGH

DURING the winter of 1923 there was an unusual amount of whooping cough in this country. Ordinarily this disease kills about ten thousand babies a year. This is bad enough, but every four or five years for some reason, it is particularly prevalent. Evidently, 1923 was one of these years.

Existing methods of treatment are of little use. Once contracted, the disease runs its course of from four to nine weeks. The frequent spasms of coughing, exhaust and weaken the child, who often develops pneumonia and dies, indirectly but none the less actually, a victim of whooping cough.

We do not know the exact cause of this disease. We do know, however, that in most cases, the thymus gland, located in front of the bronchial tubes and trachea is considerably enlarged. This gland, which corresponds to the sweetbread in the calf, is large during early life, but shrinks after the first fifteen years, until in the adult there is left only a fibrous cord. It has long been surmised that this enlarged gland, pressing on the air tubes, might have something to do with the spasms of coughing.

While treating these enlarged glands with X-ray, it was noticed that, soon after the light treatments were begun, the spells of coughing were relieved. So Dr. Ralph Lebnard, of Boston, decided to test the value of X-ray treatment in a large number of baby patients in the Boston Floating hospital. Four hundred babies with whooping cough were selected and carefully examined, so that there might be no question about the existence of the disease. Two hundred were also carefully examined, as so-called control cases. All were given the same care under the same surroundings, except that four hundred were given X-ray treatment, and two hundred were not. Of the children treated, 75 per cent showed marked improvement. In children under one year, 100 per cent were benefited.

Used in the early days of the disease, the X-ray does not prevent the coughing nor does it shorten the disease. In children under two years, however, in those not given X-ray treatment, the disease lasted nine weeks, while those given the X-ray treatment were well in five weeks. As the death rate is higher the longer the disease lasts, this shortening of the duration doubtless saved many babies' lives.

This number is by far the largest that has ever been treated by X-ray. After long experience and careful study, the opinion of all the doctors on the staff of the hospital was that the X-ray was the best means at present known for controlling the spasms in whooping cough and for shortening the duration of the disease.

SPECTATORITIS

TOM MARSHALL said that what this country needed was a good five-cent cigar. What it needs more is a good game in which anyone and everyone can take part. We are suffering as a nation from what the health commissioner of one of our largest cities very aptly calls "spectatoritis." There are too few playing and too many occupying grandstand and bleacher seats. During the beautiful days of summer, thousands of men, most of them middle aged, many of them too fat and with muscles that are crying for exercise, sit on the benches and watch a few other men play baseball. When fall comes and the baseball season closes, the same men sit in the grandstand and watch 22 men play football. Or it may be a wrestling match or a boxing contest or a six-day bicycle race or a billiard tournament. A few men are doing the work. Thousands are looking on.

The players are trained to the minute. To be a star baseball player or a crack halfback, they have developed their bodies far beyond the needs of present-day life. This means that their hearts are twice as large as they need and that by middle life, when they ought to be in their prime, they have fatty instead of muscular hearts. Athletes generally die young.

The looker-on doesn't take any chances of a fatty heart. He has his fat around his waist. His muscles are flabby and he doesn't have a good sweat from muscular exertion once a year.

So the 18 ball players or the 22 football men overwork and shorten their lives to amuse the thousands of spectators who underwork and shorten theirs.

Sounds silly, doesn't it? It is. The object of games is not to produce stars, any more than the object of eating is to produce men who can eat four times as much food as the average man. Our present system of athletics is killing off our picked young men at a time when they should be in their prime. The hundreds of thousands of spectators who pay to sit still and see other men work when they should be working themselves are kidding themselves. You can't keep fit by watching another man work, any more than you can keep strong by watching another man eat.

Can't some wide awake American invent a universal game? We need it in our schools and colleges and more than all in our every-day lives.

Dainty Gowns for Youth and Beauty

This is the debutante's hour, that enchanted moment when she stands "with reluctant feet, where the brook and river meet," and sees the world before her. Happily, the label "flapper," which never did really apply, has gone into oblivion with the weird styles that appeared simultaneously. The debutante of today is a creature of loveliness, says a fashion authority in the New York Times.

She is the most inspiring subject the dress creator ever meets to challenge his art, and less imagination is required to gown her properly than to gown any other prospect that comes to the atelier. Youth is ever engaging and ever appeals to our gentlest conceptions. No modiste who recalls the joy she had in dressing the doll of her childhood will be bored at the task of building a wardrobe for the girl who is just stepping into her first season.

It may be that, to quote a Paris fashion authority, the debutante has minor importance in the Continental social scheme of things, but this has not prevented the designers from sending to our part of the world the most delightful modes that have ever warmed the heart of a "bud." And because of the better appreciation here, American designers have produced some of the most adorable and altogether suitable styles for young women. These styles are invariably of the sort that has an appeal for the most refined, the best form in the world of fashion.

For the last four years the trend of styles has been interesting. Fashions have swung from one extreme to another until designers have despaired finally of discovering novelty that could be made to harmonize with art and beauty and taste.

Two seasons, even one season ago, the outre, the casual yet showy type of frock, was the thing most worn. It was the furthest stroke of the pendulum from the conventional which, in its countless variations, had been the accepted standard for so long. This outre idea was certain to go, for youth loves beauty, and dancing youth loves grace and ease and some quality of distinguishing elegance. The one-piece crude and graceless frocks that came after the pretty floating chiffons lived but a little while.

Like "Period Gowns."

While the season's modes of the conventional type are attractive, the fancy for "period" gowns endures, and almost every house of consequence offers quaint, picturesque frocks that have compelling grace and charm and an unmistakable chic as they are worn by the smart young women of today.

Some of these frocks are done in silk of the finest, most lustrous quality, the very simplicity of the design

Debutante Costume of Rose Point Over Pale Blue Chiffon.

giving more importance to the fabric. This is the sort of evening gown in which Lanvin delights. It is especially becoming to young women of slender figure and patrician bearing.

One of these models of definite type is made of heavy ivory taffeta, stiff and shimmering, in a style slightly directoire. The bodice, which is plain, and the skirt, which is very full and ankle length, are joined at the normal waistline. The frock entire opens down the front over a waistcoat and petticoat of turquoise-blue chiffon velvet and the whole costume is finished down each side of the front and around the bottom and the short shoulder sleeves with a pointed band trimming of the velvet and pearls.

In another mood Lanvin expressed a feeling for the Spanish in a jeunesse picture frock, also of white silk, with a snug-fitting, sleeveless bodice, untrimmed, and a full, slightly crinolined skirt spelled with black Spanish lace, glistening with spangles. Silver kid dancing slippers are worn with both of these unusual costumes.

Cherult, whose gowns have always a conspicuous touch of poetic beauty in a flower, a sash, a scarf or some other distinctive feature, is using many of the handsome materials for the young models this season. No Parisian house ever offers more tempting combinations and harmonies of color.

In one of the latest designs a brocade of subtly woven fuchsia and gold is made into a simple evening gown. The bodice is the usual plain tunic-blouse, straight to the hips, without sleeves, the neck cut V-shape, back and front, and the skirt, which is short, is godeted at each side from the knee to the hem. The piece de resistance of the whole costume is a wide sash of reseda-green chiffon velvet. It is drawn close about the hips and hangs loosely, knotted with long ends at one side.

Another Cherult model in black satin is in one piece, very short as to skirtline and relieved with a gay scarf of

Dance Frock, Gray Tulle, Two Shades Over Silver Tissue.

green-gold that drapes the decollete neck and hangs over one shoulder to the bottom of the dress.

Late Models From Paris.

A Parisian creator of prestige has sent to one of the smaller and more exclusive shops some last-word models designed to catch the fancy of a debutante who elects to be chic and dainty. Most of the frocks are of the one-piece style, some slightly godeted, and all of them are of the finest, sheerest stuffs and of delightful colors.

One in rose and silver is a sort of silk grenadine, with stripes of gold and silver lacily threading the weave to form a zigzag pattern, the points perpendicular. Another, enchanting as a full-blown flower, is achieved with rose-colored tulle in two shades, over silver tissue shot with rose. A circular flounced skirt that falls in points is very bouffant. The bodice of silver cloth is almost hidden by a winding scarf of tulle.

A debutante frock of pale-green chiffon, embroidered in the most delicate tracing of silver in a long sweeping feather pattern, is beautiful as moonlight on a summer sea. This gown follows the line of the figure to the hips, and flares slightly with fan-shaped godet inserts to the hem. Still another in this rare collection is a frock of hyacinth-blue chiffon with silver tinsel needlework.

In some late models Callot has a flair for swaying fringes in her dance frocks, and handles the idea with genius. The note of youth dominates the richness of material and trimming. White and gold is the scheme in one of the most distinguished models shown by this establishment. Luxurious beauty is expressed in a glistening brocade, severely cut, with motifs of gold embroidery forming the points of a three-quarter tunic, and two lower flounces, each finished with gilt and crystal fringes. These are typical of the handsomer gowns designed for young women who have the stature and the carriage to wear them.

Airy Fabrics Used.

We are a long way from the colonial times when the belle of the ball wore dotted swiss with blue ribbons and a neck-band of black velvet, and when muslin or a shimmery silk was considered an achievement in dress for a debutante. But the idea still lives and prompts the designer to build youthful evening gowns of the lovely airy fabrics and the colors of fancy and poesy.

One looks for snowy white, baby blue or faintest pink or gold to set off a rose-leaf skin, fair young arms and hands, and for materials that will cling most gracefully or float with fairy lightness in the dance. Fine detail in ornamentation and naivete in design are elements in the ideal costume for the first ball or the presentation party. There are variants in style without number, as there are types of women, but there is a consistent idea guiding the artist's brush

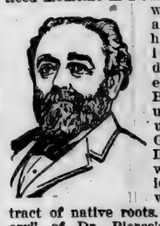
The faster a man's pace, the sooner old age overtakes him.

Brought up on a Farm



As a young man Dr. Pierce practiced medicine in a rural district and was known far and wide for his great success in alleviating disease. He early moved to Buffalo and put up in ready-to-use form his Golden Medical Discovery, the well-known tonic for the blood, which is an extract of native roots. This "Discovery" of Dr. Pierce's clears away pimples and annoying eruptions, tends to keep the complexion fresh and clear. It corrects the disordered conditions in a sick stomach, aids digestion, acts as a tonic and enriches the blood. Vim is sure to follow its use. All dealers. Tablets or liquid.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

INDIANA State Happenings

Indianapolis.—Members of the United States naval reserve in Indiana will have a far better opportunity to obtain actual naval experience and training aboard ship as a result of the assignment of the cruiser Hawk of the United States navy to Michigan City for the use of the reserves, said Lieut. O. F. Heslar, U. S. N. R. F., commanding the Ninth regiment of the reserves. The ship has been ordered transferred from the naval training station at the Great Lakes, and is expected to arrive at the Indiana port within a few weeks. The new training ship will replace Submarine 419, on which the reservists have been training.

Indianapolis.—Dr. G. W. Butler, inspector for Indiana of the bureau of animal industry of the United States Department of Agriculture, received instructions from the department to begin work in Indiana to prevent the spread of the European fowl pest disease, which has killed many fowls throughout the country. Doctor Butler said that measures will be taken to stop the transportation of poultry in crates, which have been used previously to this time. He said that all poultry meat will be inspected, and crates and coops must be cleaned or disinfected under government supervision before any chickens, geese or turkeys can be shipped in them in interstate commerce.

Indianapolis.—After reiterating his belief that witnesses in the damage suit against 33 residents of Jasonville, charged with being members of a mob that had attacked James Gatherun as a result of labor trouble, had perjured themselves on the witness stand, Judge A. B. Anderson overruled motions for a new trial, filed on behalf of ten of the defendants, and gave a judgment on the verdict of the jury for $25,000.

Marion.—The will of Walter Siddons, who died suddenly December 4, provides that the income of the estate, estimated at $50,000, shall go to the sister-in-law, Alice M. Siddons, and that at her death the income shall be divided, two-thirds to the Marion lodge of Elks and one-third to the Marion branch of the Salvation Army. The money under the terms of the will is to be used to relieve suffering and distress.

Warsaw.—George Allen, age fifty-five, and his son, Thomas Allen, age twenty-four, of Packerton, are in the McDonald hospital with broken bones, cuts, bruises and other injuries. They were injured at Packerton when they drove an automobile into the side of a speeding passenger engine at the Nickle Plate crossing. They failed to see the train. Their automobile was wrecked.

Franklin.—William Nay, seventy-six years old, pioneer resident of Hensley township, met a tragic death when he burned to death in a fire that destroyed the house in which he was living with his brother, James Nay, and nephew, William Nay, Jr., in the edge of Ninevah township. The house, which was destroyed by the fire and in which Mr. Nay lost his life, was a log cabin that was built in 1887.

Indianapolis.—Maj. Gen. Robert H. Tyndall, O. R. C., was selected commander of Indiana commandery, Military Order of Foreign Wars, and Brig. Gen. L. R. Gignillint, superintendent of Culver Military academy, was chosen senior vice commander at the annual meeting, held at Indianapolis, when Brig. Gen Hugh A. Drum, U. S. A., of the general staff, was the guest of honor.

Richmond.—Raymond Kelly, age thirty, an attorney, and son of William Kelly, city attorney, died at a hospital as a result of exposure suffered when his automobile stalled in a lonely country district near Milton. He is survived by the widow and one child.

Indianapolis.—Cairy Littlejohn, for six years state inspector of mines and mining, and instrumental in the framing of Indiana mining laws, died at the Methodist hospital in Indianapolis, following a major intestinal operation. Mr. Littlejohn was sixty-four years old.

Anderson.—George A. Ireland, age sixty-four, six years trustee of Fall Creek township, Madison county, died of paralysis at his home at Pendleton. The widow, seven sons and three brothers, including Edgar Ireland of Indianapolis, survive.

Brazil.—James L. Kehoe, age fifty-two, a prominent business man and packer of Clay City, is dead. He was agent for the E. & T. H., and Big Four railroads at Clay City for a number of years.

Terre Haute.—Yeggmen at Terre Haute robbed two safes and escaped with approximately $2,500. The safe in the office of the Standard Oil company was jimmied open by four masked bandits and the contents, $900, was stolen. At the American theater, approximately $1,600, the receipts of Saturday and Sunday, were stolen.

Fort Wayne.—Damage estimated at $350,000 was caused by fire which destroyed the stock and interior furnishings of the Boston store at Fort Wayne.

Plans New Survey of Dangerous Roads

Indianapolis.—The state highway commission has sent a letter to each superintendent and district engineer asking for a new survey of dangerous places on roads, with a view of learning what can be done with the least expenditure of money to make these places safer for traffic, John D. Williams, director of the commission, has announced.

Realizing that long stretches of smooth surface increase the probability of carelessness on the part of drivers, Mr. Williams said that the commission had ordered more warning signs placed at sharp turns and curves.

"This step is taken by the highway commission to do everything possible to safeguard life and property on state-controlled highways and to help minimize accidents that seem to be increasing at an alarming rate, largely due to careless drivers," the director said.

Bedford.—Four persons, three sisters and a neighbor, were killed and the brother of the three sisters, who was driving the car, was injured at a railroad crossing of state road No. 40, near Huron, Lawrence county. The automobile was struck by fast passenger train No. 1 on the Baltimore & Ohio railroad. The dead are: Mrs. Fred Desmond, age twenty-five; Mrs. Clarence Richardson, age thirty; Miss Bertha Chapman, age twenty, and Miss Margaret Chapman, age eighteen. All the persons in the car lived in Lawrence county.

Boonville.—A decision of considerable importance to tobacco growers was given by Judge Caleb J. Lindsay in the Warrick Circuit court, when he sustained the defendants' demurrer to the complaints of the Dark Tobacco Growers' association against Miles and Baxter Robertson. The two cases were identical and the opinion was applicable to each. Both cases were suits by the association against the growers for breach of contract. According to the decision, contracts entered into between the association and the growers are void.

Evansville.—James Bethel Gresham's grave has been marked by the stone sent by the government for the grave, officials making special effort to get the stone in place by Christmas. The grave had been marked by only a pickle bottle until, through the efforts of William E. Wilson, representative in congress, a government marker was obtained. Gresham was the son of Mrs. Alice Gresham Dodd of Evansville.

Columbia City.—The sleet storm has caused thousands of dollars' worth of damage in Whitley county, hundreds of telephone poles being down, while the weight of the ice has tangled scores of branch lines, and demoralized both local and toll service. It will take weeks to remedy the conditions.

Franklin.—Leave to file an amended complaint in the state's suit to revoke the charter of the Indiana Bell Telephone company was granted U. S. Lesh, attorney general, by Judge Fremont Miller in the Johnson Circuit court after he had sustained a demurrer by the company against the state's second amended complaint.

Indianapolis.—Mrs. Gertrude Bunce Miller, widow of W. H. H. Miller, who was an attorney general of the United States, died at her home, 1217 North Pennsylvania Street, Indianapolis, where she had lived since 1879. She was eighty-six years and six months old.

Bloomington.—With the completion, except for a few minor details, of the new $350,000 Griffey Creek waterworks, the problem of water shortage in Bloomington is to be solved for all time. The new waterworks is situated two and one-half miles north of Bloomington on the Dixie highway.

Hentyville.—An epidemic of hydrophobia among horses and mules in this vicinity has resulted in the infection of three men and has become general enough to spread alarm among stock men of this district.

Bicknell.—Elmer Stewart, a coal miner employed at the River Valley shaft near here, was killed when he was crushed by the mine cage which was being hoisted.

Fort Wayne.—Diamonds, watches and other jewelry valued at $10,000 made up the loot taken in a robbery of the Wayne Littlefield jewelry store in the heart of the business district.

Lebanon.—Alva Monroe Baker, age sixty-three, prominent Lebanon and Indianapolis business man, died of heart disease at the Witham hospital, following a several months' illness.

Lafayette.—Thomas H. Graves, age seventy-two, died of apoplexy. He is survived by his widow and a daughter.

Bloomfield.—Thieves who entered the grocery of Ed Baker at Worthington escaped with $250 taken from the safe.

Bloomington.—Phillip Blair Rice, twenty years old, who will be graduated from Indiana university with an A. B. degree in January, 1925, has been chosen from 20 candidates to be Rhodes scholar from this state at Oxford. Rice will receive $1,700 a year for the three years he is at Oxford. His home is at Martinsville.

Columbus.—Marshal T. Reeves, age seventy-three, widely known as a manufacturer, philanthropist and church worker, died at his country home north of Columbus. He had been ill several months.

Get back that lost weight!

WHEN you start to waste away to a shadow, when the color leaves your cheeks and your poor, tired legs will hardly hold up your weakened body it's high time you started taking a fine tonic and builder like Tanlac.

Tanlac will build you up and make you feel that life's worth living. Made from roots, herbs and bark gathered from the four corners of the Earth and compounded under the exclusive Tanlac formula, Tanlac is just what the poor, starved body needs.

First of all it cleanses the blood stream and puts the digestive organs in order. You find, after a few days' treatment, that you want to eat. Pretty soon the welcome color steals back into your cheeks and the scales tell you that you're gaining weight. From then on it's only a short time until you're feeling fit as a fiddle.

Millions of men and women have taken Tanlac with great benefit. More than one hundred thousand people have written us glowing tributes to this wonderful tonic.

First Bottle Brought Improvement

"Pains in my side and back caused me lots of trouble day and night. I could hardly walk my beat. Tanlac fixed me up quick. I noticed the improvement after the first bottle."

Patrolman Wm. J. Bader
324 Paul Ave., Belleville, Ill.

When you know it has worked wonders for so many folks it's folly not to take advantage of Tanlac's help yourself. Don't put it off another day: Get a bottle at your druggist's now and start the good work right away.

TAKE TANLAC VEGETABLE PILLS FOR CONSTIPATION

TANLAC
FOR YOUR HEALTH

No more delay, vain boaster, but begin.—Dryden.

Life is a long lesson in humility.

You can't do much for a man who is easy to do.

Handy "Bayer" boxes of 12 tablets—Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Health and good looks
—the reward of internal cleanliness.

IF YOU do not keep clean internally your looks and health are undermined together. A clogged intestine breeds poisons that reach every part of the body. These poisons ruin the complexion and undermine health. Constipation brings on such ailments as headaches, bilious attacks and insomnia, each of which saps your health and vitality.

Avoid Laxatives—say Doctors

Laxatives and cathartics do not overcome constipation, says a noted authority, but by their continued use tend only to aggravate the condition.

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless.

Take Nujol regularly and adopt this habit of internal cleanliness. For sale by all druggists.

Neglected Cough Dangerous—How to Stop It Quickly

When the delicate tissues of your throat are raw and sore from coughing, and your strength is exhausted with the constant hacking, you may fall an easy prey to more serious trouble. So stop the cough the quickest you can, before it creeps to the deep-seated lungs.

By a very simple treatment you can stop the most severe cough, and relieve the heaviest cough often in 24 hours. The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful and hold it in your throat for 15 or 20 seconds before swallowing, without following with water. It has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. With the cause treated in this way, the whole cough condition goes in a very short time.

The prescription contains no opiates or harmful drugs. It simply helps Nature. It is for coughs, chest colds, hoarseness, bronchitis and spasmodic croup. Very economical, as the dose is only one teaspoonful. For sale at all good druggists. Ask for

A Good Thing - DON'T MISS IT.

Send your name and address plainly written together with 5 cents (and this slip) to Chamberlain Medicine Co., Des Moines, Iowa, and receive in return a trial package containing Chamberlain's Cough Remedy for coughs, colds, croup, bronchial, "flu" and whooping coughs, and tickling throat; Chamberlain's Stomach and Liver Tablets for stomach troubles, indigestion, gassy pains that crowd the heart, biliousness and constipation; Chamberlain's Salve, needed in every family for burns, scalds, wounds, piles, and skin affections; these valued family medicines for only 5 cents. Don't miss it.

Obituary

Frances Ann Wasson, daughter of Samuel and Eliza Wasson, was born October 23, 1856 in Spencer township, DeKalb county, Indiana and died at Sacred Heart Hospital in Garrett, Indiana, aged 68 years, 2 months and 8 days.

She was one of a family of twelve children and spent her girlhood days on a farm near Spencerville.

October 5, 1882 she was united in marriage to James K Ricketts This union was blessed with three children, one son and two daughters. She and her husband moved to this community in 1910, purchasing the Levi Nelson farm on the Auburn road, where they spent many happy years, until death claimed her companion in 1917 She continued to reside there until four years ago when she purchased the Etchen property adjoining the homestead, and lived alone. She had been ailing only five days when the death angel summoned her to her heavenly home.

In early life she united with the M. P Church at Concord, later transferring her membership by letter, to the United Brethren church at Newville. She was active in church work and in the Sunday School, being treasurer for several years of the Willing Workers class. She was always cheeriul, kind and obliging, ever ready to lend a helping hand in sickness and distress. She will be greatly missed in the home circle, in the community, in the church, in the Sunday School and in the Ladies Aid Society.

She is survived by three children Mrs. Isa Shearer, of Fort Wayne; M. J. Ricketts, of Wilmington township and Mrs. Geraldine Webster of Stafford township; one step daughter, Mrs. Harriett Draggoo of Concord; also two sisters and one brother—Mrs Jane Hull of St. Joe; Mrs. Tillie Sheldon of Johnsonburg, Pa., and W. E. Wasson of Watsonville, Cal, besides five grandchildren.

The funeral was held Wednesday January 7th., from Newville U. B. Church at 10 o'clock, Rev. Strickler officiating. Burial at Spencerville, E. R Kinsey funeral director.

Card of Thanks

To the many neighbors and friends, we desire to express our appreciation of the acts of kindness and words of sympathy shown us in the death of our mother.

The Children.

Christian Church Notes

Bible School at 9:30, communion service immediately following. Preaching by the pastor in the morning.

Council meeting of officers and teachers will be held Monday evening, January 19 at 7 o'clock A good attendance is desired. The Loyal Sons and Daughters class will have charge of the social hour.

The following officers were elected Thursday afternoon to serve the coming six months for the Martha Society:—Pres., Mrs. Ida Williams; Vice pres., Mrs Nan Lysher; Sec., Mrs. Ada Bassett; Treas., Mrs. Arminta Northrup; Chaplain, Mrs. Belle Keesler; Membership com., Mrs Grace Sheffer and Miss Dorothea Scholes. Four new names have been added to the roll so far this year.

The report for the Sunday School for 1924 shows a gain of seven in the average attendance for the year over 1923. The grand total attendance of 1924 was 5,245, for 1923 it was 4,969. Average attendance 1924 was 102 plus and for 1923 it was 95 plus. The largest attendance for the past year was 258 on August 24, the smallest attendance 53 on January 6. The offering for the year was $281.07, average offering was $5 38 plus

HERE AND THERE

Mr. and Mrs. E. J Smith and son, Jacques, were Garrett visitors Saturday.

Mrs. Belle Ridgway returned home Saturday night from a six weeks visit at Hobart, Indiana.

Gray Woodcox and wife of Garrett, spent Sunday in the C. A. Woodcox and Ralph Sechler homes.

Mrs Virginia Lawson and Miss Martha George were Sunday dinner guests of Mr. and Mrs Harvey Lindley.

Stanley Monroe of West Unity, Ohio, spent Friday and Saturday here with his parents, F. M. Monroe and wife.

Mrs. Hollis Dilley and son, John left Saturday to join Mr. Dilley at Dayton, Ohio, where they will spend a few months.

Mrs. Sam Kees accompanied Dan Myers and family of Hicksville to Fort Wayne, Saturday, where they spent the day.

Joseph Koch of Fort Wayne, spent Sunday here with his parents Mr. and Mrs Charlie Koch. Mrs. Anna Baker, who has been visiting her children at Concord, returned with him to resume her work there.

The Leaders class of the M. P Sunday School was very pleasantly entertained Monday afternoon at the beautiful country home of Mr and Mrs. H. M. Widney. Mrs. Widney being assisted by Mrs. B. E. Widney. A good program was carried out, after which delicious refreshments were served. Thro the generosity of Mr. Chas. Koch the ladies were treated to a real old fashioned bob sled ride to and from the meeting, and to say he turned the corners "fast" is putting it very mildly.

In Society

Mrs. Virgil Perry entertained the members of the Progressive Bunco club at her home on Third street Friday eve. Prizes were awarded Mesdames Vernon Monroe Howard Renner and Clayton Wyatt. At the conclusion of the games a delicious lunch was served. One guest was present, Mrs. Chas. Grimm of Waterloo. A very delightful time was enjoyed by all with the exception of Mrs. Chas. Rice who was unable to eat. The next meeting will be held at the home of Mrs. Harry Randall.

Tile-Making in Mexico.

Long ago the Dominican fathers in Mexico established colored tile-making industry at Puebla, which has persisted through the years in spite of wars and revolutions.

Gotta Use Your Own Wits.

When the wife asks about political matters, your only hope is to be vague enough to convince her that she hasn't wit enough to understand.—Indianapolis Star.

Excavate Buried City in Northern Africa

Ruins of the ancient Roman city of Leptis Magna, which are being excavated from their centuries-old grave in the sands of the Lygian desert in northern Africa, promise to rival those of Pompeii in historical and artistic significance, in the opinion of Dr. Bruno Roselli, professor of Italian at Vassar college, who has just returned from Tripoli.

Statuary of the highest Roman type, with palaces, baths, basilica and the ruins of a Roman harbor, already have been unearthed. The operations, which are being conducted by 200 Arab prisoners of war under the direction of Prof. Renato Bartoccini of the Italian department of fine arts, will be completed in two years. Archeologists have proved that the city once had a population of 200,000.

Leptis Magna is being resurrected from beneath four to fifteen yards of sand. Many of the building walls have caved in under the weight of the sand. Although much of the statuary is broken, Doctor Roselli believes most of the fragments will be found.

The decline of the buried city began in 476 A. D. When the Arabs swept over the site in 600 A. D. the process of deterioration was complete. Because "Christian dogs" once had lived there and had contaminated the place, the Arabs did not seriously molest the ruins.

Her Improvement

"Have you noticed any improvement in your golf lately?"

"You bet! I found ten balls out of 50 lost yesterday. Last season I was lucky if I found two."

The Exclusive Shoe Store

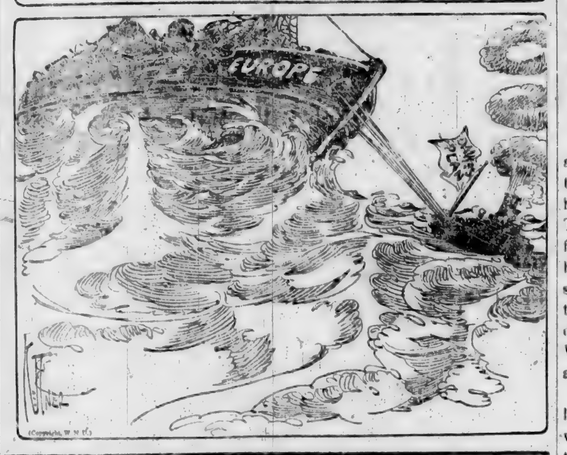
Salvaging the Derelict



Young Peoples Conference Sunday

The young people of Concord township have planned a conference for next Sunday evening, January 25, at the Lutheran church, with the following program:

7:00 Worship Service Harriett Wasson
7:20 Address, What My Church Expects of Me, Rev. Steffey
7:50 Music
8:00 Organization of Young Peoples Dept. Paul Hadsell
Music
8:25 Closing with Friendly Circle.

Hicksville Man Drives Into Creek

Fred Ferris had a thrilling experience Tuesday of last week as he was driving the state road west of Newville. As he neared the creek east of the Yeiser home, Mr. Ferris made the remark, to the man with him, of the accident last summer, when an auto load drove into the creek, and just then his car slid and he made a dive for the creek and landed right-side-up in the middle of the stream, without being injured. Men were engaged Wednesday to get car from the creek. From the bridge to the bottom of the creek is 13 feet.

Sale Of Delinquent Properties

February 9, is the date set for the sale of delinquent taxes and in all there will be 265 parcels of real estate sold.

The list contains the lands and town and city lots returned delinquent for non-payment of taxes for the year 1923, payable in 1924, with interest and penalty added, as well as for the taxes of 1924, payable in 1925.

The number of descriptions near here to be sold are as follows:—St. Joe, 7; Jackson; 3; Concord, 2; Spencer, 5; Spencerville, 1; Newville, 5.

The total is 265 as compared with 196 last year and 216 in 1923.

Troy, Stafford, Franklin and Grant townships have no delinquents.

Teacher Leaves St. Joe

Mrs. Detamore, teacher of Music and English in the Concord township schools, severed her connections here last Friday, leaving for South Bend where she and her husband will live. Her work was highly appreciated by the Trustee and teachers and her leaving is regretted by the pupils as well.

Roy Wade is crippling about with a very sore foot. While loading logs Saturday he fell in the car tearing the ligiments in his right foot.

Gorrell Must Pay Up or Go to Jail

Jesse Don Gorrell Saturday was given until March 15 to pay his former wife, Ruth Gratz Gorrell of Jackson township, the money he owes her for support of their child, Josephine Gorrell.

Judge Endicott warned him, however, that if he failed to make payment by that time he would be sent to jail. He is delinquent in his payments since December 8, 1921. The support order is for $15 a month.

Gorrell appeared in court upon order of Judge Endicott following the filing by his former wife of a petition. He was accompanied by his attorney, E. G. Hoffman of Ft. Wayne. His former wife also was present with Attorney Edgar W. Atkinson.

Mr. Hoffman explained to the court that his client had been unable to raise the money to make the support payments. Gorrell lives on a farm in Allen county and has remarried. Upon agreement of counsel, the court continued the case until March 15 to give Gorrell additional time to get the necessary funds.

Chickens Come Home To Roost

Milford, Ind., Jan. 21.—"My dear teacher: You whipped me many years ago when you taught school at Milford and always told me I was headed for the penitentiary. You managed to beat me to it."

This is a sample of numerous letters being written to James T. Shepard of Milford, serving sentence in the Indiana State prison on a charge of receiving deposits as cashier of the Farmers State bank, when he knew the bank to be insolvent. The shortage at the bank totaled $225,000.

The letters are from the cashier's former pupils and school boys and girls who joined hog clubs and lost their savings when the bank failed.

Lineman Breaks Hip When Pole Breaks

Thursday morning as Mr. Elmer Swift, telephone lineman was at the top of a pole near the Clay Coburn home, east of town, the pole broke at the bottom and as it fell Mr. Swift hit the ground first the pole falling on top of him breaking his hip in two places. He was taken into the Coburn home, the Kinsey ambulance called and he was then taken to his home at Hicksville.

Wanted: To buy Horses. Highest market prices paid. Spencerville phone 82, Hicksville phone 339-13. Gorrell Brothers. 3t4p.

In Society

Mrs. G. M. Burney very pleasantly entertained the members of the Ladies Literary Club at her home on last Wednesday evening. The honorary members were the favored guests of the evening. A bounteous pot luck supper was served at 5:30 after which the the three honored guests, Mesdames Roy Koch, Dr. Shook and William Staman, Jr., gave short addresses.

The downstairs rooms and tables were very prettily decorated with streamers and bouquets featuring the club colors.

Beginning at 7 P. M a very delightful program was enjoyed by all present. The club quartett rendered three very pleasing numbers, Mrs Earl J. Smith and Mrs Paul Curie each sang a solo for which they received much applause, Miss Faye Bangs favored the club with two very delightful readings In a story writing contest, conducted by Mrs Wm. Curie, Mrs Harry Randall was acclaimed club poet and Miss Bangs was given first prize as a short story writer with Mrs. Buckingham running close second.

A city contest conducted by Mrs. Buckingham was contested by Mrs Renner and Mrs. C. A Woodcox The president permitted the members to wait until next club meeting before rendering a decision. A fish pond in which each one present fished for her fortune furnished much amusement. The responses to roll call were bits of humor.

Besides the three honorary members, Mrs. Chad Jordan and son, Dicky and Master Jacques Smith, were also present.

Mrs. Barney was assisted in entertaining by Mrs. C. C. Woodcox, Mrs. J. P. Buckingham, Mrs. F. B. Leighty, Mrs. William Curie and Mrs. H. J. Renner.

Lutheran Notes

Sunday School 9:30.

Gall Stones

Before risking operations send for my free booklet explaining simple home treatment for irritations of Liver, Gall Bladder and Gall Ducts as associated with Gall Stones.

Dr. E. E. Paddock, Desk AP, Kansas City, Mo.

Parent-Teacher Association

E. R. KINSEY, - - Reporter

The Parent-Teacher Association held their regular monthly meeting last Friday night with a large crowd in attendance. One hundred thirty-four members were reported. The following excellent program was given: Community singing led by C. A. Woodcox; Bible Reading, Evelyn Knight; Vocal Solo, Mrs. Jean Curie; Violin Duett, Dorothy Ginther and Donald Davidson; Reading, Thelma Poper; Male Quartette, Ed Storer, Merritt Seehler, Wm. Staman and H. M. Widney; Reading, Della Huffman; Vocal Solo, Latha Dermott. The program closed with several good numbers from our popular local musical organization, The Choral Society.

Under reports of committees Mrs. H. M. Widney, chairman of the Hot Lunch, stated that the lunch was progressing satisfactorily in every way. Mrs. Dilley, who assisted the Domestic Science teacher, was obliged to give up the work on account of leaving town for an indefinite time. Fortunately her, sister, Mrs Vernon Monroe has taken her place and the lunch is served in the usual efficient way.

The teachers in our school bought some fine scales to be used in weighing and measuring the children and the committee from the P.-T. A., is assisting in this work.

The Lutheran Woman's Missionary Society, of this town, through the P. T. A., is furnishing milk for two children for the balance of the school year and the P.-T. A. is furnishing milk for four children.

The Woman's Farm Bureau, of this township, donated five dollars to the P.-T. A. to be used in the Hot Lunch fund.

Many individual offerings of money and food stuffs have been received during the past month. The P.-T. A. desires to publicly thank the people for their generous cooperation.

INDIANA NEWS

Bloomington.—Asserting that Indiana stands at the bottom of the seven states of north central group in its support of its state universities, President William Lowe Bryan of Indiana university, discussing the program for increased support for the universities now before the present legislature, asserted that "nobody can stop the American people from making the adequate American university." "Indiana is at the bottom in the total amount spent for its universities and in the amount expended in proportion to the appraised valuation of the state; in the average cost per student; in the provision for buildings, equipment and library; in the average salaries paid professors, and in the proportion of total taxes paid to the amount spent for higher education," asserted Professor Bryan.

Indianapolis.—Twelve of the fourteen defendants convicted in the Hawkins mail fraud conspiracy case, in the United States district court at Indianapolis were sentenced to the federal penitentiary at Leavenworth, Kans., for terms ranging from five years to a year and a day, and the other two were fined $1,000 each, by Judge Ferdinand A. Geiger in federal court. Nine of the twelve sentenced to the penitentiary also were fined $1,000 or $2,000. All were expected to appeal the conviction to the United States Circuit Court of Appeals, and preliminary steps to accomplish this were taken. Sentences imposed are to run concurrently.

Indianapolis.—While Emmett F. Branch was dictating his last official correspondence as governor of Indiana Monday, a delegation, including the heads of practically all the state departments, filed into the office at Indianapolis, bearing trays of silver and other gifts of remembrance. The governor, without looking up from his work, said: "Come in, gentlemen, I'll be with you in a moment." The former chief executive of the state was visibly surprised and deeply moved when he realized the purpose of the delegation.

Indianapolis.—As a result of studying the per capita costs of maintaining inmates in the five Indiana institutions for the insane, the legislative budget advisory committee has decided, it has been learned at Indianapolis, to recommend to the legislature an additional building program at the Southern Hospital for the Insane at Evansville, and to eliminate the requested appropriation for new buildings at the Central Hospital for the Insane at Indianapolis.

Lafayette.—In spite of the generally unfavorable season for corn this year, 20 growers are eligible for the Indiana Hundred Bushel club by producing 100 bushels or more of corn to the acre in the five-acre corn-growing contest. Sixty-four made official yields of 85 to 100 bushels an acre, and 99 raised 75 to 85 bushels an acre. George J. Yarling, a twenty-eight-year-old Shelby county corn grower, produced the highest yield in 1924. He grew 118.38 bushels an acre on his five-acre plot.

Indianapolis.—Authorities estimate that at least one-third of all adults are partially deaf in one or both ears, according to the Indiana State Medical association. "A percentage of ear afflictions is the result of processes arising outside of the ear itself," reads the bulletin. "Adenoids and stoppages of the nose by clods are more often causes of deafness than any disease of the ear itself. To avoid ear trouble it is important that the nose be kept healthy."

Indianapolis.—Last November 517 arrests were made and 489 convictions resulted to persons who violated the fish and game laws, according to George N. Mannfeld, chief of the fish and game division of the state conservation department. The bulk of the $9,068.30 collected in fines and costs goes into the school fund. During the fiscal year ended September 30, 1924, receipts totaled $190,970.71.

Indianapolis.—With a view to reducing the number of holdups, shooting affrays and murders that are reported annually, Herman R. Rikhoff, chief of the Indianapolis police force, has prepared a bill for introduction in the legislature that would provide increased penalties for "gun toters." The bill would amend the present law pertaining to the carrying of concealed weapons.

Lafayette.—Indiana farm men and women, leaders from every county and community, arrived in Lafayette to attend the opening session of the Purdue agricultural conference. This conference supplants the farmers' short course, which has been held annually for the last twenty-five years, and includes the best speakers of the old course as well as many new ones.

Lafayette.—Five Montmorenci high school pupils were injured when two automobiles in which they were riding were in a head-on collision in a road east of Montmorenci. The injured youths are Raymond Sheets, Clarence Vanschepen, Russell Meacham, Everett Sheets and Harry Steeley.

Terre Haute.—Dr. Edwin S. Johonnott, for 30 years connected with the faculty of Rose Polytechnic institute, and for several years head of the physics department of the institution, was killed when an auto in which he was riding was struck by a street car.

Three New Members on Agriculture Board

Indianapolis. — Reorganization of the Indiana board of agriculture for the coming year followed the election of five members of the board by official delegates from county fair organizations of the state and from live stock breeders' associations. Three new men were elected to the board and two members of the old board were re-elected.

The new members elected are: Roy Graham of Franklin, a horse breeder, representing the Fourth district, replacing G. R. Kemper, a Columbus hotel keeper; Russell G. East of Shelbyville, replacing Henry M. Moberly of that city, representing the Sixth district, and C. Y. Foster of Carmel, president of the Indiana Shorthorn Breeders' association, who succeeded E. J. Barker of Thorntown, president of the agricultural board in 1924 and representative from the Ninth district.

The members re-elected were: Lin R. Wilson of Jonesboro, from the Eleventh district, and O. L. Reddish of Waveland, from the Fifth district. Reddish, Wilson and Foster were elected unanimously.

South Bend.—Complete agreement on details of the New Carlisle "death crossing" subway proposal has been reached by the railroads, St. Joseph county and the town of New Carlisle. The plan is now ready to be submitted to the public service commission. As a result of the agreement the grade crossing will be wiped out through the building of three subways. The crossing is the most dangerous spot on the Lincoln highway, it is said.

Richmond.—Funeral services for the Rev. Luke Woodard, age ninety-three, pioneer minister of eastern Indiana, were held in the Friends' church at Fountain City, ten miles north of Richmond. The church was filled with representative citizens and Quakers of Wayne county. Services were conducted by Rev. Alfred Copeland of Paoli, Rev. A. O. Reynolds of Fountain City and Rev. Thomas Woodard of Knightstown.

Indianapolis.—The last official act of Governor Emmett F. Branch, who retired on Monday, was to name Harry L. Redkey of Muncie as judge of the city court at Muncie, to succeed Lance M. Coons, who died suddenly in the courtroom at Muncie. Branch said that Redkey had received the indorsement of leading business men, organizations and politicians of Muncie and that he regarded him as well fitted for the place to which he was named.

Indianapolis. — Thomas Kennedy, newly appointed secretary-treasurer of the United Mine Workers of America to succeed William Green, began his official duties at Indianapolis when he sat with the organization's executive board in a three-hour session. Mr. Kennedy's home is in Hazelton, Pa., where he was president of District No. 7, United Mine Workers of America.

Indianapolis.—The five field men of the state board of tax commissioners at Indianapolis have begun a survey of real estate values with a view to guiding assessing authorities of the state in the state-wide reappraisement of real estate which has been ordered by the tax board for 1925. The field men will work in their respective districts. The general reappraisement of real estate will begin March 1.

Fort Wayne.—Approximately $300,000 damage was caused by a fire which swept the Franks dry goods store at Fort Wayne, and for a time threatened a block in the heart of the business part of the city. The stock and fixtures and a part of the building housing the Franks store were destroyed by fire and water and a number of other concerns were damaged.

Indianapolis.—While the inaugural ceremonies were taking place in the lobbies of the statehouse at Indianapolis and crowds swarmed through the corridors, fifteen Presidential electors sat in the office of the speaker of the house on the second floor and solemnly cast the majority vote of the people of Indiana for Calvin Coolidge for President and Charles G. Dawes for vice president.

Muncie.—About twenty bills will be presented to the general assembly this year with the indorsement of the Indiana division of the Izaak Walton League of America, which will have to do largely with the conservation of forests, streams, lakes, fish, birds and game animals. The bills were discussed by members of the league, who met at Muncie.

Muncie.—Rapid growth of the Indiana State Normal school's eastern division is indicated in a report showing increase of 446 per cent in the number of students between 1918 and 1924. The enrollment is 834. During that time the faculty has been increased from 12 to 41 members.

Terre Haute.—John (Jack) Barrett, age fifty-five, widely known as a race horse man, and a resident of Terre Haute for the last 30 years, was fatally injured when, it is believed, he was struck by an automobile while walking between Terre Haute and West Terre Haute.

Indianapolis.—Taxes, fees and other sums due and collected by the state from the 92 counties in 1924 amounted to $16,924,599.10, or $1,690,302.10 more than the amount collected during the preceding year, which was the greatest collection in history to that date.

ROAD BUILDING

THOUSANDS TRAVEL OLD TRAILS ROUTE

One of the great transcontinental highways extending from the Atlantic to the Pacific is the National Old Trails road. It has been called "The Broadway of America." It traverses mountains, plain and forest and is rich in varied scenery, while offering splendid road conditions and very little desert country. By many motorists it is regarded as the most practicable of all highways for transcontinental tourists.

Its importance as a through highway is evidenced by the fact that it is traveled by thousands of motorists. Starting from New York, the route runs in a westerly direction over a hard-surfaced road by way of Washington or Philadelphia, through West Virginia, Ohio, Indiana, Missouri, Kansas, southern Colorado, New Mexico, Arizona and thence to southern California. It is hard-surfaced from St. Louis east to New York. West of St. Louis, particularly across Missouri and Kansas, weather conditions govern the traveling. In rainy weather across these two states skid chains should be carried, and when overtaken by sudden storms the motorist would do well to lay over a day or two in the nearest town, as the roads dry off quickly after storms.

In traveling the National Old Trails route it is no longer necessary to carry large supplies of gasoline. Two extra quarts of oil may be carried, but gasoline supply stations are found all along the road. Motorists are advised to keep the tank filled at all times. Good hotel accommodations and automobile camp grounds will be found in almost every city and in the mountain regions of Colorado, New Mexico, and Arizona natural camp sites can be found along some stream close to the highway, at almost every necessary stop. The automobile camps usually charge a small fee, from 25 to 50 cents per day.

The trip can be made in from 20 to 60 days at approximately ten hours per day. This means that only 18 miles per hour need to be made during the traveling time. Many long stretches of fine highway enable the motorist to exceed this speed.

For car equipment, the following list is recommended: One set of skid chains, one good horn for use on mountain curves, one set of tools, one jack, good cutting pliers, two extra casings, four extra inner tubes, tube patches, three spark plugs, one to two-gallon water bag or canteen, one flashlight, one ax, one small shovel, radiator hose connections, lamp bulbs, one motormeter and one tow rope or a short cable.

Proper Maintenance of Roads Is Big Necessity

Extensive travel over the highways of Minnesota and the Dakotas this year has brought home to us the prime necessity for proper maintenance of unpaved roads. Fortunately the necessity of maintenance was early recognized in the Minnesota road laws, says the Farmer. It may seem "putterish" to see a road patrolman with his rake, and even some of the frequent dragging may seem unnecessary and unduly expensive. Nevertheless it is this constant attention that smooths the path of travel and saves the life of the road.

About the only bad roads we have run across in Minnesota this year have been in the Twin Cities and in the cities and villages of the state where no attention is given to road maintenance except on paved streets. Those in charge of these city and village streets might well take a course of instruction from the state highway commission.

We must not get the idea that only state highways can be kept in good condition by maintenance. In the old days before we had these modern roads, nearly all of our roads were acquainted with the road drag at least. Now we depend so much on these trunk highways that the minor roads are neglected and abused to an unusual degree.

Ancient Highway Taxes Were Collected in 1661

The policy that United States highway authorities have adopted in regard to taxes on vehicles being confined to the maintenance of highways, has an ancient precedent.

Students of Blackstone will find there is an old statute from the time of King Charles II, namely, Statutes 13 and 14, Card 11 c-2, bearing on this point.

In 1661 there were 400 public coaches having licenses for operation in London and Westminster within a radius of about six miles. The tax collected from these licenses was used to pave the streets.

Road-Work Problems

Rapid growth of motor traffic has placed before highway officials of the various states a huge problem to provide for the reconstruction of obsolete types of "high crown" roads, to obtain adequate rights of way for future expansion, to improve the safeguards at curves and grades to eliminate grade crossings and one-way bridges, and to increase the maximum carrying capacity of existing roads. Much information is being furnished through the bureau of public roads.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1924, Western Newspaper Union.)

Monument to Two Brave Soldiers

Although the name Vincennes brings most readily to mind the heroine of a celebrated historical novel, that little river town in Indiana and the fort which once stood there should be a monument to the memory of two men, Francois Morgan de Vincenne, the Frenchman, and George Rogers Clark, the American, gallant soldiers both.

As early as 1650 the French had determined to build a chain of forts through the great inland empire of America to check British expansion, and one of the sites selected for this purpose was on the Wabash river, on the direct line of water communication from the St. Lawrence to the Mississippi. But it was not until 1702 that the project was carried through and in that year De Vincenne started from Detroit and established three posts, one where the city of Fort Wayne now stands, another near the present site of Lafayette, later famous as Ouiatanon, and the third on the Wabash, which was variously known as Post Ouabache, Post St. Francis Xavier and Poste Vincents.

In 1736 De Vincenne met a glorious death during D'Artaguette's expedition against the Chickasaws, and so he was spared the pain of seeing his fort fall into British hands at the end of the French and Indian war. The new owners gave to the rude little stockaded fort which commanded the town the name of Fort Sackville, in honor of their prime minister, Sir Thomas Sackville, earl of Dorset.

In 1778, after George Rogers Clark had captured Kaskaskia upon the advice of Father Gibault, he sent a small force under Capt. Leonard Helm to take the fort at Vincennes and the French there readily turned it over to him. Then Helm renamed it Fort Patrick Henry. He held it until Governor Hamilton swooped down and recaptured it, but not until Helm had bluffed the Briton into allowing him and his garrison of one man to march out with the honors of war! So the fort became Fort Sackville again and again was under the British flag.

Then followed the heroic march of Clark and his Virginians across the "Drowned Lands" in the winter of 1779, the short siege during which the bullets of Clark's riflemen sped with uncanny precision through the loopholes of Fort Sackville to terrify its defenders, and finally the surrender of the fort. Again this little log fortress became Fort Patrick Henry. The great Northwest was won for the United States and from that time until the fort was torn down, some time after 1816, its flagstaff, which had borne the lilies of France and the red cross of England knew no other flag but the Stars and Stripes.

From It Grew America's Second Metropolis

Illinois has two forts which may well lay claim to being included among the most famous in American history—Fort Chartres on the Mississippi and Fort Dearborn on Lake Michigan. Just as the massive bastions of Fort Chartres typified the rule of the Old world—the French—in the Mississippi valley, so did the log walls of Fort Dearborn represent the reign of the New, the American.

There were two Fort Dearborns, the first built in 1803 by Capt. John Whistler (an ancestor of the famous painter) and named for Gen. Henry Dearborn, secretary of war. Soon after the outbreak of the War of 1812 General Hull at Detroit ordered Capt. Nathan Heald to evacuate Fort Dearborn and march to Fort Wayne, Ind. Heald, although the sullen behavior of the Pottawatomie Indians around the fort augured ill, prepared to obey the order. On the morning of August 15, 1812, "there issued forth the saddest procession Michigan avenue has ever known"—the garrison of Fort Dearborn marching to its death.

They had not gone south along the lake shore very far until the Indians opened fire upon them and within a few minutes the Fort Dearborn massacre had added its list of 53 slaughtered men, women and children, to the bloody annals of border history. The story of that massacre is both a tale of horrors and a recital of heroism unparalleled—how Capt. William Wells rode to the rescue of Mrs. Heald, his niece, and how he sold his life so dearly; how an Indian sprang into the wagons bearing the children and tomahawked all of them save one; how Mrs. Corbin fought her attackers until she was literally cut to pieces; how Sergeant Hayes engaged in a hand-to-hand combat with an Indian, ran his bayonet into the savage's breast so deeply that it could not be pulled out and how, supported by the bayonet, the Indian tomahawked the soldier and the two warriors fell dead together; how Black Partridge, the Pottawatomie chief, saved Mrs. Heim, the incident commemorated in a monument standing where it took place.

Although the second Fort Dearborn, built in 1817, became an important military and fur trading post, it never provided such a dramatic reason for being remembered as the first. That memory is a cherished tradition of the city which grew up on its site—America's second metropolis, Chicago.

Daddy's Evening Fairy Tale

BY MARY GRAHAM BONNER

COPYRIGHT BY WESTERN NEWSPAPER UNION

OCEAN'S GENEROSITY

"I wonder if they thought I was selfish before," said Mother Ocean.

Mr. Sun was looking down upon her and was saying a polite good-night before he went to sleep.

He was wearing a very handsome suit of gold and red and he had cast a beautiful band of color right straight around the rim of the world, it seemed.

"I am sure no one ever has thought you were selfish," said Mr. Sun.

"Well," said Mother Ocean, "I heard a very curious thing today. Some people were traveling on one of the great big boats I allow to pass over me."

"It was the first trip they had ever made upon the ocean, so they said. They needn't have said that, for I could realize from the speeches they made that they had not traveled on the ocean before.

"Doubtless they knew about coasts and rocks and of how I look near the land when I talk to my shore cousins, the Rock family and all of the others.

"But they said:

"'Goodness, but there is a lot of ocean. We've been out now for three days, and we have been going steadily all the time and still we are not near land. And not another boat to be seen. We never knew the ocean was so enormous.'

"Ah, Mr. Sun, they had no idea of my generosity. I'm not one of your mean little bodies of water.

"I'm generous. I'm very generous with myself.

"I spread myself over so much distance and I say to all who cross me:

"'Here I am. Lots and lots of me. When you come for an ocean voyage you get an ocean voyage—you don't get a little bit of a boat ride and then home in time for supper.

"'Oh, no, I'm your generous ocean.'

"Of course," Mother Ocean continued, "I don't know that they always care for so much generosity on my part. Perhaps they would like me to be smaller so they could travel all about the world and get everywhere in quick time.

"But they'd soon weary of that.

"What would be the fun in thinking of strange places all over the world

"Goodness, There Is a Lot of Ocean."

and in planning to see them some day if they were right around the corner?

"Or when thinking of their great and enormous country would people like it if they could see it all in a day's ride?

"I don't believe they would. It's an event to go from one part of the country to another.

"Maybe they dream for years of the time when they'll see what the West looks like if they happen to live East or what the East looks like if they happen to live West—or they may want to see it further North or down South or along the Middle states!

"The country is generous. There is lots of it. Lots and lots to see.

"So is the ocean generous. I may not have all the different sights that the land has—I may not have different views every time you look out at me from a ship as you would have if you looked out from a train window going across the country—but I have size.

"Everything that is a body of water cannot be the ocean. I have really accomplished something.

"I have done what only a few others have done—and they are all of my own Ocean family.

"Oh, Mr. Sun, when you go to sleep tonight I think perhaps you may dream of the miles and miles and miles and miles and miles of ocean you've seen and you'll think how beautiful it is to see me in the morning when you get up and in the evening when you go to bed.

"Of course many travelers have said they would never know which was east and which was west when traveling on the ocean unless they saw you, for they know you rise in the east and go to bed in the west bedroom.

"Yes, you have an east morning dressing room, and a west bedroom for sleeping.

"It's of particular help to ocean travelers.

"But oh, Mr. Sun, no one has any idea of the ocean's generosity until they come and take a trip upon me and then they see how enormous I am—how perfectly enormously enormous!

"That's the only way in which I can describe my size. And I call it generous to spread one's self out as I do."

Place for Summer Resorts

"What are the mountains for?" asked the teacher of the juvenile geography class.

"For summer resorts," answered the boy at the foot of the class.

HOME, SWEET HOME

"I am satisfied of one thing at last; I found where my husband spends his evenings," remarked Mrs. Gadabout.

"You don't say so, dear; how did you find out?" questioned the excited Mrs. Gossip.

"I stayed at home one evening last week and found him there," answered the satisfied lady.—Arkansas Utility News.

UP IN THE AIR

"Jack is always kicking about those new balloon tires on his car."

"Goes up in the air, eh?"

Auld Scotia

An open winter hurts the Scot
And racks his very bones—
It doesn't give him any place
To skirl the curling-stones!

Wake Up, Slow Boy

They sat side by side in Battery park, watching the moonbeams play upon the majestic waters of New York harbor.

"I wonder," he said, looking at the goddess and her uplifted arm, "why they have the light so small."

"Perhaps," she said, moving a little closer, "the smaller the light, the greater the liberty."—National News.

The Deceiving Clock

"How much is that old clock?" asked the customer of the antique dealer.

"Five thousand francs."

"That's pretty expensive. I suppose it still works?"

"Admirably, only you've got to know how to use it. When the hands point to noon and the chimes ring 5 o'clock, you must understand that it's half-past two."—Sans Gene.

Tom Was Angry

Two girls were engaged in conversation in the street. Said the first: "Tom tried to kiss me last night and I wouldn't let him."

"Did it make him angry?" her companion asked.

"It did. He said he wished he had called on you."

Cruel and Unusual

"What caused the accident?" asked the judge.

"He tried to kiss the girl while he was driving," replied the arresting cop.

"Right to hug while driving suspended for one year. Next case!" snapped the judge.

UGLY ENOUGH TO WIN

Ethel—My dear, she's a scream!

Eve—Yes; almost homely enough to win in a beauty show.

Doesn't Pay

"A workaday world this surely is,
But for all of that," said Goff,
"It doesn't pay to work a day
And take the next day off."

In the Movies

"I never know what a producer will accept," growled the playwright.

"And I never know what a censor will cut out," grunted the producer.

The Lesser Evil

Hero—I'm tired of these break-neck stunts. Haven't you another part I can take?

Director—Nothing but a lover's part, playing opposite to your wife.

Hero—All right, then, lead me back to the cliff.

One Friend to Another

"John, I fear your son is lazy."

"Why do you say that?"

"I just saw him walk around a burnt match on the sidewalk."

Women, Why Suffer?

Quincy, Ill.—"I was relieved of feminine trouble, which had caused me to suffer with headache and other distressing feelings, by simply taking a few bottles of Dr. Pierce's Favorite Prescription. I have had no return of the trouble and I am glad to recommend this tonic to all women who suffer. I wish someone had told me about this remedy long before they did."—Mrs. Rose Davis, 525 S. 3rd St.

Obtain this "Prescription" of your dealer, in tablets or liquid. Write Dr. Pierce for free medical advice, to Invalids' Hotel, in Buffalo, N. Y.

BUILDS STRENGTH TO FIGHT COLDS

Father John's Medicine

SAFE FOR ALL THE FAMILY

OVER 69 YEARS OF SUCCESS

Garfield Tea

Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in ever greater favor as a family medicine than in your grandmother's day.

Porter's Pain King

A Liniment

For fifty years your neighbors have relied on this remedy of pure and wholesome herbs. Yet, even now, some do not know that quickly checking colds, relieving aches and pains, healing cuts and burns, are *but a few of its many uses.*

Read the directions with every bottle.

USE IT TODAY

Geo. H. Lewis Co. Peoria, U.S.A.

Green's August Flower

The remedy with a record of fifty-eight years of surpassing excellence. All who suffer with nervous dyspepsia, sour stomach, constipation, indigestion, torpid liver, dizziness, headaches, coming-up of food, wind on stomach, palpitation and other indications of digestive disorder, will find GREEN'S AUGUST FLOWER an effective and efficient remedy. For fifty-eight years this medicine has been successfully used in millions of households all over the civilized world. Because of its merit and popularity GREEN'S AUGUST FLOWER is found today wherever medicines are sold. 30 and 90 cent bottles.—Adv.

Mammoth Electric Sign

To announce the recent Presidential election returns to Cincinnati, four large electric sign monograms, each made up of the letters "C" and "D," were mounted on the tower of the Union Central Life Insurance Company building, 33 floors above the ground. Each of these letters was 12 feet high by 10 feet wide and contained 60 25-watt electric lamps.

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear If You See the Safety "Bayer Cross."

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 23 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

And Then, 'Twas Sheep

Diner (after valiant but futile struggle)—It must have been a very tender-hearted butcher who killed that lamb!

Waiter—Yes, sir; why, sir?

"He must have hesitated three or four years before striking the fatal blow."

Cuticura Soothes Itching Scalp.

On retiring gently rub spots of dandruff and itching with Cuticura Ointment. Next morning shampoo with Cuticura Soap and hot water. Make them your everyday toilet preparations and have a clear skin and soft, white hands.—Advertisement.

Dubious

'Tis said that every man finds his own level, yet we all know fellows who don't come up to the mark.—Boston Transcript.

For true blue, use Red Cross Ball Blue. Snowy-white clothes will be sure to result. Try it and you will always use it. All good grocers have it.—Advertisement.

An engaged girl is always suspicious of her girl friends who are heartwhole and fancy free.

Hoxsie's Croup Remedy for croup and consecutive colds, prevents pneumonia. 50c. All druggists, Kelis Co., Newburgh, N. Y., Mfrs.—Adv.

It's often a matter of an hour when a woman says, "Wait a minute."

Internal cleanliness protects against disease

IN CONSTIPATION, say intestinal specialists, lies the primary cause of more than three-quarters of all illness, including the gravest diseases of life.

Laxatives and cathartics do not overcome constipation, says a noted authority, but by their continued use tend only to aggravate the condition and often lead to permanent injury.

Why Physicians Favour Lubrication

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Thus, Nujol brings internal cleanliness.

Nujol is used in leading hospitals and is prescribed by physicians throughout the world. Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless.

Take Nujol regularly and adopt this habit of internal cleanliness. For sale by all druggists.

PREPARING FOR BLINDNESS

BASIL KING, the well-known novelist, is slowly going blind. Complete darkness will soon settle down on him, yet he is cheerful and smiling. "Even without sight" he says "life is filled with splendid compensations."

Could you say as much, if you knew you would soon be blind? What would you do, if you had only six months more in which to see? Would you lose hope and pass the time raving at your cruel fate, or would you spend the remaining days of sight in preparing yourself to do without vision?

Our eyes are our most important sense organs. Through them we learn more about the world around us than by any other means. Yet they are not indispensable to either a useful or a happy life.

When one of our senses goes, the others can be trained to take their place. This is especially true of those who become blind in adult life, if they use the last days of vision to educate themselves to get along without it.

The first thing to do, for those who are losing their sight, is to make up their minds to train their bodies to get along without eyes. If they allow themselves to become dependent on others, they will probably remain dependent the rest of their lives.

The blind person must learn to go about alone. He must be able to tell, by the feeling in his feet, whether he is walking on a floor or a grassy slope, on a concrete walk or on an open road. He must learn to tell whether he is in a narrow hallway or a large room, whether he is walking on a level or a surface sloping up or down. He must learn to see with his fingers. He must become acquainted by touch with the furniture, the ordinary household implements, his clothes and other belongings which he has heretofore recognized by sight. He must learn an orderly arrangement of all his belongings so that when he lays an article down he will know where to find it again. He must learn to keep his person and his clothes neat and clean.

If possible he should stick to his old occupation. If not, he must learn some new kind of work which he can do without his eyes. But some kind of work he must have. Blindness is bad enough, but blindness and idleness is unbearable.

Most states have special schools for the blind, where they are taught suitable work, also touch reading. Special typewriters, games, books and magazines, watches, writing machines and other devices for the blind, can be secured.

Anyone with courage and perseverance can learn to get along without eyes.

GIVING YOUR EYES FOR A DRINK

ACCORDING to newspaper reports, Willard Mack, popular actor and matinee idol, has lost the sight of one eye and has narrowly escaped total blindness, as the result of drinking wood alcohol. With three or four friends, he was driving along a country road and asked a group of workmen where he could get a drink of whisky. One of the workmen handed him a pocket flask, from which they all took a drink. In a short time, all of them were blinded. After several weeks of blindness Mack recovered the sight of one eye. The other is permanently blinded.

Forty years ago, poisoning from ethyl or wood alcohol, as it is commonly called, was unknown. The wood alcohol first made had such a disgusting odor and vile taste as to make it practically impossible for any one to drink it. About 1890, a process was discovered by which wood alcohol could be purified and deodorized and it was put on sale under various trade names, such as Columbian spirits, cologne spirits, etc. It was widely advertised as a cheap and harmless substitute for grain or ethyl alcohol.

But soon cases of poisoning began to occur. Not only persons drinking cheap whisky died or became blinded, but painters using cheap varnishes and shellacs, especially in closed places, such as beer vats, tanks and closed rooms, were overcome by the fumes and either killed or blinded.

In 1904 Drs. Casey Wood and Frank Butler collected 275 cases of death or blindness from wood alcohol. It causes an inflammation of the optic nerve, which destroys the nerve and causes incurable blindness. After drinking wood alcohol or inhaling the fumes, the victim has abdominal pain, nausea, vomiting, dizziness, headache and blindness. In severe cases the victim becomes unconscious and dies. In those who recover, blindness may develop in a few hours or may be delayed for several days. All persons are not equally susceptible. If ten persons drink the same amount, all will have marked abdominal distress, four will die, six will recover, of whom two will be blind. The other four may suffer no permanent injury.

But you don't know until you try it, whether you are immune or not. At best, it is a three to two chance, that if you drink wood alcohol, you'll die or be blind for life. That might be a good bet on a horse but it's too heavy odds to take on your life or eyesight.

Notable Faculty for Holy Land University

The new University of Jerusalem will have a notable faculty, says the Portland Oregonian. The group of scientists whose support is assured includes Albert Einstein, known wherever science is mentioned for his theory of relativity, who will become dean of the department of pure science; Chaim Weismann, discoverer of TNT, who will head the department of chemistry, and Dr. Jordan Manges, a noted American scholar, who will direct the college of Semitic literature. One of the lecturers in English literature will be Rabindranath Tagore, who has won one of the Nobel prizes in literature and is an admitted world leader of thought.

The Zionist movement recognizes at the outset that broad culture is indispensable to durable results. It takes hostage of the future by insisting that the imponderables shall not be ignored. The political and economic problems of Zionism are necessarily complex, but the probability of their solution is enhanced by that foresight of the founders in this regard. Conceived solely as a vocational venture, the enterprise would be far less likely to succeed.

Step on Her

Tod Browning has the largest cat in Hollywood and it purrs loud and long when petted by some one it knows. Hence, a little friend of the family could not understand why it would not purr for him, though he stroked the gorgeous creature till his arm grew tired.

Finally, in disgust he turned to Tod, exclaiming:

"Gee, Mr. Browning, I wish you'd make kitty start her engine for me!"—Los Angeles Times.

Naturally

Magistrate—And what did you do when you heard the accused using such language?

Policeman—I told him he wasn't fit to be among decent people, and brought him here.

The Vain Things!

Complexion creams are being increasingly used by men, mostly middle-aged or elderly. Skillfully applied, they make a man both look and feel younger.—Answers.

Just say to your grocer Red Cross Ball Blue when buying bluing. You will be more than repaid by the results. Once tried always used.—Advertisement.

His Limitation

"I would do anything in my power to prove my love for your daughter."

"Would you support her?"

"My dear sir, I said anything in my power."

Good health depends upon good digestion. Safeguard your digestion with Wright's Indian Vegetable Pills and you safeguard your health. 372 Pearl St., N. Y. Adv.

"Every Picture Tells a Story"

Feel Stiff and Achy After Every Cold?

Do You Have Constant Backache? Feel Old and Lame and Suffer Sharp, Rheumatic Pains? Then Look to Your Kidneys!

DOES every cold, chill or attack of grip leave you worn-out and utterly miserable? Do you feel old and lame, stiff and rheumatic? Does your back ache with a dull, unceasing throb, until it seems you just can't stand it any longer?

Then look to your kidneys! Grip, colds and chills are mighty hard on the kidneys. They fill the blood with poisons and impurities that the kidneys must filter off. The kidneys weaken under this rush of new work; become congested and inflamed.

It's little wonder, then, that every cold leaves you with torturing backache, rheumatic pains, headaches, dizziness and annoying bladder irregularities.

Don't delay! Get a box of *Doan's Pills*. Give your weakened kidneys the help they need. Assist them, also, by drinking pure water freely, eating lightly and getting plenty of fresh air and rest. *Doan's Pills* have helped thousands and should help you. *Ask your neighbor!*

"Use Doan's," Say These Good Folks:

MRS. J. W. SMALLENBARGER, N. Hyatt St., Tippecanoe City, Ohio, says: "My kidneys were weak and I became run down and had no energy. My back was lame and weak. If I took cold it settled in my kidneys and my back ached and pained dreadfully. My kidneys acted too often. I used Doan's Pills and they put my kidneys in good order. The backache left and I felt fine."

G. W. CLINE, 6th & Walnut St., Tippecanoe City, Ohio, says: "My kidneys troubled me for quite a long time. My back ached and pained, especially when I did any lifting or stooping. I couldn't rest at night and mornings I felt lame and stiff. My kidneys acted too freely. I used Doan's Pills and the aches and pains left my back and my kidneys were regulated."

Have You This Habit?

By Margaret Morison

JOHN BALL

JOHN BALL crept out of the doctor's office more dazed than alive. "A year's rest and a dry climate as long as you live," had been the verdict. It meant that he was shelved—definitely shelved—at thirty-five. What could a man do with his free will reduced to that extent? John Ball had come across several poor devils handicapped in one way or another, and he knew what disqualifications meant in the modern race. One acquaintance of his he had always thought of as the man with a plucky wife: John Ball had seen business thrown his way as one throws scraps to an animal. Another—a friend—had tried to substitute social gifts for brains, and Ball had watched him gradually slipping, slipping, slipping behind. Then there was the plucky soul who always lost several months a year through illness, and who, when he was working, slaved twice as hard as other men just to keep abreast of the last. It was to the ranks of these, drudging hopelessly with wornout tools, that John Ball knew he had been relegated.

In the station on his way to his home in the suburbs to break the news to his family, he stopped, through sheer custom, to buy a newspaper. Before the stand, which was as big as any in the station, stood a stocky chap of thirty. The paper man knew Ball's voice and at the familiar "Evening Daily, please," he sang out, "Yes, sir," as pleasantly and instantaneously as ever. When he turned with the right sheet in his hand Ball read, with fresh vision, that "I am blind" sign across his coat. There had been no hesitating, no fumbling, and, on the other hand, a kind of professional pride that was good to see.

In spite of his preoccupation Ball paused for a minute and watched. Someone asked for a paper of the day before and the blind man had to stoop and search with his sensitive fingers through piles done up ready to return to the dealer. But he found unerringly the right one; and then, with the accented motion that avoided mistake, he counted out the correct change. Suddenly John Ball knew that such technique had been learned; that it had taken time and pluck; and that it had met with a success, not relative and in consideration of the circumstances, but absolute and competitive. Like another good soldier, this man must have asked "Shall I perform day labor, light denied," and have found his answer in the affirmative. As John Ball turned away he knew that he, too, must acquire the habit of all good workmen of using, and not complaining of, their tools.

A LINE O' CHEER

By John Kendrick Bangs.

NEVER TOO LATE TO BEGIN AGAIN

ALL the resolutions fair
Of the glad New Year
Have to my intense despair
Broken down, I fear
But in this old world of sin
I'll not yield to sorrow—
On a fresh batch I'll begin
Tomorrow!

Diagnosis

Doctor—You seem to be all run down, Mrs. Peck. Let's see your tongue.

Henry Peck—That's right, doctor, you guessed it right off!

SCHOOL DAYS

EVERY DAY

By DOUGLAS MALLOCH

LIFE should every day grow brighter:
Every day the load grow lighter,
Every day the will grow stronger,
Every day the heart grow younger—
Every day to failings blinder,
Every day the judgment kinder,
Kinder all we do and say
Every day.

Every day, oh, let us labor,
Every day a nearer neighbor,
Every day a closer brother,
Every day to one another,
Every day the lonely cheering,
Every day a friend appearing,
Helping all along the way
Every day.

Love should every day grow fonder;
Every day we're getting yonder,
Every day the lost ones nearer,
Every day the loved ones dearer;
Every day our faith the surer,
Let our souls grow ever purer,
Braver, better every way
Every day.

Something to Think About

By F. A. WALKER

THE OLD CIRCLE

THE natural inclination in man, when he is lost in the woods, or is floundering around in business for which he is not qualified, is to move in a circle.

The carrier pigeon flies straight to his destination; the horse goes unguided through the darkest night to his stable.

A man may have genius or merely ordinary talent, but if he cannot move straight ahead, think clearly and keep his mind upon his work, he is plodding round and round, arriving at the end of the year at about the same spot from which he started, befuddled a little more and decidedly less courageous.

Such a man, and there are thousands of them, is not built for success. He is apt to take no reckoning of his progress until someone beside him who has been thinking effectively in straight lines, moves up to where opportunity is greater and reward is richer.

This rude awakening causes but a temporary shock to his numb sensibilities, lasting, perhaps a day or two, but producing in him no material change for the better.

If any serious doubt as to his ability should come to him at such a time as this, it is instantly banished as too burdensome, and he continues his aimless trot in the old circle.

He doesn't ask himself whether he is dependable, whether he thinks constructively or whether he thinks at all.

He doesn't ask whether he is given to watching the clock and stealing away frequently from his work to inhale the aroma of his favorite cigarette.

He doesn't ask whether he in all his time in his present position has made a single suggestion of value to his employer.

Ah, no! he has the faculty of avoiding duteous obligations, especially those that would be likely to impose upon him an additional stroke of work, or interfere with his plans for pleasure among his night associates.

Such a man is not qualified for straight thinking or straight going. He is not capable of handling things with intelligence and in the depths of his heart he knows it.

He is a failure, and for no other reason in the world than his own perverseness is moving in the old circle—wandering about the best part of his life in the wilderness.

Mother's Cook Book

Across the fields of yesterday
He sometimes comes to me,
A little lad just back from play—
The lad I used to be.

And yet he smiles so wistfully
Once he has crept within,
I wonder if he hopes to see
The man I might have been.

—Thomas S. Jones, Jr.

FRITTERS

A COLLECTION of fritters will be found very convenient. They are nice served as an entree or as dessert.

Banana Fritters.

Mix and sift together one cupful of flour, one tablespoonful of powdered sugar, two teaspoonfuls of baking powder, one-fourth teaspoonful of salt. Beat one egg until light, add one-fourth of a cupful of milk and add to the flour mixture, then add one tablespoonful of lemon juice and three bananas forced through a sieve. Drop by spoonfuls into hot fat. Drain and serve with lemon sauce.

Cherry Fritters.

Mix one-fourth of a cupful of cornstarch with the same amount of flour, add one-half cupful of sugar, one-fourth teaspoonful of salt, then add one-fourth of a cupful of cold milk and the beaten yolks of three eggs; add gradually to two cupfuls of scalded milk and cook 15 minutes in a double boiler. Add one-half cupful of maraschino cherries, pour into a buttered shallow tin to cool. When cold turn on a board, cut into squares, dip in flour, egg and crumbs and fry in deep fat and drain. Serve with maraschino sauce. This is prepared with the liquid from the cherries.

Fritter Batter.

Take one and one-half cupfuls of flour, two teaspoonfuls of baking powder, one-fourth teaspoonful of salt, mix well, then add two-thirds of a cupful of milk and one egg, well beaten.

Hot Tartare Sauce.

To one-half cupful of white sauce add one-third of a cupful of mayonnaise dressing, one-half tablespoonful of chopped onion, one-half teaspoonful of vinegar and one-half tablespoonful each of finely chopped capers, pickles, olives and parsley. Stir and mix until hot, but do not allow it to boil.

The Young Lady Across the Way

The young lady across the way says mere legislation can't do it at all and sugar is considerably higher, in spite of the new tariff law.

(© by McClure Newspaper Syndicate.)

Maggie and the Will

By VERA M. JONES

(©, 1925, Western Newspaper Union.)

MAGGIE FLANNERY'S anxious gaze was turned on the little man in gray kneeling before the bookcase.

"I can assure you, my good woman," he was saying, "that our firm, as administrators, will see that justice is done you, whether your late mistress' will is found or not. You can file claim for unpaid wages, you know—"

"If she can prove she has not already drawn them," Peter Hines broke in from the desk over which he was bending.

"Or that Sarah Baldwin didn't think she had done enough in giving Maggie a home in exchange for her services," Sophy, his wife, supplemented. "Sarah was not fond of spending, you know! Why—the way she treated Peter—her only relative—never a penny—"

Maggie Flannery sank back in her chair, the lassitude of her hopelessness marking every line of her worn face and frail body.

The search continued in silence. The room, a bedchamber, was in a state of upheaval; drawers thrown open and contents jumbled; books from the case piled on the floor; the wardrobe stripped, the garments heaped on the old four-poster.

Then, as Sophy pushed the last of the dresser drawers she had been examining, she drew close to her husband, whispering: "Cheer up, Peter! Suppose a will does turn up! It may only give Maggie her wages, after all, and make her heir—"

Peter gave her a warning nudge. "Not a chance!" he breathed. "You know the old skinflint always warned me Maggie was to be her sole beneficiary at death. My one hope is—since the document wasn't filed—that I get my hands on it first. I won't rest until I do!"

But finally Peter did, sinking down on the bed and lighting a cigarette. Accidentally the flaming match fell on the garments beside him. In snuffing it out he suddenly laughed.

"Sarah not fond of spending!" he quoted his wife. "Well, if this is a sample of my aunt's wardrobe, I think we must agree she wasn't!"

At the sneering tone the old woman roused herself: "Miss Sarah liked her old things best. She always said: 'Old clothes, like old friends—'

"Maggie!" broke in Sophy, "don't be impertinent."

"Let her be, Sophy. It's edifying to hear these reminiscences! This now"—and Peter mockingly picked up an old dressing gown—"this, Maggie, judging from its ancient appearance, was treasured as a life-long friend, eh!"

Just then the little man in gray turned from replacing the last book in the case; and just as suddenly Peter jumped to his feet.

"But let's end it! What say you, Mr. Dowling? I think you're convinced we've searched thoroughly."

"There's certainly no evidence of a document," Mr. Dowling admitted. He gazed at Maggie Flannery.

Peter Hines turned to the lawyer: "I'll tell you, Mr. Dowling, what I think the explanation is: My aunt intended for me to come into the money this way! You see—during her lifetime she—well, she acted anything but like a wealthy woman should toward her only relative. Remorse for that, no doubt, when death drew near, filled her with a desire to make amends. But she was a proud woman; wouldn't want me to know. So—by dying intestate—you see—restitution, without humbling her pride—"

Then a sudden thought came to Sophy. Quickly she grubbed up the old dressing gown, after a swift glance convinced her it was the most dilapidated of the garments. "Here, Maggie, is that robe of Miss Sarah's; that ought to make a grand keepsake—since you loved her so well! Take it, and go. And don't come back here again, or I'll have you arrested for false pretenses—claiming wages we don't owe you! Go now!" Without further ado Sophy took hold of the dazed old woman and thrust her down the back stairway.

Shortly after Peter returned. His manner gave portent of mystery.

"You get rid of her?"

Sophy smiled. "Yes; and I gave her that old dressing gown."

Peter started, then staggered toward a chair. "My God!" he gasped. "Then you gave her the will—"

"Peter!" chided Sophy, wild-eyed. "You're crazy!"

Her husband wagged a tortured hand. "You did, I tell you! When I picked up that old gown on the bed I suddenly noticed a paper sticking out of the pocket. On it was plainly written: 'Last will and testament of Sarah Baldwin.' I was just going to grab it and thrust it in my pocket when Dowling happened to look up and start toward me. So the only thing I could do was push it back in its place until I got rid of him and Maggie. I knew that if they saw it the jig was up! He'd claim a big fee for finding it—and she'd claim everything legally— And good God, that's what she'll do, now that she has the will—"

Identification

"Is Mrs. Rise at home?" inquired Mrs. Chatters, standing in the shadow of the doorway.

"I don't know, ma'am," the new maid replied. "I can't tell till I get a better look at you. If you've got a wart on the side of your nose, she's out."

Aviator Worthy of Honor Accorded Him

The oldest man to earn his flying wings in either the army or the navy is Capt. Noble Edward Irwin, United States navy, known otherwise as "Bull" Irwin. During the war Captain Irwin was at the head of naval aviation. Under him the qualified naval aviators of the service increased from a bare hundred to 2,000-odd. They patrolled the coast from Chatham, Mass., to Key West from a score of stations. They patrolled the north Atlantic, the Irish sea and the Mediterranean from stations in Italy, France, England and Ireland. They formed the great night bombing squadron which was prepared at the time of the armistice to send flocks of Handley-Pages over Germany and bomb Berlin from the map. After the armistice Irwin, then more than fifty years old, earned his gold wings as a naval aviator, going through the entire course prescribed for every student and qualifying with honors.

Captain Irwin, then an ensign, was the only officer wounded at the battle of Manila bay, when Dewey attacked the Spanish sea power. He holds yet records made at Annapolis for lifting 100-pound weights and other Herculean feats of strength. He comes from a fighting race, which has captained every war of the Republic and of the Colonies.

WAS STILL ALONE

"Didn't you marry because you didn't like to be alone?"

"Sure."

"Then what are you getting a divorce for?"

"For the same reason."

Dead Sea Dynamos

Plans for the electrification of Palestine by raising the level of the Sea of Gallilee and harnessing the historic River Jordan, involving an initial expenditure of $10,000,000, are described in "Palestine: Its Commercial Resources, With Particular Reference to American Trade," by Addison E. Southard, American consul at Jerusalem, just published by the Department of Commerce. The same project calls for the canalization of the Jordan valley from the Sea of Galilee to the Dead sea, where, under irrigation, it is expected that copious crops of dates, rice, sugar cane, flax and cotton can be produced. Provision for 2,000 miles of motor highways, commercialization of the Bagdad-Cairo air route, traversing Syria, and agricultural credit banks are among the other innovations contemplated in the modernization of the Holy Land, as related by Mr. Southard.

By No Means

"Americans use the word 'obliged' in its old sense of pleased or gratified," comments a London paper, adding, "the above explanation is necessary in order to explain to English readers the point of a delightful little story concerning Mr. Cyril Maude, who recently returned to the United States to resume his part in the play, 'Ain't We All?' The famous actor was once introduced to a certain financier, who greeted him rather superciliously with the stock phrase over there, 'I'm obliged to know you.'

"'Not necessarily!' retorted Mr. Maude."—San Francisco Argonaut.

Brined Vegetables

The bureau of home economics of the Department of Agriculture has recently co-operated with the bureau of chemistry in tests on the utilization of brined vegetables, says the New York Times. Brining has long been used as an easy method of preserving various vegetables for use in pickles. These tests showed, however, that green tomatoes and green peppers could be kept successfully in brine for as long as six months and then be used in a number of new ways. Mock mincemeat, bordeaux sauce and pickle were all made from the green tomatoes, and the peppers were satisfactory for stuffing.

Your Last Name

IS IT NOYES?

A RECENT authority on surnames tells us that Noyes is one of the names derived from the Old Testament, and that no less a character than Noah is sponsor of this name. The popular form of the name was Noy, from which it is easy to derive Noyes and Noyce.

Some members of the Noyes family, however, have a different theory as to the origin of their name. They trace it to Noyers, a place in France, saying that old forms of the name were Noiers, de Noies and de Nouiers.

The first of the name in this country were two brothers, Rev. James Noyes, who was born in England in 1602 and his brother Nicholas. They came to this country in 1634 in the Mary and John and the next year settled in Newbury, Mass. Rev. James Noyes was minister there for 20 years. He enjoyed quite a reputation for learning, being something of a Greek scholar, and he wrote a catechism that was widely used in his days.

He is spoken of in old records as "one of the greatest worthies of his age." The house in which Rev. James Noyes lived has often been spoken of as the oldest house in Massachusetts.

Among the descendants of Rev. James Noyes are a goodly number of clergymen and scholars, but it is for its able bankers that the Noyes family is chiefly distinguished.

Rev. James Noyes and his brother, Nicholas, were sons of Rev. William Noyes, rector in Wiltshire, England. It is said that he traced his descent to Normandy and that his name was originally Noye.

Angel—This is probably one of the numerous surnames derived from a shop sign. In medieval times every shop had its sign by which it and its keeper came to be called. Thus, if a cobbler named Thomas hung out a painted sign representing a lamb, he became known as Tom Lamb. Many of the signs were taken from church imagery and the angel was one of these.

The Appleton Family

Mr. Lysander John Appleton
Mrs. Lysander John Appleton
Miss Daysey Mayme Appleton
Master Chauncey Devere Appleton

IT OFTEN happens on a morning when there is extra work at home that Daysey Mayme Appleton is overcome with a desire to Go Forth Into the World, and Do Good, and she usually yields to this noble impulse by hunting up some one who is afflicted

with poverty and sickness. Sometimes she takes a tract, and other times she goes empty-handed to cheer the afflicted with her optimism. She recently visited a woman who had suffered the misfortune to fall and break both her arms. Daysey Mayme gazed at the poor creature with both arms in splints, and the tears came to her eyes. But there is no situation too dark for Daysey Mayme to cheer. "You have much to be thankful for," she said to the woman. "You have two good, strong legs left to run to fires."

* * *

When Mrs. Lysander John Appleton cleans house, she does the work so thoroughly that articles are lost which are not found in three months. She claims the proud record of once having cleaned the parlor so thoroughly that a glass case of stuffed birds was not found in ten years.

* * *

There is a bond of sympathy between Lysander John and his son, Chauncey Devere, born of a desire to satisfy the women-folks, and the failure to do so, which they hardly knew exists. They have never in so many words found fault with the women-folks, being timid in their presence, and loyal in their absence. But Mrs. Appleton and Daysey Mayme don't know of this loyalty. "What," they will ask when they see son and father together, "are they conspiring now?"

* * *

Daysey Mayme Appleton was recently bragging that she is an experienced traveler, though the neighbors say she was never in a sleeping car but once in her life. "I am so used to travel," said Daysey Mayme, "that I can go into a pullman dressing room and hold possession of it with nineteen women pounding on the door."

Wayne and Harrison

COLETOWN

Ensor Conine of Fort Wayne, was an over Sunday guest in the R. H. Conine home.

About sixty young people of this neighborhoo gathered at the home of Sherman Meek Saturday evening and gave their son Kenneth a birthday surprise.

Alva Cobu n is helping care for Wilson Beaber, who is on the sick list.

Everett Kain and wife were Sunday guests of Homer Donley and wife.

Gladys Conine and Hasel Kline attended institute at Garrett, Saturday.

Clair Miller and family spent Saturday and Sunday with Will Sauers and wife.

County Round-Up of Home Economic Clubs

The Home Economic Clubs of DeKalb county met Saturday, January 17, in the assembly room of the court house at Auburn.

In the morning every one reviewed the splendid display of house dresses after which Miss Perry of Fort Wayne demonstrated the Singer Sewing Machine.

At noon one hundred forty-six enjoyed a pot luck dinner at the Commercial Club room.

Mrs. McKinley reviewed the clothing work in the afternoon and the meeting was closed with each one feeling well repayed for a day thus spent.

Honor Students of Spencer Twp.

Spencer township can boast of having six honor students, whose averages were 90 or more for the first semester, as follows:

Ralph Beams—90 9
Ercil Steward—92 6
Frankie Allen—90 8
Janice Wade—95 5
Kenton McCrory—95 7
Harold Furnish—91.2.

Fishermen Complain of Jellyfish in North Sea

The resources of science have been appealed to in the hope of ridding the North sea of the myriads of jellyfish which are devouring the eggs of valuable food fish. Up to the time of the coming of the hordes of jellyfish, the trawler captains of England, Holland, Germany and other nearby countries always considered the North sea haddock and herring as their own particular spoils. Huge catches have made the North sea fishermen rich, and helped to spread the fame of kippered herring and also of finnan haddock, until they became known on almost every breakfast table in Europe and North America. A glance at the jellyfish, which is almost all stomach and tentacles to sting and grab its food, shows what a rapacious creature it is, and how in the struggle for existence the herring and haddock were no match for it. The presence of these vermin in the North sea is accounted for by a rise in the temperature of the Gulf stream. It was this extra warm current that carried untold millions of jellyfish up to the coast of Norway, where they were afterward caught in the Norway current and swept into the North sea.

American "Jazz" Finds Little Favor in Japan

Speaking of Japan, it is interesting to know that there is in Tokyo a general ban on dancing as practiced by Americans and Europeans. Jazz orchestras have been doing their worst, it appears, to lure kimono-clad maidens to dance with foreigners, writes the Argonaut.

At Kamakura, the summer resort called "Japan's Deauville," there has been a gay season that has aroused the indignation of the strong-arm patriotic societies. These vigilantes have stopped the dancing, just as they prevented it earlier in the year at the Imperial hotel in Tokyo. The Black Dragons and other orders were aroused by the elopement of a Japanese girl of distinguished family with a young American, and they have taken the matter of the dancing mania into their own hands.

By issuing orders to hotels patronized by foreigners they expect to stamp out a custom that is causing much anxiety, for many Japanese girls have developed a fondness for all the flapper ways that have been imported by visitors and by the movies.

Gems Used as Playthings

The first large diamond discovered in South Africa is said to have been found in the leather bag of a sorcerer. Several authorities state that in the early days in South Africa highly valuable diamonds were frequently the playthings of the Boer children.

To Remove Water Mark From Glass.

A few drops of olive oil or any other oil rubbed inside a glass vase where the water mark is evident will prevent the mark from appearing again.

Unlucky.

A few climb the ladder of fame; the most of us walk under it.—Boston Transcript.

NEWVILLE

You can get transfer paper at News office in large or small sheets.

Romeo Fusselman and mother, Mrs. Mary Mitchel, were Butler Saturday.

John Rude is moving to the Magginis farm on the Hicksville-Newville road.

Guy Smith now has a Radio in his store and is hearing things from all around.

Clyde Dean expects to move from Auburn to his home at Newville in the near future.

Mrs. Robbie Wyatt and children of Auburn spent last week with her parents, Leroy and wife.

Dewey Miller and family of Auburn, spent Saturday night and Sunday here with their parents.

Rev. Strickler expects to begin revival meeting at the United Brethren church, Sunday evening.

Mrs. Wm. Miller, Mrs. John Miller, Byron Miller and little Elsie Mendenhall, were at Hicksville Saturday afternoon.

Chubb Richmond, who has been considered seriously ill with lung trouble, has recovered so that he is able to be around town.

SPENCERVILLE

Miss Margaret Lake was a Sunday guest in the B. F. Markle home

Miss Minnie Walker was a Thursday night guest of Miss Ada Markle.

Amos Stackhouse and wife were Sunday guests of Carl Osmun and family at Hicksville.

Mrs. Mary Zimmerman and daughter, Marcella spent the week-end with Fort Wayne relatives.

Donald Kimes, wife and son, Robert, are visiting John House and family in Detroit, Michigan.

Reason Chaney is reported bed fast, visitors not being allowed. It is thought he is suffering a stroke of paralysis.

Miss Dorothy Syler, who has been visiting in the A. R. Stackhouse home, returned to her home at Pioneer, Ohio, Friday.

The Junior class of the high school met at the home of their class mate, Laura Bishop, west of town, Thursday evening. Miss Bishop has been on the sick list for some time and not able to attend school. Those present besides the class were Lynn Howey and Gale Bowser.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)

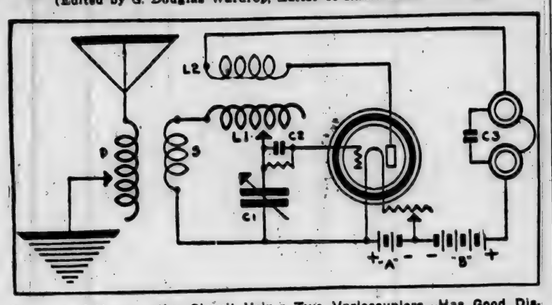

Diagram of Regenerative Circuit Using Two Variocouplers—Has Good Distance Qualities and Gives Strong Signal.

By J. S. CAULFIELD

The variocoupler is used more for a single-circuit regenerative set than for any other use and most experimenters are inclined to feel that is all it can be used for. There are other uses for it besides acting as a primary and plate coil. Two variocouplers may be used in one set and will make a selective as well as a sensitive regenerative set.

A regenerative circuit using two variocouplers is shown herewith. It will be fairly new to the young fan, but it is a circuit that is very familiar to a great number of radio bugs. It has very good distance qualities and gives a very strong signal. The parts for this circuit are as follows:

2 standard variocouplers.
1 .00025 mfd. variable condenser.
1 grid leak.
1 socket.
1 tube.
1 .001 mfd. fixed condenser.
1 rheostat.
1 A battery.
1 22½-volt B battery.

The primary of the variocoupler (P) is connected to the antenna and ground. One side of the secondary (S) is connected to one side of the primary (L1) of the second variocoupler. The taps are brought to a switch and the switch is connected to the grid through the .00025 mfd. grid condenser C2. The secondary (L2) is connected to the plate and one side of the telephones. A .0005 mfd. variable condenser (C1) is connected across the switch on L1 and the filament return of the secondary (S). The filament is connected in the conventional manner.

The following tuning pointers may be helpful to those who try this circuit. With both rotors set at an angle of 45 degrees, and about one-half of the wire on L1 tapped in, varying the secondary condenser will help locate the broadcasting stations. When a station is located tune in as loud as possible with the rotor of the first variocoupler, and the secondary condenser. Then try varying the coupling of the rotor of the second variocoupler; this is where you will encounter a squeal, which is typical of the tube when in an oscillating condition. Make this adjustment to the point where you get the strongest signal without distortion.—New York World.

Ten Good Rules for Broadcast Listeners

1. Don't try to hear Australia in midsummer. Be satisfied to enjoy the nearer stations most of the time.

2. Don't be disappointed if an occasional storm should interfere with your radio evening. There are many fine concerts coming. You can't expect to find a pearl in every oyster nor to receive a record-breaking concert every night.

3. If you want louder signals, use a longer aerial, more tubes, higher plate voltage, more sensitive loud speakers, and more careful tickler and receiver adjustment.

4. A pleasant signal filling a moderate-sized room should be enough to give satisfaction. It is not worth while producing signals which deafen the neighbors. It is wasteful to insist on tremendous signals which are generally less pleasant than moderate signals.

5. If you local station comes in too loudly and drowns others out, a smaller aerial will help in tuning him out, with a smaller condenser connected between aerial and ground. And if all measures to get rid of the local station fail, why not enjoy his concerts? He is working hard for you and it is nobody's fault that you are so close to him that you are bound to hear him. Broadcast stations have to be closer to some people than to others.

6. For the new longer waves above 450 meters, use a condenser connected between the aerial and ground terminals of your set.

7. A little patience in learning to handle your receiver yields rich returns in satisfaction from fine signals. Remember that "Rome wasn't built in a day" and keep on getting more and more familiar with your set and how it works.

8. It is a good idea to read the radio column of a newspaper or a good radio magazine or two. It helps you to know how your set works and keeps you up-to-date in radio. Information of this sort is an aid in getting the concerts loud and clear.

9. Ask your radio dealer for advice; he can probably tell you what you want to know and will be glad to do so. The manufacturer of your set is also willing to help you get the desired results from its use.

10. Do not throw away the direction sheets or booklet that came with your set and with the tubes. Read all such material carefully now and then. If you have lost the direction sheet, write to the dealer or manufacturer for another. The direction sheets answer most of the questions which have been puzzling you and preventing you from getting the best out of your set.

Should Know Tricks of Favored Crystal Set

Those who have the future of the radio amateur at heart are worried. They are not worried over the permanency of radio as an art or as a public utility. That is assured. But the future of the amateur phase of radio is not assured; there is a dark cloud hanging over it at the present time which threatens its very existence.

The tendency of the present-day novice is to run along the wrong track, and unless he reverts to the position of the amateur of radio's early days, instead of continuing as the greatest factor in radio development, he will become a mere incident, without the glory and credit that has belonged to him in the past.

The buyer of an automobile who buys with the idea of driving it himself and to a large degree caring for it himself, if he is wise buys a car of relatively small cost and simple construction. He studies it until he becomes intimately acquainted with its merits and its weaknesses—finds out how to get the most and the best out of it. By the time he has mastered his first car, he is naturally ambitious to possess one of greater attainments; one that will do bigger and better things. And he is fit to be trusted with such a valuable piece of machinery. He is almost sure to remark that he is glad that he had sense enough to learn on the junior.

But the tendency of the radio novice is not to climb the ladder of experience but reach the top by one big bound. To plunge into elaborate and costly apparatus. This leads to poor results in receiving, and the rendering of "horrible examples" to the neighbors—the divorcing from the radio idea of many who might become enthusiasts and of benefit to the art.

The amateur may well start with the crystal set. It presents a fascinating field for experiment. He should make his own set if at all mechanically inclined. Should learn its how and why from A to Z. To know when he is getting all that is in it, and if not, why not.

There is a lot of fun and a lot of efficiency in a well-built crystal set, and a lot of joy in receiving over what you have made yourself; of showing off your own child. It is doubtful if receiving over any costly outfit will ever give the genuine satisfaction to the owner that comes from reception over the outfit that cost a few dollars and that he has himself put together.

Let's get back to the old ways, radio friend. Let's start with the crystal set, make a friend of it and learn all of its tricks. If we must have a set of greater capacity, let's try one of simple construction, with a hook-up not over our heads. Let's try a single tube set and master that before we jump into complex apparatus.

(© Science and Invention and Radio News.)

Tools Necessary When Building Radio Outfit

For the construction of a radio receiver the following tools are all that are necessary: One breast drill with assorted size drills ranging from 1-32 to ⅛ inch; two good screw-drivers, one heavy point, one fine point; one pair of compass dividers, one marking tool, one square, one flat file, one three-cornered file, two pairs pliers, one heavy electrician's pliers, one sharp nosed electrician's pliers, one sharp knife, one hacksaw, one set of good clamps, some sheets of emery and fine sandpaper, one soldering iron and solder paste and solder.

Radio Part of Study

Midshipmen of he United States Naval academy at Annapolis have to take up radio and pass a thorough examination before graduation. One of the requirements is to build a workable receiver.

A Storage Battery Hint

When a storage battery fails to take a charge it is an indication that it needs to be repaired at a battery service station.

Humble Socket Is Important to Set

Attachment Should Be Made of Best Material —Contact Springs.

The humble socket, used to hold the vacuum tube and to provide the means of making an electrical contact between the prongs of the tube and the rest of the circuit, receives less attention from the radio fan than it should.

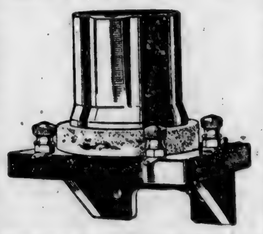
The socket should be carefully scrutinized, for it is at this point that the plate and grid wires and filament leads come very close to each other. If the socket is made of poor insulating material these currents will leak across the base between the binding posts, and become lost. The volume and distance of the receiver will suffer. Nothing less than bakelite should be used.

Do not accept a socket made of material that can be easily cut with a knife, or will leave a black mark when rubbed across a piece of white paper. Material that will do this has lampblack in it, which is a very poor insulating substance. As a rule this class of material will melt under the heat of a soldering iron.

Of next importance are the contact springs. Poor contact springs cause a great deal of the noise that is attributed to static. Due to the short distance available on the inside of a socket, and the need for keeping the dimensions of the socket as small as possible, the contact spring must necessarily be short. Due to the shortness of the spring, most of the sockets at present are unsatisfactory, because the springs become permanently bent. This requires frequent bending back into their former position so that a good contact can be obtained with the prongs of the tube.

One manufacturer has solved this problem by making the spring longer, then bending the tip of the spring backwards and upwards. This eliminates the short leverage on the spring allowing it to bend in two places. Springs are made of phosphor bronze and always keep a firm upward pressure against the tube prong.

The socket should also be non-microphonic. In a receiver which uses ordinary sockets, a loud ring will be heard whenever the set is jarred. Often removing the hand from the tuner dial will be sufficient to cause the tubes to set up this ring. This is caused by the elements of the tubes vibrating.



New Type of Socket Which Overcomes Difficulty.

To cure this, many set builders fasten their sockets on soft rubber sponges to absorb vibration. The chief objection to this method is that if you use screws to hold the socket down to the baseboard, or use bus bar wiring to the binding posts, the socket is mechanically connected to the baseboard, and the rubber support does not help a great deal in reducing noises.

A new type of socket has appeared on the market, which overcomes this difficulty. The socket is made of two pieces of molded bakelite. On one piece is mounted the binding posts and a pad of soft spongy rubber is glued on in the center. The shell of the socket contains the contact springs and this is glued to the top of the rubber pad. Connections are made from the binding posts to the contact springs by flexible stranded wire leads underneath the shell of the base. These wire leads are "dead" as far as vibrations are concerned, and the tube is therefore completely floated.

The socket can be mounted directly on the back of the panel or on the baseboard. The soft rubber pad allows for the absorption of side jars as well as those in a vertical direction.

Poor Connections in Jacks Cause Trouble

Sometimes a set will cease functioning or will function poorly on the last stage of audio-frequency amplification. This is almost always due to a poor connection in the jack that precedes the last stage or in one of the preceding jacks in other stages.

If you have this trouble, look in between the small silver contacts in the jacks and notice whether or not they close properly when the plug is withdrawn from them. Sometimes the springs weaken and do not allow them to close as they should.

The remedy is to take out the jack and bend the offending spring back into position, and then to replace the jack.

Winter Weather Hard on Aerials and Grounds

Because winter storms mean heavy strains on aerial and ground installations, it is a good idea to make a thorough inspection of the outdoor wiring system. See if the guy wires holding the aerial masts and the aerial wires in place are all taut and tight. Look over all soldered connections and try to determine if they have become corroded.

JACKSON SWORN IN AS GOVERNOR

Takes Oath With Van Orman and Mrs. White at the Statehouse.

Indianapolis.—Another state administration began its course on Monday, when Ed Jackson of Indianapolis became the thirty-first governor of Indiana, and F. Harold Van Orman of Evansville was inducted into the office of the state's lieutenant governor at a ceremony which was held amid a gala setting attended by hundreds of people in the statehouse corridors. While the ceremony was under way the chimes of Christ church played patriotic airs.

Following the inauguration of these two state officials, Mrs. Edward Franklin White, of Indianapolis, the first woman to be elected to a state office in the history of the Hoosier commonwealth, became the reporter of the Indiana Supreme and Appellate courts, receiving the oath of office on the same specially prepared platform and in the same setting as the two other state officials.

Judge Travis Administers Oath.

Judge Julius C. Travis, of Indianapolis, chief justice of the Indiana Supreme court, administered to each of the three officials the customary oath of office, in which they pledged themselves to protect and defend inviolate the federal and state Constitutions and the laws of the state.

Simplicity marked the entire program of the inaugural, which placed on the shoulders of Mr. Jackson the burden which Emmett F. Branch had carried since April 30, 1924, when he succeeded Warren T. McCray.

Mr. Van Orman's elevation to the position of second rank in the state official family meant the filling of an office which had been vacant since Branch, who then was lieutenant governor, left when he ascended to the governorship. Mrs. White succeeded Will Adams, of Wabash, who was reporter for the last eight years.

Jackson Introduced.

As Governor Jackson came to the platform, he carried on his shoulders his three-year-old adopted son, Edward, Jr. The crowd cheered as the officials stepped on the platform, and Jackson waved to the crowd.

Introducing him, Governor Branch said that this was a "happy day in Indiana."

Governor Branch, after a brief address, presented the incoming governor, who was inducted into office by Judge Travis. After the oath, the Purdue band played the "Star-Spangled Banner" previously to the new governor's inaugural address.

Jackson's Inaugural Address.

After taking the oath of office, Gov. Ed Jackson made the following brief address:

"Honorable Senators, Representatives, Judges, Ladies and Gentlemen:—In assuming the obligation that the taking of this oath involves, I trust that I am duly appreciative of the very high honor conferred upon me. The holding of office cannot clothe the holder with honor unless the office be honored by the conscientious discharge of its duties by the holder. The government belongs to the people. We who hold their commission are only their servants. The rights of the people must be guarded with an ever-zealous and watchful eye. We should stand firmly against the tendency toward too much government. The people have to bear the burden of their government, and this burden should be made to rest as lightly as possible. We have, in my judgment, the best form of government in the world. We must permit nothing to insinuate itself into our government that will weaken or be detrimental to it. Our government is composed of three distinct departments: the executive, legislative and judicial. The prerogatives of one department should not be encroached on by another.

Courage Required.

"In the discharge of the duties of public office, the exercise of calm, deliberate and unbiased judgment, as well as courage, is required. There will be those who will offer counsel from a class viewpoint; also those whose counsel will be prompted by selfish motives; there will be others who will attempt to dictate and, failing in that, will try to harm by criticism. Against all of these one must be fortified by manly courage sufficient to do right uninfluenced and undeterred. A public servant owes all to those whom he serves.

"I renew the pledge contained in the obligation just taken to discharge every duty conscientiously, faithfully and fearlessly to the very best of my ability. I have great faith in the God of nations, the Creator of all things. By His grace and leadership I hope so to acquit myself that I may at all times deserve and retain the confidence of the people and His approval."

Van Orman Gets Gavel

Indianapolis.—In the presence of friends from the state's "pocket" who accompanied him here to cheer him as he took the oath of lieutenant governor, F. Harold Van Orman was the central figure in a brief ceremony conducted by the Evansville folk in the senate chamber after the inaugural exercises. As a token of esteem from his friends, a mahogany gavel, bound with gold bands, formally was presented to him by Senator Delbert V. Blackburn, of Evansville.

(©, 1926, Western Newspaper Union.)

Lesson for January 25

JESUS COMFORTS HIS DISCIPLES

LESSON TEXT—John 14:1-31.

GOLDEN TEXT—"I am the way, the truth, and the life; no man cometh unto the Father, but by me."—John 14:6.

PRIMARY TOPIC—The Heavenly Home.

JUNIOR TOPIC—Walking in Christ's Way.

INTERMEDIATE AND SENIOR TOPIC—How Jesus Comforts His Disciples.

YOUNG PEOPLE AND ADULT TOPIC—Sources of the Christian's Comfort.

The hopes of the disciples were utterly shattered when Jesus told them about the cross. Jesus had told them that He was going away, and that they could not follow Him. Their hearts were flooded with grief. He consoled them by

I. Pointing to the Reunion in the Father's House (vv. 1-3).

1. He Asks Them to Trust in Him Even as God (v. 1). Faith in the God-man, Christ Jesus, will steady the heart, no matter how intense the grief or how great the sorrow.

2. He Informed Them That He Was Going to the Father's House in Heaven to Prepare a Home for Them (v. 2). He assured them that there was abundant room for all. Heaven is an eternal dwelling place.

3. He Assured Them That He Would Come Again and Escort Them to Heaven (v. 3). Jesus will not wait for His own to come to Him, but will come and call forth from the graves those who have died, and transform living believers, and take them all to be with Himself in the heavenly home forevermore (I Thess. 4:16-17).

II. Revealing the Way to the Father's House (vv. 4-11).

Jesus informed the disciples that they knew the place to which He was going and the way. To this Thomas interposed a doubt, in answer to which Christ asserts that He is

1. The Way to God (v. 6). He is something more than a mere guide or teacher. He is the way itself. He is the door of the sheep-fold.

2. The Truth (v. 6). He is not merely the teacher, but the truth incarnate. In His incarnation the spiritual and material worlds were united, therefore every line of truth whether spiritual or material converges in Him. No one who does not have Christ can ever have the real truth about anything. In Him we have the truth about man, what he is, what he ought to be, and what he shall be in eternity. In Him especially we have the truth about God.

3. The Life (v. 6). Christ is not merely the giver of life, but He is the essence of life. Only those who receive Christ have life in the true sense. Since He is God incarnate, to know Him is to know God.

III. Assuring Them That His Work Was to Continue (vv. 12-14).

Jesus' going away was not to end the work which He had begun. This no doubt meant that through the ministry of the Spirit-filled disciples, the work which Christ began would assume larger proportions. There would be a much greater number of conversions than under His ministry. After the Day of Pentecost the gospel did take a much wider range. During His ministry the message was confined to the Jews, while under the ministry of the disciples it was only limited by the world itself. The disciples' ministry was ushered in by the conversion of three thousand in one day.

IV. Promises Another Comforter (vv. 12-17).

The word comforter means literally one called to the side of another to give help, protection and deliverance. This comforter was the Holy Spirit. Jesus was the Comforter while here in the body. The Holy Spirit was to be "another comforter."

V. Assuring Them of His Return to Them (vv. 18-24).

Although Christ went away He did not leave His disciples as orphans. The Father and the Son make their abode with the disciples who love and obey Jesus Christ.

VI. Assuring Them That the Holy Spirit Would Aid Them in Remembering and Understanding His Words (vv. 25-26).

This the Holy Spirit does by illuminating the minds of the disciples.

VII. Giving the Legacy of His Peace (vv. 22-31).

By His peace is meant the serenity of soul which one enjoys who is reconciled to God, who knows that his sins are forgiven.

Doing Better

It is not a question of how much we are to do, but of how it is to be done. It is not a question of doing more, but of doing better.—John Ruskin.

Duty

Do the duty that lies nearest thee; which thou knowest to be a duty! The second duty will already become clearer.—Carlyle.

Tomorrow

Where is tomorrow? In another world. To numbers this is certain. The reverse is sure to none.

Sorrow and Joy

Worldly joy ends in sorrow; godly sorrow ends in joy.

Another Nurse Praises Tanlac

"As a nurse I have seen many marvelous results from Tanlac. For anaemia, nervousness, stomach trouble and building up the system after operations I consider Tanlac great!" Mrs. K. M. Lowe, Walnut Park, Cal.

NURSE Lowe's statement merely backs up what over one hundred thousand grateful Tanlac users have said about this great natural tonic and builder. Our files are packed with such testimony.

If your system is run down, if you can't seem to eat or sleep, have lost weight or suffer from trying pain, why not let Tanlac start to bring you back to vigorous strength and health.

No long, wretched wait to get results! Tanlac starts right in to build you up. It cleans the blood, revitalizes digestive organs, fixes up the liver and makes you feel like a new person.

For Constipation Take Tanlac Vegetable Pills

TANLAC
FOR YOUR HEALTH

Pimples

BLOOD impurities are pumped by the heart into the face. That is what causes that grainy appearance, that muddiness, sallowness, pimples, blackheads, acne, red spots, and that impossible "something" which no face cream, massage, or face powder can cover up or beautify! The foundation for a beautiful skin simply is not there, and no face treatment can give it to you. But increase your red-blood-cells,—and quickly the ruby tint of purity begins to glow in the cheeks, the complexion becomes venus-like and immaculate! Try it. It will do it every time. S. S. S. builds the red-blood-cells you need for a beautiful complexion. Begin using S. S. S. at once, and give yourself what you have been working for, for years.

S. S. S. is sold at all good drug stores in two sizes. The larger size is more economical.

S.S.S. The World's Best Blood Medicine

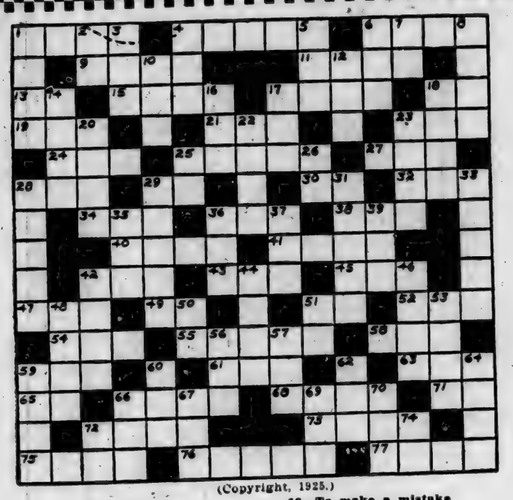
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—To become insolvent
4—A long-legged bird
6—Presage
8—A bruise
11—Not working
13—What
15—Cautious
17—In bed
18—Mother
19—To lick up
21—To waste away
23—A sticky substance
24—To silence
25—Encircled
27—Since
28—Beast of burden
29—Article
30—Exclamation
32—Guided
34—Liquid juice of plants
36—Assent
38—Everything
40—To grasp
41—Clamp
42—Also
43—First woman
45—A drink
47—Organ of body
48—Dissent
51—Exist
52—A beam
54—To fall behind
55—To squander
56—A tree
59—Viper
61—An automobile
63—A card
65—Preposition
66—A distance
68—Ireland
71—Exclamation
72—A step
73—Measure of time
75—Remunerated
76—To rub off
77—A vegetable

Vertical.

1—Combustible material
2—Part of "to be"
3—Vulgar
4—She
5—Point of a pen
6—Aged
7—Myself
8—Close to
10—A rodent
12—Cave
14—Very old women
16—To make a mistake
17—Eaten
18—Female horse
20—To go ahead
22—To do as asked
23—To ring a bell
25—Upon
26—Perform
28—To astonish
29—A covering on an automobile
31—Speed
33—A person who dresses fastidiously
35—Past
36—An animal
37—After day
39—Sheltered side

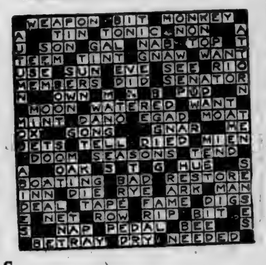
69—A liquor
70—To catch
72—3.1415926
74—Backwards

The solution will appear in next issue.

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Crossing the Ocean in Colonial Times

A journal written by a tourist who crossed the Atlantic to New York before the year 1700 has recently been discovered. It gives a vivid picture of early shipboard accommodation. The passenger was traveling for pleasure, not emigrating. He was accustomed to the best treatment the traveler of that period could procure.

His journal records that the diminutive sailing vessel set out on its long voyage from Holland bound for New Amsterdam. He begins early in the voyage to complain of the cabin. There was no palatial lounge and writing room in those days. Although he was a first-class passenger, he could not enjoy the luxury of a private stateroom, but shared the little cabin with men, women and children. He notes that the deck above his head was so low that though seated on his trunk writing his journal, he could not sit erect. The space between decks was little more than three feet.

He complains of the rough weather and of the fact that most of the cabin passengers were seasick. There is, besides, frequent comment upon the quality of the drinking water, which did not improve in the two months required for the crossing. The bathing facilities were primitive, consisting of a few buckets of salt water enjoyed in a more or less secluded corner of the deck.

The traveler girds at the customs regulations. It is recorded that the sea chests and folls of clothing were turned inside out with no consideration for the feelings of the owners. The writer noticed that the passengers who enjoyed political positions were not molested.

Prepared for the Worst

Jones had found a slip of paper on his lawn. It was an accurate and detailed plan of his private office. The exact position of the stairs was noted. Notes showed which doors swung in and which swung out. Even the windows were set down. Jones was alarmed.

"Some burglar must be going to raid my office," he told his family.

"Oh, that isn't it," cried his daughter, glancing at the sketch. "Those notes are in Jack's handwriting. He's coming down to your office to ask you to let him marry me."

Hard-Working Burglar Forced to Draw Line

Bert met his old friend Bill the Burglar and the two got chatting about things in general.

"I hear you've left your wife," remarked Bert presently. "Why did you do that?"

"Because she was always wantin' me to do somethin'," snarled the burglar moodily.

"What do you mean?" asked his friend.

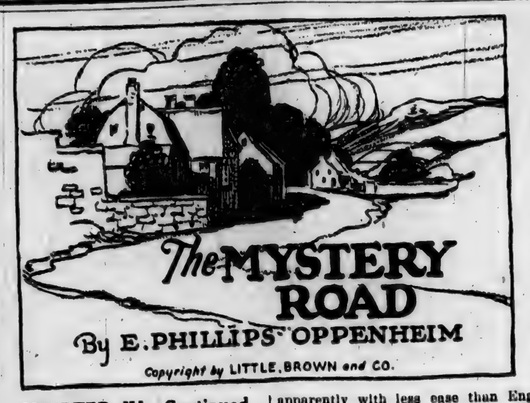
"No matter how busy or tired I was, she was always naggin' me to do somethin' for her. At last, one night, it was too much."

"How was that?" said the other.

"Well, I came in about three o'clock in the morning," explained Bill, "all worn out from doing too much work. I had opened two strong boxes and finished up by forcing a couple of safes, to say nothing of a vault I cracked earlier in the evening. An' then, when I got in, what do you suppose that woman wanted me to do?"

"What?"

"As I stand here, it's true!" growled Bill the Burglar. "She wanted me to open a box of sardines for her."—London Answers.



CHAPTER IV—Continued

—21—

"Then thousand pounds?" she almost shrieked. "Why, it is two million roubles! Ivan Krossneys would sell you his whole batch of prisoners for that, and throw the fortress in! Why, if it rested with me," she went on, "you could have Krossneys as well, for a quarter of that. Talk sense, please! There is not an Englishman there. Of that I am certain."

"The prisoner whose liberty I desire to buy," Gerald confided, "is a Russian. I do not know under what name he passes, but his number is twenty-nine."

Elsa Francks rose to her feet, opened the door and shouted to her maid in Russian. Then she took up a battered telephone instrument.

"I will speak with the major," she said. "I am the only civilian in the town with a telephone. It is a great favor. You can wait whilst I speak with him."

There was a good deal of delay before she was connected, and a further delay before the person with whom she desired to speak arrived. In time, however, the conversation was finished, apparently to her satisfaction. She set down the instrument.

"The governor is on his way down," she announced triumphantly. "Come, we will see to this little affair quickly. You can remain."

The maid entered the room, carrying a tray on which were bottles of beer and glasses. The woman eyed them with satisfaction.

"You are not Russian," she said, "so I do not offer you the samovar. Beer every one drinks—the English especially. That is so, is it not?"

"That is so," Gerald admitted. "I shall drink to your good health, madame."

"You may call me Elsa," she invited graciously, coming over to his side with a glass in her hand. "We will drink to the success of our enterprise."

Gerald accepted the glass and exchanged courteous amenities with his hostess. She eyed him with growing favor.

"It is a pity that you are not staying longer," she observed. "We might become friends. Who knows?"

"In that case," Gerald replied gallantly, "I might have to quarrel with Major Krossneys, and that would not do at all."

She snapped her pudgy fingers. A man who had ten thousand pounds to dispose of! What was Krossneys!

"Do you think," she scoffed, "that I shall stay here with him if I can get hold of half that sum you spoke of? Not I! I shall choose a different companion. I shall go to Monte Carlo. I shall never enter this accursed country again. Even to think of leaving it makes me giddy with happiness. It will be you who will be my deliverer. Let us drink again together."

"Perhaps," Gerald suggested, "the governor will not give up his prisoner."

Her exclamation of contempt was almost a shout. The very idea, while she scouted it as ridiculous, seemed to infuriate her.

"Give him up? Of course he will give him up!" she declared. "If he refused—why, I would take him by the beard—I would kill him!"

Her eyes were lit with cruelty. The snarl of an animal of prey twisted her lips. Then she burst into a fit of laughter.

"Why do I make myself furious?" she exclaimed. "Why, Ivan would sell every one of his hundred and thirty-seven prisoners for a tenth part of the money you speak of! Come, let us be gay. I will put something on the gramophone. You shall dance with me, yes?"

"What about his excellency the governor?" Gerald asked.

The woman made a little grimace.

"You are perhaps right," she acquiesced. "One must wait—wait until everything is arranged. After that I shall snap my fingers at Ivan. He wearies me, and he is an old man. Will you take me out of the country, my friend? We might to go into Poland—I have friends at Warsaw."

There were heavy steps outside. She held up her hand as though to warn him.

"It is the governor," she announced. "It is Ivan Krossneys who arrives. Mind, he is very jealous. Be careful."

Gerald, with all his nerves on edge, was yet able to indulge for a moment in a grim smile. The door was opened. The maid poked her head in and muttered something unintelligible. Close behind her entered the governor of the fortress.

The governor was a large, corpulent, untidy-looking man in an ill-fitting uniform, with coarse features and a straggling beard. He clicked his heels together and made some pretense at a military salute, as Elsa introduced her visitor. She whispered a word or two apart with him in Russian, and then continued in French, which she spoke apparently with less ease than English.

"This gentleman," she declared, "has a great affair of business to discuss with you. He was sent here by a friend of mine whose name I may not give. He is an Englishman pretending to be an American, but that makes for little. He is entrusted with a great sum of money for a certain purpose."

Into the governor's eyes flashed for a moment some reflection of the cupidity which had gleamed in the woman's. Money was scarce in Russia; pay was small and irregular in coming. The thought of money whetted his interest.

"Let me hear what this gentleman has to say," he invited.

"I have come with a very bold proposition," Gerald began, "but it is one which I hope you will consider carefully. You have many prisoners in your fortress who are detained largely through misfortune. There are many there whose offenses are trivial, who will probably be released shortly in any case, and who might just as well be free as remain a charge upon the government."

"You seem to know a great deal about my prisoners," the governor remarked graciously. "Many of them are criminals of the worst order."

"It is not one of these whom I wish to discuss with you," Gerald assured him. "It happens that you have a young man there who is not of the criminal class at all. He has very wealthy friends."

"Ha!" the governor exclaimed. "How wealthy?"

The woman broke into the conversation. She gripped her friend by the arm.

"Ivan," she cried, "it is incredible! Do you know the sum which monsieur speaks of? It takes one's breath away! He speaks of ten thousand pounds! It is two million roubles! What do you think of that?"

"G—d!" Krossneys muttered. "A prisoner of mine?"

"A prisoner of yours," Gerald repeated. "I will be quite frank with you, sir. I speak, I know, to a man of honor, but I will ask you to remember that this young man is unconvicted of any crime, and that the government by whom he was sent to you is tottering. This is not a bribe which I am offering you. It is the price of an act of justice. The money is to be paid in cash."

Krossneys was showing now as much agitation as the woman had displayed. Mingled with his emotion, however, was a fear, signs of which were at once manifested in the anxiety which distorted his face, the eagerness of his demand.

"The number?" he cried. "Tell me the name or the number of the prisoner you desire?"

"Number twenty-nine," Gerald replied.

The governor struck the table with his clenched fist, so that the glasses rattled.

"A million devils curse and blast you both!" he shouted.

He kicked a footstool which was close at hand across the room. Then he flung himself into an easy-chair and sat there with his arms crossed, glowering at Elsa. The woman gazed at him as though he had suddenly gone mad.

"Are you out of your senses, Ivan?" she asked. "Twenty-nine or thirty-nine—what does it matter? Is not one prisoner like another? Who comes to visit them? Who knows which cell is empty? Bah!"

"So you thought you were rich for life, did you, Elsa?" the man in the chair muttered. "Well, you can just rid yourself of the idea. And as for you, sir," he went on, with a malicious glance at Gerald, "you may think yourself fortunate if you leave this country as easily as you entered it."

The woman drew a little nearer to him. There was the look of a wild animal in her face.

"Listen, Ivan!" she cried. "Are you mad? It is a fortune which this man carries in his hand! What is there amongst the scum that infests your prisons of account against that? You terrify me. The money is for us, to be divided. Cash, Ivan! Money to spend—tomorrow—the next day—every day!"

"You fool!" the governor retorted. "Of what use is money when your feet dangle in the air and your neck is broken? That for you, and a dozen rifle bullets in my heart! You are a bold man who came to Russia on such a mission," he added, glowering at Gerald.

She turned to her visitor.

"What does this madman mean?" she demanded. "Who is this prisoner whose freedom you seek?"

"I do not know," Gerald replied. "I am only an emissary."

The governor sat up in his chair.

"I will tell you," he declared hoarsely. "Number twenty-nine is all the fortress records say of him, but his name is Paul, grand duke of Volostok, prince of Tamboff, hereditary grand duke and ruler of all the provinces of the Dvina, nephew of Nicholas, the late tsar, head of the house of Romanoff—himself, if the people changed their fancy tomorrow, tsar of all the Russias! There, my woman, now you know the secret of my fortress! You can guess where we might be if I traded with this lunatic!"

The woman flopped upon the sofa. She was pale through all her rouge and powder. Her yellow hair had broken loose from its band of ribbon. Her dressing gown had fallen away a little from her ample bust. She sat breathing heavily for several moments. Gerald, of the three, was the only one who kept his head.

"All that makes for nothing," he said calmly. "You excite yourself greatly for nothing. The Romanoff dynasty is past. There will never be another tsar in Russia. This young man has rich friends and they want him out of the country. I should think your government would be glad to be rid of him."

Gerald's words were not without their effect, especially upon the woman.

"After all," she muttered, "this man speaks sense. Who cares about grand dukes, nowadays? There are plenty of them who have already escaped. What does one more or less matter?"

"But this one—I have told you who he is!" the man growled.

The woman was beginning to pluck up spirit. She scoffed at him openly.

"When the people of Russia want the days of tsardom back again," she said, "they will find one of the brood fast enough. But that day will not come yet. This young man in your fortress is of no account. You are a fool, Ivan. You cannot see the truth. You have not thought to yourself what ten thousand pounds may mean."

Krossneys sat back in his chair, biting his finger nails.

"Who are you?" he demanded suddenly. "And where does this money come from?"

"My name is Dombey," Gerald replied. "I have admitted to Madame Francks that I am an Englishman. This money has been collected in London by friends and relatives of the young man. The desire for his release has not the slightest political significance."

"And what the devil excuse can I make for letting him go?"

"I should put one of your less important prisoners into his cell and say nothing about it," Gerald suggested.

"There is an inspector of state prisons," Krossneys muttered. "He does not often come. But who knows when he might take it into his head to pay us a visit?"

"The last time he was here," Elsa Francks reminded him, "you met him at the station and took him to the hotel. Afterward, you brought him on here and he was so drunk that he had to stay for two days. He did not even go near the fortress. Your papers and books were brought down here for him to sign."

"It is true," Krossneys assented, "yet next time another man might come. And again, how will this number twenty-nine get safely out of Russia?"

"Think less of these difficulties and more of what one could do with ten thousand pounds," the woman insisted. "You are not asked, Ivan, to run a risk for nothing. I say that it is worth it."

(TO BE CONTINUED.)

"And What the Devil Excuse Can I Make for Letting Him Go?"

Early Navigators Dared Perils of Every Sort

It is a little more than 400 years ago since man made his first-known trip around the globe. The first voyage took three years, and they were years of great privation and discomfort. The early successful navigator was J. S. del Cano, a Spaniard. He returned to port on September 6, 1522. The expedition numbered five vessels, and of the 280 pioneers who set sail only 31 returned—ragged and broken. One of the objects of the adventure was to test the theory that the earth was round, and the ships took a westward course to discover a passage to the Indies. Ferdinando Magellan, a Portuguese, after whom the straits are named, was a leading spirit in the expedition. When the task was almost accomplished he and 40 others were killed by natives in the Philippine islands. Only one ship, the Vittoria, under del Cano, completed the journey.

Easy Way to Break Severest Cough

No matter how long you have had a persistent, weakening cough—no matter how many remedies you have tried without success—you can usually get relief instantly, and often relieve the entire cough condition in 24 hours, by a very simple method.

The method is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take one teaspoonful and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. The prompt relief seems almost magical, and the quickness with which the whole cough condition disappears is often simply amazing. There is nothing better for coughs, chest colds, bronchitis, bronchialasthma, hoarseness, and almost every throat irritation. Economical, too, as the dose is only one teaspoonful. On sale at all good druggists. Ask for

DR. KING'S NEW DISCOVERY FOR COUGHS

Local Briefs

Mrs. Hazel Monroe was a Defiance visitor, Monday.

Mrs. Mary Betz spent the day Sunday visiting Fort Wayne friends

Homer Woodcox of Fort Wayne spent over Sunday here with his parents, Chas. Woodcox and wife

For good glasses see Griest at American Building Hicksville, Ohio.

Mrs Kate A Leighty left Saturday for an indefinite visit with her sister Mrs. Mary Magers at Churubusco

W. E Henly and family and Mrs Hazel Monroe and children, spent Sunday at Auburn with I. E. Sherrick and wife.

A January fog, freeze a dog, is the old adage. Sunday night the fog was dense, a very uncommon thing for winter. Auto drivers experienced great difficulty in driving the icy roads.

Mr. and Mrs. Chas. Koch, Mr. and Mrs. Sherman Rickett, Mrs Blanch Leighty, Mrs. Ida Herrick Mrs. Nettie Culbertson, Sam Dailey and son, Keith, attended the funeral of Mrs. Will Fisk at Waterloo, Saturday afternoon. Mrs. Fisk died at the home of her daughter, Mrs. Russ Fikes at Jackson, Mich., Thursday.

MORE MERCHANDISE

To Sell for the Next Eight Days at

HALF PRICE

Patterson-Fletcher are planning on making the last eight days of their Great Half Price Sale the real big days of their sale.

In speaking of their sale Mr. Harry P. Fletcher, president of the company, said: "We held our sale one month earlier than usual and we had more merchandise to sell than we ever had in any previous sale but the crowds that have come have almost depleted our Half Price merchandise and still the crowds keep coming. We advertised the sale for the entire month of January, and even in the face of higher prices for spring and still higher prices for next fall and winter, we must give the people merchandise as we have gone through our stocks and selected many lines of merchandise that we did not intend to sell at a discount during this sale, and for the next eight days they will go at just Half Price." More Men's and Young Men's Suits, more Overcoats, more Shirts, more Underwear, more Hosiery and other fine wearables will be added to make these last eight days unusual big days of their great sale

Mrs. C. C. Bassett was a Hicksville visitor Thursday morning.

Shelf paper, white with figured edge, to close out at 5c each, at News office.

Sam Keesler and family visited Wilbur Yeiser and wife, Sunday afternoon.

Olen Waltz of Fort Wayne, visited his parents, H O Waltz and wife over Sunday.

Miss Flossie Keeler is staying with her grandmother, Mrs. Mary Meek, for the winter.

The finest box stationary in town on display at News office. From 5c to $1 00.

Mr. and Mrs. M. A. Miser and son, Joe, were Sunday dinner guests of Mr. and Mrs. Ed Miser.

Mrs Lester Pugsley, Mrs. Foster Gee and Leon Kees are on the sick list. Amos Leavy is reported not so well.

Donald Ramsey of Fort Wayne, came Saturday evening, returning Sunday. His wife and baby accompanied him.

Mr. and Mrs M. J Riding have gone to Chicago to make their home after visiting in the home of Mrs. Alice Warner

Mr. and Mrs Jasper Snyder and Leland Hade and children, were Sunday dinner guests in the Geo. Culbertson home.

One hundred forty attended the teachers institute at Garrett Saturday, representing Noble, Allen and DeKalb counties.

Chas. Miser returned to his work at Fort Wayne Monday after being confined to his home here with an attack of mumps.

Clarence H rt, wife and daughter, Florence and Mrs. Alice Hart, were Friday dinner guests of Mr. and Mrs. J C. F. Abel.

Mrs. Catherine Mahoney spent Wednesday, returning home to Defiance Thursday morning, with Mrs. Alice Warner and Mrs. F. H. Langley.

For Sale: Span of geldings, coming 4-yrs. old, broke. Span young black mules coming 3, good size. B. W. Dwyer, Spencerville. 3t2p

The News cross-word puzzle starts in this issue and to show you that we are friendly, a receipt for six months subscription will be awarded the first person to bring in the correct answer by Monday, January 26 Try your luck.

This is what is happening in St. Petersburg, Fla., "So large is the attendance at two of the churches that the preachers have resorted to double services every Sunday forenoon to accomodate the throngs that wish to worship in their buildings."

The R H C met Thursday afternoon with Mrs Cora Waltz. Ten members one associate member Mrs Pluma Hamilton and two guests, Mrs Floyd Coburn and little son, Murl, were present. Mrs Dora Wilder won in the contest given. Mrs. Gladys Murphy will be hostess in two weeks.

Basket Ball, Thursday night. St. Joe vs Leo, at Spencerville.

A jolly bunch of merry makers made up a bob sled load and went to the home of Wm Staman, Jr and wife, Sunday evening. A good old taffy pulling was enjoyed and the evening was spent with games and music, every one having a fine time. Those present were: Donald Kinsey, Charles Miser, Roy Koch, E J Smith, wife and son Jacques, Harry Randall and wife, Chas. Jordan, wife and son, Dickie, Vernie Monroe and wife and Virgil Perry and wife.

CONCORD

Mrs. Jane Hull seems to remain about the same.

Mrs Gertrude Borthwick spent Tuesday at Hicksville.

Walter Baker transacted business in Fort Wayne, Tuesday.

Mrs Roy Keller spent Tuesday with her mother, Mrs. Curt Washler.

Mrs. George Johnson and son, Carl spent Sunday at Cedarville with her mother, Mrs Hull.

Gervice Sebrin and family were Saturday afternoon and supper guests of his sister and family.

Christian Church Notes

Bible School at 9:30 communion service immediately following Preaching at 7:00 P. M.

Merritt Maxwell and wife entertained the Loyal Sons and Daughters class Thursday evening.

Mrs. Lester Pugsley will entertain the Martha Society Thursday afternoon.

A most interesting council meeting was held at the church Monday evening. About sixty being present. Several plans for the betterment of the school services were talked over and adopted. After which the short entertainment given and the refreshments served by the Loyal Sons and Daughters class were enjoyed.

Where Designs Come From

Designs that fascinate the eye of embroidery lovers do not just grow in the mind of the designer or the factory girl who makes them. They are nature's handiwork. Growing plants provide the motif for much needlework, whether done by hand or on machines and the natural form assumed by a plant shooting into growth or a snowflake falling upon a black background are but examples of them.

The SANDMAN STORY

THE KING'S FAVORITE

SOMETIMES the things we think would make us happy we find, when we get them, give us more discomfort than happiness, and that was the way it was with Otto.

Otto was a poor peasant boy who worked for small pay all day in the fields, and one day when he was resting at noon under a tree he stretched himself and said: "It must be a fine thing to live in a palace."

Otto's wish was scarcely off his lips when a cloud of dust appeared down the road, and the next minute a horse came dashing along with the rider hanging helpless from the saddle.

Otto jumped to his feet and run down the road and, as the horse dashed by him, he caught at the bridle and brought him to a standstill.

"My good man, you have saved my life. You shall be well rewarded," said the man, who was handsome and dressed in a velvet suit trimmed with gold braid.

He Overheard One of the Attendants Telling the King.

Just then several horsemen dashed up to them and asked: "Are you injured, Your Majesty?"

"I am uninjured, thanks to this brave man," replied the man, who Otto was sure must be the King from the manner in which the attendants addressed him, and when the King asked Otto what he could do for him to repay his bravery, Otto said he would like to serve him at his palace.

"That you shall," said the King. "There is always room for a man such as you are."

And so Otto got his wish, and for a while he felt he must be dreaming, everything was so beautiful and grand.

One day Otto, who always had his eyes and ears open now to all that was going on, overheard one of the attendants telling the King that a rival King and his army were reported on the way to the palace to take him prisoner and take his crown, and he was quite sure it was Otto who had betrayed the King by telling his rival of the secret passage under the forest which led to the palace.

That night Otto watched and saw the attendant he had overheard talking to the King leave the palace. Cautiously Otto followed him into the forest, where he entered a cave and went along a passage which led to the sea.

Otto could see many ships filled with soldiers, and now he knew that all he had heard the attendant tell the king was his own treacherous plan.

Otto heard all the plans the attendant made with the rival King.

He waited until the false servant was well inside the secret passage and then he sprang upon him and bound him with his girdle and, pushing him well out of the path, Otto went back to the end of the passage where the rival King and his ships were waiting.

Because all the servants of the King were dressed alike and it was dark, the rival King thought Otto was the one he had spoken with before, and he followed him into the secret passage without the least suspicion.

"You must come with me to make sure you have the right path," whispered Otto, and the King followed straight up to the palace garden, where Otto closed the gate behind them and aroused the guards inside and outside the palace.

It took but a few minutes to bind the rival King and carry him before Otto's King, when Otto told his story and where the false servant could be found bound and gagged in the secret passage.

The King's soldiers, led by Otto, soon put to flight the rival King's ships full of soldiers, but the rival King was kept a prisoner for many years.

Otto's King became ruler over the kingdom where the rival King had ruled, and he wished to make Otto a great lord and have him rule over part of it, but Otto told the King he did not wish to live in a palace; all he asked was a little house and a garden far away from all the pomp and grandeur of court life.

This the King granted, because Otto had twice saved his life, and when he visited Otto, as he sometimes did, he knew that Otto was far happier in his humble cottage than he was in a palace.

The Why of Superstitions

By H. IRVING KING

A BURNED HOUSE

THERE is undoubtedly a relic of fire-worship in a superstition found in some sections of the country—that it is bad luck to build a house on the site of one destroyed by fire. The new house is likely to be destroyed in the same manner. The main idea would appear to be that the fire which destroyed the first house had rendered sacred the spot where it was burned and, therefore, taboo for ordinary purposes. Another house built on the spot would be like placing an offering upon an altar for the fire to consume.

This is one of the very few popular superstitions which it is safe to regard as a survival of fire-worship, which was an Eastern cult, never obtaining any strong hold upon Western minds. The great majority of superstitions into which the element of fire enters are regarded by the best authorities as being derived from sun-worship—the fire being an imitative sun—or from the ancient custom of human sacrifice. Our barbarian ancestors, it is true, had their fire festivals, but Professor Frazer says of them, "The presumption is that the essential features of the primitive fire festivals was the burning of a man who represented the tree-spirit." A study of historic superstitions shows, however, that to a certain limited extent pure fire-worship existed in early times even in western Europe, the section of the world from which, or through which we inherit our superstitions of today.

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name; its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

ENID

PERHAPS the sole example of a name which maintains its original beauty and dignity and is without derivatives or diminutives is Enid, signifying soul. The first and immortal Enid was made so by Tennyson, who rescued from oblivion the charming idyll of Geraint and Enid and placed them among the chivalry of the Round Table. This story was found in the "Maburgeon," and a "Triad" mentioned Enid as one of the three ladies of King Arthur's court.

The name Enid is a Celtic form of animus, meaning soul. It is not difficult to perceive how the successive changes came about, through differing pronunciations. Anid is probably a connecting link in the transition and, for euphony, the word became Enid. All this must remain suppositious, however, as there is no accurate history concerning the name, so she is accepted as a poetic fact.

She appears as Enide in the French verse of Christien de Troyes, but she is better known as the wife of the Prince of Devon of romance, whom Tennyson describes in his "Enid and Elaine":

The brave Geraint, a knight of Arthur's court,
A tributary prince of Devon, one
Of that great order of the Table Round,
Had married Enid, Yniol's only child,
And loved her, as he loved the light of heaven.
And as the light of heaven varies, now
At sunrise, now at sunset, now by night
With moon and trembling stars, so loved Geraint,
To make her beauty vary day by day,
In crimsons and in purples and in gems,
And Enid, but to please her husband's eye,
Who first had found and loved her in a state—
Of broken fortunes, daily fronted him
In some fresh splendor; and the Queen herself,
Grateful to Prince Geraint, for the service done,
Loved her, and often with her own white hands
Arrayed and decked her, as the loveliest,
Next after her own self, in all the court.

Enid's jewel is the beryl, which has the power to reawaken love in married people. It likewise makes the wearer amiable and unconquerable. To dream of it signifies happiness in store. Monday is said to be Enid's lucky day and three her mystic number.

Man Walks Right Into Trouble With His Eyes Wide Open

This bit of philosophy is true of all of us. Too many men and women go through youth heedless of their eyesight and walk right into eye trouble in their years of maturity. Be eye-wise in time. Medical authorities advise yearly examinations Our examination is scientifically exact. If you need "Rest" or "Constant" glasses, you will find the cost most moderate, and your satisfaction is guaranteed.

County Convention Announce Speakers

The DeKalb County Sunday School association will hold its sixtieth annual convention in Auburn February 12 and 13 at the First M. E church. This year the convention will be held three months later than previous years so that persons living in the country may attend all the sessions before the rush of spring work starts on the farm.

The event this year will be among the most widely has ever been secured. Such Sunday school workers as Nellie C. Young of Indianapolis, state worker in the children's division; Harry G. Rowe of Indianapolis, who does the state department in the adult and young people's division and Roy A Burkhart of Dayton, Ohio, general superintendent of the young people's division of the United Brethren in Christ church will give addresses and assist throughout the convention sessions.

The music will be in charge of Prof C. A. Gerber, professor of music in the Fort Wayne Bible training school. A special feature will be a men's chorus of thirty voices which goes under the name of "The Men's Gospel Chorus." This organization will appear on the Friday night program.

Thursday morning will be devoted to the registration of the convention representatives. In charge of the registration will be a committee composed of Mrs. Dessie Wyatt, Mrs. J. R. Bishop, Mrs. L. F. Miner, Miss Nellie Ober, Mrs. H. C. Hathaway and Mrs. O. J. Burnier. A banquet Thursday evening in the basement of the Methodist church will be for the pastors of the churches in the county, Sunday school superintendents and county and township officers. George E. Beugnot of Auburn, will preside as toastmaster.

The details of the program, which are nearly completed, will appear in a later issue of this paper.

NOTE—Pay your accounts. They are due now.

Get Acquainted Before The Need Comes

A banker is something like a doctor.

He will do his best whenever you call on him, but he can do a great deal better if you get acquainted when you are well, instead of waiting until you are sick.

Sometimes you will want to make use of the facilities of this bank.

Don't wait until right up to the time. Come in now. Start an account, if only a small one. Establish credit.

Then it will be easier to handle something important when it comes along.

The St. Joe Valley Bank, A STATE BANK

LODGE NOTES

Seven members of the local K. of P. lodge, Frank Milliman, Clare Hull, Geo. Walter, Ira Bone, Donald Kinsey, Harry Randall and Harry Burke, attended the county rally at Auburn last Friday evening. About seventeen Spencerville boys were there. Arrangements were made for the next county assembly to be held at Spencerville on the night of February 2nd and plans were started to celebrate the anniversary of the founding of the order on the night of February 19 by having each subordinate lodge furnish a part of the program for the occasion.

The K. of P. lodge No. 400, entertained the families of various members, Saturday evening at Castle hall. The following program was given: Address, C. H Havens; Solo, Mrs Esther Bowman; Reading, Miss Eloise Bowman; Male Quartette from St. Joe high school; Music by the lodge "Can't Be Beat" orchestra. After the program several contests were given and luncheon served. The rest of the evening was given over to the old fashioned round and square dances.

Lutheran Notes

The regular services will be held next Sunday.

Sunday School 9:30.

Preaching 10:30.

Prayer meeting Thursday eve at 7:00 o'clock.

At this service we will begin a series of lectures on the book of Revelations. Come and be with us as this will be important.

S. D. Steffey, Pastor.

Mac Keller went to Fort Wayne Monday morning where he accepted a position at the Gas Plant.

$10,000 Loss Of Barn And Contents

Fire starting from a lantern destroyed one of the largest barns in DeKalb county Saturday night on the farm of Marion DeLong of Fairfield township. All of the contents of the building, which included seventy head hogs, eight head of cattle and six horses, were consumed. All of the hay, estimated at fifteen tons, the grain and farm machinery were also destroyed, the loss reaching $10,000. Insurance was carried in the DeKalb Farmers Mutual Fire Insurance Co., as follows: On the building, $4,000; contents, $1,800; live stock, $1,000 and farm machinery, $800.

Mr. DeLong had a narrow escape. He went to the barn about 6 o'clock to bed the stock for the night. He carried a lantern and while he was in the straw shed in one wing of the L shaped structure some rails on which the straw was piled gave way, precipitating Mr. DeLong fourteen feet below to the bottom. He was badly burned about the face.

New Teacher Is On the Job

Miss Ima Bray, of Indianapolis, arrived Sunday to take the place of Mrs. Detamore, who resigned as teacher of Music and English in our public school. Miss Bray is a graduate of Earlham college and has majored in Domestic Science. It is a difficult task to take up another's work in a term, not knowing the methods used, or the scholars, but it is the expression of the faculty that Miss Bray will fit in splendidly.

Court Orderes Action

In the suit of W. H. Randall against Zenith Stamets, the defendant Monday filed a motion for a new trial. Judge Endicott entered jugment for $85.75 in the case and ordered the foreclosure of mechanics lien.

LICENSED TO WED

Glen Snyder, 24, farmer, Harlan, and Beulah Bidlac, 23, Newville.

The News has lost another of its very first subscribers, in the death of Mrs. Mary Buchanan, of Huntsburg, Ohio. The daughter, Opal Wagers, not knowing any of the St. Joe folks ordered the paper stopped. Old stand-by subscribers like Mrs Buchanan and John M. Henderson will be missed.

Kicked By Horse Monday Night

Monday evening, while doing his chores, Jacob Krabill was kicked on the left hip by one of his horses. Mr. Krabill did not speak to the horse and it being dark, the horse kicked. He fell against the barn and then to the floor. After trying to get on his feet for some time he found that he would have to crawl to the house, as no one could hear him. When he had made half-way to the house, help came. He was badly bruised up and will be confined to the house a few days

Fast Driving-Ice Turns Do Not Work Safety

A Ford touring car, driven by a Mr. Pepper of Fort Wayne, was badly damaged Sunday night, by turning over a few times, when the driver attempted to turn the corner at Clay Coburn's at thirty-five miles an hour and on ice. The car landed south of the corner, up side down and damaged considerable. The driver came on to town and was picked up here and taken to Spencerville and parties came after him.

The weather man says the cold snap is about over—What do you say?

Home Bureau Activities

Mrs. Daisy Woodcox

The Home Bureau held an all day meeting last Friday, at the home of Mrs. Hattie Widney. In the forenoon Miss Perry of Fort Wayne, demonstrated the use of the Singer Sewing Machine attachments. At the noon hour a pot-luck dinner was served. In the afternoon the regular program was carried out.

A playlet entitled "They Do Say" was given by the committee in charge. A short talk on Landscape Architecture entitled, "The Universal Shrub" was given by Mrs. Daisy Woodcox. This was followed by the regular project, "Clothing" which was given by Mrs. Beulah Coburn. About thirty five women responded to roll call and several new names were added to the list of members. The last number on the program was a demonstration of the Electric Sewing Machine by Miss Perry. The ladies left at a late hour expressing themselves that the day was well spent.

RAIL SAFETY BILL IS BEING DRAFTED

Will Eliminate Grade Crossings and Limit Speed of Autos.

Indianapolis.—A safety bill which will incorporate the recommendations of the safety conference called last October by Emmett F. Branch, then governor, will be drafted and ready for presentation to the general assembly soon, Frank Singleton, chairman of the safety committee, said.

Four members of the committee are now working out details of a bill, Mr. Singleton said.

Provisions which the bill probably will contain are the gradual elimination of all grade crossings in the state; a speed limit for automobiles approaching a grade crossing, and the creation of a department of safety, Mr. Singleton said.

The provision for elimination of grade crossings will be written in such a way that the program will not overtax the railroads, giving them ample time to take care of the work.

Although the definite speed limit of automobiles approaching a grade crossing has not been determined, this feature of the bill is practically assured.

Mr. Singleton pointed out that the original suggestion of the safety conference, requiring automobiles to approach crossings in low or intermediate gear, did not seem feasible to the committee.

After a rather spirited debate, in which party lines were disregarded, the senate voted to change the rules that have prevailed throughout the last two sessions so as to provide that a bill may be reconsidered once during the session after having been indefinitely postponed. The vote was 23 to 21 in favor of the change, six members being absent.

Preparation of a bill to amend the 1921 budget law to include all state departments was considered by members of the budget advisory committee for immediate introduction in the legislature. Passage of the amendment under consideration would extend the budget control of state expenditures from about $10,000,000 to virtually all of the annual disbursements of the state, aggregating about $33,000,000.

Representative Walter B. Korff (Vanderburg, Rep.) has prepared a bill which is designed to require all automobiles of the state to be protected by liability insurance and to make a penalty of $500 for failure to comply with the law. The bill would prohibit the operation of any motor vehicle not protected by this insurance.

A bill being prepared by Demarchus C. Brown, state librarian, will ask for the appropriation of $800,000 for the erection of a state library building on the World war memorial plaza grounds, a site which has been offered gratis.

As a direct outgrowth of the state forestry conference which was held in Indianapolis early in December a bill will be introduced in the house of representatives by Representative Oliver P. LeFuze (Wayne and Union, Rep.) providing for the adoption of an immediate state forestry plan through the levy and collection this year, and annually thereafter, of a state tax of two mills on each $100 for a forestry fund. This money is to be used in the purchase and development of state forest lands and the growing and distribution of forest tree seedlings.

A bill providing for the state to set aside $150,000 to be used in the establishment of a memorial to Paul Dresser, Hoosier composer, on the banks of the Wabash river, between Terre Haute and Dresser, will be introduced into the house of representatives by members of the Vigo county delegation in the house, it was announced by Representative Cooper (Vigo, Rep.).

Governor Jackson's Recommendations

Indianapolis.—Governor Jackson's address recommends: Such board and commission consolidations as are feasible in conformity with the recommendations of the special survey committee.

Fire insurance sinking fund for state institutions.

Revaluation of real estate in 1925 and every four years thereafter.

Careful consideration by legislature of farmers' economic problems.

Extension of state budget system and payment of all money so far as possible into general fund.

Permanent automobile license plates and higher gasoline tax to cover the amount now raised by license fees.

Strictest economy in school administration.

Continuance of highway building program without imposing too heavy a burden on any class of citizens.

Motor carrier regulation by public service commission.

Increased fees for public service commission to make that body self-supporting.

Rigid economy in state institutions.

Simplify the accounting system, reduction of funds to the least number possible and prohibition of transfer or borrowing between funds.

Consolidated control of institutions for the feeble-minded to avoid conflict of authority over transfer of patients from one institution to another.

Permanent allocation of inheritance tax to the general fund.

Stronger "blue sky" law.

Firm opposition to salary increases and recommendations that salaries increased since last legislature be reduced to amounts specified in last appropriation bill.

Boards of uniform size for all state institutions with two members from each political party.

Extinguishment of current state debt as soon as possible with regulation of budgets so that the state can live within appropriations.

Appropriation of $6,000 to continue state's investigation of Great Lakes-St. Lawrence canal project.

Emphatic opposition to repeal of primary law.

Strong appeal for economy in local and state administrations.

Pledge that there will be no executive interference with legislation.

INDIANA STATE NEWS

Michigan City.—Michael Faroh, who shot and killed his wife and wounded her brother, James Bohlin, and then shot himself, died at a hospital. An affidavit, charging first degree murder, was filed against Faroh. Bohlin will recover, it was said.

Seymour.—Mabel Weddel, age nine, daughter of Mr. and Mrs. Riley Weddel, living 12 miles west of Seymour, died of a bullet wound in the forehead caused by the accidental discharge of a .32-caliber rifle in the hands of her sister, Bessie Weddel, age eleven.

Indianapolis.—Homer Elliott, for three years United States district attorney, vacated office and Alexander G. Calvins, special assistant district attorney, took the oath of office as his successor, following designation by A. B. Anderson, judge of the United States Circuit Court of Appeals for the Seventh judicial district, who has been assigned to sit as district judge in this district. Elliott received notice of the fact that the Department of Justice had accepted his resignation, submitted last August, so it was necessary to designate a successor at once.

Zionsville.—Ensign E. Mac Moore, of the United States cruiser Milwaukee, was painfully injured and Lieut. Harold Peterson, of Rantoul, Ill., connected with the United States flying corps in that city, narrowly escaped death in a pasture field on the Ira Shelbourne farm, a short distance north of this city, when the United States airplane in which they were riding from Rantoul to Fort Benjamin Harrison, was forced down and crashed to the ground. The accident was said by Peterson, who was piloting the plane, to be due to a frozen rudder.

Letts.—The Letts State bank was ordered to close its doors by J. Paul McMillan, state bank examiner, and Thomas Barr, assistant state bank examiner. It was found the bank was overloaned. The examiners found the deposits of the bank were $60,000. Mr. Barr said it was probable, although not assured, that the depositors would get their money.

Anderson.—In a fit of jealous rage, occasioned by seeing his wife brought home by another man, Lee Danforth, thirty-two years old, opened his knife and inflicted severe wounds on Mr. and Mrs. Oscar Jordan, parents of his wife; Robert McGinnis, who was the escort for Mrs. Danforth, and then used his fists on his wife. He cut his own throat. He was discovered before he bled to death.

Indianapolis.—When members of the house of representatives of the Seventy-fourth Indiana general assembly go for their mail, they are greeted by the ready courtesy and engaging smile of Miss Carrie B. Plasterer of Huntington. The office of postmaster of the house has not escaped the general inroad of women in politics, and for the first time in the history of Indiana, a woman occupies the coveted place.

Richmond.—Mrs. Josephine Comstock, age eighty-seven, widow of Judge Daniel Comstock, a former judge of the Indiana Appellate court, and who served one term as a representative in the congress from the Sixth Indiana district, died at her home after a brief illness. She was born in Germantown, Ohio, and had lived in Richmond since 1867. Three children survive.

Richmond.—News of the death of Daniel G. Reid, in New York, was received by Richmond people with deep regret. Probably no native son of Richmond was more generally known and so well liked by citizens in all walks of life. During the years previous to his rise to fame in the financial world, and while he was cashier in the Second National bank, he came in contact personally with hundreds of Richmond residents almost daily. He will be buried in Richmond.

Indianapolis.—Recommendations that "some adequate measure of the damage" on account of the commercializing of the state roads be worked out and that the bus business be taxed accordingly, that the gasoline tax be increased, that the inheritance tax money be returned to the general fund and that a 2-cent state tax levy be placed in effect for highway purposes are made by John D. Williams, director of the state highway commission, in a report covering the commission's activities in the year which closed September 30, 1924. The report shows that the highway commission in that period spent $14,919,566.43, leaving a balance at the end of the year of $1,991,694.93 out of balances and receipts for the year amounting to $16,911,261.36.

Indianapolis.—Thirty residents of Pendleton called on Governor Jackson to protest against the relocation of state road No. 37, which now passes within one-quarter of a mile of Pendleton. The relocation was ordered by the state highway commission and was approved by the federal government in order to eliminate two railroad crossings.

Hartford City.—Dr. William A. Hollis, age forty-six, widely known eye, ear and nose specialist, died suddenly of heart disease in the Blackford county hospital

Lesson for February 1

THE VINE AND THE BRANCHES

LESSON TEXT—John 15:1-17.

GOLDEN TEXT—"He that abideth in me, and I in him, the same bringeth forth much fruit."—John 15:5.

PRIMARY TOPIC—Being Friends of Jesus.

JUNIOR TOPIC—The Vine and the Branches.

INTERMEDIATE AND SENIOR TOPIC—Fruit-Bearing Lives.

YOUNG PEOPLE AND ADULT TOPIC—Union With Christ.

Under the beautiful allegory of the vine and the branches Jesus set forth the spiritual oneness of Himself and His disciples.

1. The Relationship of Jesus and the Father to the Disciple (vv. 1-3).

1. Jesus the Source of the Disciple's Life (v. 1). He is the true vine. Through the incarnation Jesus identified Himself with humanity, and by virtue of His atoning death and resurrection it is possible for the believer to be a partaker of His life so that between the disciple and his Lord there is a community of life. As the vine pours its life into the branch, so Christ pours His life into the believer. Our salvation is eternal life because it is the life of the eternal Son in us.

2. The Father Has in His Hands the Discipline of the Disciple (v. 1). The "Father is the husbandman." Just as the culture of the vine is in the hands of a husbandman so the discipline of the believer's life is in the hands of the Father. In this disciplinary process he

(a) Removes the unfruitful branch (v. 2). He does not take the trouble to prune the fruitless branch. The nominal church member, the mere professor, He removes.

(b) Purges the fruitful branch that it may produce more fruit (v. 2). He restrains our natural tendencies and desires in order that the virtues of the Lord, the fruits of the Spirit, may shine forth.

3. The Instrument by which the pruning is accomplished is Jesus' words (v. 3). The disciples already were cleansed by Christ's words, for Judas the traitor had been cast out. If the believer's life is to be fruitful in character and service the pruning knife, Christ's words, must be intelligently and regularly applied.

II. The Conditions of Fruit Bearing (vv. 4-7).

The supreme object in pruning, the culture of the vine, is fruit.

1. Abiding in Christ (vv. 4-6). As the branches draw sap and life from the vine, so believers must abide in Christ, from whom they derive their purity, strength and wisdom. Indeed, it is a mutual abiding, the disciple in Christ and Christ in the disciple. It is Christ's life expressing itself through the believer. The one thus indwelt by Christ will bear much fruit. So great is the displeasure of the Lord with lifeless, unfruitful branches that they are to be "cast forth," "withered," even burned (v. 6).

2. Christ's Words Abide in Us (v. 7). So mighty is the power of the one who abides in Christ and in whom His words abide that Heaven can withhold no gift from him.

III. The Blessed Issue of a Fruitful Life (vv. 8-17).

1. The Glorification of the Father (v. 8). Through much fruit-bearing, the Father will be glorified (Matt. 5:16).

2. Credentials of Discipleship (v. 8). The only way to prove that one is a child of God is to manifest the characteristics of God in one's acts and service.

3. Abiding in Christ's Love and Keeping His Commandments (vv. 9, 10). The way to abide in Christ's love is to keep His commandments. The one who neglects the words of Christ is destitute of His love. It is folly to talk of being in the love of Christ while disobeying His teachings.

4. Fulness of Joy (v. 11). The way to have fulness of joy is to have Christ's joy in us.

5. Loving one another (vv. 12, 13). The one who abides in Christ and has the life of Christ flowing into him will live a life of love, will love his fellowman, especially his brother in Christ.

6. Friends of Christ (vv. 14, 15). Christ's friends do whatsoever He commands. Being thus obedient He takes us into His confidence and makes known unto us the Heavenly Father's will.

7. Perpetual Fruit-Bearing in Love, With Power in Prayer (vv. 16, 17).

Physical Vigor

Physical weakness is not a sign of spiritual power. All other things considered, the man or woman who enjoys physical vigor will be able to accomplish more than those who are puny and ill.

How Many?

"How many people," says Jeremy Taylor, "are busy in the world gathering together a handful of thorns to sit upon!"

Our Fears

What we fear most is not today's trouble, but that which may happen tomorrow.

Dumb Love

A dumb love is only acceptable from the lower animals.—Doctor Van Dyke.

ROAD BUILDING

ROAD BUILDING NOW DEMANDS RIGHT MEN

In the early days of road building, any contractor who could spread stone and roll it was good enough to "engineer" the road to be built. Today all organizations engaged in road building are looking for the trained road engineer, and when there are not enough to go round, sending their own men to college for better training in highway building.

In 1919 the University of Michigan, which has departments of highway engineering and highway transport (Prof. Arthur H. Blanchard) offered graduate short period courses in highway engineering and highway transport, leading to the degree of master of science or master of science in engineering, arranged especially for men engaged in the practice of highway engineering and highway transport.

In 1919-20 the attendance was 29; while in 1922-23, 110 men attended these courses, the average age of the men being twenty-seven years, ranging from twenty-three to fifty-six years. These men came from the United States bureau of public roads, state, county, and municipal highway departments, contractors' organizations, companies manufacturing motor trucks, highway machinery and materials, universities, and from the field of highway transport. During 1923-24, 18 graduate short period courses were offered, ten in the field of highway engineering and eight in highway transport. These courses were given by a staff of eight professors and ten non-resident lecturers.

The road building world is looking to the engineer, the trained man, the technician, for light on how to build better, less expensive, more permanent highways. It is generally recognized now that the day of the rule-of-thumb builder is gone, and that only the engineer, proficient in the art and familiar with the best practice, is the economical spender of the taxpayer's money.

Closed Autos Now Make Wider Roads Necessary

A few years ago most of the automobiles were open models; a closed car then was somewhat of a rarity, and was regarded as more a town model than anything else. Today, however, this condition is vastly changed, and we find that now approximately 85 per cent of the automobiles sold are closed models.

Consideration of this fact will reveal that this situation makes a great deal of difference in traffic conditions.

When most of the automobiles were open cars, motorists would go driving only when there was prospect of continued fair weather. Now, however, the possibility of rain does not deter the automobile owner from taking his car for a spin when he has the time; even if it does rain he can be dry and comfortable inside his gasoline coach.

This means that the average number of cars on the road is always much greater. (And one must not lose sight of the fact that more cars of all models are being sold today than ever before.)

All of which points out the necessity of more paved roads—and wider ones. New pavements must be built wider. Old ones, which have become inadequate to handle the greatly increased traffic, must be widened by laying strips of concrete beside the old pavement.

This is exactly what is being done in many communities. Road officials realize the necessity of wider roads. And it is necessary that those who use roads and those who are benefited by the use of them support these officials in getting wider roads. It is up to them, in fact, to insist on wider roads.

Uncle Sam Is Building Eleven Concrete Roads

One Appius Claudius Caecus, a Roman censor, won honorable mention in our history books by building the famous Appian way, which carries traffic southeast out of Rome to this day. He started work in 312 B. C. on a section 140 miles long. He sometimes built embankments of earthen work 20 feet high, and the road surface itself was of carefully cut stones cemented together over two feet of gravel. But the rest of this 350-mile highway, to the heel of the Italian boot, was finally paved just 400 hundred years later.

Rome sat upon her seven hills and ruled the world over her highways. In the wilds of Macedonia their ruins may be found. In England I have driven over them, resurfaced with modern materials. A marvelous system for that age, but they took centuries of building.

Uncle Sam is building 11 Appian ways of solid concrete, writes Earl C. Reeves in Collier's.

It All Depends

"My dear," asked the dreamy young wife, "do you believe that in the end right must always win?"

"No," yawned her husband from behind the sporting page. "Sometimes a left jab puts them to sleep in the first round." — American Legion Weekly.

Water Pipes of Wood

Wood stave pipes will be used in the laying of 4,000 feet of public water mains in South Devon, Canada.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

PICKING OUT THE FEEBLEMINDED

In the last few years the public has begun to recognize the danger of mental defectiveness. Much study has been given to feeblemindedness. Various mental tests have been devised, not only to determine who are feebleminded, but also to classify the different types and degrees of feeblemindedness. Special attention has been given to those forms of feeblemindedness which are so near normal as to make their recognition extremely difficult.

It has been found that many persons who possess enough intelligence to look after themselves, and even in some cases to earn their own living are below the normal standard of intelligence.

These tests, of course, sometimes lead to ridiculous results, as when a distinguished lawyer, after spending years on the bench and accumulating a large fortune in the practice of his profession, was found unable to pass the mental test for freshmen at his state university. But this only means that our tests are imperfect.

Much has appeared in newspapers regarding morons, a term until recently unheard. Strange and motiveless crimes have been found to be due not to deliberate criminal intent, but to abnormal mental conditions. Such freakish crimes as setting fire to buildings for the pleasure of seeing the blaze, turning on fire alarms to see the engines turn out, stealing useless and worthless things, and especially those dark and mysterious crimes caused by exaggerated or perverse sex impulses are explained today as the act of mentally abnormal rather than criminal persons. In fact, Judge Olsen, chief justice of the Municipal court of Chicago, says that all criminals are insane.

The trouble is that today, the feebleminded person is not recognized until he commits some act which to the normal mind is criminal. We are still treating mental conditions very much like our forefathers treated contagious diseases.

Dr. Walter E. Fernald, superintendent of the Massachusetts School for the Feebleminded, estimates that there are 50,000 feebleminded children in Massachusetts, not more than 18,000 of whom have been recognized.

The only method which so far offers any hope is the mental examination of every child when it enters school, and special training and education for those found mentally defective.

PREVENTING DIPHTHERIA IN CLEVELAND

DIPHTHERIA is one of the diseases we know all about. Bretonneau of Tours first described it as a distinct disease in 1821, over a hundred years ago. Before that time it had been confused with many other forms of sore throat and had been called "malignant sore throat," "putrid sore throat," etc. He called it diphtheria from a Greek word meaning a membrane, because in true diphtheria a membrane always forms on the infected spot. Klebs discovered the diphtheria germ in 1883 and Loeffler in 1884 first succeeded in growing the germ outside the human body.

In 1888 Roux and Yersin proved that poisoning and death in diphtheria were caused, not by the germ itself, but by the poison which the germ manufactures in its growth. In 1891 Von Behring made an antitoxin or antidote for the diphtheria poison, by which the poison caused by the disease could be neutralized and the child's life saved. In 1913 Schick found that a single drop of antitoxin, injected under the skin, would show what children were susceptible to this disease. Then Park and Zingher in New York found that children whom this test shows to be immune at two or three years of age will probably be safe from the disease for the rest of their lives, while those who are susceptible can by a dose of toxin-antitoxin, be protected from it in all cases during childhood and in many cases for the whole of their lives.

So we know all about it, what causes it, how the germs get into the throat of the well child, how it can be prevented and how it can be cured. Yet in 1921 there were twenty thousand deaths from diphtheria in the United States, most of them children under ten years of age.

As King Edward asked, "If this disease is preventable, why is it not prevented?" Because its prevention requires action on a large scale. To protect a single child against diphtheria is good but this will not reduce the death rate. All susceptible children must be protected. The time to do this is when the child enters school.

In Cleveland Doctor McClelland found that two-thirds of all children examined were susceptible and that the largest number of susceptible children were found in the well-to-do homes. Not a single child out of the 30,000 treated showed any bad effects from the antitoxin.

"Who would not give a trifle to prevent what he would give a thousand worlds to cure?" Three doses of toxin-antitoxin will protect your child from this awful disease. Don't be sorry when it is too late.

Permanent roads are a good investment—not an expense

Road Building Far Behind the Automobile

Millions now recognize the automobile as a necessity. It is no longer a luxury for the few. Sixty per cent of its use is for business.

Because of this the modern paved highway has become an economic necessity.

Yet although the mileage of Concrete Roads and Streets has been steadily increasing, our highway system today lags far behind the automobile. The great majority of our highways are as out of date as the single-track, narrow gauge railway of fifty years ago.

Such a condition not only seriously handicaps the progress of the automobile as a comfortable, profitable means of transportation, but also holds back commercial, industrial and agricultural advancement in practically every section of the country. It is costing taxpayers millions of dollars annually.

Highway building should be continued and enlarged upon.

Your highway authorities are ready to carry on their share of this great public work. But they must have your support. Tell them you are ready to invest in more and wider Concrete Highways now.

SUFFERED AFTER BIRTH OF BABY

Trouble Caused by Getting Up Too Soon. Relieved by Taking Lydia E. Pinkham's Vegetable Compound

Talcville, New York. — "I thought it would interest you to know what benefit I have derived from taking your medicine. A few days after the birth of my third child I got up too quick. Then just before my fifth child was born I had inflammation of the bladder and displacement. Seeing your advertisement in a Liverpool (England) paper I began taking Lydia E. Pinkham's Vegetable Compound and that was the best confinement I had. Whenever I feel rundown I always take the Vegetable Compound as a tonic. We have just removed from Brockville (Canada) so I was pleased when the store ordered the medicine for me and I got it today. I would not be without it for any price and I recommend it to ladies around here because I feel so sure it will benefit any woman who takes it." — Mrs. AGNES WIGNALL, Talcville, New York.

Women can depend upon Lydia E. Pinkham's Vegetable Compound to relieve them from ills peculiar to their sex. For sale by druggists everywhere.

SPOHN'S DISTEMPER COMPOUND

Don't take chances of your horses or mules being laid up with Distemper, Influenza, Pink Eye, Laryngitis, Heaves, Coughs or Colds. Give "SPOHN'S" to both the sick and the well ones. The standard remedy for 30 years. Give "SPOHN'S" for Dog Distemper. 60 cents and $1.20 at drug stores. SPOHN MEDICAL CO. GOSHEN, IND.

Did you never bore anyone? Then be merciful.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 23 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

CHAPTER IV—Continued

—22—

By E. Phillips Oppenheim

Copyright by Little, Brown & Co.

"For you, yes," Krossneys sneered, "because you risk nothing and you have the spending of the money. For me it is different. I have an official position. I am governor of the fortress; I wear the uniform of the Russian republic."

Elsa Francks laughed loudly and scornfully. She pointed jeeringly at Krossneys.

"Uniform of the Russian republic!" she exclaimed. "A pity they didn't make it to fit you! Official position, indeed! What do you get out of it, I should like to know? Would you not starve if it were not for the contributions of the prisoners themselves?"

"It is true," Krossneys assented gloomily. "It is a dog's life."

"And a dog's country to live it in!" the woman proclaimed. "Listen to me, Ivan."

She sat upon the arm of his chair and talked to him in Russian. Soon it was evident that he was yielding. She fetched him beer and then spirits of some sort from a cupboard. Once or twice she turned and winked stealthily at Gerald. At last she turned towards him in triumph.

"It is arranged," she announced.

"Not so fast," Krossneys intervened. "Let us hear how this money is to be paid?"

"In cash," Gerald replied. "I have drafts upon your own banks."

"Well, well," Krossneys muttered, "the money is right enough, then. At ten o'clock tomorrow morning," he went on, "present yourself at the fortress. Inquire for me. I shall give you an audience. The affair may be concluded at once. Get back to your hotel now and be careful not to speak of your real business."

Gerald rose blithely to his feet. The idea of leaving the horrible atmosphere of that room was undiluted joy to him. He bowed to the governor. Elsa took him to the door and, under pretext of calling the servant, passed out with him into the passage.

"You can come back later if you like to talk with me again," she whispered. "Be careful, though, for he is very jealous."

She shouted something to the Russian maid and stepped back into the room with a meaning smile. Gerald put money into the hand of the woman who opened the postern gate and stepped into the street with a gasp of relief. The clear air was wonderful. He drew in great gulps of it as he made his way along the uneven pavements, stared at by every passer-by. He could scarcely believe that his task was coming so easily to an end. If all went well, in twenty-four hours he might be on his way back to England.

Chapter V

Gerald, after a weary climb out of the town, stood at last, at the appointed hour on the following morning, before the rusty iron gates of the fortress. Untidy and neglected though the whole place seemed, there was still something sinister about the various crude precautions against the escape of a prisoner. For a quarter of a mile, on the outside of the walls, not in themselves formidable, everything in the shape of trees, shrubs or dwellings had been razed to the ground, and every fifty paces around the walls, on the top of a buttress, was mounted a machine gun, from which an iron ladder led to the ground. The walls themselves were about eight feet high, of stone covered with white plaster. The fortress itself was built of a kind of gray-colored brick, a square, solid building, with a curiously unexpected pointed top. The barred windows were no more than slits. The space of open ground by which the main building was surrounded was inches deep in dust.

A porter in stained and ill-fitting uniform admitted Gerald to the building, escorted him across the yard, and passed him on to a duplicate of himself, to whom Gerald once more presented the card which had obtained him admittance. He was led down a stone passage, which had apparently neither been cleaned nor swept for months, into a lofty but bare apartment at the farther end. Krossneys, who was sitting before a wooden table, apparently expecting him, dismissed the attendant and motioned Gerald to sit down. He looked at his visitor in unfriendly fashion.

"Why did you not come to me direct instead of going to Elsa Francka?" he demanded.

Gerald was not unprepared for the question.

"I knew your reputation as a soldier and a man of honor," he replied. "I feared that unless this matter was put to you in the proper light, tactfully, as a woman can put it, you would have nothing to say to me."

The governor grunted.

"It was a mistake," he declared sourly. "The woman is greedy. She will demand her full share of the money. It is scarcely justice."

"I am sorry," Gerald said. "I acted as I was advised."

"Supposing I accede," Krossneys went on, after a short pause, "how do you propose to get Number Twenty-nine out of the country?"

"I was hoping," Gerald admitted, "that you might have been able to help with some suggestion."

The governor stroked his beard.

"Suggestions," he muttered, "are worth money."

Gerald acquiesced.

"I have not command of much more than the amount I spoke of," he said, "but if you can show me how to get our friend safely out of the country, I will add a thousand pounds to your share."

"Which sum," the governor insisted quickly, "will not be mentioned to Elsa Francks and will belong to me alone."

"Agreed," Gerald acquiesced.

"Show me your papers," the governor demanded.

Gerald produced them without hesitation—his passport, an urgent letter of recommendation by the one statesman who was in good odor in both countries, banker's drafts, which needed only his signature to produce a never-ending flow of cash. The governor's eyes glittered as he turned them over in his hand. It was horrible that a share of these treasures must go to the woman! She was well enough under his thumb, the slave of his command, but with money in her pocket—they were neither of them in their first youth, but, so far as looks went, in his eyes she still had charm—if she were independent of him, all sorts of things might happen. He threw down the documents with a little oath. The passport, however, he kept in his hand. His manner, as he looked at Gerald, changed. He became almost servile.

"You, too, are an aristocrat, then," he remarked.

"I am of the English aristocracy," Gerald admitted. "I have another passport in my pocket, which proclaims me an American citizen."

The governor nodded. He pushed a box of black cigars across to his visitor. The latter contented himself, however, with accepting a cigarette. Then he touched a bell. The attendant brought in beer, which was poured into two glasses. As soon as they were alone, Krossneys motioned Gerald to draw his chair close to the desk.

"Now here is my scheme," he said. "Number Twenty-nine is of your height and build. You shall see him for yourself and judge. Number One Hundred and One, also a young man, died yesterday afternoon of malarial fever. His death has not yet been officially reported. Very good! I take you to the cell of Number Twenty-nine. You exchange clothes with him. You give him your American passport. You go in with me to his cell. He comes out with me. You remain."

"I—I Have Had No Water Here for a Fortnight," He Groaned.

"The devil I do!" Gerald muttered.

"Do not be a fool!" the governor exclaimed impatiently. "I beg your pardon, excellency," he added a moment later, as he remembered his visitor's identity. "Your stay there will not be long. I shall explain in a moment. I drive Number Twenty-nine to a small station on the line, eleven miles off. I take leave of him there. He is an American who has bought my oil concessions. The station is in the middle of the district. My presence with him will remove all suspicions and prevent their examining the passport too closely. He will travel through to Petrograd. There, I take it, you have made arrangements."

"I have a ship waiting," Gerald replied.

"That is my scheme, then."

"So far, I approve of it," Gerald declared, "but what about me?"

"You will bore yourself for twenty-four hours," the governor replied. "I will see, though, that you have beer and newspapers. If you will, Elsa can come and see you."

"For heaven's sake, no!" Gerald begged. "I mean," he added hastily, "I shall need no society. I am very tired. I shall sleep."

"As you will," the governor acquiesced. "In the morning, Number One Hundred and One—I should say his remains—will be carried secretly down to your cell. You will be moved up to the cell of Number One Hundred and One. I shall at once report the death of Number Twenty-nine. He will be buried in the cemetery here before intervention is possible. Now the question comes how to dispose of you."

"I was getting interested in that myself," Gerald admitted.

"Number One Hundred and One's time was up," the governor explained. "He could have gone home last week if he had been strong enough. I have his papers of release here, signed by myself. Tomorrow morning early, I shall provide you with suitable clothing, and I shall drive you to the railway station. I myself have leave of absence in my pocket, granted to me a fortnight ago, but, to be honest with you, I have not used it because I have had no money with which to enjoy myself. I shall travel with you myself to Petrograd. You will have acted as my clerk in the prison, and I take some interest in you. In my company you are absolutely secure. No one will venture even a question. Arrived at Petrograd, I will drive with you to the docks, you shall take me on board your ship, and we will drink a bottle of champagne together. What do you think of my plan?"

"Capital!" Gerald replied.

"I will conduct you now," the governor announced, "to Number Twenty-nine. We will lock ourselves in his cell. You shall explain the scheme to him and change clothes. I will bring pen and ink with me, also the deeds which will put Harmon P. Cross in possession of my oil properties. You shall pay over the drafts. After that you must be patient."

"I am ready," Gerald declared, rising to his feet.

Krossneys unlocked a drawer and took out a bunch of keys which shone like silver—the only clean thing, it seemed to Gerald, that he had seen in the prison. They tramped up two flights of stone steps.

"I am a humane man," the governor said, "and it does not please me to turn my prisoners into vermin. I have cells underground, without light or air, which were used by my predecessors. I have had them blocked up. You will find it not so terrible here."

They had reached a long, white-washed passage with arched roof. The governor dismissed the attendant who had followed them, inserted the key into the lock of the door over which "20" was painted in black figures, and entered himself, motioning Gerald to follow him.

In the sudden somber twilight of the cell, Gerald's first impressions were that a man opposite had hanged himself against the wall. At their entrance, however, the figure dropped to the ground, releasing his clutch of the rusty bars to which he had been clinging. A tall, thin young man, with sunken cheeks, long, unkempt hair, and eyes a little more than ordinarily bright, stood gazing at them. His clothes seemed to be the remains of a prison uniform. The trousers, always too short, had worn away at the bottom of the legs, and he wore neither socks nor shoes. He stared at the two men—at Gerald especially—in wonder, but remained silent.

"You speak English?" Gerald inquired.

Number Twenty-nine shook his head.

"I speak French better," he replied.

"What were you doing when we came in?" the governor asked.

Number Twenty-nine smiled wanly.

"For an hour every day," he told them, "sometimes for more, I spring till I catch those bars, and I hang on until I am tired. I can always see the sky; sometimes, if I am feeling strong, I can lift myself so that I see a little of the country."

"Well, you have something better to do now," the governor declared. "You were a man when you were brought in. I have seen you play a man's part. Remember, if you faint or do anything foolish, you spoil everything. Set your teeth and take off your clothes. You are going to be set at liberty."

Number Twenty-nine scarcely faltered.

"I am to be shot, I suppose," he said coolly. "I trust that your wardens are better marksmen than they are soldiers."

"There is a long story," Gerald intervened, "of which the governor will tell you as much as he choses. I am an Englishman, sent here by relatives of yours. I have been able to arrange for your freedom. In a few days' time, you will be steaming for England."

"Cut it short," the governor interrupted. "I will do all the explaining."

Gerald took a letter from his pocket-book.

"Read that letter," he invited. "It is from Pauline. She is my friend. I am Lord Dombey, an Englishman. We shall meet at Petrograd later. On the steamer I will explain everything. Meantime, take off your clothes. You will have to wear mine for a couple of days."

The young man took off his coat almost mechanically. His shirt was ragged. He had apparently no underclothes. His fingers began to shake.

"I cannot," he faltered.

"But it is necessary," Gerald assured him. "See I am half undressed myself."

He took off his coat and waistcoat. At the sight of his silk underclothes, the other man began suddenly to sob.

"I—I have had no water here for a fortnight," he groaned.

Gerald looked him in the eyes.

Wild West Tactics

By BAYARD D. YORK

(©, 1925, Western Newspaper Union.)

NO SAFEBREAKER, intent upon his first attempt, could have approached the United States postoffice with greater trepidation than Hazel Gledhill felt as she slipped through the revolving doors at 10:58.

The words of the "personal" column glimmered before her—

WATCH: If the person on the Seyms street trolley who found a watch in her pocket will be at the post office at eleven Sunday morning, she will learn something to her advantage.

She had come, driven by longing and loneliness. At last, after sixteen months of monotony in the city, something was going to happen—or at least, so she hoped.

She had scarcely moved to the window which commanded a view of the Hopkins street entrance when a large gray car stopped at the curb. Blue-coated men began to leap from its interior.

As stenographer for Peck Brothers, attorneys, she knew that the law looks with a stern eye upon the possessor of stolen goods.

A hand touched her shoulder—

"Come with me," said a voice. "There's not a second to lose."

"The police," he murmured. "My car—this way—hustle!"

In another second, as it seemed, she found herself in a little blue roadster, whirring along the street at a speed which defied all laws of traffic or safety. And some distance behind came the big gray car with its load of policemen!

She glanced at the young man as he bent grimly over the wheel. She realized that he was a thief, fleeing madly from the officers of the law. She realized that she wanted him to win the race.

She looked back and tears came into her eyes. The flight was such a hopeless one! The gray car was gaining rapidly.

The next moment he had turned his car from the road, and brought it to a stop in a pine grove.

The gray car whizzed by; the young man backed out upon the road again—and began doubling back over his own tracks.

"There!" he muttered. "We'll be forty miles away before they catch our trail again!"

It presently became evident to Hazel that he was taking a very peculiar course back. Just as she was about to protest, the car came up over the crest of a hill—and there before them, blue and sparkling in the sunshine, lay the ocean!

"Barton Beach," the young man explaind.

"I will thank you," she said primly; "to take me to the city at once. Why—I don't even know your name—or you mine."

"I do know yours," he admitted. "But you don't understand all of this, do you?"

"I think I do," she responded. "You were concerned in the robbery at Lorton's jewelry store. On the trolley you slipped the watch into my pocket because you were afraid you'd be caught with it. Then you put that item in the paper so that I would bring the stolen watch back to you. Here it is."

"That isn't quite the way of it," he said. "Jim Beaton—Jim's a chum of mine and reporter of the Globe—says one day, 'do you know, Ned Nearing, this old world's lost every bit of romance it ever had? Why, if you happened to be crazy about a girl whom you didn't know—' you understand Jim said this—'all you'd have imagination enough to do would be to get somebody to introduce you to her. And she'd say, 'Why, you freckle-faced, snub-nosed, red-headed young ape—' Jim has a gift of description; gets it from his newspaper work. 'You see, girls like a little wild-west, shoot-the-town-up sort of stuff.' That's what Jim says."

He seemed very intent upon a spot eight miles out in the dancing ocean.

"Jim's words hit me between the eyes," he said. "Because—because—because there was a girl I wanted to meet, only I—I didn't know anybody at—at Peck's. So I went out for a little wild west. I bought that watch at Lorten's, just the day before the robbery—dropped it in your pocket on the trolley—and put that note in the paper."

He suddenly faced her, grinning slightly.

"Now listen to this," he stated. "Just as I was leaving for the post office, at ten-thirty this morning, Jim told me that the police expected to nab a woman confederate of the robbery at that very spot at eleven o'clock. That furnished more wild-west than I bargained for. Do you know, I'm hungry—"

He had suddenly started the car with a jerk.

His eyes met hers. His look was not bold, but it was very friendly—and perhaps a little insistent.

"I'm trying a little more wild west," he said. "You're kidnaped—for lunch at Barton Beach."

Pleasant Surprise

"Hullo, old man!" exclaimed Dubley, at the Literary circle reception. "It's a pleasant surprise to meet you here."

"Good of you to say so, old chap," replied Brown.

"Yes, I was afraid I wouldn't find anybody but brainy and cultured people here."

Thomas Edison Makes Forecast Worth Noting

The next great invention, Thomas A. Edison states in an interview in Collier's, will be the perfection of the helicopter.

"Man now has definitely accomplished flight," Mr. Edison says. "It has come to stay and serve the world. But the helicopter—that device which, when perfected, will enable men to rise straight upward from the ground and, after having reached a stated altitude, to hover there without moving back or forth, or up or down—after we get this helicopter flight will revolutionize our civilization. We shall achieve such tremendous speeds as are beyond us now and shall not need to fly at great heights. Flying will come along in practical form in time to keep us out of trouble. When the need for some new thing becomes insistent men always find it.

"At the present moment the farmer is getting all the worst of it. The trouble is that, speaking roughly, half the population is made up of farmers and the other half consists of manufacturers and middlemen. A very simple plan would solve the problems of the farmer. All the government should have to do would be to store foodstuffs and do with them what it does at present with its gold and silver stores—pass them out for use as needed."

THE LEISURE CLASS

Mrs. Stocksanbonds—Such a pity we haven't a real leisure class in America!

Mr. Stocksanbonds—You should be at the head of a big business office, my dear, to know better than that.

The Busy Lady

"I knew a lady, Mrs. Rebecca Trott, by name, who was as thin as a shoestring," related old Riley Rezzidew of Petunia, "and kinda stoop-shouldered, and talked so fast that when she got fairly unbuckled and going at full speed, half of her words had to climb on the backs of them ahead in order to arrive in time to be of any use. She would grow real excited and red on the cheek bones over how some feller that wasn't in any way related to her whipped his wife oftener than perhaps she needed a licking, and when her brother-in-law died she busted a blood vessel over the way the lodge brethren who acted as pallbearers tracked mud all over the ingrain carpet."—Kansas City Star.

Popular in Her Day

We had planned a visit to the Home for the Aged. We had never been there before, but our friends asked us to come with them because they knew we could sing and the old people would like it.

We brought with us the music we thought they would like, song after song, "Annie Laurie," "Love's Old Sweet Song," "Suwanee River" and others.

We were not so sure we knew our audience as well as we thought we did, when the oldest old lady of them all piped up, "Young lady, do you know a song called 'I Wonder Who's Kissing Her Now?'"—probably the last song she remembered previous to her entrance in the home.—New York Sun.

Fastidious Jack

Jack Dempsey was the subject of discussion.

"Jack is fastidious," said a welterweight. "Of course, if he wasn't he'd never have had his nose done up.

"Jack gave me a lesson in table manners. In them days I used to make a kind of gargling noise over my soup—didn't know better. Well, I was gargling my soup in a swell joint one day when Jack turned and stared at me from a table at the other end of the room.

"'Good soup, Jack,' I yelled, waving my spoon.

"'It don't sound good,' Jack yells back, grufflike."—Pittsburgh Chronicle-Telegraph.

The Sports Suit

By WILLIS BRINDLEY

(©, 1925, Western Newspaper Union.)

FOR ten dollars cash and five dollars a week, payable on pay days, Moe Golden will sell an honest working girl a sports suit that will make her look and feel like Evelyn Vandergould. Minnie Bowers knew this. Minnie had ten dollars and enough over for incidentals on her vacation at Linger Longer, where she had been invited to be a guest of rich Aunt Harriet.

But Minnie knew also that she could not possibly squeeze an extra five dollars a week from her pay envelope to complete payment for the suit.

It was Saturday morning; she would be off at one, with time to shop and back in the afternoon and catch the night boat for Linger Longer. If she only had that sports suit.

The telephone at her ear jangled. Long distance from Berrydale for Miss Bowers.

"Yes, Mr. Simonson, two dozen cellar window bolts No. 863, four dozen light galvanized strap hinges No. 647, by auto freight today, sure. Business must be good with you, Mr. Simonson. Thank you very much. Today, sure."

She wrote the order, and ran out to the shipping clerk with it.

"Today, sure, Mike, for Simonson at Berrydale, and if you don't make that auto freight I'll never speak to you again."

"All right, Minnie, just for you we'll make it."

She returned to find Adam Goss, her employer, at her desk, with a tremendous list of hardware items, in his own handwriting.

"Today, sure," said Goss. "Copy it and get it in the mail, and don't lose it, and there's a letter goes with it—it's that big job for the Central high school we're figuring. I am going for the day."

"Mr. Goss," she said, "I'm leaving this afternoon for my vacation."

"Yes. Well, get that estimate out before you go. You got plenty of time."

But that was not what she had come to talk about.

"Mr. Goss, I think I'm entitled to more money. I want five dollars a week more."

He stared. Such talk!

"It is up to me to decide when a person around here is entitled to more money. Nobody should talk like that unless he is indispensable."

Minnie Bowers returned to her desk, her face aflame. The telephone jangled in her ear. It was the Bon-Ton store at Cedar Rapids, all out of extension window screens No. 843. She wrote the order and made savage threats to Mike of what she would do if he did not ship today, sure.

Then she tackled the estimate. Adam Goss had priced the list himself, with special prices on most items, and she must extend and total it, type the accompanying letter and put it in the mail.

The telephone rang again. It was the five and ten at Gardenvilla, suffering for fly-swatters and paring-knives. Came one o'clock and the office cleared—of all but Minnie Bowers. At three o'clock she finished the estimate—luncheless, tired, angry. She mailed the thing herself, walked into Goss' office with the carbons and his original, and then—

Then she walked back with the papers to her own desk and buried them in the second drawer.

Minnie Bowers, vacation at Linger Longer over, returned to the wholesale hardware business becomingly tanned and becomingly arrayed in a sports suit that lacked seven payments of being legally her own. And the first thing she did was to look in the second drawer for that estimate.

It was gone.

"Boss wants yuh," said a voice in her ear. She went to him.

"Nice vacation, I hope. That's good."—(My, but wasn't he nice?) "Well, you'll be glad to know we sold that schoolhouse hardware. We found the estimate in your desk all right."

She managed to look up at him, but found no words.

"Well, you done a good job on that estimate, but it ain't that I called you in for. I guess from now on you'll have to lay off estimates and just answer long-distance and take care of country trade. Simonson of Berrydale, he raised h—ll when you weren't here last week and the Bon-Ton store and the Gardenvilla five and ten, they say only you can handle their orders and get 'em right. Now, I ain't prepared to say that anybody's indispensable around here, but this country trade job is goin' to be worth five dollars a week more to you, beginning this week."

Tuberculosis Conquered?

According to Sir Leonard Rogers, English physician, there will be no more tuberculosis after 25 years. Doctor Rogers' remedy, sodium morrhuate, consists of a sodium salt obtained from the codfish. It was first used in treating leprosy patients in the tropics. Because the bacillus of leprosy and tuberculosis are so similar it was used as a specific for tuberculosis with favorable results. The most significant feature of the new remedy is that, being so cheap, it lies within the reach of every sufferer, says Doctor Rogers.

Too Wise

Hardware Dealer (attempting to sell automobile tools)—Why don't you take your car to pieces and overhaul it yourself? Don't you understand it well enough to?

Mr. Chuggins—I understand it well enough not to!—Good Hardware.

Selling the Earth

By J. R. McCARTHY

(©, 1925, Western Newspaper Union.)

PETER WRENN stared at the envelope. He didn't need to open it. For Peter knew what was inside. Peter had decided day before yesterday, when Miss Tuttleson rented that desk, that he must make a good impression upon her.

So far he had failed miserably. Why did all bill collectors have such aggressive manners and such loud voices? It was intolerable. The real estate business was bad enough at best, Peter decided. His slogan, "Peter Wrenn Sells the Earth," seemed a huge joke.

Peter's nice new paper knife slid through the top of the offending envelope. A bill for advertising.

"Mr. Wrenn!"

"Yes, Miss Tuttleson."

He hadn't time to talk with Miss Tuttleson, yet here she was making him sit down and seemingly preparing for a long talk. He was due in exactly thirty minutes to call for Doctor Green and take that gentleman out into Orange county to look at a ranch. Of course he must rent a car. Peter knew he wouldn't sell the ranch, but in justice to himself he knew he must make the effort.

But Miss Tuttleson was speaking. "Do you know," she asked, "where I can get a decent price for my car?"

Peter Wrenn's ears pricked up. The delectable young lady continued: "Second-hand cars seem to be flooding the market. If I knew someone personally who wanted a car, I wouldn't mind selling for half what it's worth."

"How much should you get for it?"

"I'd take $300 even, but it's worth $600 easily, Mr. Wrenn. I know that."

"Then why sell it?" blundered Peter.

Miss Tuttleson smiled. "Well," she said, "I won't need it any more. I'm going out of business, you know."

"Isn't the advertising business good here?" he blundered.

"Oh, it's good enough, I guess, when you've made a reputation. I've had an offer. I'm going with an agency. Oh, Mr. Wrenn," she leaned forward, so that none of the thrifty Mr. Cain's other business tenants might hear, "don't you know someone who will buy that car? I simply must have the money."

In the strength of inspiration Peter Wrenn forgot for the moment that Miss Tuttleson had been hearing the threats of a dozen bill collectors directed against him. "Why," he announced grandly, "I need a car; I'll buy it."

"That will be fine, Mr. Wrenn. Do you want to try it out?"

Mr. Wrenn did want exactly that, and ten minutes later he was driving gaily up to Doctor Green's rather formal abode. "A darn shame," thought Peter, much more cheerful than his words, "that a girl like Miss Tuttleson should have to sell her car and take a petty job." But her troubles did not bother Peter greatly, while his own misfortune annoyed him not at all. For he had quite changed his mind about whether or not Doctor Green should buy the ranch.

Three hours later the blunt Doctor Green broke out with, "$100,000? Too much! I'll give you $95,000."

So it was that Doctor Green remained on the front steps of his new ranch house, smoking a herculean pipe, while Peter Wrenn, having sold the earth, and having a goodly check in his pocket, drove directly to the office of his client, the previous owner of the ranch. Then to the bank, escrow department.

"A little advance?" requested his client.

"Yes," said Peter, "Say about a thousand." And he got it!

Then back to the thrifty Mr. Cain's roomful of rented desks. Miss Tuttleson looked up at him queerly. He thought he saw wetness in the corners of her eyes.

"Fine car," said Peter briskly. "I'll take it." Peeling off not three but six one-hundred dollar bills from his brand-new roll, he laid them before her and stepped jauntily to his desk.

There was an envelope. Peter opened it. "Your balance due," the diplomatic note read, "is $84.60. Our Mr. Collins will call at 2:30 tomorrow. Will you kindly have a check ready, and your adv. for Saturday's News?" Peter glanced at his watch. Two o'clock. He turned to Miss Tuttleson, to find her weeping real tears and looking from the new banknotes to him and back again.

"Miss Tuttleson," Peter Wrenn called airily, "a representative of the News will be here in half an hour for my advertisement. Will you, in your official capacity, prepare my copy? Here are my own previous efforts." And he placed a pile of clippings on her desk.

Miss Tuttleson smiled acquiescence in her best professional manner. But her words weren't professional at all. "My name is Mary," was what she said.

Starling Good and Bad

Just 34 years ago, in 1890, 60 starlings were released in Central park, New York. The next year 40 more were added and it is from those two pioneer groups that all the starling family in America is descended. Their spread has been wide and rapid, for they are already at home from Maine to Virginia and they have crossed the Alleghenies. It is a question among ornithologists whether the starling is a desirable alien, for, while it is an insect eater, it is also aggressive to the point of driving out our own native song birds and insect destroyers.—New Haven Register.

No Mercy for the Rat, Is Slogan in Denmark

That early report of rottenness in the state of Denmark was garbled, perhaps, in getting around the world. Rattiness seems to have been the impression intended. Up to the year 1898, the rats of Denmark had things pretty much their own way, living the life of Riley—to draw an innocuous parallel of luxurious living. But the 25th of November, 1898, was a dark day for the rats. On that day up rose Emil Zuschlag and told Copenhagen landlords that "the only good rat is a dead rat."

A society was formed for the extermination of rats, and bills were passed by the legislature to regulate and systematize the work of extermination. Since the beginning of the campaign millions of rats have been killed in the urban and rural districts of the country. Every rat bears a prize on his head—so many rats killed, so many kroner paid to the killer—the premiums are set down in the statutes. Rat killing in Denmark is big business.

The ways and means of extermination are discussed in Kampen mod Rotterne—which just goes to show that the rat is a rotter in any language.—Nation's Business.

Modern Light at Last in Great French Library

Following the example of the Institute de France, the national library has for the first time installed electricity. Long the despair of scholars who were forced to hunt by flashlight among the library's 5,000,000 books for the particular title they desired, and who again and again were forced to give up their work because of cloudy weather or approaching darkness, the library is now almost modern, says the New York Herald-Tribune.

The installation of electricity cost 50,000 francs, but the responsible authorities feel that this is a very reasonable expenditure, in view of the increased facilities now at the disposal of readers.

Volunteer Cook

"What puzzles me most about cooking a meal," said the man whose wife has been away for a visit, "is how a person can start a meal of three separate dishes and arrange it so that they all become 'done' at the same time. I've been cooking my own meals for three days now, and I've tried it every evening, and every evening I register failure upon my noble and expressive brow, to say nothing of what my vocabulary does to the atmosphere. I've come to the conclusion that no human being is able to cook canned corn, fry potatoes, and broil lamb chops and have them all done at once. I have been able to get the lamb chops well cooked, and while I was watching them the corn stuck to the bottom of the stew pan, and after I got that stuff loosened up, the potatoes began to burn, and by that time the chops, which had been removed, were cold. I'll tell the world that cooking is a gift."—Detroit News.

Refused a Bride and Throne

Toscha Seidel, the German violinist, recently finished a very successful tour of Australia, New Zealand and several South Sea islands. His music certainly touched the savage breast, for on one of these islands the natives decided that the visitor had been sent from their heaven and if possible should be retained among them. They tried to persuade him to marry the daughter of their dead king and thereby become their ruler. They could not understand why he should decline and it was only with some difficulty that he made his escape without a black bride on his arm.

Room for Development

According to statistics published in the 1923 Year Book of the Department of Agriculture, there are in all about 608,000,000 acres of potential crop land in the United States. That is, land physically capable of being utilized for crops some time in the future. Waste land, that is, land that is absolute desert, rock, etc., comprises 67,000,000 acres.

Armistice Halts Arrest

When two detectives of Liverpool, England, went on Armistice day to arrest a man, they arrived at the house just as the city sirens sounded a two-minute silence and they waited at the door with their heads bared for two minutes, then effected the arrest.

The Elusive Age

By M. and R. M. TERRELL

(©, 1925, Western Newspaper Union.)

PHILLIS RAINE seized the morning papers, folded back to the page of theatrical criticism. She had determined that her Juliet should be the pinnacle of her achievement, as it had been, according to the reviews. All but one. And that, unfortunately, was the one review about which Phillis Raine cared. For years, how many years she hardly dared to think, she had set herself to winning praise from Jacques Jackson's acidulous pen. When she didn't win it she knew in her heart she had failed.

So now one line from this man was enough to make her lie back among the costly lace of her pillows with grief staring out of her fine, dark eyes and terror crystallizing in her mind. The one line had wiped out the effect of the flowers with which the room was heaped, the pile of congratulatory telegrams accumulating on the silver tray in the corner, the messages coming in over the telephone. With his scalpel-like mind Jacques Jackson had hated the one unconquerable defect in her performance, the one fear hitherto she had not dared to face even in the secret places of her heart.

"Phillis Raine's performance of Juliet last night," wrote the critic, "was a wistful echo. Juliet Capulet is the flame of youth incarnate, preserved like a gorgeous, golden fly in the amber of the poet's words. Miss Raine's Juliet is beautiful, but not young. It reminds one regretfully of the charm that was Phillis Raine's."

Her enemy had conquered at last, the arch enemy of all womankind: She was old, too old for Juliet, the test for romantic youth. She might deceive less observant critics, but she could not deceive Jacques Jackson; and that meant she couldn't continue to deceive anyone very much longer.

The world of the theater, and of the theater-goers, was astounded when Phillis Raine announced that she was leaving the stage. To the few friends she permitted herself she made no explanations; what she said to her utmost frantic manager was never revealed. The engagement was concluded and in three days Phyllis Raine sailed for Paris alone.

Rumors had always gone about Broadway concerning the private life of Phillis Raine, the life from which she so rigorously excluded every form of publicity. Hearsay had it that in the spring-tide of her life she had married and that she had not been happy. Professional gossips said also that there had been a daughter of that marriage, a fragile child brought up by an aristocratic order of nuns in France, far from the glitter of Broadway.

It was inevitable that now the Rialto chatterboxes should opine that this child was ill or dying, that Phillis Raine had rushed to her side, throwing aside her career like an old gown to speed the haste of her departure.

Then came a cable abruptly announcing that Phillis Raine had died and been buried in some unpronounceable little town in southern France. Her world mourned her sincerely. A year passed.

Then New York was astounded to hear that the daughter of Phillis Raine had arrived. She was a beautiful, slender girl, startlingly like the mother whose policy of avoiding publicity she adopted.

Curiosity seekers saw her occasionally as she arrived at or left the theater where she was rehearsing, under her mother's old manager, her mother's last role, Juliet; a slender figure discreetly muffled; wide, startled, dark eyes in the shadow of a large hat.

And so, over a year later, Phillis Raine herself lay again among the costly lace of her pillows, awaiting the papers and the reviews of her rejuvenated performance of Juliet.

Her death in obscure France had been a clever, and costly hoax. She had never had a daughter, but she had taken advantage of the established rumor. Actually, she had passed the year in the hands of two of the world's most famous specialists, the one of plastic surgery, the other of nerves. The magic of the modern beauty doctor, sane diet, rest, unlimited money and a determined woman can put old Time himself out of the running—for a season.

Those who saw Phillis Raine's Juliet that night saw youth incarnate, reckless, spendthrift, impatient, southern youth, staking honor and life against a golden hour, touching youth's heights of happiness, losing with tragic despair, reckless abandon, touching the depths of sorrow as only tumultuous youth can.

Only to Phillis Raine's seeking eyes Jacques Jackson remained cold; she could easily see him out front; his applause seemed unwilling. And so she waited with impatience the first light that would bring the morning's papers and his review.

"The performance of Phillis Raine, the daughter, as Juliet last night was a triumph of artistry," he wrote. "One wonders that youth could be so young. In fact it is too young to be real. It strikes one as a performance not by youth, but of youth. The daughter is an artist, but her mother was a genius. It is the mind and spirit of the artist which illumine the clay of the body, and for these, unfortunately, there are no beauty doctors. We were reminded, wistfully, of the charm that was Phillis Raine's!"

Our Great Half Price SALE

ENDS SATURDAY EVENING

Do not let these last few days go by without a visit to our store.

Patterson-Fletcher Co.

The Store That Does Things — Wayne and Harrison

SPENCERVILLE

Richard Shook was a Sunday dinner guest of Henry Markle.

Rev. Brown and family were Sunday guests of Mr. and Mrs. Kessler of near Mt. Olivet.

Mrs. Luella Smith, who has been on the sick list for the past seven weeks, is slowly improving

Isadore Badica and wife of Fort Wayne were guests Friday of the latter's mother, Mrs. Emila Gloyd.

The revival meetings are still in progress this week and the young people of the church have charge until next Sunday.

F. W. Silberg and wife, Mrs. Sophia Miller and Mrs Ines Miller and daughter, Lucille, spent Saturday in Fort Wayne.

Frank Wise has qualified to act as guardian of Sarah E Koontz by filing bond of $3,500 in DeKalb circuit court with James L Lewis and Edgar Atkinson as sureties.

The Sophomore class of the high school was royally entertained on Thursday evening by Miss Erma Agler, west of town. Ada Bowser and Margaret Koch had charge of the entertainment which was greatly enjoyed. Those present besides the class were George Wilmot, Vernon Lipe, Vernon Kline, Earl Hodges, Kermit Steffey, Freeman Johnson, Hilda Volkert, Garnet Beams, Doris Hodges and Ila Agler.

A son was born on Saturday to Mr and Mrs. Lantz of Leo. Mrs. Lantz was formerly Miss Mary White

Gerry Wasson and wife attended the funeral of the latter's cousin, Mrs. Balentine of near Auburn, Saturday.

C E Chapman and wife, who are spending the winter at Tangerine Flordia, announce the arrival of a baby daughter, Josephine Anne, born January 8th.

Mrs. Emila Gloyd very pleasantly entertained the Loyal Workers class of the Methodist Sunday School on Wednesday afternoon. The ladies are studying the women of the bible. Mrs Charles High gave the life of Dorcas. Mrs. Cora Steward will have charge next month.

The Ladies Aid will meet in an all day meeting on Thursday at the home of Rev. and Mrs Roy S. Brown. The men of the church are invited at this time to come and assist in trimming up the trees which were broken during the storm. Pot luck dinner will be served.

Mr. and Mrs. Henry Berry recently were pleasantly surprised when twenty-five neighbors and relatives came at the noon hour with well-filled baskets to assist Mr. Berry in keeping his 76th birthday anniversary. It was also the wedding anniversary of their neice and nephew, Herman Sheafer and wife, who were married 3 years ago on the same date.

You can get transfer paper at News office in large or small sheets.

On account of the illness of Mrs Georgia Jenkins, the C C. club will not meet until February 6th, at the home of Mrs. Flossie Rhoads north of town.

Born to Mr. and Mrs. Gerald Fuller of Pleasant Lake, a son. Mrs. Fuller will be remembered as Miss Evangeline Fisher, formerly of this place.

Hello Folks!

We have just installed our **20th. Atwater Kent Radio Outfit** for Bert Davis at his Restaurant at Spencerville and our **38th. Service Light Plant** which we manufacture and Install complete, this plant went to Jerry Klopfenstein near Leo. We wish to Broadcast our thanks to our many friends and patrons who have made possible our success, and wish also to say that we will continue our very best service.

We have opened a **Rabio Headquarters** at the Bert Davis Restaurant, where you may see and hear the wonderful new Atwater Kent Radio Outfit, sold only through bonafide official dealers, which insures you the best of service. Drop in at Bert's where you can get a good, first class lunch and hear the finest radio on the market—then we can talk it over or you can call us by phone or write, we will be glad to come to your home and demonstrate this set to your entire satisfaction. We also carry a line of electrical supplies, A and B batteries, battery chargers, lamps, etc.

HERMAN REASONER

Not Her Station

The dear old lady in the railway train had never taken such a journey before in her life. She was very nervous lest she should pass the station for which she was bound, and accordingly she repeatedly asked her fellow travelers if they had arrived at Rockford yet.

Then suddenly there was a crash, the train gave a terrific lurch and, jumping the rails, ran down an embankment, causing a lot of the passengers, including the old lady, to be hurled into a field at the bottom.

Opening her eyes, she inquired of the man who had fallen beside her:

"Is this Rockford, please?"

"No," was the reply, "this is calamity."

"Then," wailed the unfortunate woman, "I have got out at the wrong station."

Cold Comfort

The young and fame-aspiring dramatist walked nervously into the manager's office.

"Might I ask if my three-act play has been read yet, sir?" he asked. "And if it has been read, may I inquire whether you have accepted it for production?"

"Three different people have read it," answered the manager, puffing at his cigar, "and each thinks it will do with one act cut."

"I'm glad to hear that it is no worse, sir," replied the other, breathing a sigh of relief.

"But," continued the manager, holding up his hand, "each wants to cut out a different act."

Altogether Different

In Mrs. Stirling's book of recollections, "Life's Little Day," just published across the water, is a story of a Victorian hostess who in middle age was as skittish and racy as any modern damsel. At one reception a man came up to her with the outstretched hand of greeting.

"'You don't know me from Adam,' he complained.

"'Of course I do,' came the quick rejoinder. 'You've more on.'"

MICKIE SAYS—

NEWS OF THE TOWN

Wm. Randall and wife were at Auburn, Saturday.

Mrs. Anna Dilley is home from a few days visit with her daughter near Auburn.

State senate passes mortgage exemption bill providing for $2,000 instead of $1,000 as tax exemption

Where is the fellow that has been talking of the return of the robbin, making garden and that spring is here? Only this week he had to order more coal.

J P. Buckingham and J. E. Foltz were accompanied by their wives to the Irene Byron hospital, Sunday, where they visited Al Hull. He is reported feeling better.

The garnishee bill before the state legislature is being fought by the Labor organization, thinking the bill was aimed at them. The real purpose of the bill is to take hold of any dishonest man, whether laborer or wealthy. A law of this character is needed badly.

A Good Thing - DON'T MISS IT.

Send your name and address plainly written together with 5 cents (and this slip) to Chamberlain Medicine Co, Des Moines, Iowa, and receive in return a trial package containing Chamberlain's Cough Remedy for coughs, colds, croup, bronchial, "flu" and whooping coughs and tickling throat; Chamberlain's Stomach and Liver Tablets for stomach troubles, indigestion, gassy pains that crowd the heart, biliousness and constipation; Chamberlain's Salve, needed in every family for burns, scalds, wounds, piles, and skin affections; these valued family medicines for only 5 cents. Don't miss it.

COLETOWN

Milford Funk of Napoleon spent a few days with John Varner and family.

Mrs Ada Mann is spending a few weeks with her daughter, Mrs Della Hart.

Mrs. Clede Kyle is spending a week with her parents near Antwerp.

Edwin Guthrie and wife took Sunday dinner with Mrs. Carrie Brown of Hicksville.

Clair Miller, wife and daughter, Georgia, of Auburn and Wm. Sauers and wife, were Sunday dinner guests of Mark Murphy and family.

H. G. Hursh and wife had as Sunday dinner guests Mr. and Mrs. Marsh Andress and Mr. and Mrs. F. M. Monroe.

The average DeKalb county farmer's income in 1924 was $1,599 This estimate, based on the most accurate available data, covers the yield, acreage and animal production on farms in this section of Indiana. This is the best indication yet that the state's agriculture is again headed toward prosperity. 1919, one of the two peak years in the purchasing power of the American farmer, witnessed an average income of $1,834 per farm in the state. The average income per Indiana farm for the past season's production will run up to approximately $1,450.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Peculiar Wills

One of the most puzzling of all testaments was that left behind by Miss Cora Johnson, who died in Boston in 1910. She left worldly effects worth only $100, but her will disposed of a fortune of $700,000. Relatives were perplexed, for they thought that somehow or other she might really have had that much money. After a time, however, it was found that the spinster had an obsession that she was to come into a great fortune.

In another case a man had so great a hatred of short people that he had his fortune divided among his relatives who measured 6 feet 4 inches in height or more. Since it was a family noted for its height, more people came in for some of the money than would be otherwise imagined.—Philadelphia Record.

Birds That Fell Trees

A little bird no bigger than a canary builds a nest as big as a house! This is in South Africa, where birds are very sociable. They live in large colonies, the members of which all build in the same tree.

Each couple contrives a nest of mud, joining its walls to those of its neighbor. As the colonies consist of several thousands of birds, the feathered town soon reaches very respectable proportions.

The same tree is occupied the season that follows by the same colony, and new nests are constructed on top of the old ones. Occasionally the whole mass of nests will come crashing down amid much squawking. Sometimes it is the tree that collapses through the weight of so many houses and their inmates.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)

By J. L. RIFKIN

Crystals are fast becoming unpopular as detectors and rectifiers of radio waves. Except for its use in reflex circuits, the crystal is now used only by those who cannot afford the more expensive vacuum tube.

The main reason for the neglect of the crystal is the fact that crystals have a limited receiving range, except under very favorable conditions. Another reason for the unpopularity of the crystal is that most crystal circuits do not provide sufficient selectivity and the different broadcasting stations "interfere" with each other in the set.

Were it not for these two disadvantages, crystals would be even more widely used than vacuum tubes for radio reception. In the first place, crystals are very much cheaper to buy and to replace than tubes. Secondly, the crystal does not require any batteries to run it, as tubes do, and thus has no cost of upkeep. Thirdly, it is a well-known fact that crystals give much better and clearer reproduction of broadcast speech or music than vacuum tubes do.

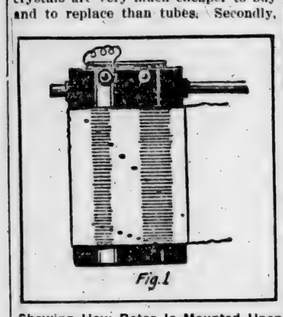

Fig. 1

Showing How Rotor Is Mounted Upon Stator Tube.

An exceptionally efficient crystal set can be built if the directions and diagrams given are carefully followed. This set will give surprisingly good results and will cover far greater distances, if properly tuned, than the ordinary crystal set.

The parts needed to build this receiver are very few, and if the variocoupler is made at home according to the directions given the cost of the set, not including aerial, ground and phones, would be small.

Parts Needed to Build Set.

The materials needed are:
One variocoupler as described.
One 23-plate (.0005 mfd.) condenser.
One crystal detector.
One .002 mfd. fixed condenser.
One panel 7 inches by 10 inches.
One baseboard, 6 by 9 inches.
Aerial, ground, phones.

The variocoupler may be any one of the standard makes now on the market, or it may be constructed in this way:

Get a cardboard or composition tube about 3½ inches in diameter and 6 inches long. An empty oatmeal or salt box will do very nicely. One inch down from the top of the box punch two small holes one-quarter of an inch apart. Procure a spool of No. 20 or 22 double cotton-covered wire and weave the end of the wire back and forth through the two holes until the wire is firmly anchored. A few inches of the end of the wire should be left free to make connections to.

Now the winding is begun. Wind ten turns of the wire as closely and tightly as possible. When the tenth turn is wound hold the turns securely with the left hand while you twist a little loop in the wire with the right hand. This forms a tap. Wind on eighty more turns, with a tap at the end of every tenth turn. Do not make the taps directly under each other, but a little staggered to one side, as shown in Fig. 1. These form the "tens" taps.

Nine more turns are then wound on, with a tap at the end of each turn. These are the "units" taps. After the ninth turn has been tapped wind another turn and fasten the wire securely by means of two small holes, as in the beginning of the winding. Leave a few inches of wire at the end to make connections to.

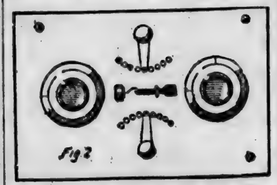

Fig 2

Diagram Showing Position of the Various Instruments.

Mounting the Rotor.

Now get a wooden rotor ball about three inches in diameter. This rotor ball, with brass fittings for mounting it upon the stator tube, can be obtained at any radio shop. Sixty turns of No. 20 wire are wound upon the rotor, about two inches of wire being left at each end of the wire for connections. The rotor is then mounted upon the stator tube, as shown in Fig. 1. Two small holes are made in the stator tube directly opposite each other and one-half inch down from the top of the tube. The mountings for the rotor ball are pushed through these holes. Stranded wire is used to connect the ends of the rotor winding to two binding posts at the top of the stator tube.

This completes the variocoupler. A thin coat of collodion or of shellac diluted with alcohol may be spread over the winding to keep the turns in place. The taps are scraped free of insulation, so that the leads from the switches may be soldered to them.

The parts are now mounted upon the panel and baseboard. The position of the various instruments is shown in Figure 2. The variocoupler is mounted on the left, the switches leading to the tens taps and the units taps respectively are in the center and the condenser is mounted on the right. This makes a very neat and simple panel layout. The crystal is mounted above the switches. If a fixed crystal detector is used it may be mounted inside the set, and will relieve the operator from the necessity of making delicate crystal adjustments.

Wiring Is Simple Matter.

The wiring diagram shown in Fig. 3 is very simple and easy to follow. The aerial (a single wire about 100 feet long) is connected to a binding post in the upper left-hand corner of the panel. The binding post is in turn connected to the stator plates of the variable condenser. The ground (a wire connected to the nearest radiator or cold water pipe) is connected to another binding post on the lower left-hand corner of the panel. The ground binding post is connected to the units switch and to one end of the rotor winding. The movable plates of the variable condenser are then connected to the "tens" switch and to the cat whisker of the crystal detector. The other end of the detector and the other end of the rotor winding go to other binding posts on the panel, to which the phones are connected. The fixed condenser is connected across the phone binding posts.

Use bus bar or No. 14 copper wire for making connections and solder all the joints well. Before soldering the leads to the rotor windings try reversing the connections. That is, try changing around the leads going to the two rotor binding posts.

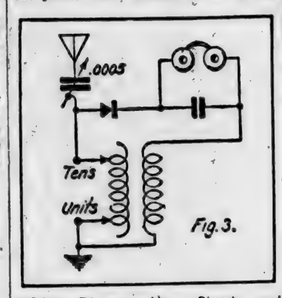

Fig. 3.

Wiring Diagram—Very Simple and Easy to Follow.

Tuning this set is very simple and does not need any description. The crystal is adjusted and the dials and switches are turned until the station is picked up, after which final adjustments are made to bring in the station as loudly as possible and to eliminate interference from other stations.

RADIO RHYMES

By ROBERT S. SUTLIFFE

THE RADIO LAY

Give your hens free concerts and increase your egg production. Charmed by the music of a picolo, 30 hens laid 5,040 eggs in seven months.—News Item.

WHEN we folks were girls and boys, if we heard a cackling noise, we wouldn't give the incident a thought; we were willing hens should sleep, eggs were then so gol darned cheap, that a dozen for a quarter could be bought. But those times have passed away, we now coax the hens to lay, we jolly them with scientific feed; no more the biddies roam, they are kept today at home, with a patent this or that for every need.

Nowadays there's little show for a hen that's getting slow, for production now the chicken's born and bred; with her fruit at 60 cents, she must show accomplishments, she must lay, or surely off will go her head. Like the calm, contented cows, chickens now are kept from rows, there's no excuse that goes for hens who shirk; she's allowed but strict propriety and freed from male society, the biddy's mind is kept upon her work.

But the best of all the tricks that are practiced on the chicks, a shell game all the country folks should know; is to keep the hens a laying by some fellow's picolo playing, broadcast to the birds by radio. If you want your hens to lay, you just get some one to play some jazzy tune you'll find the hens like best; then you make a sound like "gimme," and the hens will start to shimmy, and the fruit will soon be dropping in the nest.

Two Simple Rules to Aid in Tuning

Methods Which Will Produce Signals That Are Clear and Louder.

There are two simple rules in tuning which if observed carefully will produce surprisingly good results. Not only will you hear more stations—stations you never heard before—but those you usually hear will come in clearer and louder.

In the first place the object in tuning is to get the circuit (or circuits) of your set in resonance at some frequency (or wave length). When you have done this, a signal should be heard if a station is broadcasting on that wave length. If one is not, then you should hear faint artificial or atmospheric noises. When searching for stations, try to maintain this condition of resonance while you shift your tuning controls throughout the range of your set. This is Tuning Rule 1.

Signals from distant stations are usually so weak at first that they are difficult to distinguish from the ever-present "resonance noises." As a result a great many distant stations are passed by undetected. If you want to hear these stations, it is of paramount importance, says Tuning Rule 2, that resonance positions in tune with the wave length of a distant station be approached very slowly and carefully.

Attachments Being Discarded.

When variometers, couplers, condensers, potentiometers, or other tuning instruments are controlled merely by an ordinary knob or dial, it is practically impossible to do this. In trying to obtain proper tuning control, radio engineers first replaced the original small knob with large dials because of the greater mechanical advantage derived. To increase this advantage a small knob with a rubber disk was then placed tangent to the edge of the dial. Imperfect contact producing uncertain control is causing these attachments to be discarded.

The next step toward improved tuning control was the addition of vernier plates to condensers. The limited range of the vernier plates, however, practically forces you to tune with the coarse adjustment. With the latter it is almost impossible to fulfill the conditions of Tuning Rule 2. As a result many distant stations are missed.

Contact losses and the inconvenient two-knob arrangement have further proven vernier condensers unsatisfactory. Besides, the so-called vernier attachment is invariably controlled by a very small knob. Because of its small size such a knob almost totally counteracts the ratio intended by the vernier.

Solution Is Offered.

With these problems in mind, there has recently been designed a tuning dial which offers a practical solution. By means of a simple geared mechanism contained within the knob the conditions demanded by Tuning Rules 1 and 2 (see above) are easily satisfied. Such a dial has these additional advantages:

It may be attached readily to any tuning unit, such as variometers, condensers, etc., by simply substituting it for the ordinary dial. Its single knob gives continuous vernier or rapid control throughout the entire range of the unit and eliminates the inconvenience of the usual double arrangement. There are no contact losses through additional vernier attachments. Besides, a standard knob such as this improves the appearance of a receiving set by omitting unsightly additional knobs which are generally scattered unsymmetrically about the panel.

If you are building a set, or wish to improve your present one, you will find it both economical and highly advantageous to buy good plain instruments and equip them with a single knob vernier dial such as that described above. With such tuning controls it will be easy to keep your set in resonance and approach resonance positions in tune with certain stations slowly and carefully. Distant and local stations will then be tuned in with almost equal ease.

Extension Handle Will Aid Radio Set Builder

Occasionally it is desired to have some other form of controlling device for variable elements in a radio set or meter other than a dial. A very simple one may be made by obtaining a knob of composition that has a shaft hole to fit the instruments to be used. Then drill a one-eighth-inch hole in the knob to take an extension handle made from a six-inch length of wood dowel pin. A little shellac will hold the pin in the hole drilled. Then procure a protractor from the nearest stationery store and fasten it to the panel above the instrument shaft and knob and pointer. The pointer may be bought with the knob or made from strip brass.

A Protector for Tubes

To protect expensive vacuum tubes from burning out place a fifteen or twenty-watt electric lamp of the common 110-volt type in series with the "B" battery, so that the current must pass through the lamp before going to the set. This will protect the tubes in case of a short circuit.

Capacity of Grid Condenser

Practice has found that either .0005 or .00025 microfarad condensers are the best for radio reception. The latter is the capacity most commonly used.

Three generations of Resinol Soap users in this family

Long Beach, Cal., June 23:—"I wonder if you would care for this unsolicited testimonial. I began using Resinol Soap many years ago with my first baby. He and his wife are now using it for my two-year-old grandchild.

I have also two married daughters using it and one more daughter at home with the heaviest curly bobbed hair I ever saw. All my life people have asked what I used to make the children's hair so beautiful and to give them such clear, healthy complexions. I have had only two rules: Resinol Soap and good plain food.

You have one good booster here in the west not only for California but for the Resinol products." (Signed) Annie L. Brown, 1042 E. 16th St.

Tomatoes Ranked First in Crops

Nineteen Different Products Had $313,000,000 Gross Value in 1924.

(Prepared by the United States Department of Agriculture.)

Nineteen truck crops produced in the United States the past year for table use, canning, and manufacture had a gross value to the growers of $313,000,000, according to estimates by the United States Department of Agriculture. This is $12,000,000 less than in 1923, but $22,000,000 more than in 1922, and $78,000,000 more than in 1921.

There has been a rapid expansion in truck crop production, transportation, and marketing in recent years, as indicated in acreage figures, the department points out. The acreage devoted to the 19 crops this year was 2,302,000 acres, which is a 60 per cent increase over the acreage in 1921.

Canning Acreage Doubled.

Production of 18 crops grown wholly or partly for table use direct was on 1,300,000 acres and had a value of $262,000,000. The quantity produced wholly or partly for canning or manufacture was grown on 993,000 acres and had a value of $51,000,000. The canning acreage has been more than doubled since 1921, and the table acreage has been increased one-third.

Tomatoes were first in gross value, showing a total of $55,000,000; early Irish potatoes are valued at $44,000,000; strawberries $35,000,000, and cantaloupes $20,000,000. Green peas, onions, lettuce, celery, cabbage, and asparagus each come in the $15,000,000 to $17,000,000 range; cucumbers, snap beans and watermelons ranged from $8,500,000 to $12,000,000 each, and sweet corn for canning, spinach, peppers, cauliflower, and carrots, from $3,600,000 to $7,100,000 each. The value of eggplants was $1,030,000.

Tomatoes in the Lead.

Tomatoes had the largest acreage at 470,000 acres; early Irish potatoes, 308,000 acres; sweet corn for canning, 299,000 acres; green peas, 242,000 acres; watermelons, 168,000 acres; strawberries, 147,000 acres; cucumbers, 130,000 acres. These figures do not include market gardens. Ninety-one per cent of the acreage of green peas was for canning; canning and manufacture of cucumbers took 72 per cent of the acreage; tomatoes, 67 per cent; asparagus, 47 per cent; spinach, 29 per cent; string beans, 27 per cent, and cabbage for kraut, 14 per cent.

Truck crops are the product of intensive agriculture and require much human labor, and a highly fertile and well-tilled soil. Gross return per acre is far from being all profit, and sometimes fails to equal the cost of production, the department says.

Sources of Protein and Vitamines for Laying Hen

Skim milk and buttermilk are exceedingly valuable sources of protein and vitamines for laying hens. This has been demonstrated not only by experiment stations, but also by thousands of poultry raisers. While poultrymen generally understand the value of these products, they do not always use enough of them to get the best results obtainable. Too many think that if they feed some milk or some buttermilk in addition to the regular mash and grain ration, they are doing all that is necessary. This, of course, may not be true. Feeding "some" of these dairy products may not be enough to properly balance the ration.

It has been shown that an ordinary mash made of ground corn, ground oats, bran, and shorts, when supplemented with whole corn and oats, make a good laying ration when the hens are given all the buttermilk or skim milk they can consume. That is, when they are given no water. If they have access to water in addition to skim milk or buttermilk, they will not consume enough of the latter to balance the ration mentioned, and therein lies the mistake that so many poultrymen make. They do not feed enough of the skim milk or buttermilk to furnish the amount of protein needed for high production.

Increase of Roup

Although roup is an all-year-round disease, the worst epidemics come with the shifting weather conditions of fall and spring. The disease causes considerable loss and appears to be increasing from year to year. The true roup includes colds, bronchitis, catarrh, canker, diphtheria, roup proper, and perhaps chicken pox. It usually comes with colds which start when the birds have been exposed to dampness, drafts and chill.

The Strawberry Patch

Very few gardeners who have space to spare will do without a strawberry patch. The everbearing variety has come into favor, and in most instances is satisfactory. However, the crop, being continuous throughout most of the growing season, is seldom as large at any time as the regular kind. Better results will be had by pinching off the blossoms until June.

Rice Is Not Relished

Rice is not liked by poultry, and it ranks lower than wheat in both digestibility and palatability. It is not much used for poultry feeding, even in the South where rice is grown. Some commercial chick scratch grain mixtures contain a little rice, but it does not add to the value of the feed.

Record in Fight on Bovine Tuberculosis

More Tests in October, 1924, Than Any One Month.

(Prepared by the United States Department of Agriculture.)

More cattle were tuberculin tested during the month of October, 1924, in the nation-wide campaign to eradicate bovine tuberculosis than were ever tested in any previous month, according to a summary of the work compiled by the United States Department of Agriculture. A total of 642,602 cattle were given the tuberculin test during that month by the force of veterinarians engaged by the government and those co-operating in stamping out this costly cattle plague.

This exceeds by more than sixteen thousand the previous record number of cattle tested in one month. In May, 1924, there were tested 626,257 cattle, which was the highest number until the recent month of October. The total number of cattle now under supervision for the eradication of tuberculosis is 9,198,975. That the work of tuberculosis eradication is popularly supported is shown by the fact that there is a waiting list of more than two and one-half million cattle whose owners desire to have them tested as soon as practicable.

Of the 642,602 cattle tested in October there were 21,440 which reacted to the test, indicating that they were tuberculous. Such animals are immediately disposed of in accordance with regulations for the prevention of their acting as spreaders of the infection of tuberculosis.

Cost of Fertilizer Can Be Reduced by Legumes

"Grow more legumes and let nature take care of your fertilizer needs. Let the air help pay your fertilizer bill."

This is the suggestion soil and crop specialists of the Georgia State College of Agriculture make to help keep the cost of fertilizer down. Nitrogen is the most expensive constituent in factory mixed fertilizer, they say, and economy necessitates the using of a part of the unlimited quantities of nitrogen found in the air over Georgia farms.

The clovers and vetches have been found to make available about sixty pounds of nitrogen per acre, and when the whole crop is turned under, the fertilizing value is equivalent to the addition of five or six loads of stable manure.

A good legume hay crop turned under will lead to profitable and permanent farming. It would require four tons of ordinary mixed fertilizer per acre, containing 2 per cent ammonia, to furnish an amount of nitrogen equal to a good crop of vetch or clover. If purchased in mixed form this nitrogen would cost from $20 to $25 per ton.

Prune the Fruit Trees

Young trees, fruit or shade trees, require attention every season. The pruning knife should be used quite liberally if the best results are desired. There is no doubt that the fruit trees which are headed low prove more satisfactory. They are easier to get at when pruning, spraying and finally when picking the fruit. Grape vines require the same attention, early in the spring.

Control of Apple Scald

Oiled wrappers have proved to be the most practical preventive of scald found so far. The first consideration is prompt cooling after harvest. Then pack your apples, using oiled wrappers for each apple. Such apples should come through storage in much better condition. Write to the United States Department of Agriculture for Farmers' Bulletin No. 1380 for a more complete discussion of the problem.

Farm Hints

Cows do not enjoy moldy silage, and it makes horses sick.

* * *

Farmers of the United States planted 370,000,000 acres of crops in 1924.

* * *

Semi-solid buttermilk is a valuable poultry feed, especially when there is no home supply of sour milk or buttermilk.

* * *

Does the snow sift in on the workbench and tools in your shop or garage? Melted snow is water, and water rusts.

* * *

The horticulturist of the Dominion of Canada has kept well for 26 years by eating 8 to 16 apples a day, he told members of the state horticultural society at a recent banquet.

* * *

It is not denied that the robins and some other birds eat the cherries and berries. They also eat the cabbage and other vegetable worms. In fact, they like the worms better than they do the fruit. Even the sparrows are valuable when the cabbage worm season is at its height.

* * *

There is little danger of the small gardener overdoing the fertilizing of his soil. The richer the soil the better for the majority of vegetables and flowering plants. It is well at all times to save any kind of fertilizer or anything that can be developed into fertilizer and apply it where most needed.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1925, Western Newspaper Union.)

Michillimackinac, "Place of the Great Turtle."

Long before the French explorers pushed into the interior of North America, the island of Michillimackinac, (Mackinac) in Michigan, was a well-known landmark to the Indians. The first white man to visit this gateway between Lake Huron and Lake Michigan was Jean Nicolet who paddled past the island in 1634. In 1671 Father Marquette established the mission of St. Ignace near by and in 1673 the French built the first Fort Mackinac near the mission and from that time until Cadillac established Detroit in 1701 it was the principal outpost of the French in the West. Mackinac was virtually deserted after the founding of Detroit, but in 1712 it was regarrisoned and held by the French until the English took possession of the country in 1760.

The British built a second Fort Mackinac on the south shore of the straits, a palisaded structure enclosing about two acres. Here occurred one of the dramatic incidents of the Pontiac war when on June 4, 1763, the hostile Indians used a ball game as a stratagem for gaining entrance to the fort. They killed 20 of the garrison and took the remainder prisoners, among them Captain Etherington, the commander, who failed to heed advance warnings of the conspiracy.

After Pontiac's war was over the British again occupied Fort Mackinac and it again became the center of the fur trade of the Northwest. It was an important British post during the Revolution and in 1780 the garrison was transferred to Mackinac island where it began building the third Fort Mackinac, a strong fortress of stone. Although Great Britain agreed to give up all of her western posts at the close of the Revolution, it was not until 1796 that the young republic finally gained control of this post.

The next few years saw Mackinac growing in importance as one of the principal posts of John Jacob Astor's American Fur company. Early in 1812 the British swooped down upon the place and because of their overwhelming numbers easily captured the fort. In 1814 a force of 500 United States regulars and 400 militia attempted to recapture Fort Mackinac, but their attack was beaten off and the British remained in control until the close of the war. Mackinac island is now a state park and every year hundreds of tourists visit the historic buildings of the fort, which are still in an excellent state of preservation.

Where the Social Whirl Held Sway.

At the close of the second war with England the federal government, which had so nearly lost the old Northwest to the British, resolved to build a chain of forts through this inland empire to guard against future dangers and also to protect the frontier settlements which were constantly pushing westward. One of the sites selected was in Wisconsin where the Fox river empties into Green bay, a place made famous by the early French explorers, a noted fur-trading center and a hotbed of Toryism during the War of 1812.

Congress appropriated $21,000 for this fort (a generous sum in those days) and in 1816 Col. John Miller of the Third infantry left Fort Mackinac, Mich., with two rifle companies to establish the post at Green Bay. The work was directed by Capt. Lewis Morgan and the post was named Fort Howard in honor of Gen. Benjamin Howard, commander of the military district in which it was located.

Although Fort Howard was a frontier post it soon assumed all the refinements of an Eastern community and it became known as a center of social activity whose prestige in army circles made assignment to it much desired by officers and their wives. In 1819 Maj. Zachary Taylor (later President Taylor) took command at Fort Howard and under the regime of this courtly Southerner and his wife, life there became a continual round of social pleasure—dinner parties, cotillions, boating, sleighing and skating.

To Green Bay also came many distinguished travelers to enjoy the hospitality of Fort Howard, among them Captain Marryat, the famous "Midshipman Easy" who was entertained at the fort in 1832, and the Prince de Joinville, youngest son of King Louis Philippe of France, who visited Green Bay in 1841. It was upon this occasion, according to Eleazer Williams, the half-breed Indian, who claimed to be the Lost Dauphin of France, that the prince sought him out and tried to persuade him to abdicate his claim to the throne in favor of Louis Philippe. History has shown that Williams was a colossal fraud, but his presence at Green Bay, whither he had led a large number of New York Indians to establish an Indian empire in the West, adds another touch of romantic interest to old Fort Howard.

Fort Howard was prominent during the Black Hawk war, but after the Indian question east of the Mississippi was finally settled and the fur trade was no more, it, like many other posts in the old Northwest, soon became only a shadow of its former greatness.

Daddy's Evening Fairy Tale

By MARY GRAHAM BONNER

COPYRIGHT BY WESTERN NEWSPAPER UNION

COWS' CHATTER

"Moo, moo," said Mrs. Cow, "the way some talk about us!"

"Moo, moo," said Mrs. Brown-and-White Cow, "what do you mean by that?"

"I was thinking," began Mrs. Cow.

"I do hope it didn't tire you," said Mrs. Brown-and-White Cow.

"No," said Mrs. Cow, "it didn't tire me at all. If it had tired me I would have stopped thinking."

"Sensible," said Mrs. Brown-and-White Cow. "But pray continue."

"I was thinking," continued Mrs. Cow, "of the time last spring when some children passed us one morning.

"They were evidently having a holiday, but they said:

"'Just think, it is only 10 o'clock in the morning and those cows are lying down or sitting down and haven't a thing to do.

"'They haven't any lessons to study and they haven't any examinations coming.

"'They haven't any chores to do. They can enjoy scratching their chins under the fence or resting by the brook or choosing some lovely shade tree under which to lie. And all at 10 o'clock in the morning.'

"'Still,' said another child, 'I'm glad I'm not a cow. They don't have such bounding joy as we do and they don't feel all excited and happy over their birthdays or over their school games.'

"Yes," continued Mrs. Cow, "that was the way they were talking. First they envied us because they couldn't take off all the time we could in which to do nothing.

"Then they were glad they weren't cows, as they liked to have excitements which we miss, such as birthdays and so forth.

"But I thought to myself that they shouldn't talk about us and about our laziness.

"Maybe we are lazy. But we give milk twice a day and we make them

"They Haven't Any Lessons to Study."

feel strong and well so they can enjoy their parties and their birthdays and their games.

"Besides, if we had birthdays they wouldn't be able to have so many presents or such a fine cake, as some of the family money would have to be used for our birthday cakes.

"What if every cow had a birthday cake with candles! What an absurd thing that would be.

"And just suppose we all sat around and wished each other a moo-moo happy birthday!

"What good would we do if we tried to do chores?

"Suppose I should run up the street and do an errand in place of Lillian when she wanted to play, would it be of any use?

"Not a bit of it. If I hurried up the street people would start after me.

"And if I did get as far as the store and then get inside they wouldn't wait on me or know what I wanted.

"So why shouldn't we sit still when we can't be of any use, doing the things others can do?

"We can't study for examinations as we don't go to school, and if we did go to school the teacher would have a dreadful time.

"I looked in the schoolhouse windows down the road once and I knew I could never sit in one of those silly little desks.

"I couldn't put up one leg (I haven't any arms) and say:

"'Please, teacher, I know the answer to that question!'

"So I sit here as do all of us and we rest and we eat and we give people milk.

"We do our work well.

"But when we're not working or when we haven't anything to do we don't pretend to be busy when we know we're not!"

"Fine sentiments," said Mrs. Brown-and-White Cow.

"Well," said Mrs. Cow, "spring will soon be here again and people will see us lying down in the morning and will probably say how lazy we are.

"But let it not upset us."

"Oh no, moo moo," said the other cows, "we won't let it upset us."

"We will continue to do our own cow way," said Mrs. Cow.

"Our own cow way," repeated Mrs. Brown-and-White Cow.

"Our own cow way," said the other cows.

His Face Slipped

Teacher (to little boy)—Freddie Brooks, are you making faces at Nellie Lyon?

Freddie Brooks—Please, teacher, no, I was trying to smile, and my face slipped.

Scraps of Humor

SHE HATED TO LOSE

"How long do you want to rent one of my electric vacuum cleaners?" asked Mr. Hammerstein, the hardware dealer.

"Oh, not for more than five minutes," replied the economical Mrs. Savorley. "I spilled a pound of powdered sugar on my kitchen floor and I can't recover all of it with just a broom and a dustpan."—Good Hardware.

Indoor Holdup

"I've got you at last," he cried; "move, if you dare, move! It's taken me many years, but at last I've got you where I want you! Now I dare you to move!"

"Yep, you're right," replied his friend, "it's the first game of checkers you ever did win from me."—Treat 'Em Square.

THE NEXT GENERATION

Bobbie (motoring)—Oh, daddy, what's that queer animal? It looks like something I've seen in my natural history book.

Dad—Why bless me, Bobbie, if it isn't a horse! I'll slow down a bit so you can get a good look as we pass.

Confession of Constant Reader

Diplomacy chat leaves me blue
And science embitters my life.
But I'll read for a column or two
When somebody poisons his wife.

Trying to Console Him

Mrs. R. M. writes. "Not long ago I remonstrated with my negro maid for openly encouraging the attentions of the janitor next door. 'Mary,' I said, 'don't you know that he is a married man?'

"'Yes'm,' she replied, 'I knows it. But'm hes dissatisfied.'"

Hard to Break Away

"I hear Scroogs has quit the sausage business."

"Yes, he's retired. He plays golf now."

"What made him take up golf?"

"Says he just can't keep away from the 'links!'"—Progressive Grocer.

JUDGING FROM FULL JAILS

"Don't you think society is freer from criminals than it has ever been?"

"Judging from the packed condition of the jails, perhaps it is."

They All Do

At fifty miles
Drove Ollie Pidd.
He thought he wouldn't
Skid, but did.

Turn About

City Cousin—Oh, Uncle Hank, it isn't polite to eat with your knife.

Uncle Hank—Oh, rats. Didn't I let you eat with your fork when you come to visit us last summer without our ever letting on how funny it looked to us?

A Catastrophe

"Good heavens, man, what is the matter with your face? Were you in an automobile accident?"

"No, I was being shaved by a lady barber when a mouse ran across the floor."

A Slip of Memory

"Do you love me, darling?"

"Of course I do, Harry."

"Harry? My name's Sam!"

"Why, so it is! I keep thinking today is Monday."—London Tit-Bits.

The Bare Truth

"You will ruin me with your extravagance!"

"My dear man, no one wears fewer clothes than I do!!"

Seeing the Bright Side

She—Oh, Richard, I'm so afraid some other girl will lure you away from me.

He—Well, darling, you'd have one consolation—if she did I wouldn't be worth bothering about.

No Bad Eggs

The Vicar—So you like the country? Are your hens good layers?

Mabel (fresh from town)—Topping! They haven't laid a bad egg yet!—London Passing Show.

Boschee's Syrup

Allays irritation, soothes and heals throat and lung inflammation. The constant irritation of a cough keeps the delicate mucus membrane of the throat and lungs in a congested condition, which BOSCHEE'S SYRUP gently and quickly heals. For this reason it has been a favorite household remedy for colds, coughs, bronchitis and especially for lung troubles in millions of homes all over the world for the last fifty-eight years, enabling the patient to obtain a good night's rest, free from coughing with easy expectoration in the morning. You can buy BOSCHEE'S SYRUP wherever medicines are sold.—Adv.

Stop Night Coughing This Simple Way

People who have persistent, annoying coughing spells at night, and who through loss of valuable sleep are weakening their systems and laying themselves open to dangerous infections, can stop their distressing trouble promptly by a very simple treatment. Hundreds who have hardly been able to rest at all for coughing, have gotten their full night's sleep the very first time they tried it.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. The result is that you usually sleep as soundly as a babe the very first night, and the entire cough condition goes in a very short time.

The prescription is highly recommended for coughs, chest colds, hoarseness and bronchitis, and is wonderful for children's coughs and spasmodic croup—no harmful drugs. Economical, too, as the dose is only one teaspoonful. It is on sale at all good druggists. Ask for

Notice of Executors Sale of Real Estate

State of Indiana
County of DeKalb
In the DeKalb Circuit Court
Decembe Term 1924
In the Matter of the Estate of Emillus Case, deceased.
Proceedings to Sell Real Estate

The undersigned, Executor of the Last Will and Testament of Emillus Case, deceased, hereby gives notice that pursuant to the terms and conditions of the Last Will and Testament of the decedent and to an order of the DeKalb Circuit Court of Indiana, he will on Saturday the 28th day of February, 1925 at the office of Henry C Springer at Butler, DeKalb County, Indiana, at the hour of 2 o'clock P. M. on said date, and from day to day thereafter at the same hour and place until sold, offer for sale at private sale, at not less than the full appraised value thereof, the following described real estate owned by the said Emillus Case at the time of his death, and located and situated in DeKalb County and State of Indiana and described as follows, to-wit:

The west half (½) of the north-east quarter (¼) of Section Twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east

Also the east half (½) of the northwest quarter (¼) of section twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east.

Also that part of the northwest quarter (¼) of the southeast quarter (¼) of section twenty-eight (28) in township thirty-three (33) north range fourteen (14) east that lies west of the St. Joe-Spencerville road and containing seven (7) acres more or less

Said real estate will be sold in one tract or in seperate tracts as the best interests of the estate may determine, for not less than the full appraised value thereof and upon the following terms and conditions, to-wit:

At least one third of the purchase price, cash in hand; one third in six months and one third in twelve months from date of sale, deferred payments to be evidenced by the promisory notes of purchaser waiving relief from valuation and appraisement laws, with attorney fees and in all respects fully negotiable and bearing interest at six per cent per annum from date and secured by a first mortgage upon the said real estate, to be executed by the said purchaser, his or her spouse if any joining therein; purchaser to have the right to pay the entire purchase price in cash.

Said sale will be made subject to the approval thereof by the DeKalb Circuit Court of Indiana and the right to reject any and all offers is reserved by the undersigned Executor.

Sale will be made subject to the rights of any tenant upon the said real estate and further subject to the taxes for 1925 due and payable in 1926.

EDWARD PFLAUMER,
Executor of the Last Will and Testament of Emillus Case, deceased.
Henry C. Springer,
Attorney for the Estate.

Official Frown Turned on Pajamas in Belgrade

They have been introducing pajamas in Belgrade and the puzzled Jugo-Slavs have not taken kindly to them, according to the London Observer. This is partly because the lunatic asylum at the Jugo-Slav capital long ago adopted pajamas as the normal attire of its inmates, so that the ordinary citizen's reluctance to don "modern nightdress" was at least comprehensible, writes the Living Age.

One hot night last summer, however, one greatly daring youth ventured out of his garden and a little way down the street clad in the novel night attire. A passing policeman instantly arrested him as an escaped lunatic, his suspicions being confirmed by the fact that the unfortunate prisoner—this also is comprehensible—had no identification papers in his pajama pocket.

The young man spent the night in the cells, and when he was taken to police court the next morning, wishing to avoid recognition, he begged that a waste basket be placed over his head.

The spectacle of the alleged lunatic, clad in pajamas and helmeted with a waste basket, solemnly marched to court between gendarmes armed with long and fierce looking bayonets, greatly edified the less serious minded of Belgrade's citizens.

FULL MEASURE

He—Why do you prefer Jack to me?

She—Well, he always sends me a bushel of kisses when he writes, and you only give me a little peck.

High Degree of Praise

Laurette Taylor, the well-known actress, considers that the most complimentary thing ever said to her came from a relative of hers, a nonogenarian. She had lived practically all her life in Ireland, says Miss Taylor, of a very religious turn of mind, and had never been inside a theater till she was persuaded to come and see me play in "Peg o' My Heart."

"At the end of the play I asked her what she thought of my acting.

"'Is that all you get your money for?' she exclaimed. 'Sure, and I wouldn't call that acting at all, at all. Why, I've seen hundreds of young colleens behave just like that over in Ireland.'"—San Francisco Argonaut.

Peat as a Fertilizer

Every now and then some one puts forth the claim that the nitrogen in peat is comparable with that in commercial fertilizers, but experiments in New Jersey, Indiana and elsewhere have shown the nitrogen in peat to have a very low availability. The value of peat lands lies more in their crop-producing power than from a fertilizer standpoint. Their agricultural development has made great progress in the last decade. By drainage and proper fertilization, immense yields of crops are obtained, and they are now being developed for general crops and pasture, as well as for intensive crops. Peat is far more valuable as a place for crops to grow than as a fertilizer for upland soils.

Didn't Worry

In one of the government buildings at Washington is an old negro who has been running the same elevator ever since anybody can remember. Yet he seems hale and hearty and doesn't look nearly as old as he must be.

Asked one day how he accounted for his remarkable vigor, he replied: "I think it's because I don't let my work worry me. I never take it to bed with me. When I go home at night I don't think any more about my work until the next day."—Collier's.

Calls a Long Way

By MARTIN M. CHESTER

(©, 1925, Western Newspaper Union.)

"YOU mulish little tike! Thought you were smart, didn't you Dad told you to come when I called. Take that and that and that. Next time I call, you come. Understand? Promise?"

Jim Carter stopped pommelling, but still held his younger brother John to the ground by a knee and one strong hand. John glared up furiously as he struggled for freedom, but without words.

"Look here," Jim continued, "Dad told you to mind me while he was gone. And he told me to look out you didn't do some fool trick and get hurt or killed. So if I call you, you drop what you're doing and come. Get that? Promise?"

This was after supper and the boys did not meet again that night. Next morning John did not answer the breakfast bell. His father was summoned, and the police set to work—all to no end. The only word or trace of John was the scrawl he had left in his room: "I told Jim he'd have to call a long way if he wanted me to come, and I don't know as I'll come then."

And even when Judge James Carter, Jim had become famous as the "children's judge," he was still searching for John.

Then one day a friend in New York telegraphed that a man about John's age had been picked up unconscious after a street accident—too injured about the face for recognition, but bearing papers that seemed to identify him was John H. Carter.

Jim was immensely stirred. Again and again clues had led him to some John Carter—always to the wrong one. But "H," he said to himself, "John H. Carter!" And he swiftly put his desk in order that he might start at once for New York.

"A woman to see you, judge," said his confidential clerk. "It's about that boy, Pete Blainey."

Jim looked at his watch. "I have ten minutes—no more."

The woman's story was a familiar one, but heard for Jim [illegible] at that moment. Her boy Pete and his older brother Jerry couldn't get along. Jerry meant well, but was rough and bossy—thought he had to take his father's place. And Pete had grown impudent—even at the office where he worked—and yesterday the boss had given him the sack. Now things at home were worse than ever. Wouldn't the judge help?

Jim explained that he was just starting for New York but would take the matter up at once on his return.

The woman burst into tears. "You'll be too late! Pete's fixin' to run off. I come on a bunch of his clothes tied up. It'll be tonight, and I'm afraid he'll steal money to go with."

"But—" Jim began, "but I told you—"

Jim's head bent to his hands upon the desk. "I'm calling from far, John," he cried in his mind. "Come back—don't go off again, John. I want another chance." His head lifted and he smiled at the woman: "I'll do what I can," he said aloud.

Twenty minutes later he sat in the office of the mining expert who had discharged Pete Blainey. The desk telephone rang sharply, interrupting his plea for Pete's reinstatement.

"That," said the expert, excusing himself, "is long distance from Tucson, Ariz. By the way, it's from a man of your name."

The habit of following up every clue had become second nature to Jim. Of course John was lying in New York—perhaps at the point of death—and yet—"What's this particular Carter's given name?" he asked rather wearily.

But the mining expert was already talking: "Hello?" he asked. "John H. Carter."

"What!" exclaimed Jim. "Who? Let me—Give me that—" He rushed toward the desk.

"Judge Carter speaking, long distance," introduced the expert as he gave up the telephone.

"Hello! John H. Carter?" Jim was asking in his turn.

"Yes," came long distance in a man's weather-roughened tones.

"John H. Carter, born in Illinois?"

"Yes," came the answer.

"Did you have a domineering, overbearing, self-righteous fool of an older brother?" Jim's voice was growing unsteady.

"You bet I did!" Long distance spoke rapidly. "Are you Jim?"

"Yes, John, this is Jim."

"Gee—caught me at last!" "Say, you aren't Judge James Carter, are you! The judge that gets next to the kids?"

"If I'm worthy to be called 'the children's judge'—if I do anything for them—it's because I've been thinking of you, John, ever since you left."

For an instant long distance kept silence. Then—"Say, Jim, you're a long way off now—You know what I said?"

"What you said?" repeated Jim, puzzled. Then he gave a great shout over long distance: "John Carter, you come here!"

The Worst to Come

Candidate—The newspapers are publishing scandalous lies about me.

Committeeman—Don't worry. They might do worse. They might publish the truth.

Misjudged

Robbins—I didn't think you had any idea of marrying the widow.

Newlywed—I hadn't; it was an idea of hers.

Man Walks Right Into Trouble With His Eyes Wide Open

This bit of philosophy is true of all of us. Too many men and women go through youth heedless of their eyesight and walk right into eye trouble in their years of maturity. Be eye-wise in time. Medical authorities advise yearly examinations Our examination is acientifically exact. If you need "Rest" or "Constant" glasses, you will find the cost most moderate, and your satisfaction is guaranteed.

The Coming Musical Event

On Thursday evening, February nineteenth, the Band and Choral Society will offer a musical program that will be of great interest to the people of this community.

The Choral Society has kindly donated their part of the entertainment and the net receipts will go to the Band.

An "out of the ordinary" program will be presented—full of merit and well worth your consideration.

Both organizations have been working all winter to make the event a success—and we assure you that it will be well worth your time and the admission fee.

The program will consist of choral numbers, band selections, solos and readings. We have engaged a reader of exceptional ability and her numbers alone will be worth the price of admission.

Complete program next week.

Lutheran Notes

The regular services will be held next Sunday.

Sunday School 9:30.

Afternoon and evening services will be the Township Convention Program elsewhere. Come.

Prayer meeting Thursday eve at 7:00 o'clock.

S. D. Steffey, Pastor.

Court Friday Evening At School House

The public is invited to attend the mock trial staged by the Hunting & Fishing Club, at the school house on Friday evening of this week. This will be a real treat to the audience. There will be no charges made. Preparations have been made to carry this particular case to the limit and only the very best attorneys have been secured by the state and the defense. The name of the offender is not generally known in this case. The state is busy looking up evidence against this man and they are expecting to use every piece of evidence available. You better tell your friends and go. It will be a real time.

Pest Hunt Contest Is Now On

Sparrows, mice, rats and weasles are sure being run down by the school children. The Freshmen are against the Senior high school, including the Sophomores, Juniors and Seniors, in a pest hunt which will terminate February 14, at the school house in a banquet given by the loosers. It is almost unbelievable the amount of scalps that are being turned in. Even the girls are active and the results will be surprising. This is a good move on the part of Mr. Renner, who superintends the contest.

NEWS OF THE TOWN

Paul Carpenter is now driving the Telchow bread wagon out of Butler.

Charley Miller spent Monday at Coldwater, Michigan, a guest of Mr. and Mrs. H. F. Garton.

For Sale: A seven room house some fruit and 12 lots all fenced. D. C. McCann, Box 214. 5t2.

Mrs. Helen Randall was called to Lima, Ohio, recently by the illness of her sister, Mrs. Herb Cook.

Frank Rhoads, wife and daughter, Miss Doris, were Sunday guests of Mr. and Mrs. F. Buchanan.

Wm. Randall and wife, Harry Randall and son and Miss Muriel Beard of Waterloo visited relatives at Goshen and Ligonier, Sunday.

Mr. Wm. Oberholtzer, wife and daughter of Butler, were Sunday dinner guests of the former's parents, Mr. and Mrs. Daniel Oberholtzer.

The Farmers Mutual Insurance Co., of DeKalb county re elected officers Saturday as follows: Noah Lung of Auburn, president; Henry St. Clair of Auburn, vice president; Phillip Carper of Jackson township, secretary; Perry A. Foote of Richland township, treasurer and C. H. Bangs of Richland township, actuary.

Items of Interest From Court House

Among the inheritance tax reports made in December term of court, are two well known to our readers: Joseph C. Prosser estate: Net value, $621.46. Sister-in-law, Matilda C. Culbertson, sole heir, tax, $26 07. Henry W. Beams estate: Net value, $13,519 74. Widow, Rebecca Beams, $5,016.58, no tax. Children, Frank L. and Geo. Beams, and granddaughter, Helen V. Lake, $2,834 39, tax, $8 34 each.

Judge Eudicott in the DeKalb circuit court has approved the report of Edgar W. Atkinson and Capt. H. C. Springer, commissioners to sell real estate in the partition suit of Emma Hull, Fred Kaellner and Anna K. Briggs against Herman and Margaret Kaellner. The receipts from the sale were $10,000, plus $153.11 for interest. Court costs, abstract and attorneys' fees amounted to $777 28. Of the balance, Anna K. Briggs, Emma Hull, Fred C. and Herman C. Kaellner received $1,562 64 each and Margaret Kaellner $3,125 28.

Legal notice is being given of the letting of the contract for the construction of the Shird-H. Platner gravel road in Wilmington township, which will take place March 3 at 10 a. m. in the county commissioners' court. The road will be 106,48 feet in length and the estimated cost is $7,919 68. The highway runs from the Mullet road south to the Concord township line.

Nine divorce decrees—six to wives and three to husbands—were entered on the records of the DeKalb circuit court during the December term, which ended Saturday. This is exactly the same number granted during the corresponding period a year ago. At that time there were nineteen divorce complaints pending at the end of the term. Now the number is only nine.

What is Your Opinion

To create an interest in St Joe and her newspaper, The News solicits articles from anyone upon subjects suggested or otherwise:—

What ought St. Joe do with her streets?

Is St. Joe entitled to free telephone service to Auburn?

What does St. Joe need most?

Should church people engage in same things as those who make no profession?

Write your views and send to News. Sign name for reference only.

W. C. T. U. NEWS

Mrs Herma Havens entertained the W. C. T. U. Friday afternoon After some special music on the graphaphone Mrs. Delora Curie read the fifteenth chapter of John and offered prayer in the devotional. After another musical number Mrs. Ada Lane of Auburn, county president, gave her splendid report of the National W. C. T. U. convention held at Chicago. After which the Misses Havens sang two duets and Mrs. Lane dismissed the meeting with prayer. The hostess served cookies and apples.

Saturday Fire Call

The Frank Meese residence caught on fire Saturday afternoon, response to the alarm was made and the fire was soon put out. The damage was small only a small portion of the roof being burned.

A baby daughter was born Sunday to Victor Brown and wife.

Mrs. Delia Wade, of Petoskey, Michigan, is here a guest of her sister, Mrs. Wm. Brown, and other relatives.

Chas. Reasoner has been in bed for seven weeks with rheumatism and is still unable to use his legs, while Mrs Reasoner has been in bed for four weeks and still remains very poorly. Chas. Collins and wife are staying there

We Appreciate Your Kind Words

St Joe Ind., Jan 28, 1925
Editor St. Joe News,
St. Joe, Ind.
Dear Mr. Leighty:—

Your method of presenting to your readers the Cross-word puzzle feature of the "News" was tactful to say the least. So just to be "friendly" I responded

I thank you for extending our subscription six months. We enjoy the "News" and St. Joe should be proud to loyally support the home town paper.

Gratefully yours,
Mabelle Thornton.

Several Real Estate Deals

The past week in St Joe, saw a number of real estate transactions. The Leighty residence on Fourth street was contracted by Floyd Ridgway and the George Hamm farm was bought by Wm. Staman, Jr., at $4,500 cash.

Arthur Woodcox and family were Sunday dinner guests of Mr. and Mrs Frank Scholes.

Gall Stones

Before risking operations send for my free booklet explaining simple home treatment for irritations of Liver, Gall Bladder and Gall Ducts as associated with Gall Stones.

Dr. E. E. Paddock, Desk AP, Kansas City, Mo.

Tankage Below Cost

We bought early when the price was down. We are selling Tankage to you by the hundred cheaper than you can buy it in carload lots f. o. b. shipping points. As long as our Tankage lasts, we will sell it for **$3.15 per hundred.**

Have a full line of other feeds.

Attention Coal Buyers

Keep on buying our high grade quality coals which give you the best heat and keep you warm in the coldest weather. **Buy** our coals and know you are getting the best.

The St. JOE ELEVATOR

Samuel Keesler, Mgr. Grain Dept. **Bert Jackson,** Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

Making It Easy To Save

One of farmer friends tells us that he likes to divide his plowing into small lands, and finish them one at a time. It seems to make the job easier when he can see each land finish up, and take a deep breath before starting the next.

It works the same way when you start saving money. If you try to put away a thousand dollars all at once, it looks like a very large undertaking, but if you divide it up into small parts and make a new start every time you have cleaned up a hundred dollars, your thousand dollars will be saved before you realize it.

A big yield of corn does not depend on a few extra big ears, but rather on having a good average ear on every stalk. Don't think you have to have a large amount of money in order to start a savings account. Put away a small amount, and keep putting away regularly and persistently, and it will bring you a substantial result.

European Fowl Pest Found Here

Disease Is Characterized by Its Extremely Infectious Nature.

(Prepared by the United States Department of Agriculture.)

Several weeks ago Dr. Veranus A. Moore, of Cornell university, brought to the attention of the United States bureau of animal industry the existence among poultry of a disease which he diagnosed as the European fowl pest, hitherto unknown in the United States. Investigations made in New York city, and Philadelphia, by representatives of the bureau confirmed this diagnosis.

The disease is characterized by its extremely infectious nature, rapidly progressing course, and high mortality. Conspicuous symptoms are depression and loss of appetite followed by prostration. The comb and wattles usually become purple, and sometimes swollen. Sticky exudate may paste the eyelids together, clog the nasal passages and even obstruct the windpipe, causing labored breathing. A greenish yellow diarrhea may be present.

Autopsy Findings.

The nasal passage, larynx and windpipe contain some mucous exudate. Blood-stained patches and sometimes blood clots are found in the windpipe. The lungs are usually more or less pneumonic. A hemorrhagic or "bloodshot" condition is found on the crop and under the skin in various other parts, sometimes accompanied by a gelatinous exudate. Hemorrhagic spots on the muscle or fat of the heart, on the gizzard fat, on the outer surface of the small intestines, and especially on the inner lining of the glandular part of the stomach and gizzard are considered as diagnostic evidence of European fowl pest. Serous fluid is sometimes within the heart sac, or in other cases in the body cavity.

Since treatment of affected birds is futile, the aim should be to prevent so far as possible the spread of infection. The first fowls showing symptoms should be destroyed by a method which would guard against the contamination of the premises. The carcasses should be burned or buried deep. The healthy fowls should be moved to new quarters if possible and carefully watched for signs of disease. Houses and runs should be thoroughly cleaned at frequent intervals and disinfected with carbolic acid in 5 per cent solution. The drinking water may be made antiseptic by adding one-third teaspoonful of permanganate of potash to each gallon, a procedure which serves to prevent the spread of disease through the water, and also is a convenient means of administering an internal antiseptic.

Control Measures.

It should be remembered, said Dr. John R. Mohler, chief of the bureau of animal industry, that there are other poultry diseases prevailing that may be mistaken for fowl pest. Diseased chickens have been received for study from several points in the central West within the last few weeks, but fowl pest was not encountered in any of these shipments. Congress, appreciating the importance of prompt action in eradicating this European infection, passed a joint resolution making $100,000 immediately available for the control and eradication of this pest. Regulation and other suppressive measures are being formulated by the bureau of animal industry to become effective as soon as the work can be organized to meet the emergency.

Embargoes were declared recently against a number of poultry producing states of the Middle West by New York city, and the states of New York, New Jersey, Maryland, Pennsylvania, Connecticut and California.

Keep Seed Corn Dry

There is no danger in corn getting too dry to grow. Moisture is the great enemy of seed corn and when it is not possible to dry it out thoroughly in the barn or crib before freezing weather, artificial heat should be used. After it is thoroughly dried there is no danger of low temperature injuring it but care should be taken not to allow it to absorb moisture again before it is used. The presence of moisture in the kernel allows the freezing and expansion which injures the seed qualities.

Feed Molasses to Hogs

It seldom pays to feed molasses to hogs when it costs more per pound than corn. In fact some experiments at the Mississippi experiment station show that it requires from 1.8 to 1.9 pounds of molasses to equal 1 pound of corn when fed to pigs. Other experiments have shown a higher value but it is certain that molasses will not equal corn pound for pound. Therefore, with corn at its present price, it would not pay to substitute molasses at 25 cents per gallon.

Farmer Who Hatches Early

The farmer who hatches eggs early does these things:

Gets more chickens, because a larger proportion of the total hatch will live.

Gets more actual meat, because more chickens will live, and because they will weigh more at maturity than late-hatched birds will weigh.

Gets more eggs, because the early-hatched pullets will lay eggs during the winter and the late-hatched ones will not.

Cabbage and Tubers Affect Milk Flavor

Fed Immediately After the Milking Not Harmful.

(Prepared by the United States Department of Agriculture.)

Cabbage and potatoes, though not grown generally for dairy feeds, are often fed to dairy cows to supply succulence in the ration and to dispose more economically of these products during periods of low prices. Like other succulent feeds they tend to affect the milk with undesirable flavors and odors when fed under certain conditions of quantity and time.

In order to determine the amounts of these feeds that may be fed, as well as the time of feeding, without affecting the flavor of the milk, the United States Department of Agriculture conducted a number of tests, the results of which have just been published in Department Bulletin 1297.

From these tests it is concluded that dairy cows may be fed as much as 24 pounds of cabbage immediately after milking without imparting any objectionable flavors or odors to the milk. On the average, however, the feeding of 14.3 pounds of cabbage within one hour before milking will cause objectionable flavors in the milk, and an increase in the amount of cabbage fed will intensify the flavors produced. Proper aeration, however, will reduce strong abnormal flavors to some extent, and some of the slightly abnormal flavors may be eliminated.

When dairy cows consume an average of 14.8 pounds of potatoes one hour before milking, slightly abnormal flavors and odors may be produced in the milk. They are slight, however and would seldom be perceived by the average consumer. Increasing this amount to as high as 28.7 pounds does not increase the abnormal flavors. That amount may be fed immediately after milking with no effect whatever on the flavor of the milk.

A copy of this bulletin may be secured free of charge, while the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Thorough Study of Oil Emulsion as Insecticide

A thorough study of oil emulsions for use as insecticides has been begun by the bureau of entomology of the United States Department of Agriculture during the past year, and important progress has been made, especially toward increasing the stability of emulsions in hard water and lime-sulphur solutions. The investigation of miscellaneous insecticides has been continued at the laboratories in Washington and at the nearby field station at Silver Spring, Md., and cooperative tests on a commercial scale are made by the Washington laboratories and various field stations on new or improved preparations. What appears to be a new contact insecticide which will in many instances be a suitable substitute for nicotine at a lower cost has been developed by two offices of the bureau co-operatively. This insecticide mixes well with oil emulsions and, it is believed, will make an excellent spray for the delayed dormant treatment for the simultaneous control of the San Jose scale and apple aphids.

Inoculate Alfalfa Seed

Be sure to inoculate your alfalfa seed. Alfalfa culture for inoculation can be procured from most of the agricultural colleges at a very small cost and is absolutely necessary for a good stand. Do not attempt to grow alfalfa either on slough or land where water frequently lies for considerable time as it will partially, if not wholly, be killed out after the water disappears.

It is more a question of cultivation than soil, as the land must be thoroughly worked up, giving it a final weed-killing harrowing right before seeding.

Generally wheat land will make excellent alfalfa soil, unless it happens to be underlaid with hardpan.

Farm Hints

Legumes swell profits.

• • •

Don't overwork the hens with too much light.

• • •

Greens fed to the hens help put green-backs into the pocket.

• • •

Be sure to plant "certified" Irish potatoes next season, for safety and profit.

• • •

Denmark, one-third the size of New York, had 5,000 co-operative associations in 1920.

• • •

Weeds transpire moisture from the soil. Remove the weeds and so conserve moisture.

• • •

Jack Frost will provide much comfort next summer if you will provide a storage for his products now.

• • •

If we may judge from the trend of public sentiment, the time may not be far distant when those who will not grade their products will not sell them.

• • •

A large number of cattle die every year from cornstalk disease. Veterinarians say there is no treatment for the disease. They suggest that overly hungry cattle should not be turned into cornstalks because they are affected quicker. Feed the animals some hay every morning before they are turned out.

Daddy's Evening Fairy Tale

By Mary Graham Bonner

COPYRIGHT BY WESTERN NEWSPAPER UNION

THE GERANIUM'S PLACE

"We are far more useful than you are," said the seeds of the lettuce which were just peeping above the ground in a box, showing their little green heads. They were in a schoolroom.

"I can't help that," said the geranium plant. "I was never meant to be useful. I try to be bright and cheerful. I wish I could be useful, but everyone can't be just the same as everyone else. Neither can plants all be the same. Vegetables can't be plants and plants can't be vegetables. But we all have our own reasons for being here."

"Sometimes I get so discouraged," said one of the onions in another box. "For you it is different, little lettuce leaves. You are a salad when you grow up. You are considered a luxury and a treat."

"Don't people enjoy eating you?" asked the lettuce.

"Yes," said the onion, "they do. But they don't like to praise us. They are a little ashamed of liking us."

"If you weren't appreciated and liked," said the lettuce politely, "you wouldn't be planted and grown. They use you all the time—to season food and to make sandwiches with sometimes.

"Yes, I've heard several people speak of loving an onion and roast-beef sandwich.

"They like to have you join with me too in making a good salad.

"Why I'll begin to be mournful too if you are. I'll begin to think I'm not liked for so often they put us together."

"True," said the onion, "but no one ever speaks of being ashamed of liking you.

"They say that they love lettuce. And they don't seem to be ashamed of themselves as they speak of you.

"They really do seem that way about me."

"Ah you musn't be discouraged," said the lettuce. "I feel sure no one

"For Shame," Continued the Fairy.

is ashamed of liking you. I know I love to have you put on a lettuce salad.

"I feel as though you were even giving me more flavor."

"Oh no, you shouldn't be discouraged," said the geranium plant.

"Yes," the lettuce repeated, "I agree with the geranium plant there, but geranium plant to my way of thinking is lazy.

"You can't eat geraniums. We help with the food.

"We're far more useful."

"I'm beautiful," said the geranium plant. "And I'm cheerful too."

"I'm not gloomy," said the lettuce.

"But I am," said the onion.

"No reason for it," said the lettuce, "you do make things have a nice taste."

"Ah," said the onion, "that is true. I grieve at times because they do not like my rare onion perfume but now I feel better. I am indeed a great necessity. As for the geranium, it is utterly useless. It is not used for food or flavoring."

Just then the Queen of the Fairies came along. "Do I hear quarreling?" she asked. And the lettuce tried to hide as did the onion. The geranium plant was looking very bright and cheerful. Its red blossoms were happy and gay looking.

"For shame," continued the Fairy Queen. "You should not boast so much, lettuce and onions. Simply because you can be eaten you should not abuse the geranium because it is not food. And the onions were naughty to want more praise. Oh dear, oh dear," and the Fairy Queen sighed.

"We will never be naughty again," said the onions from their box and the lettuce from the lettuce box.

"And we'll never abuse the geranium plant because it can't be eaten and isn't useful," they added.

"I am glad to hear it," said the Fairy Queen. "To be sure lettuce and onions are very useful and they are also very good to eat—quite delicious in fact." The lettuce and onions looked very much pleased.

"But I don't want to hear you become conceited," she added, "because we wouldn't care to eat and grow strong if the world wasn't such a lovely, beautiful place. And it's the geranium's work to add to the beauty—not to the food."

And they knew that the Fairy Queen was right.

One Leg and One Eye

What is standing in one corner with one leg and one eye? A needle.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1926, Western Newspaper Union.)

The Training School of American Generals

It is doubtful if any other post in the United States has known as many of our famous military leaders as Jefferson Barracks, Mo. When Jefferson Davis became secretary of war in 1853, he determined to form a regiment which would be the best in the army. Remembering the tradition of the army, which, from the close of the War of 1812 had sent to Jefferson Barracks the most promising young officers in the army, he organized at that post "the Second cavalry, later known as "Jeff Davis' pet."

The colonel of the regiment was Albert Sidney Johnston and its lieutenant-colonel was Robert E. Lee, destined for fame as two of Davis' greatest Civil war generals. At the same time there was organized there the First regiment of cavalry with Edwin V. Sumner (later a Union general) as colonel and Joseph E. Johnston (of Bull Run fame) as lieutenant-colonel.

In fact these two regiments gave to the Union and Confederate armies no less than 30 generals, among them such men as John Sedgwick, W. J. Hardee, W. H. Emory, George Stoneman, E. D. Baker, "Jeb" Stuart, George H. Thomas Wesley Merritt, Earl Van Dorn and Kirby Smith.

But these are not the only distinguished names on Jefferson Barracks' roll of honor. There, too, appear Henry Leavenworth, Henry Atkinson, Stephen W. Kearney, John C. Fremont, Braxton Bragg, James Longstreet, Ulysses S. Grant, William Tecumseh Sherman, Philip Sheridan, Winfield Scott Hancock and Nathan Boone, a son of the famous Kentucky pioneer.

Jefferson Barracks also saw organized the original "rough riders" long before the days of Theodore Roosevelt and San Juan hill. During President Van Buren's administration the Seminole Indians became troublesome and the President asked the governor of Missouri to raise two regiments of mounted Missourians, frontiersmen all, to serve against the Seminoles. From all parts of the state these horsemen poured in to St. Louis and under the leadership of General Gentry and Col. John W. Price they were organized at Jefferson Barracks and acquitted themselves brilliantly in Florida.

Jefferson Barracks was established in 1826, as Cantonment Adams (in honor of President John Quincy Adams), and during its existence of nearly a century has been an important military rendezvous in all of Uncle Sam's wars from the Mexican to the World war.

The Fort That Was Built on a "Scrap of Paper"

On September 3, 1813, a young lieutenant of the American army, Thomas Hamilton, found himself in a desperate predicament. Outside Fort Madison, a little fortification on the Iowa shore of the Mississippi river, swarmed hundreds of hostile Indians who had been besieging him for nearly a month. Any attempt to escape would be perilous but to hold the fort meant the massacre of his men, if the savages carried the fort by assault. Starvation, too, faced them, for their provisions were exhausted.

So Hamilton ordered a trench dug down to the river's edge where boats were moored. That night they crept down to the water, undiscovered by the enemy because of the blackness of the night and a high wind which was blowing. When the last man left the fort, he set fire to it and as Hamilton's force paddled out into the current of the Mississippi the buildings roared into flames. The Indians pursued but Hamilton had too much start and he reached St. Louis in safety.

Thus ended the brief history of a fort which was built upon a "scrap of paper." In 1805 Gen. James Wilkinson sent Lieut. Zebulon Pike to select a post between St. Louis and Prairie du Chien, Wis. Pike chose a place on the west side of the Mississippi some 40 miles above the mouth of the Des Moines river. A treaty made with the Sac and Fox Indians the previous year had specifically prohibited the government from building forts on the west side of the river. As in many other cases, the government regarded this treaty as a "scrap of paper" and in 1808 Lieut. Alpha Kingsley of the First infantry began building the fort, completed it the next year and named it Fort Madison in honor of President James Madison.

Lieutenant Hamilton came there in September, 1812, with a force of 50 men and immediately afterwards the fort was attacked by 200 Winnebagoes, who were aided by a young Sac warrior named Black Hawk, who was on his first warpath against the Americans. From that time Fort Madison was repeatedly attacked and besieged, until at last Hamilton abandoned it. It was never rebuilt and all that remained for many years to mark its site was a stone chimney which survived the fire. The chimney later crumbled and fell but a few years ago it was restored by the women of the city of Fort Madison which grew up on the site of the old fort. It now stands as a monument to a thrilling episode in Iowa history as well as to the tragic sequel of a broken promise.

GOOD ROADS

PAVED ROADS PROVE BOON TO VILLAGES

With the completion of another thousand miles of concrete highways in Illinois, there is additional proof that the new hard roads, instead of being a curse to the villages and smaller towns along their route, are a blessing instead. The pessimists in the hamlets have argued ever since these improvements were first projected that they would sound the death knell of the rural settlements and that trade would centralize in the larger at the expense of the smaller. It was maintained that farmers who were formerly forced to trade at the village store, due to the embargo of mud, would patronize only the more pretentious stores of the city.

This gloomy condition has never been realized. The "Illini boulevard," which connects St. Louis and Chicago with a band of concrete 300 miles in length, will not show a single town that has deteriorated since the new road was completed. Investigation has revealed that in every instance the population has held steady and, in most instances, increased, while there has been no loss, either in the number of inhabitants or in business.

With thousands of tourists passing through daily in automobiles, each town has become more careful of its appearance. A more attractive front has been displayed. There has been a universal cleanup. Attractive filling stations line the new highway, surrounded by shrubs and flowers and with well-kept lawns and driveways. They replaced dilapidated buildings or other eyesores. Rubbish has been removed. Stores and residence premises, visible from the hard road, are well maintained. There is an air of neatness and orderliness, never before as pronounced. It is an ever visible invitation to halt and patronize the "gas" stations or other places of business.

A count, maintained for several days during the tourist season, led to the estimate that during the year 1,000 cars from other states passed over the new boulevard every day on the average en route either to Chicago or St. Louis. This means more than 300,000 for the year. Probably the occupants of every car spent from $5 to $10 on the trip for supplies or food. The villages received their share of this sum, enormous in the aggregate, perhaps $2,000,000. Roadside stands, where farm products, fruits, vegetables, eggs and butter are on sale, have been opened at many places between the villages and have been profitable.

Lad Wins Big Prize

John Liska, high school youth of Wisconsin Rapids, Wis., has been announced as winner of the H. S. Firestone four-year university scholarship for the best essay in the fifth annual good roads essay contest. More than 200,000 high school students throughout the United States and territorial possessions sought the honor which fell to this lad.

Double Tonnage Since War

Freight hauled over British highways has increased from 150 per cent to 200 per cent since the war, according to a road survey near Sheffield, reported in Motor Transport (British).

Seven thoroughfares studied were supporting over 10,000 tons of traffic daily and 16 between 5,000 and 10,000 tons.

"The percentage of heavy motor vehicles has, of course, greatly increased," states the report, "the pre-war figures being 13 per cent as against a present average proportion of 56 per cent."

Abolishing Death Trap

Elimination of six dangerous grade crossings on the Montauk division of the Long Island railroad east of Jamaica, including the crossing at Merrick road, Springfield, generally regarded by experts as one of the most dangerous crossings on the Long Island lines, was ordered by the New York transit commission. One-quarter of the $1,400,000 cost will be met by the state, one-quarter by the city and the remainder by the railroad company.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for February 8

CHRIST'S INTERCESSORY PRAYER

LESSON TEXT—John 17:1-26.

GOLDEN TEXT—"Holy Father, keep through thine own name those whom thou hast given me, that they may be one, as we are."—John 17:11.

PRIMARY TOPIC—Jesus Praying for His Friends.

JUNIOR TOPIC—What Jesus Prayed For.

INTERMEDIATE AND SENIOR TOPIC—Christ's Prayer for His Disciples.

YOUNG PEOPLE AND ADULT TOPIC—Christ's Intercessory Prayer.

I. His Prayer for Himself (vv. 1-5).

Fully conscious that the hour of His crucifixion was at hand He prayed to the Father saying, "Glorify thy Son, that thy Son also may glorify Thee." His coming into the world had as its supreme mission the glorification of the Father. In order that the Father might be glorified it was necessary that the Son should be glorified.

1. To Him Had Been Given the Power to Give Eternal Life to God's Chosen Ones (vv. 2, 3). Eternal life is knowledge of and a right relation to the true God and Jesus Christ. Thus we see that eternal life is a relationship and not an entity.

2. He Declared That He Had Finished the Work Committed Unto Him (v. 4). The definite work which He came to do was to give eternal life to the chosen of God.

II. His Prayer for His Immediate Disciples (vv. 6-19).

1. Their Preservation (vv. 9-16). He did not pray that they would be taken out of the world but that they might be kept from the Evil One. It is not the divine will that we go to heaven at once when we believe because:

(1) Christ needs our ministry. Those who have been made partakers of the divine life are His representatives in the world.

(2) We need His grace strengthened and developed in us. Heaven is a prepared place and only those who have been prepared for it can be admitted into it.

(3) The world needs us. Christ declares that the disciples are the light of the world, the salt of the earth (Matt. 5:16). Only as the light of the Lord shines forth through the disciples can the people in the world find their way.

2. Their Sanctification (vv. 17-19).

(1) Sanctify means: First, to set apart; that means then that the disciples were to be set apart to do the specific work of representing Christ; second, to cleanse; those who are set apart as His representatives need the special cleansing grace to make them vessels fit for the Master's use.

(2) The instrument used (v. 17). They were to be sanctified through God's truth. God's truth is His Word.

(3) The purpose (v. 18). They were sanctified in order that they might be qualified for His service in the world.

(4) Jesus' own sanctification was for that purpose (v. 19). He is the grand example.

III. His Prayer for His Future Disciples (vv. 20-26).

1. Their Unification (vv. 20-23). His great concern was that all believers should be united.

(1) The grand pattern of this spiritual union is the union that exists between the Father and the Son (v. 21).

(2) The incentive making possible this union (v. 22). The vision of the glory of God in Christ (II Cor. 3:18) is the grand incentive which unites the believers.

(3) The purpose (v. 23). The supreme objective in the unification of the believers is to convince the world that God sent Jesus Christ to save it.

2. Their Glorification (vv. 24-26). The disciple of Christ enjoys fellowship with the Father and the Son and fellowship with his fellow believer, but he also looks forward to the time when he shall be glorified.

(1) "I will that they be with Me where I am" (v. 24). There is a present glory enjoyed by believers.

(a) They are now children of God, although it does not yet appear what they shall be.

(b) They now possess eternal life and therefore shall never perish. While there is the present glory, Jesus wants His disciples to be with Him in Heaven. He said, "Except a grain of wheat fall into the ground and die, it abideth alone." We can reverently say that unless the believer is taken to Heaven Christ will be lonely.

(2) "Behold my glory" (v. 24). The believer shall share the ineffable glory of Christ (I John 3:1-3).

The Master-Word

The master-word of Christianity is love.

Charity

A bone to the dog is not charity. Charity is the bone shared with the dog when you are just as hungry as the dog.

Never Be Afraid

Never be afraid of giving up your best—and God will give you His better.

Men's Muscles

Men's muscles move better when their souls are making merry music.

AN OPERATION RECOMMENDED

Avoided by Taking Lydia E. Pinkham's Vegetable Compound

Los Angeles, Cal.—"I cannot give too much praise to Lydia E. Pinkham's Vegetable Compound for what it has done for me. My mother gave it to me when I was a girl 14 years old, and since then I have taken it when I feel run down or tired. I took it for three months before my two babies were born for I suffered with my back and had spells as if my heart was affected, and it helped me a lot. The doctors told me at one time that I would have to have an operation. I thought I would try 'Pinkham's,' as I call it, first. In two months I was all right and had no operation. I firmly believe 'Pinkham's' cured me. Everyone who saw me after that remarked that I looked so well. I only have to take medicine occasionally, not but I always keep a couple of bottles by me. I recommend it to women who speak to me about their health. I have also used your Sanative Wash and like it very much."—Mrs. E. GOULD, 4000 East Side Boulevard, Los Angeles, Cal.

Many letters have been received from women who have been restored to health by Lydia E. Pinkham's Vegetable Compound after operations have been advised.

First Quiets—Then Ends A Cough

That terrible "hack", "hack", "hack" that almost drives you frantic and strains your whole body can be quieted in a jiffy by taking a swallow now and then of that fine old medicine, Kemp's Balsam. It gets the phlegm, soothes the inflamed membrane and takes away that constant desire to cough, cough, cough. Only 30 cents at all stores.

For that Cough / KEMP'S BALSAM

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)

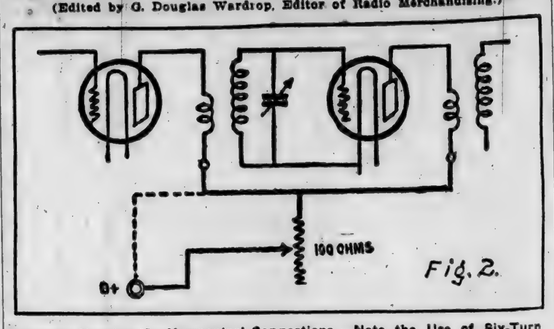

Fig. 2.

Diagram Showing the Kompentrol Connections. Note the Use of Six-Turn Primary to Prevent Resonance.

By ROBERT LA MAR

Day by day engineers of the various radio manufacturing corporations are making improvements in circuits that have been standard for many years. Occasionally one of them stands out so prominently that it becomes an important factor in the industry. The Kompentrol, the trade name of a new tuned radio frequency receiver, comes under this heading.

The performance of the receiver, one that employs five tubes, is very much superior to many others in this category. This is a broad statement which unquestionably will arouse some dissension, but it is based on rigid comparative tests conducted by the writer in various localities, some of them the so-called dead spots of New York city. Most of the competing sets were "put under the table" when it came to distant reception.

The new set consists of two stages of tuned radio, a detector and two stages of audio. Admittedly, this is no cause for amazement, but the actual performance of the set is.

Where the Set Differs.

The basic difference between the Kompentrol set and the ordinary radio frequency amplifying set of the tuned type is shown in Fig. 2. It will be seen that in the conventional radio amplifier the low potential sides of both radio frequency primaries are

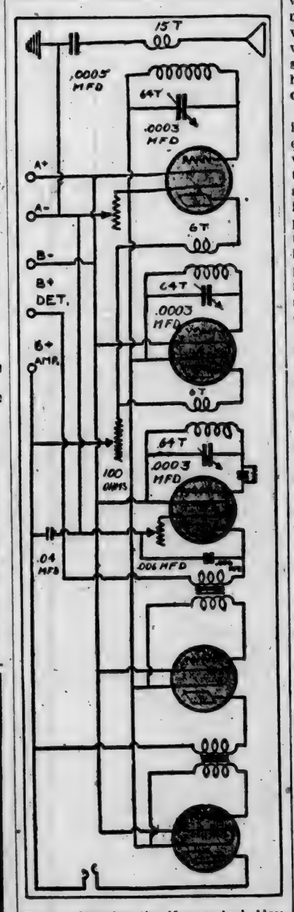

Fig. 1—Showing the Kompentrol, Having Variable Plate Resistor.

connected to the "B" battery plus amplifier post.

In this receiver, however, they go to one end of a variable 100-ohm rheostat, while the other end goes to the "B" battery amplifier. In other words, a variable resistor is inserted in series with the primaries of the radio frequency transformers.

The first thought the technical radio fan is likely to get is that the resistance is put into the circuit to introduce losses and suppress oscillations. This is not true. In fact, it is the reverse. Actual operation shows that the more resistance one introduces into the primary circuit the more the set oscillates. In other words, we have a common regenseration control for the two stages of radio frequency. Practice has shown that nothing is gained by employing separate variable resistors for each stage.

The action of the variable 100-ohm resistance may seem uncanny to many builders, but a study of the underlying theory will take all the mystery out of it. The radio amplifier is built so that it is highly improbable that any resonance can take place, making the amplifier itself non-oscillating. The resistance may be more properly termed a reactance of variable choke. It is a conceded fact that a choke coil introduced in the plate circuit will retard the radio frequency currents and therefore throw the set into oscillation. Consequently, if the reactor, or choke, be variable, the oscillation point of the amplifier can be adjusted to accommodate all wave lengths.

Actual Results.

In this respect the theory works out in practice, for the receiver can be brought up to and beyond the hissing point at any and all wave lengths. Actually, the receiver is as efficient an amplifier as may be desired, with the added advantage of not being too critical.

The writer operated the Kompentrol receiver for a whole evening in the heart of Manhattan, using a 30-foot piece of wire suspended outside the window as an aerial. Ten DX stations were heard, despite the fact that all of the city's most powerful stations were in operation. After the locals shut down, stations up to 1,500 miles were heard, just as loud and clear as most locals, although there was some reradiation.

Perhaps the greatest performance in the way of selectivity was demonstrated when WNAC, Boston, operating on 278 meters, was tuned in with vociferous volume, through WFBH, on 273, and with the latter station only a mile or so distant. This performance would have done credit to a super-heterodyne operating on a loop.

Selectivity and sensitivity go hand in hand. A receiver cannot be really efficient and not be selective; the reverse is true, also. The sensitivity of the set may be accounted for by the ability to keep the receiver on the hissing point at all wave lengths by a simple control. The selectivity is far better than a neutrodyne because of the lower coupling employed. This is imperative because of the fact that the radio frequency primaries must have six turns so that resonance cannot be obtained.

If you are desirous of constructing a set of this type, the circuit diagram of Fig. 1 should lead you on the right track.

A list of the necessary parts used by the writer follows:

Three spiderweb coils for usual tuned R. F. amplifiers.

Three 17-plate (.0003) variable condensers.

One 6-ohm Amsco rheostat for four tubes.

One 20-ohm rheostat for detector.

One 100-ohm rheostat or 200-ohm potentiometer (Amsco).

One double circuit jack.

One single circuit jack.

One 7 by 18 bakelite panel (black or mahoganite).

One 6½ by 17 bakelite baseboard.

Three 4-inch Freshman dials.

One .0005 fixed condenser.

One .00025 grid condenser with 2 megohm leak.

One .006 mfd. Dubilier condenser.

One .01 mfd. fixed condenser.

Two audio transformers.

One battery switch.

Seven binding posts (preferably marked).

Twelve lengths bus-bar.

Sundries such as screws, nuts, angles, etc.

A little confusion might arise about the spiderweb coils. They may be obtained from your radio dealer if you know what to ask for. They are called tuned radio frequency coils of the non-oscillating type. Usually the primaries have 15 turns—but no matter how many turns on the primary they will be all right.

Make sure that the secondary has 62 turns, for a greater or lesser number of turns will not cover the band of wave lengths on the usual coil and condenser; of course a turn or two out of the way matters but little. Remove sufficient turns from the primaries of two of the coils so that only six turns will remain on each, the third one remaining as purchased.

Coil Supports.

The coils should be fastened with little pieces of rubber so that the flat area is at right angles to the panel, it being preferable that the coils be mounted on top of the condenser, to make them the highest unit in the set. The unhampered coil having a 15-turn primary is fastened to the first condenser, i. e., the one on the extreme left of the set facing from the front. The other two coils should be mounted in a similar manner, the order of mounting making no difference since they are similar.—New York Telegram.

Circuit Sure to Be Satisfactory

Good Coupler and Low-Loss Variable Condenser Are Needed.

How often have you wished that your receiving set would cut out a certain station nearby which was interfering with a program you were trying to hear? Selectivity in the radio set depends upon two essentials—parts and hookup.

Of course, every radio fan knows that he should select only the material which is of the highest grade, especially the variable condensers and variocoupler.

With a good coupler and a low-loss variable condenser the accompanying circuit will fulfill the wants of the most exacting radio fan. A vario coupler with a 180-degree secondary is required.

Fifty-Two Turns on Primary.

The primary of the coupler should have about fifty-two turns, with a tap on the tenth turn. This tap is connected to the ground binding post on the panel. The upper end turn of the primary connects to the aerial as well as the .00025 grid condenser.

The lower and upper ends of the coupler primary are shunted with a .0005 variable condenser. The rotor plates of this condenser connect to the lower end of the coil and the filament battery.

The stationary plates connect to the grid condenser and the top of the coil. The grid condenser of .00025 mfd. ca-

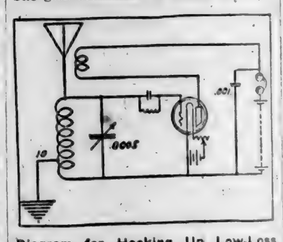

Diagram for Hooking Up Low-Loss Regenerative Receiver.

pacity is wired close to the grid terminal in the socket. In this way "hand capacity" is reduced to a minimum.

Try Tickler Two Ways.

The rotor of the coupler which is connected in the plate circuit of the detector tube should have about thirty-five turns of wire on it. It will be necessary to try the rotor or "tickler" leads in both directions.

One direction will not allow the set to regenerate, while the other direction will result in an increase in volume as the rotor is turned.

The plate circuit also comprises the ear phones, high-voltage B battery and the phone condenser. The latter is a small fixed condenser of .001 or .002 mfd., which is shunted around the phones and B battery. This acts as a by-pass, giving better signal strength.

In tuning the set the variable condenser is employed to cover the wavelength range, while the rotor coil increases or decreases the volume. Any type of tube will work in this circuit.

Of course, the tubes operating from storage battery current will give better signal strength than the dry cell tube, and hence the former type is recommended.—Chicago Daily Journal.

How Pigtail Leads Will Increase Efficiency

Pigtail connections are just as desirable and necessary for a condenser as for a variometer or variocoupler. In many condensers the rotor shaft makes contact by rubbing against a little brass or copper strip to which a screw or binding post is attached for making connections.

After a period of use the point where the contact is made becomes black, as you can verify by looking at your own condenser if you are using the ordinary type. This black coating prevents the rotor shaft from making good electrical contact with the brass or copper strip, and thus greatly cuts down the efficiency of the conductor.

However, it is easy enough to make your own pigtail connections for your condensers. Get a piece of insulated litzendrant wire, or the small flexible leads sold at all radio stores for making battery connections, and cut off a piece about two inches long.

Clean off the edge of the rotor shaft where it makes contact with the brass strip and solder one end of the flexible lead to this cleaned part of the rotor shaft.

The other end of the two-inch lead is then soldered to the screw or binding post used for connections to other parts of the set. This completes the "pigtail" and will greatly increase the efficiency of the condenser.

In many cases the pressure of the contact strip against the rotor shaft serves also to keep the rotor plates properly spaced betweeen the stator plates. If this is the case, the brass strip should not be removed, but should be used in conjunction with the pigtail connection.

Wavemeter Handy Instrument

Included in the experimenter's list of apparatus should be a good wavemeter. This is just as true in the case of the experimenter who limits his work to receiving apparatus as to the man who goes in for research work on both receiving and transmitting equipment. Keep one handy and it will help you in designing your new coils or choosing the right size of condensers for use with the right size coils.

Genuine BAYER **ASPIRIN**

SAY "BAYER ASPIRIN" and INSIST!

Unless you see the "Bayer Cross" on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians 24 years for

Your doctor advises internal cleanliness

HE WILL tell you that the first results of constipation—headache, sleepless nights, biliousness, backache, etc.—warn that the body is flooded with intestinal poisons. In time these poisons may cause the breakdown of health and lead to serious disease.

Laxatives and cathartics do not overcome constipation, says a noted authority, but by their continued use tend only to aggravate the condition and often lead to permanent injury.

Why Physicians Favour Lubrication

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Thus, Nujol brings internal cleanliness.

Nujol is used in leading hospitals and is prescribed by physicians throughout the world. Nujol is not a medicine or laxative and cannot gripe. For sale by all druggists.

Nujol

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name: its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

FANNY

FANNY, which was originally considered a diminutive of Frances, has become sufficiently an individual entity to be regarded as a separate name entirely. Its origin is in reality very complicated as it is one of a dozen dissimilar names that come from the Frey of Teutonic mythology. Freya was the goddess of love, but she likewise drives over the battlefields in her car drawn by cats and chooses half the slain whom she escorts to their seats at the banquet of Valhalla.

The modern Fanny is apparently of the days of Queen Anne, coming into notice with the beautiful Lady Fanny Shirley, who made it a great favorite and almost a proverb for prettiness and simplicity, so that the wits of George II's time called John, Lord Hervey "Lord Fanny" for his effeminacy. Fanny is often given at baptism instead of the full name, Frances, and by an odd caprice, it has lately been adopted in both France and Germany instead of their national contractions.

One poet, doubtless seeking to celebrate the beauty of the lovely Lady Shirley, wrote a "Song to Fanny" which has lyrical charm:

Nature, thy fair and smiling face
Has now a double power to bless;
For 'tis the glass in which I trace
My absent Fanny's loveliness.

Her heavenly eyes above me shine,
The rose reflects her modest blush,
She breathes in every eglantine
She sings in every warbling thrush.

That her dear form alone I see,
Need not excite surprise in any;
For Fanny's all the world to me,
And all the world to me is Fanny.

Fanny's jewel is the wondrously lovely fire-opal. The restless colors of the ordinary opal are far surpassed by the fire-opal whose mysterious depths are shot with flame. The stone is perhaps the only one which superstition regards as unlucky, except in cases of persons born in October. Legend has it that a pixie clad in brilliant colors has been imprisoned in the stone; he moves restlessly about seeking egress, but only human tears can melt the gem and give him freedom, so he contrives all manner of mischief for the wearer, to bring about that end. Fannie's lucky day is Friday and 8 is her mystic number.

Passenger—Doesn't this boat tip a lot, steward?

Steward—Yes, she's setting a good example to the passengers.

WASHINGTON

By DOUGLAS MALLOCH

THIS was his greatness; he combined
Vision and judgment, fact and dream;
His was the truly balanced mind,
Not skeptical, nor yet extreme.
No thinker quicker caught the gleam
Of new-born stars in human skies,
And yet he tested star and stream,
On earth and heaven kept his eyes.

This was his greatness: he could be
Leader and comrade, master, man;
He wore the robe of dignity,
With human brotherhood his plan.
He was the first American,
A pattern for a nation now,
His soul as large as heaven's span,
His heart as tender as its dew.

This was his greatness: Washington
Met strength with strength, yet could be kind
Without the look of weakness—one
Who firmness, gentleness, combined.
His was the truly balanced mind
That none could flatter nor defame;
To glory and ambition blind,
He won, unsought, a deathless name.

Your Last Name

IS IT KISSAM?

THERE seems to be much difference of opinion and uncertainty concerning the surname Kissam. However, there is no uncertainty concerning the fact that the family was founded in this country by one John Kissam, born in 1644, who made his home in Flushing, L. I. It is not known where he was born. That is, some authorities say that he was born in England, while others say he was a native of Amsterdam, Holland, and others have it that he was a Huguenot from Montpelier, France. It would be interesting for some member of the Kissam family to trace to its source each one of these traditions.

The fact that the Kissams were always strong supporters of the English or Episcopal church certainly suggests that they were English rather than Hollanders, though there are some instances of families of Dutch name having become devoted Episcopalians. Sometimes the fact that the head of the family married women of that church led to the future alliance of the family with that church.

It is also recalled that the Kissams were strong Tories in the Revolution, a fact that has been cited in proof of the English origin of the family. But this might be explained in another way. The Kissams were from the first persons of prominence in Queens county, Long Island, and intermarried with the Whitehead, Rutgers, Hewlett, Treadwell, Combs, Van Brunt, Vanderbilt and other prominent families in and about New York city.

Semple—There is no doubt that this is derived from an earlier form of surname, St. Paul. This sort of contraction of a saint's name was quite usual.

Holland—At first sight you might suppose that the first to bear this name was a native of the Netherlands, but it is an English name derived from a small place in Lancashire called Holland.

Maud—This is clearly a matronymic. That is to say, it is a surname derived from the mother rather than from the father.

Lowe—This is usually a German-Jewish name and, of course, is from the word meaning lion in German. About a hundred years ago, when German Jews were required by law to adopt a definite surname, many took names of animals and birds, as Adler, Eagle, Hirsch, Hart and Wolf.

SCHOOL DAYS

THE JUDGMENT OF A BOY

By DOUGLAS MALLOCH

JUST remember, if you can,
When you weren't yet a man,
But a boy with naked feet
Up and down the village street,
Leave behind the world of men,
All the things you've done since then,
Think of things back home again.

Just remember—and you will—
Store and church and farm and mill,
People that you used to know
You've forgotten long ago.
Look again with boyish eyes,
See them at their proper size;
For the boy-heart is the wise.

Just remember some were great,
Yet you never passed their gate;
There were some considered rich,
Yet you feared them like a witch;
There were some who put on style,
But they only made you smile—
No one fools a boy with guile.

Just remember there were some
Common folks, who common come
Into life, and common live,
Work and laugh and pray and give,
Often fail, yet often try,
Common live and common die;
Those you liked the best—and why?

Just remember even now,
Just recall, remember, how
Boyhood puts them to the test,
What the boy-heart thinks the best;
Just remember—you will find
Ev'ry memory left behind
Is of some one who was kind.

Mother's Cook Book

There is no policy like politeness, since a good manner often succeeds, where the best tongue has failed.—Magoon.

FOR THE FAMILY MEAL

A SALAD which is not common, but is most attractive and appetizing is:

Grapefruit and Cress Salad.

Cut the stalks from a few bunches of cress, pick over carefully, to remove all discolored leaves and wash in cold water to which a little salt has been added. Peel and remove all white fiber from grapefruit, break the sections into small bits and add three tablespoonfuls of olive oil, one of vinegar and one of the grapefruit juice, salt and paprika to taste. Mix lightly not to crush; serve on the well-dried water cress.

Chicken Tamales.

When you find those who like tamales, they like them very much. Try this one: Cook in salted (onion and garlic seasoned) boiling water, a fat fowl until tender. Remove the meat from the bones and chop fine adding a clove of garlic and a generous quantity of cayenne pepper. Make a thick paste of cornmeal, salt, boiling water. Form the meat into small finger-sized rolls and incase each in the cornmeal paste. Wrap each tamale in corn husks and tie securely. Drop the tamales into the hot chicken broth with two Mexican peppers and cook fifteen minutes.

Hot Ham Sandwiches.

Grind cold, cooked ham, either baked or boiled; mix with creamed butter to make a paste, and mustard, paprika and spread on buttered bread. Cover with another slice and press together. Beat an egg, add one-half cupful of milk and a little salt. Dip the sandwiches, fry in butter until brown, serve hot.

A thinly sliced Southern onion makes fine sandwich filling. Dip the slices or cover with a highly-seasoned French dressing and place on buttered bread.

Cucumbers served the same way are also fine sandwich filling.

Nellie Maxwell

Something to Think About

By P. A. WALKER

THE LEADING PART

WHEN youth packs up its textbooks, turns its back on the friendly old university with visible signs of relief, and faces the staid world, there is in the heart of every man and woman that he and she have been cast for the leading part in life's great drama.

The curtain is slowly rising. Expectancy is on tip-toe.

The orchestra is playing a lively air, each tripping note being full of promise.

It is an ancient scene set with new faces, contrasting in some particulars with the fresh verdure, the blooming flowers, the chirping birds making love and building nests, guided not by college lore, but by an innate instinct which keeps every bird in its place, contented with its lot, and happy in performing its humble part.

With nature, there is no chance of anything going wrong, but with nature's proudest handiwork, man and woman, there is grave doubt as to whether this rule in the majority of cases would apply.

Imagination carries the young in one swift ascent to the heights, which the old and experienced know cannot be reached except by patient, persistent work and self-denial, the price exacted from all regardless of condition.

And here is a lesson which cannot be learned except by rubbing against the practical world.

It is easy to sit in a cushioned chair and dream of conquest, so difficult to achieve when in action.

No victory can be won except by hard fighting.

Life is not a resting place, but a field of battle from the first cry of the infant to the last sigh of the departing spirit.

To play the leading role, one must prove one's ability to lead in little things as well as in big things, by holding fast to courage and honor; by keeping constantly at work and steadily driving ahead with so deep-seated a purpose that neither weariness nor discouragement shall be permitted to block the road. There is no other safe course to pursue, not even by those who in their imagination think they are cast for the leading part.

(© by McClure Newspaper Syndicate.)

IS IT CRUGER?

CRUGER has been so thoroughly naturalized as a surname in this country that it does not always occur to one that it is a name of German origin. The name is said to have originated in Germany from the Latin, meaning cross bearer, but it has generally been spelled Kruger rather than Crugor. Another authority, however, has it that this is simply a surname of occupation derived from the German word meaning innkeeper.

It is said that the family of the Barons von Cruger are distinguished from the untitled bearers of the name in their use of the initial C instead of K, and the fact that the American family has always spelled the name with the C is taken as one evidence of descent from the baronical family. Besides this there is a well-established and persistent tradition in the family to this effect—and such traditions are well worth heeding.

The first of the name here and the founder of the family was John Cruger who came from Germany before 1700 and settled in New York city. He was a prominent merchant and man of wealth, and from all records was looked upon as a man of cultivation and position. He became mayor of New York, a position which was also held by his son, John Cruger.

The original John Cruger had four children: Maria, who married a Cuyler; Henry, John and Tileman. Tileman died young, unmarried, and John, though he became mayor of New York and lived to make a fortune, as a merchant, and was first president of the New York chamber of commerce, never married either.

Henry, though he spent some time in Bristol, England, married in this country and is the ancestor of all the American Crugers. His children were John, who married a De Lancey; Henry, who took up his residence in Bristol from which city he was member of parliament; Tileman who lived in Curacoa, Nicholas who married Anne, daughter of the Comte de Nully of Santa Cruz, and after her death Anne Markoe of Santa Cruz, and two daughters.

Bunker—It is said that the oldest form of this name is Bonquer or Boncoeur, a French adjectival surname meaning good heart.

The Appleton Family

Mr. Lysander John Appleton
Mrs. Lysander John Appleton
Miss Daysey Mayme Appleton
Master Chauncey Devere Appleton

EVER since he could comprehend what they were talking about, Chauncey Devere Appleton has been told that he was an ungrateful boy. "You are an ungrateful boy not to want bread and butter," his mother has said, "when the children in India are crying for it."

—x—

Mrs. Lysander John Appleton calls herself a worm in her prayers, but it is her honest opinion that she is a good deal of a bird.

Lysander John Appleton is such an old-fashioned man that his first thought in every emergency is to light the fire and put the kettle on. The day that Daysey Mayme got word that her first lover had gone back on her, and while she was trying to decide whether she would become a Nemesis or pine away to the tomb and send word to him from her deathbed that she forgave him, Lysander John disappeared, and was found later in the kitchen, where he had lighted the fire and put the kettle on.

—x—

Daysey Mayme Appleton has been engaged for the past three weeks in writing a poem on "True Friendship." She refuses to give out any advance sheets, but the drift of her theme is that the "Rock of Ages" is a trembling hulk compared with "True Friendship."

GOOD FOR WILLIE.

Sister's Beau: Willie, if I gave you a nickel what would you do with it?

Willie: I'd buy an auto, a pair of horses, a little place in the country, and save the rest for a rainy day.

Mary Philbin

Charming Mary Philbin, as a little high school girl, was selected for the "movies" in a beauty contest, and her acting from the beginning astounded all filmdom. Miss Philbin was born in Chicago. She graduated from the Hyde Park high school. Before entering motion pictures she had had no experience, except as a star in Sunday School amateur plays.

Have You This Habit?

By Margaret Morison

LAURA LITTLE

LAURA LITTLE—Mrs. Augustus Little—was expecting the landlord to call that morning to talk over the question of repairs to the apartment. As the maid-of-all-work ushered him into the front room, Laura's first words were: "Of course I know you won't do anything I ask." Now, the landlord was a good sport, for a landlord, and he had been prepared to be really generous. But his reaction to Laura's words was unaccountable opposition, and he left shortly, after taking the firm position that no repairs were possible that year.

Considerably ruffled, Laura departed for market. It was Saturday and everything was busy, and Laura had to wait like all the other customers at the butcher's. Finally through a mistake some one who had come in just behind her was served first. Laura bristled up to the desk. "You take care of anyone at all," she scolded, "before me. I won't stand for such treatment." Whereupon she departed, nose in the air—to find all the other shops closed for the week-end.

On the way home she met an innocent but near-sighted acquaintance on the street, who passed without seeing her. But Laura was in no generous-minded mood. Muttering to herself that she would show whether she was to be treated with indignity, she quickly circumnavigated the block until she again came face to face with her friend. This time Mrs. Little was recognized. But she swept past the outstretched hand in stony silence, leaving a very puzzled lady to wonder if Mrs. Little were a bit unbalanced.

Puffing up the stairs to her walk-up apartment, she passed several persons whom, she decided, looked at her "queerly." As she unlocked her door she heard a crash and went in to find her favorite coffee pot in splinters. Then she knew that her maid, as she had often suspected, was addicted to fits of temper, and upon the spot and without allowing explanation Laura dismissed her. A few minutes later Gus, Jr., came upon the scene and confessed that his Irish terrier had jumped on the table and knocked off the coffee pot. But that did not help much as afternoon wore on and it was time to get dinner all by herself.

She had just successfully burned the soup when her husband arrived, bringing a guest. That was exactly like his lack of consideration for her, Laura burst forth; and Gus, Sr., crept back to the parlor with drooping ears. When the baked potatoes that weren't baked and the scorched eggs and the rest of it finally came on, and a dismal group gathered around the table, Laura took the same attitude toward her husband's friend of suspecting a pre-conceived plan to embarrass her. After dinner the two men went out, pleading an engagement together; then her son descended to a pal's; finally her daughter left to spend the night with grandmother. And as Laura caught sight of Mike's tail disappearing down the fire escape, she was left alone with only the habit of the chip on her shoulder to keep her company.

Have You Ever Stopped to consider

how important it is to have a Radio installed in your place of busiuess as well as your home? Look at the crowds in the up-to-date Radio equipped places. Both Chas. High aud Bert Davis report a wonderful difference in volume of business.

Let us instal one for you today. The cost is small the results are beyond your expectations. Many folks have both our Service Light Plant and Atwater Kent Radio outfits. Ask Sol Shank or Garry Horn or anyone who has either—they will tell you our service is the best our prices low.

As to our light plants, we build them in all sizes, from the 5 000 watt plant at the Hoosier Store Packing at Harlan, the 3,000 watt plant installed for C. W. Follis near Spencerville which he operates with a Fordson tractor, down to Dad Reasoner's 250 watt plant which he operated for over ten years on one set of batteries. Give us a trial and be convinced.

Get your light bulbs at Davis Restaurant.

HERMAN REASONER
SPENCERVILLE, IND.

NEWVILLE

Irene Berre, the eight year old daughter of Mr. and Mrs. Floy Berre, died Tuesday afternoon, January 26th. The funeral was held from the Christian church Thursday afternoon, Rev P. A. Hubartt of Butler officiating, assisted by Rev. Clickner, pastor of the U. B. Church The little girl was a third year pupil of the Newville school and the school attended the funeral in a body, six girls of the upper room acting as flower girls and four boys as pall bearers. Interment in Newville cemetery by the side of a little brother, who passed away less than a year ago. Besides her parents and grandparents she leaves two little sisters and many dear friends. The sorrowing ones have the sincere sympathy of the communiey. Those from a distance who attended the funeral were Mr. and Mrs Harris of Hicksville and Mr. and Mrs. Roberts of Scipio.

Rev. Clickner is holding revival meeting at the U. B Church.

Frank Griest and wife of Hicksville, spent Sunday at this place.

Byron Miller and Elsie Mendenhall were Auburn visitors, Saturday.

Mr. and Mrs. John Miller have been on the sick list the past two weeks.

Mrs. Leroy Kinney spent a part of last week in Auburn helping in the care of the little daughte of Robbie Wyatt and wife, who was seriously ill. Mrs. Day Wyatt also assisted in caring for the little one.

Wife Understands

A husband often thinks that the reception is being given to celebrate the eighteenth anniversary of their wedding, observes H. R. H., but the wife is perfectly clear in her mind that the affair was planned to convince him by sheer force of numbers that at last they simply must have a sun-room built off the living room to the south, with French doors between.—Kansas City Star.

Chinese Dancing Rules

In China, the ballroom floors are divided into squares, each of which bears a sign of a bird, fish, or some other form of nature. Dancers must keep to their own squares and if they fail to do so are stamped with a colored disk. Three failures to keep within the square assigned results in the penalty of leaving the place.

Oyster Industry

The latest inventory as to the magnitude of the oyster industry in personnel and equipment employed indicated that 67,257 persons were thus engaged, drawing wages aggregating annually $10,876,801 from vessels and apparatus appraised at $17,000,000. Ninety-nine per cent of the oysters are taken from the Atlantic and Gulf coasts, Maryland, Virginia and Connecticut, in the order named, having foremost ranking in yields. Chesapeake bay gives us more oysters than any other body of water in the world. Virginia and Maryland, through which this huge pond extends, produce 5,000,000 bushels of oysters each annually. Connecticut is credited with an output of 4,000,000 bushels. The total product at this time was 30,000,000 bushels.

New Use for Old Tires

A combing of the city dumps is now in order since a new use for discarded motor tires has been discovered.

Shoes, conspicuous for utility rather than beauty, are made from them, the outer tread being used for soles, the inner fabrics for the uppers. The shoe is held on the foot by a strong strip of lining.

The idea is said to have originated in Spain, where the peasants and workmen are wearing them. Besides being suitable for almost any kind of weather, the shoes are considerably cheaper than leather ones.—Columbus Dispatch.

Too Many Smiths

Few telephone exchanges have more trouble than at Washington, Pa., where the calling is not done by number but by name. The trouble arises from the fact that there are five Frank Smiths to be called by the operator and none of them is known by his middle initial. The operator picks one at random, and if that is not the one wanted calls the others in turn until the right one is found.

Hopeful!

Provincial Mayor (to leader of famous string quartette)—On behalf of the audience I beg to thank you, sir, for the great treat you have given us. I am glad to know that your concert has been a financial success, and I do hope this may enable you to afford to enlarge your excellent band.—London Punch.

Nation's Telephone Wires

There are now more than 45,000,000 miles of telephone wire in service in the United States. This is 15 times the total mileage of the nation's rural roads.

In Furnished Rooms

By EDITH H. OLIVER

(©, 1925, Western Newspaper Union.)

AT FIFTEEN Adolphus Dodson became a messenger in the Nth National bank. He was promoted slowly, but steadily, until he had a good position, and in the process he met Lucy Mears and fell in love with her.

He was an earnest young man; neat, methodical, reliable and thrifty, so thrifty, indeed, that he resolved not to tell Lucy of his love until he had another promotion; but when this occurred Lucy had gone away. He had lost her and his heart ached.

Adolphus had always lived in furnished rooms; he had dreamed of a home with Lucy, but now that was dead, lost forever. He lunched at the Eureka restaurant. There was a story that the engineer in the factory at the rear blew the noon whistle without looking at his watch when he saw Adolphus hang up his coat and hat on his own particular peg in the corner. Adolphus came in one day prepared to go through his invariable routine. He took off his overcoat and hung it on his arm; he took off his hat; he drew the folding nickel-plated coat hanger in its neat black case out of his pocket; patted his tie; smoothed his hair—

There was a soft flurry of gray beside him, a delicate breath of perfume floated through the air, and he found himself staring at a small figure in gray that hung a gray coat with a big gray collar—on his own exclusive peg. His own exclusive chair tilted against the table advised the world of its high mission, but the gray figure tilted it onto its four legs, sat in it and reached composedly for the menu.

Adolphus stood there holding his coat and hat and the folding nickel-plated coat hanger in its neat black case, when the gray figure turned towards him, and in an instant all the lonely years cried out in one word—

"Lucy!" He dropped his immaculate garments upon the floor and stammered forth an inarticulate flood of love and longing.

It was indeed Lucy. They ate an ecstatic meal together and agreed to meet and eat another next day.

They met every day after that in the Eureka, progressing by timid, primly conventional steps through the calling of first names, the almost agonizing delight of surreptitious handclasps, until one day Adolphus spoke the words that had been on his lips for so long, and he thought it just exactly what it should be when she said she would answer him in a week.

"I'll call for you—darling," he said, in a trembling voice. "We will go out to dinner and—take a taxi drive up Riverside drive afterward."

Lucy murmured something he could not hear.

"I can't hear you—darling—and how fortunate I remembered that you have never told me where you live."

Lucy murmured something else that he did not hear—she was so adorable.

"I can't hear you, dear; write it—on my cuff." He thrilled as her soft fingers touched his hand and his own closed over them and the happy cuff. Only one week and he could hold them as often as he wished.

For the first time in his life Adolphus Dodson could not go to sleep that night. He had found Lucy again; they were engaged; they were going to be married. He lay planning and thinking of all the wonderful years ahead together, lay so long that the gray dawn peered in at him before he went to sleep. The sun had been peering at him for some time before he awoke, and he had to hurry off to the bank without any breakfast and feeling horribly dishevele. He was disturbed all through his work, too, by the remembrance that it was the laundryman's day, and he had not left the things for him. That, at least, was all right, though, for his landlady had given them and made out the list in duplicate, just as he—. Suddenly the world turned to a black chaos of despair as he remembered that the address was on the cuff of the shirt that had gone and he had not read it! He rushed to the laundry; but it had gone to the main depot at the Bronx. He suffered hours of ignominy in overhauling uncounted hampers of other people's shirts.

The next day he went early to the Eureka and established a costly and far-reaching system of espionage for apprising him instantly of Lucy's appearance, but all to no avail. Lucy meant to keep away in her adorable modesty until the week was up, and then she would wait and he would not come, and what could she think except that he had deserted her.

On the day that was to have been the happiest of his life he went mechanically through his work, and with despair in his heart sat long after he knew it was hopeless in the Eureka. Somehow the hours dragged themselves along—six o'clock came—the hour when he was to have called for her. He went to his room and sat there, staring out into the falling dusk. It was all over; he would never see her again! With no definite idea beyond escape from himself and his misery he seized his hat and ran downstairs. Someone was fumbling outside the door with a latch key, he tore the door impatiently open—and Lucy walked in, all sweet confusion when she saw him.

"I'm so sorry to be late," she said, "but I won't be a minute. If you don't mind I'll just run up and change my hat."

Adolphus stared at her. "Run up," he said stupidly.

"Yes," said Lucy, "my room is on the top floor."

Eccentric English Duke

The duke of Bedford's gold plate at Woburn abbey is among the most magnificent collections of its kind in the world. So lightly, however, was it regarded by the eighth duke, that on his death in 1872 gold plate worth tens of thousands of dollars was found strewn about the floor of his house in Belgrave square in such a deplorable condition that it narrowly escaped being consigned to the dustbin as worthless metal.

Giant Australian Tree

A tree recently felled in Australia was nine feet in diameter and weighed seven tons.

COLETOWN

Miles Brown returned to his home after spending several weeks with his brother, J. D. Brown and family.

Mrs Kell Hart spent Thursday with Mrs. J W Hart in the R H Conine home.

Fred Martin and family moved last week on the W. E. Jackson farm.

Clair Miller and family of Auburn, Mark Murphy and family and Alva Coburn, were Sunday dinner guests in the Will Sauers home.

SPENCERVILLE

Gerry Wasson and wife were Sunday guests at the home of F. Wertman's.

Mrs. Matilda Oberholtzer of Harlan, was a Sunday guest of Frank Markle and family.

The Home Bureau will meet on Wednesday, February 11 at the home of Mrs. Agnes Baker.

The C. C. Club will be entertained Friday afternoon at the home of Mrs. Flossie Rhoades.

James Vallieu and wife entertained at Sunday dinner their son William and wife and Orla Woodring and family.

Earnest Steward and wife attended the funeral of the former's uncle, William Hursh, at Huntertown, Wednesday.

Word has been received here from Mrs. J. B Summers at Akron, Ohio, that she is very much improved from her recent illness.

John Zimmerman and wife of Fort Wayne spent several days here last week with their grandparents, Mr. and Mrs. John Bachmann.

Mrs. R U. Bowser was called to Fort Wayne Saturday by the death of her sister, Mrs. Claudia Boyer. The funeral was held on Monday afternoon.

Hall's Catarrh Medicine

Those who are in a "run-down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that while Catarrh is a local disease, it is greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years. Sold by all druggists.
F. J. Cheney & Co., Toledo, Ohio.

WOMEN
Like to Come to This Bank

There's a spirit of friendliness and cordiality about this bank that radiates and promotes a Good Will not found in a bank that is merely a stronghold of stone and steel. And that's why women make this their headquarters for their financial dealings. They like the cheerful atmosphere and the sincere courtesy. You too, will see a difference when you come in to get acquainted.

Farmers' & Merchants' State Bank
Spencerville, Ind.

Miss Margaret Lake is visiting relatives at Fort Wayne.

A. R. Stackhouse and wife were Sunday guests of William Stillhorn at Fort Wayne.

F. W. Silberg, wife and daughter nd Vinton Miller and family, were unday dinner guests of Mrs. ophia Miller.

Raymond Rodefer and wife of Auburn, called at the Jacob Baltz ome Saturday evening. On Sunday Will Summers and wife were guests.

The Ladies Aid of the Methodist church met at the parsonage on last Thursday in an all day meeting. Much sewing was accomplished. Potluck dinner was served.

The following were contest winners from the Horn school in the Springfield township corn contest, Bernard McNabb, Ora Smith and Herschel Zice won first. In the township spelling contest which was held at Harlan, Mary Driver, first and Charlotte Berry, third. They will enter the Allen county contest February 7th. Mrs. Zona Abel, teacher.

Mrs Catherine Markle, died on last Wednesday at her home of a complication of diseases, at the age of 70 years. She leaves to mourn her departure one daughter, Mrs. Rena Chapman of Fort Wayne, nine grandchildren and fifteen great grandchildren. The funeral was held Sunday at the Lutheran church, Rev. Steffey officiating. Interment in White City cemetery.

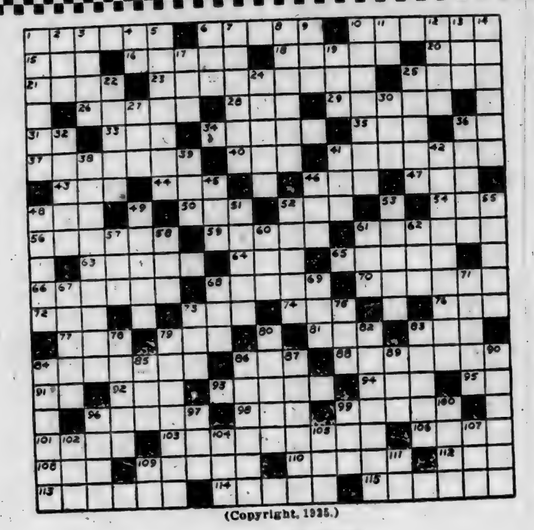
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

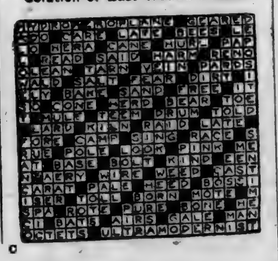
1—Rank
6—Paralysis
10—Relating to medicine or doctors
15—Single
16—Fierce jungle beast
18—To brown over a blaze
20—Bustle
21—American Indian of certain tribe
23—Vagrants
25—To pack compactly
26—Matrons
28—Soft plug
29—Deceives
31—Accomplish
33—A dark, viscous liquid
34—Roomy, flat-bottomed boat
35—To be ill
36—A measure of area
37—Unaccustomed
40—That which serves to solve or explain
41—Occupied
43—A metal
44—Corrode
46—Skill
47—Pig
48—Marry
50—Instrument of punishment
52—Unclose
54—Vigor
56—Wind instruments
59—Tranquility
61—A milk product
63—To bar
64—A grain
65—Frenzy
66—Undermined
68—Opposite middle of ship's side
70—Inclosed
72—In company
73—Wield diligently
74—To bow quickly
76—Goddess of Dawn
77—The whole
79—A digit
81—Fragment
83—Beast of burden
84—Dealt with
86—Convulsive gasp
88—Sisterhood
91—The man
92—Insect
93—A principle held as true
94—Contest by force
95—I disagree
96—Fraudulent
98—Solemn promise
99—Tidy; spruce
101—Close to
103—One who frees
106—Father of the gods
108—To call out
109—Less covered
110—A rough
112—Wrath
113—Church holiday
114—A small carnivore
115—Hidden

Vertical.

1—Curves
2—An insect
3—Urgent want
4—The thing
5—To extend from a common point in different directions
6—A wooden pin
7—South American Indian
8—Dull; stupid
9—At a distance
10—Proceeding
11—In, on, by or near
12—Rodents
13—Artificial language based on Esperanto
14—Craven
17—A vapor
19—Augment
22—The Devil
24—Uncovered
25—Word of unknown meaning occurring often in the Psalms
27—Genus home
30—Swine
32—Aquatic, fur-bearing animal
36—A shield or protection
38—Highest horizontal timber in a roof
39—Spike
41—Before
42—Woman teacher in private household
45—Highest point
46—To nimble
48—Bad in the highest degree
49—Go in
51—Famous English race
52—Nearly three-quarters of the earth's surface
53—A cold
55—Repairs
57—Cleopatra's last resort
58—Turf
60—An affirmative
61—Small vessel
62—Illimitable period of time
67—Conscious
68—A forbidden drink
69—Rabble
71—Dyestuff
73—A number of animals in a group
herd or flock
75—An underworld god
78—Work
79—Pertaining to tiles
80—Manifestation of respect or reverence
82—In the direction of
83—The great aatery
84—From there
85—To pull vigorously
86—Harsh
87—To have a care for
89—Pad worn in a woman's hair
90—A verse form
90—Garlands bestowed for victories
97—A title of respect
99—At this time
100—The primeval body from which the gods created the world
102—Epoch
104—Implore
105—Small child
107—Natural compound of metals
108—Exist
111—You

The solution will appear in next issue.

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Blind People's Sense of Touch Gets Tired

Touch the second sense the blind turn to (after hearing), has been perhaps most in the spotlight, but at the same time easily the most overrated of all the senses they utilize. First of all, it has a fatigue factor second only to smell, as tactile reading, its most conspicuous application, demonstrates.

Apparently, it should be as easy to read lines of embossed characters with the finger tip as it is lines of printed characters with the eye, once the alphabet is mastered. But it is not. Touch simply tires out.

In my own case (and I have been reading by touch 18 years), says Charles MaGee Adams in the Atlantic Monthly, two hours is the extreme limit for continuous reading and long before that the end organs are so irritated and there is such a general restlessness that it is most difficult to proceed.

The general usefulness of touch is also limited by the fact that it is a motor sense; by which I mean that the fingers must be moved over the surface of an object, instead of merely brought in contact with it, if an impression is to result. Many of the seeing show they are not aware of this when they simply place the hand of a blind person on an object.

Reach, too, sets sharply defined bounds to touch's perspective, often resulting in a warped or fragmentary concept of an object, as Kipling's story of the six blind men and the elephant aptly illustrates. It is quite impracticable to touch many objects such as moving machinery, hot metal or live wires, at all—which restricts the usefulness of the sense still further.

Preserving Book Bindings

The bureau of standards advises that the application of a thin coating of egg albumen to the leather binding of the books will prevent decay. The use of ammonia for diluting and preserving the solution should be avoided, but the whites, after a thorough beating, may be made antiseptic by the addition of a small quantity of camphor, thymol or some essential oil. Vaseline is also satisfactory in some cases as preservative for leather book binding.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

CATARACT

THE eye is a photographic camera, or, rather, the camera is an imitation of the eye. The light rays enter the camera through the lens and fall on the film or plate. The same arrangement exists in the eye. The eyelids are the shutters; the crystalline lens is the focusing machinery; the retina is the plate. If the lens in your camera became cloudy or opaque, you couldn't take a picture. If anything happens to the crystalline lens in the eye so that the light cannot pass through it, then that eye cannot see, because no light can reach the retina.

The old Greeks and Romans thought that vision was located in the lens. When it became thickened and white, they thought that water had fallen down in front of the lens, so they called this waterfall by its Greek name, cataract. We now know that this thickening is not in front of the lens but in the lens itself or in the capsule or envelope which surrounds it.

This thickening of the lens often occurs in old age. Just why the lens thickens in old age we do not know. It may be one of the changes due to age, like gray hair. But many old people never have cataract. It is sometimes found in young children. It may be caused by other conditions, such as diabetes, Bright's disease, poisoning, injury or eyestrain.

It is especially frequent in persons exposed to high degrees of heat, such as glass blowers and furnace workers. It is sometimes hereditary.

In the beginning the clear, transparent lens becomes spotted, or streaked with white bands, the vision is weakened or the patient may see double, or may see black specks. One peculiar symptom is that the patient can see better in the twilight than he can in bright daylight. The white spots and bands slowly increase, the pupil becomes white and the patient gradually becomes blind.

Cataract may affect one or both eyes or it may attack the eyes successively. It may become stationary at any time, leaving the sight impaired but still present to a considerable degree, or it may rapidly develop in both eyes until the patient is completely blind.

Cataract does not destroy sight. It forms a tight-proof shutter in the front of the eye. If the thickened and useless lens is removed, sight can be restored. This is done by the eye surgeon, who nicks the conjunctiva, which covers the eyeball, cuts through the envelope which surrounds the lens and pops the hardened lens out through the opening just as the cook pops peas out of their pods.

But this cannot be done successfully until the cataract is "ripe," that is, until the lens is hard enough to pop out in one piece. If done too soon, it won't come out clean; if too late, it may have grown fast. The eye surgeon can tell when the right time comes.

When the cataract is removed, the light can get into the eye. But the patient can't focus. So he has to have artificial lenses in the form of glasses to focus the light rays on the retina.

ARE RIPE OLIVES DANGEROUS?

THREE outbreaks of botulism poisoning from canned ripe olives occurred in 1924. The reports of these cases in the newspapers have again aroused doubt in the public mind. Are ripe olives a dangerous food?

A series of cases of botulism during 1919 and 1920 had a marked effect on the purchase and consumption of ripe olives. The California fruit and vegetable growers and canners did everything in their power to improve and safeguard their goods. They asked the help of the state and national health authorities. They spent large sums for experts. They improved their methods of canning. They did every thing possible to reassure the public. With the reassurance, millions of cans of ripe olives have been purchased and eaten. Three cases of poisoning in a year is, of course, a very small number. But what the individual purchaser and housewife wants to know is: "How can I know that I am not going to get one of these three deadly cans?"

To answer this question, the bureau of chemistry of the Department of Agriculture has made a second survey, which has just been reported in the December issue of the American Journal of Public Health." Nearly 3,000 sample cans of olives put up by 20 packers from 30 states were examined.

Spoiled or suspicious cans were not confined to any particular packer or to any special locality. Spoiled samples included those whose contents were off color or had a suspicious smell, where the olives were soft or the liquid colored. In some cases, the cans were rusty or corroded inside, bulged or contained gas. Some of these cans had remained on the dealers' shelves for several years.

Summing up their findings the government experts say that canned ripe olives that are free from odor, softening or discoloration, and where the cans are not bulged out, are not dangerous.

Don't buy any canned ripe olives unless the year of packing is marked on the can. If the olives are soft, discolored or have a suspicious odor, throw them out. Don't take any chances.

SENATE KILLS SIMS' BIBLE BILL

Provided Also for Teaching of Constitution in Schools.

Indianapolis.—By a vote of 26 to 20, the senate put to death the Sims bill, providing for the reading of the Bible without comment and the teaching of the Constitution in the public schools.

Another of the so-called "Americanization and education" measures hit the rocks when the Indiana senate voted for indefinite postponement of the Sims bill, which would have required graduation from the public schools and commissioned high schools of the state as the qualifications for teachers. The vote was 41 to 5 against the measure.

Report on $1,000,000 Bond Sale.

Before the close of the session Senator James J. Nejdl, (Lake, Rep.), introduced a resolution requiring the state board of agriculture to file a report within five days with the secretary of the senate showing what became of the money raised by sale of $1,000,000 worth of bonds authorized by an act of the 1923 legislature. The resolution was passed by unanimous vote.

House bill 50, introduced by Representative Cooper (Vigo, Rep.), which would prohibit teachers in the public schools from wearing any religious garb or emblem—a bill similar to the Sims senate bill, which was killed by that body—was withdrawn by Representative Cooper.

With amendments of considerable importance the committee on agriculture in the house of representatives recommended the passage of the Hull Murden co-operative marketing bill and the house adopted the recommendation of the committee, thus advancing the bill to second reading. The bill had previously been printed and was on the desks of the members.

Senator Moorhead's bill to require the state department of conservation to provide honorably discharged soldiers, sailors and marines with permits to fish and hunt, when they are requested, passed by a vote of 41 to 0. Now it goes to the house.

Chiropractic Bill to House.

Overturning a majority report of the committee on state medicine and public health, which recommended the indefinite postponement of the DeHaven (Marion, Rep.) bill to establish a state board of chiropractic and legalize the practice of chiropractors, the house adopted a minority report of the committee and sent the bill to second reading.

The Wright "bone dry" bill, which was on second reading and which ran the gauntlet of many attempted amendments, was not handed down during the session for the lack of time.

The session was also featured by the forwarding toward passage of the farmers' co-operative marketing bill; the withdrawal of three bills from the legislative mill, including the bill against the wearing of a "religious garb" by teachers in the public schools, and the killing of five bills by the committee report route.

Gas Tax Increase.

Representatives James W. Ebaugh (Marion, Rep.), and John G. Hammitt (Jay, Rep.), introduced a bill to increase the gasoline tax to 4 cents and to provide for the following distribution for the revenue, one-half to the state highway commission, one-fourth to the counties equally and the remainder to be distributed to the counties by a board consisting of the governor, secretary of state and state treasurer on the basis of the county road mileage.

The first legislative step in saving the First Baptist church and the Second Presbyterian church and making them a part of the World War Memorial plaza was taken when a bill to prevent the erection of the main memorial structure in the same block with the churches are located, was passed by the senate by a vote of 47 to 0.

INDIANA STATE NEWS

Indianapolis.—A detailed statement of the receipts and disbursements of the state board of agriculture, with particular reference to the funds derived from a bond issue of $1,000,000 and of a one-fourth cent tax levy, authorized by the general assembly of 1923, is ready for submission to the senate, it was announced by Edward J. Barker, secretary of the agriculture board.

Indianapolis.—Russell T. Byers, Indianapolis, vice president of the American Central Life Insurance company, was elected president of the Insurance Federation of Indiana at a meeting held in the Claypool hotel. H. L. Barr, Indianapolis, was elected first vice president and appointed to have charge of the arrangements for Indiana Insurance day next year.

Indianapolis.—James A. (Big Jim) Lucas, age forty-two, alleged whisky runner and a former policeman, died at the Methodist hospital from a bullet wound which he received when he was shot at his home. Before he died he told police two bandits held him up at the door of his garage and one of them shot him when he refused to put up his hands.

Spencer.—Mr. and Mrs. H. J. Giles observed their fiftieth wedding anniversary at their home near this city. Mr. Giles is seventy and his wife sixty-eight.

REPORT OF SURVEY BODY

Indianapolis.—To bring about more efficient operation and coordination of effort in state government, many changes are recommended in the report made to Governor Jackson by the special survey committee he named shortly after the election last November. The report was printed and placed on the desks of the members of the general assembly. The major recommendations are:

Creation of a state board of safety to include five divisions—department of state police, department of factory inspection, department of boiler inspection, department of fire prevention and department of women and children in industry. The police department would absorb the present fish and game warden service and oil inspection and the police would be given full police powers.

Extension of the budget to all state departments and institutions and the abolition of special tax levies.

Reduce state industrial board from five to three members and make the duties of the board purely judicial.

No change in the state department of public instruction. Suggested that effort be renewed to amend the state constitution so state superintendent of public instruction will be appointive instead of elective.

Transfer of legal activities of various state departments to the office of attorney general.

No change in management of the professional boards, except that they operate under the budget.

Oppose central boards of control for state benevolent and correctional institutions.

Broadening the powers of the budget commissioner to enable him to observe the activities of all state institutions.

Placing the state sanitarium at Rockville under the control of the medical school of Indiana university.

Abolition of the board of trustees of the farm colony for feeble-minded at Butlerville, placing this institution under control of the school for feeble-minded youth at Fort Wayne.

Consolidation of the state library, the state law library, the public library commission, the historical commission and the legislative reference bureau into one department to be known as the Indiana library department.

Revision of the state joint purchasing board, now limited to purchases for state institutions, to make it a state purchasing board of seven members, consisting of the governor, the auditor of state, four institutional trustees or superintendents to be named by the governor, and a seventh member to be named by the governor to serve as secretary. All purchases of materials and supplies for all institutions and departments would be made by the board, except such articles and supplies as the governor may give some department or institution to make individually. This would include materials used by the highway commission. The board of public printing would be abolished and its work done by the purchasing board.

No fundamental change is recommended in the operation of most of the more important state departments, such as the highway commission, the public service committee, the state board of tax commissioners and the conservation commission.

Indianapolis.—An annual increase of $3,000,000 in the revenue of the state highway commission for the next two years is requested in the budget report filed with Lawrence F. Orr, state examiner of the board of accounts, and Ure M. Frazer, budget clerk. The highway commission's report does not suggest the method to be used by the legislature in providing the additional revenue but does set out the estimated receipts which will be received by the department during the next two years from gasoline tax, automobile license fees, inheritance tax and federal aid.

Jasonville.—The novel idea of a highwayman holding up motorists at the point of a shotgun in order that he might get their names to promise them money was disclosed at Jasonville and lead to the arrest of Pink Pierson. Pink told his "victims" that he was giving his money away in large lumps. He would take the license number of the victim's machine and then give the motorist his name and promise. Pierson will be taken to an asylum.

Boonville.—The death of George Maurer at Evansville breaks the ranks of a sextet of men who bound themselves together to meet annually more than 21 years ago. The members of this sextet have been meeting in reunion for 21 years and at each reunion every one of the six men were present. On March 1, 1903 at De Gonia Springs in this county, the young men entered into an annual agreement,

Evansville.—A plan altering the present method of enumeration of school children, which might cause Evansville to lose its place on the state board of education, will be laid before members of the board by J. O. Chowning, superintendent of public schools, it was learned. If the plan meets with the approval of the board a bill will be drafted for presentation to the state legislature.

Indianapolis.—Chester Hause, twenty-nine years old, whose wife and two children were killed the night of October 22, 1924, in an automobile crash, broke down while on the stand testifying against John Strothenk, confessed driver of the death car, on trial in Criminal court for manslaughter.

Vincennes.—Ferry service between Vincennes and Illinois across the Wabash is to be started soon. The Wabash river bridge, condemned several years ago, was put out of the service by the state highway commission

Tanlac added 20 pounds

"Seven years' stomach trouble cost me lots of money, but 6 bottles of Tanlac made me a well and happy man. I have gained 20 lbs.—never felt so well!"—Otto Segrin, Portland, Ore.

TANLAC is Nature's greatest tonic and builder. Made from roots, barks and herbs after the Tanlac formula, it revitalizes the blood, tones up the digestive organs and puts the whole system in fighting trim.

Don't go about your work sickly and discouraged. Follow the example of millions who have been helped by Tanlac. Stop at your druggist's today and get this wonderful tonic. You'll be surprised how quickly you start to improve.

CHAPTER V—Continued

—23—

"We've done campaigning, both of us," he said. "I read of you when you led your regiment into Germany. I was in a trench myself for five days at a stretch. Those things don't really matter. Five days was quite long enough there in the mud. We didn't worry about soap then. Get on with it, please."

Number Twenty-nine closed his eyes as he shed his last garments. Then he drew on Gerald's. Presently the governor laughed.

"Upon my word," he declared, "it is better than I thought. I have ordered the barber into the next cell. He is a prisoner himself, so there is not much chance of his blabbing. Come along. We will be back in five minutes," he added, turning to Gerald. "In time to take your orders for lunch, eh? Give you time to settle down."

They passed out. Gerald felt a queer sense of loneliness as the door closed behind him. He looked around him half fearfully. Everything was worse than he had feared. The floor was of concrete, and there was not a single article of furniture of any description in the room except a straw mattress already full of holes. The floor had apparently not been swept for weeks. While he sat there, however, there was the click of a key in the door and a burly Russian entered. Without a word he commenced some effort at cleansing the place. When he had finished, he threw in a rug and disappeared. Gerald breathed a little more freely. Then he heard footsteps outside again. The governor and Number Twenty-nine entered, the latter curiously changed in appearance.

"By all the saints," the governor chuckled, "I never realized that the barber was so wonderful a person! This little scheme of mine marches well. Now, then, for your share."

He handed a fountain pen to Gerald, who indorsed the draft he had brought, wrote out a further check for a thousand pounds, and handed them, together with his American passport, to Krossneys. The latter thrust a document into Number Twenty-nine's pocket.

"You may not know it," he said, "but you are now the owner of five hundred acres of forest where oil may some day be found."

He roared with laughter. Neither of the young men moved a muscle.

"Now, listen, both of you," he went on, "the only automobile in the town awaits me outside. We depart in a minute. Say your farewells, you two. At one o'clock tomorrow morning," he concluded, turning to Gerald, "you will be moved into cell '101,' and later you will go to attend your own funeral. From now until one or perhaps half-past one tomorrow morning, you will have to make the best of it. I will come and superintend your removal myself and let you know that all is well."

"I shall try to sleep until then," Gerald announced. "I am very tired."

"You shall have a little meal in my office in the intervals of being changed," the governor promised him. "I shall lock the door and no one will know. Now, Mr. Harmon P. Cross, please, American speculator who has bought my oil fields, come with me. I am going to drive you to the train."

Number Twenty-nine held out both his hands to his deliverer. There was a simple dignity in his few words.

"Sir," he said, "I know nothing of you, but my life will not be long enough for me to express my gratitude. The day after tomorrow—"

"The day after tomorrow there will be much for us to talk about," Gerald interrupted. "What I have done, I have done joyfully. So far, it has been much easier than I expected."

The governor and his charge took their leave. The door closed behind them. Gerald heard their footsteps die away on the paved floor. He threw himself down on the mattress and tried to sleep. It was an impossible task but there was plenty to think about. At one o'clock the same burly Russian entered, bearing a bowl of something which was half stew, half soup. Gerald smelt it, looked at it, and set it in a distant corner of the room. Then he walked back and forth, counting how many paces it took him from wall to wall. Presently, with a throb of joy, he remembered his cigarette case. He smoked two cigarettes. Afterward, he dozed for a little time. Toward evening, he amused himself trying to make his predecessor's daily jump. It was not until the seventh attempt that he succeeded, and then the rust of the bars cut so deeply into his palms that he let go almost at once. At eight o'clock, the Russian appeared again with a bowl of soup similar to the last. Gerald waved it away.

"Not hungry?" the man asked in German.

Gerald shook his head. Somehow or other, it was a relief to find that he was not shut out altogether from communication with the outside world.

"You speak German, eh?" he asked.

The man shook his head.

"Few words."

"Bring me something better to eat," Gerald begged. "Can't I have some beer?"

The man held out his hand and Gerald filled it with silver. He disappeared and returned presently with two bottles of beer concealed in his baggy trousers, and a loaf of bread.

"Not understand this," he said, shaking his head. "Where Number Twenty-nine gone?"

Gerald shook his head.

"Better ask no questions until the governor comes back," he enjoined.

"No fear talk," the man declared with a laugh. "Governor given me twenty marks. If talk, I get twenty lashes instead. Goodnight!"

He departed finally, closing and locking the door behind him. Gerald ate some bread hungrily and drank the beer. Then for a time he dozed. When he woke up and looked at his watch, it was twelve o'clock. Very soon he would begin to expect the governor. He sat up on the mattress with his back to the wall. Between twelve and one o'clock he looked at his watch twenty times. One o'clock came and passed; half-past one. Then he rose to his feet and began pacing the cell restlessly. Two o'clock came; half-past. He held his watch in his hand now, to save himself the continual dragging it out from his pocket. The great fortress apparently slept. There was no sound anywhere. Only time went on. Three o'clock arrived and passed—four—five! Presently streaks of daylight began to appear. At six o'clock at last there were footsteps outside. The warder entered once more. This time he carried a jug of hot liquid.

"Tea," he announced, "from kitchen Give me something."

Gerald gave him more silver. The tea was the color of straw and water, but the faint smell of it was refreshing.

"Where is the governor?" he asked.

The warder shook his head.

"Not ask questions," he begged. "Governor not here."

Gerald pulled himself together and dismissed the man. He drank the tea slowly. Once more he sat down on the mattress. The room now was a little lighter. He could see as far as the opposite wall. He sat down and waited. Every nerve in his body seemed tingling. He tried to keep his mind off the subject of what could have happened to detain the governor, to turn his thoughts back to England. He suddenly found himself by the roadside, watching the mending of the puncture, looking impatiently along the white ribbon of road which led to Cannes, and, beyond, to Monte Carlo, where the lights were burning and the violins were playing their pagan overture. He saw Myrtile's pale, terrified face gleaming out against the background of the cypress trees, heard her pathetic story throbbing in the pine-sweetened stillness. He remembered their drive. All those things seemed part of another world. He remembered those few furious moments when Christopher had taken her from his arms. A faint feeling of shame crept over him as he sat there, huddled up. Then, with a rush, came the memory which swept everything else out of his mind. He saw Pauline, felt the disturbance of her presence, remembered the slow ebbing away of her pride, her first few kind words, the half-spoken promise. What was there about her, he wondered vaguely, which had brought him, with all his experience, so completely to her feet? She had shown him no kindness. She had not even been gracious. He had read dislike in her eyes more often than any other feeling. There remained, too, the pitiless truth that all the favors he had won from her he had bought, indirectly if not directly. Yet there she was, ruling over his life, the one sweet, dominant figure, for whose sake he sat in these miserable clothes, a forgotten figure—perhaps, even, in danger." He took out his watch with trembling fingers. It was ten o'clock. His thoughts mocked him now. He could find no escape by means of them. He could think of nothing but the present. Something had gone wrong with their plans. What would it mean for him? Not a soul in the world knew where he was. If he had a name at all here, it was the name of the man whom the people of Russia had once threatened to tear limb from limb.

At last there came a little stir, an unaccustomed sound of voices. Presently he heard footsteps outside, the key turned in the lock. His heart turned sick with disappointment—it was the warder alone! Gerald dug his hand once more into his pocket. This time he brought out a note. For some reason or other he was terrified. Even the stolid features of his visitor seemed disturbed.

"Where is the governor?" Gerald demanded. "See, there is this note if you will go and fetch him."

The man returned to the door and shook it to be sure that it was fastened. Then he came back to Gerald.

"A strange thing has happened," he said. "There is a German woman in the town. Last night the governor spent at her house. They were both drunk. They quarreled. Elsa killed him. The governor is dead."

Chapter VI

The telegram was brought in to Lady Mary as she sat alone in her little sitting-room, in the hours between ten and the dressing bell—hours which, so far as possible, especially during the last few months, she tried to keep to herself. It had been handed in at a branch office in the north of London and contained the news for which she had been waiting:

"Elected majority two thousand heartiest thanks for good wishes.

"CHRISTOPHER."

Her first impulse was one of genuine pleasure. She started to her feet, meaning to take it to her father, who was with Myrtile in the library. Then she stopped short and slowly resumed her seat. That little orange-colored form might have meant so much more, so much food for her ambitions, her natural and proper ambitions for the man she loved. It might have been such a pledge for the interest of their life together, such a wonderful life, brimful of movement and color in which she, too, might well hope to take a part. In her quiet way, she had for years looked upon her marriage with Christopher, sooner or later, as a certainty. Without the slightest desire in any way to mislead her, Christopher had subconsciously encouraged the idea. She knew perfectly well that, as soon as his position was a little more assured, he had intended to ask her to be his wife. It was one of those pleasant yet wonderful arrangements which seemed to develop automatically. Christopher was well born, his friends were her friends, his disposition accorded with hers. She could never have married an idle man. Christopher had many a worthy ambition. She was precisely the wife to further them. Her money and her social influence would save him years of fruitless labor. He could leave the bar whenever he liked, and turn his whole attention to politics. And now the dream had crumbled. This slip of paper was nothing but a friendly message, telling her of the success of a friend with whose career she had no intimate concern. Her disposition was too kindly not to feel a certain amount of pleasure at his success, but that very pleasure brought its shadow of personal grief. She sat looking into the fire, twisting the little slip of paper in her hands. She knew very well that she was cursed with that one terrible and self-mortifying virtue, the unalterable fidelity of the woman who permits in her mind the thought of one man only and who can never replace him. The very thought of marriage with any one but Christopher was revolting. It seemed to her, as she sat there, that she was doomed to a career of loveleasness and inutility. She might labor in good works till her hair was streaked with gray and her face lined, and she knew very well the fruitlessness of all that she would accomplish. The best work of a woman, as she well knew, is the work done for the man she loves.

It was perhaps natural that her thoughts should turn to Myrtile. She wondered for a moment, slowly and painfully, at the instinct which had warned her of coming trouble when the two young men had told her of their adventure. She had felt it when first she had seen the frightened child, whose unspoken appeal for protection had met with so cold a response from her. She had been conscious of a cruelty wholly foreign to her nature, in those days at Monte Carlo, whenever the name of Myrtile was mentioned. She had puzzled Christopher and her brother alike by her lack of sympathy. Well, she was punished now. The child had justified all that she had felt. She had robbed her, unconsciously and unwillingly, of the greatest thing in life. As she sat there, the telegram crumpled up in her fingers, all that old hardness came back to her. It seemed to her a bitter thing that this unknown child should have been brought into the august household in which her own serene days had been spent, to rob her, the benefactress, of the crown of her life, to draw the sunshine from her days and send her down to a joyless grave. For a moment she was on the verge of a passion. She hated Myrtile, hated the sight of her gentle movements, the thought of her and all to do with her. She rose to her feet with an unaccustomed fire in her eyes and swung round—to find that the slight noise which had disturbed her meditations had been caused by the entrance of Myrtile herself.

(TO BE CONTINUED.)

Historic Battle

The name Battle of the Giants is given to a battle fought at Marignano (now Malegnana), near Milan, September 13-14, 1515, between the allied French and Venetian forces under Francis I of France, and the Italians and Swiss, commanded by the duke of Milan. The battle was hotly contested and resulted in a victory for Francis. The total number of slain is said to have exceeded 20,000. Trivulzio, who had been present at 18 pitched battles, called them all child's play as compared with this "battle of giants."

HOW GREAT MEN MAKE LOVE

AS REVEALED BY THEIR LOVE LETTERS

By JOSEPH KAYE

(© by Wheeler Syndicate, Inc.)

SIR WALTER SCOTT AND CHARLOTTE CARPENTER

"SHE is not a beauty by any means, but her person and face are very engaging."

This was how Scott, the Scotch novelist, described his sweetheart, Charlotte Carpenter. But despite his modesty on her behalf, Charlotte was a very fair girl and a bright person, a brunette with a mischievous eye. She was Scott's second love, his first sweetheart having jilted the raw literary beginner in favor of a learned professor. Charlotte's real name was Charpentier and she was a French girl whose relatives resided in England. Her French spiritedness is shown in this letter to her fiance:

"If I could only believe that my letter gave you half the pleasure you express, I should almost think, my dearest Scott, that I should get very fond of writing merely for the pleasure to indulge you—and that is saying a great deal. I hope you are sensible of the compliment I pay you and don't expect I shall always be so pretty behaved. You may depend upon me, my dearest friend, for fixing as early a date for the wedding as I possibly can; and if it happens to be not quite as soon as you wish, you must not be angry with me.

"It is very unlucky you are such a bad housekeeper—as I am no better. I shall try. I hope to have very soon the pleasure of seeing you and to tell you how much I love you; but I wish the first fortnight was over. With all my love, and those sort of pretty things, adieu. CHARLOTTE.

"P. S. Etudiez votre Francais. Remember you are to teach me Italian in return; but I shall be but a stupid scholar. Aimez Charlotte."

THE WEBSTERS

THERE was a delightful camaraderie between Mr. and Mrs. Daniel Webster. Mrs. Webster had been Miss Grace Fletcher, the daughter of a minister of Hopkinton; the great American statesman had married when his future was already assured and thereafter they shared the fame that came to them.

"My dear love—" writes Webster from Washington, recounting his actions for the previous day, "Mrs. Brown gave her first party last night and having occasion to go to the President's I called on my return. It was the assemblage fully much of a Washington party of last year. Mrs. Johnston was there and spoke of you with great kindness and inquired for you very particularly. . . . Many other ladies (and gentlemen too!) asked after your welfare with much apparent interest and one of them pronounced you a favorite of the whole city."

Two days later came another missive, containing another report and:

"My dear love, . . . I send you a little package in which, when you have taken all the wrappers off and opened it, you will find two little bits of articles designed as presents (they were diamond pins). One of them, if you will like, you will place in your own cap; and the other in Col. Page's ruffle. Give him a box on the ear and tell him to be a good boy. . . . If you do not fancy yours you can return it to me in the same little box and I will take it back again. . . . Now adieu, my love.

"D. W."

GARIBALDI AND ANITA

IN ONE of the most critical points of his career love for his wife Anita was yet so predominant in his heart and mind as to move Garibaldi to send this exquisite letter to her:

"Your face, my little one, is with me every hour, encouraging and soothing me when my heart sinks low with fears of what may be. I thought I had tasted all the sweetness of love's cup when I first embraced my Anita, the mother of my children, in a silence that was an ecstasy; but now I know that there are peaks higher than the Alps and that there is a heaven higher and purer and sweeter than any I first explored in the ardor of my youth.

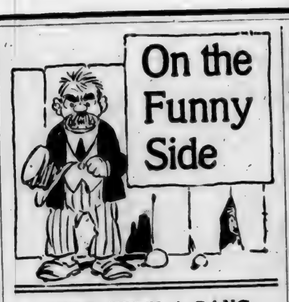
"God keep you, my darling, and restore me to your arms."

Garibaldi, Italy's idolized patriot, met his Anita when he was campaigning in South America and she was his inseparable companion until her death.

Stones in Odd Places

Stones are now and again met with when sawing up trunks of teak, rosewood and certain other trees. These masses are embedded toward the center of the stem, and it has sometimes been thought that they got into their position when the tree was young, and as time went on having become inclosed by the growing wood. Of course, such things do happen in the life of trees, for not only stones, but pieces of iron and other metals have been found. The stones under consideration, however, are produced by the tree itself and are closely similar in their formation to pearls. These vegetable pearls are almost entirely carbonate of lime.—Scientific American.

On the Funny Side



TOLD WITH A BANG

George Ade, at a dinner in New York, urged a subtler use of words. "Use words with delicate care," he said. "Observe all subtle distinctions. Never write 'vision,' for instance, when 'sight' is what you mean."

"There's no difference between 'sight' and 'vision'," interrupted an editor.

"No?" said Mr. Ade. "And yet, Billy, when you and I passed each other on Broadway yesterday, the girl I was with was a vision, while the one with you was a sight."—Everybody's.

Cause for Distinction

"That is the Hon. John Windiddy going by," said the landlord of the Petunia Tavern. "He is regarded as one of our most distinguished citizens."

"Ah, yes! And for what is he distinguished?"

"Hanged if I know! Probably for the fact that the cat did not suck his breath when he was a baby."

NOT REMARKABLE SOIL

Smith—Last Monday I planted three rows of potatoes, and they were all out of the ground next day.

Neighbor Jones — Unbelievable — wonderfully productive soil!

Smith—No—your wonderfully industrious chickens.

Hard to Tell 'Em Apart

He saw grandma
And up and kissed 'er;
The foolish fellow
Thought 'twas sister.

He Wasn't Afraid

"Get out of my way, feller," said the fresh city automobilist to the rough miner, "before I run into you with my sixty-horse motorcar."

"I haint' got no sixty horse," returned the miner, "but I got a 45 Colt right handy here, and let's see you get by it."

STRICTLY FRESH

First Cold Storage Egg—You don't like him?

Second Cold-Storage Egg—No, I don't, he's too fresh for me.

Thankful

"If conscience speaks when I do wrong,"
Said Willie in great glee,
"I'm glad it doesn't speak to me
But only speaks to me."

Asks Slickem to Speed Up

Mr. Slickem—My dear, I am afraid we are going to be forced into bankruptcy again.

Mrs. Slickem—Well, do it right away, then, Henry, so you will have everything settled in time for me to wear my jewels to the annual club banquet.

True

"Why, is it only one o'clock? I thought it was two," said the mistress as the clock gave a single stroke.

"No, mum," said Bridget, "it's niver later than wan at this toime of the day."—Boston Transcript.

Adoring the Devil

First Critic—What do you think of that young artist's painting of Satan.

Second Critic—The devil's not so bad as he's painted.—Yale Record.

Caught in the Wreckage

Rub—Hear about Jones? He was drowned on a camping trip.

Dub—How did it happen?

Rub—His folding bathtub unfolded while he was taking a bath.

All Right, Then

Guard (to prisoner, a former lumber agent)—Yes, you are condemned to death. Have you any last wish?

Prisoner—It would delight me if my firm were allowed to furnish the gallows.—Sondags-Nisse (Stockholm).

Less Expensive

"Jack, before we were married you always took me home from the theater in a taxi."

"True enough, my dear, but now we can do our hugging at home."

S.S.S. keeps away Pimples

THERE are thousands of women who wonder why their complexions do not improve in spite of all the face treatments they use. They should not continue to wonder. Eruptions come from blood impurities and a lack of rich blood-cells. S.S.S. is acknowledged to be one of the most powerful, rapid and effective blood cleansers known. S.S.S. builds new blood-cells. This is why S. S. S. routs out of your system the impurities which cause boils, pimples, blackheads, acne, blotches, eczema, tetter, rash. S. S. S. is a remarkable flesh-builder. That's why underweight people can quickly build up their lost flesh, get back their normal weight, pink, plump cheeks bright eyes, and "pep."

S. S. S. is sold at all good drug stores in two sizes. The larger size is more economical.

S.S.S. The World's Best Blood Medicine.

Do Not Hesitate

She—"Do you believe in love at first sight?" He—"Sure. Why be formal?"—Smart Set.

The housewife smiles with satisfaction as she looks at the basket of clear, white clothes and thanks Red Cross Ball Blue. At all grocers.—Advertisement.

Fable

Once upon a time there was a man who told a girl she was the first woman in his life. She was.—Life.

Are You Weak? Nervous? Rundown?

Rocky Comfort, Mo.—"I can recommend Dr. Pierce's Favorite Prescription for women who are in a nervous and rundown state. When I had become weak, rundown, and in a nervous state I took Dr. Pierce's Favorite Prescription and found it very helpful in giving me strength and quieting my nerves. The 'Favorite Prescription' is a splendid building-up tonic."—Mrs. Earnest Kimbrough.

If you want to be well, ask your dealer for this Prescription, in tablet or liquid form. Write Dr. Pierce, Buffalo, N. Y., for free advice.

Tells How to End Night Coughing

To quickly stop hacking, irritating coughing at night, a very simple treatment may be had that often enables you to sleep the whole night through undisturbed almost at once.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring, and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action. It not only soothes and relieves irritation and soreness, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. So no matter whether your cough is dry and tight, or loose with much mucus, the coughing soon stops, you can usually sleep your accustomed time without a break, and the whole cough condition goes in a very short time.

The prescription contains absolutely no narcotics or other harmful drugs. Instead of merely benumbing the nerves, it actually helps the system to throw off the trouble in a perfectly natural way. Furthermore, it is very economical, the dose being only one teaspoonful. It is highly recommended for coughs, chest colds, tickling, hoarseness and bronchitis, and is wonderful for children's coughs and spasmodic croup. On sale at all good druggists. Ask for

Notice to Non-Resident Defendants

State of Indiana
County of DeKalb
In the DeKalb Circuit Court
December Term 1924
Cause No. 13364
In Partition.

Edward Pflaumer, Executor of the Last Will and Testament of E millus Case, deceased
vs
William L. Hollabaugh et al.

Comes now the plaintiff, by H C. Springer, his attorney, and files his complaint her in, together with the affidavit of a competent person that the defendants Martha E. Dilley, Frank Case, I B Case and Berton Case are non residents of the state of Indiana and that this said action if for the purpose of partitioning certain real estate in DeKalb county, state of Indiana, which is described in the said complaint herein and which said real estate is described as follows, to wit:

The east half (½) of the north east quarter (¼) of section twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east.

Also the northeast quarter (¼) of the southeast quarter (¼) of section twenty-one (21) in township thirty-three (33) north, range fourteen (14) east.

Also the southeast quarter (¼) of the northeast quarter (¼) of section twenty-one (21) in township thirty-three (33) north, range fourteen (14) east.

Notice is hereby given said defendants named above that unless they be and appear on the 4th day of April, 1925, being the 30th day of the March Term 1925 of the DeKalb Circuit Court, at the court house in the city of Auburn, DeKalb county, Indiana, and answer or demur to the said complaint the same will be heard and determined in their absence.

In witness whereof I have here unto set my hand and affixed the seal of the Court at the office of the Clerk thereof in the city of Auburn, Indiana, this the 27th day of January, 1925.

J. H. KNAUER
Clerk of DeKalb Circuit Court.

H. C Springer,
Attorney for plaintiff. 6t3

Notice of Executors Sale of Real Estate

State of Indiana
County of DeKalb
In the DeKalb Circuit Court
Decembe Term 1924
In the Matter of the Estate of Emillus Case, deceased.
Proceedings to Sell Real Estate

The undersigned Executor of the Last Will and Testament of Emillus Case, deceased, hereby gives notice that pursuant to the terms and conditions of the Last Will and Testament of the decedent and to an order of the DeKalb Circuit Court of Indiana, he will on Saturday the 28th day of February, 1925 at the office of Henry C Springer at Butler, DeKalb County, Indiana, at the hour of 2 o'clock P. M. on said date, and from day to day thereafter at the same hour and place until sold, offer for sale at private sale, at not less than the full appraised value thereof, the following described real estate owned by the said Emillus Case at the time of his death, and located and situated in DeKalb County and State of Indiana and described as follows, to wit:

The west half (½) of the northeast quarter (¼) of Section Twenty-eight (28) in township thirty three (33) north, range fourteen (14) east

Also the east half (½) of the northwest quarter (¼) of section twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east.

Also that part of the northwest quarter (¼) of the southeast quarter (¼) of section twenty-eight (28) in township thirty-three (33) north range fourteen (14) east that lie west of the St Joe-Spencerville road and containing seven (7) acres more or less

Said real estate will be sold in one tract or in seperate tracts as the best interests of the estate may determine, for not less than the full appraised value thereof and upon the following terms and conditions, to wit:

At least one third of the purchase price, cash in hand; one third in six months and one third in twelve months from date of sale deferred payments to be evidenced by the promisory notes of purchaser waiving relief from valuation and appraisement laws, with attorney fees and in all respects fully negotiable and bearing interest at six per cen per annum from date and secured by a first mortgage upon the said real estate, to be executed by the said purchaser, his or her spouse, if any joining therein; purchaser to have the right to pay the entire purchase price in cash.

Said sale will be made subject t the approval thereof by the DeKalb Circuit Court of Indiana, and the right to reject any and all offers is reserved by the undersigned Executor.

Sale will be made subject to the rights of any tenant upon the said real estate and further subject to the taxes for 1925 due and payable in 1926.

EDWARD PFLAUMER,
Executor of the Last Will and Testament of Emillus Case, deceased.
Henry C. Springer,
Attorney for the Estate.

Other Side of the Story

By MARY B. WOODSON

(©, 1925, Western Newspaper Union.)

"WADE JARRETT, you were asked here to tea for a purpose!"

"Kind lady, have mercy!"

"Yes, you were. I warn you. You're here to meet a woman!"

"Kind lady, why?"

"Because—well, I'm sick and tired of seeing such a fine man absolutely wasted—knocking about in—single blessedness—"

Pain darkened Jarrett's fine eyes. His lips set.

"Oh, I know very well what you're going to say—that there's only one woman in the world for you (rot) and that you're a one-woman man (rot)."

"And so it can't, Margaret, unless—perhaps—you'd take pity on me—" he broke off, his hungry, lonely eyes on hers sorrowfully. "By Jove, what a trump you've been to me! I don't suppose you'd—think of it, would you—"

Abruptly, Margaret put the width of the room between them. She straightened a rose in a vase with cold fingers. She didn't look at him.

"Don't be silly," she said, decidedly. "You know I wouldn't. But why on earth Polly Wyeth couldn't have been satisfied—"

After an uncomfortable little silence, Jarrett said slowly:

"Well, she is a—very beautiful woman, Margaret. And then—" The man looked hard at his suddenly whitened knuckles. His breath shook him. "There were other men—"

"Oh, Wade, are you sure?"

"Why—wasn't it four in the morning that—that last time at the—dance when she came back with her silly tale of just meaning a run in the moonlight with Crafton and a motor-car breakdown—the time I—snapped my fingers in her face and just—left her there to get home as best as she might?" His words hurried through his tight lips.

"But couldn't there have been some mistake? Couldn't there really have been a spin just for fun. Couldn't there have been a breakdown—"

"Pshaw! Spirit of fun on Monday, with the wedding set for Wednesday? What woman who loved her lover would have gone out at all with another man on the eve of her wedding—"

"Hadn't you been away a good deal, Wade?"

Jarrett's face reddened. He moved uneasily.

"Well, I—yes, I—I guess I had been a bit of a brute. She'd flirt and—things would get so—unhappy I'd—well, want to cool off—Yes, I guess I had been away a good deal—"

"I don't suppose it ever occurred to you that women get—well, reckless and—defiant when they are lonely and—imagine themselves neglected by the—the men they—care for—"

"Our—our courtship had been so wonderfully happy—at first," hesitated the man, huskily. "It was all a horrible disappointment. I—I dare not let myself think of the—the happier days. I could break my heart just with remembering and with—things I—should have done and times when I was—when I was—wrong. I can—see it all—now, too late. But then—it was all so terrible—" Suddenly he put his face in his hands and sat very painfully still.

Quickly, with that odd mothering of women, Margaret went to him. Pityingly, she laid a gentle hand on his shoulder.

"Not half so terrible, Wade," she said tenderly, "as if you had been all wrong that—that last time. Just suppose what she told you had been true—There, that's the bell. Cheer up, dear. I shouldn't have let you talk about it. I ought to be hung. And I so want you to forget that other woman just once and be nice to my girl. Please. Somehow, I can't help but feel the—the other affair was just all—all a—mistake and you two were just made for each other—I want you to like each other so much—"

Still urging, she left him hastily, for his eyes, tragic, miserably lonely, were on her again dependently, beseechingly. Safely outside, in the hallway, she swayed a moment, dizzily, and closed her eyes. There in that room was the man she loved with all her heart, with all her soul, and heart and soul cried out to him. Suddenly her nails bit her palms and her throat swelled with denied sobs. She opened the front door, briskly, after a moment.

"Oh, my dear, I'm so glad you could come," she cried cordially. "I've caught a he-man to cure your dumps. He's here now and I—want you to know him and—like him—"

In a few moments more, she threw open the door of the room she had just quitted, threw it open and walked blithely in and said in his startled face:

"Polly Wyeth, I—I want you to—to meet—Mr. Wade Jarrett—"

Without heeding the man's low cry, or the woman's quick, surprised intake of breath, Margaret quickly shut the door again and left them alone. Slowly they were walking toward each other terrible joy and hunger banishing terrible pride in their faces. And as she fled up her stairway, the pent-up sobs came jaggedly through Margaret's throat at last. They tore at her sorrowing, low-spoken words:

"Oh, I love him, I love him. And he could have been mine—Oh, he could, he could—if only I—I hadn't—heard—her side of the—story, too—if only I—I hadn't known—how much they—they needed each other—"

New York Structure Bit of Old England

Finchley's castle, one of the most distinctive business structures on Fifth avenue, has been completed. Except for the fact that many watched the construction of this facade on the west side of the avenue just north of Eighteenth street, it might be introduced as a building centuries old, for it is an exact copy of a section of Trinity college building in Cambridge, England, facing on the inner court.

Early in the summer Finchley acquired control of the property and then gave instructions to Beverly King, architect, to design a building that would be different from any commercial structure on the avenue, intimating that baronial homes of Merry England should make an interesting facade, reports the New York Herald-Tribune. Mr. King's reproduction of old Trinity college building on the fifty feet of avenue frontage has evoked praise for the architect and for the concern which encouraged the improvement.

With the exception of a turret at the north end the entire facade is several feet back of the adjoining buildings. Stained timbers, stucco, small paneled casement windows and irregular-shaped and variegated colored slate shingles on the gabled roof have given the avenue a delightful bit of old world architecture that contrasts sharply with the present-day building models.

Canada's Resources in "White Coal" Immense

The Dominion water power research, in co-operation with the provincial bodies, has made an analysis of the water-power resources of the Dominion and arrived at the following estimate: The power available every 24 hours at 80 per cent of efficiency, at the ordinary minimum flow, is equal to 18,255,300 horse power. At the ordinary six months' flow, the season of high water, it is equal to 33,075,998 horse power, says a report of the Department of the Interior.

The three provinces possessing the greatest water power are: Quebec, 11,640,000; Ontario, 6,808,000, and Manitoba, 5,769,000. The present turbine installation is equal to 3,227,414 horse power, Ontario leading with 1,445,480 horse power; Quebec, second, with 1,116,398 horse power, and British Columbia, third, with 355,517 horse power.

His Disappointment

"Are you hurt?" sympathetically asked a motorist whose car had knocked down and run over a citizen of the Slippery Slap region.

"I hain't killed, presizely," replied the victim, "but I'm powerful disap'inted. I just had a row with my wife, enduring of which she called me a no-'count cuss and smacked me over the head with the poker. I was on my way to the creek to jump in and put myself out of my miz'ry, and now you come along with your infernal automobile and smash me up till I won't be able to get to the creek inside of a week."

"Don't take it so hard, I'll carry you to the creek, if you like, and throw you in."

"Needn't to mind. I see a feller coming 'round the bend there that's likely to have a bottle of something that's good for my case."—Kansas City Star.

An Extinct Species

Mrs. Oliver Harriman, president of Camp Fire Girls, said at the girls' Fashion and Home exposition in New York: "You see how pretty, yet how modest, the Camp Fire Girls' fashions are. It is pleasant, isn't it, to get away from the French fashions of the day, especially from the latest French fashion, the transparent one.

"French fashions are beautiful—I admit that—but one of their most ardent followers had to confess the other night that she was shocked when her little daughter asked her:

"'Mother, what's a petticoat?'"

Rubber Skin Saves Fruit

A practical new process for preserving tropical fruits, other than bananas and pineapples, so that they may be shipped long distances recently has been discovered, according to Popular Science Monthly. The fruit, gathered a little before it is ripe, is smeared with a thin coating of rubber latex, which, when coagulated, forms a protective skin. The process of ripening is slowed up, it is said, keeping the fruit in good condition.

They are making a desperate struggle to raise funds for uniforms for next season, they do not receive a penny individually, for all the time and sacrifice to make YOUR band a success—and they are not begging—offering you value received for your investment of twenty-five cents—Help them out—Tell your friends to come and make this event a financial success.

Convention Elects New Twp. Officials

The annual convention of the Concord Township Sunday School Association, was held in the Lutheran church, February 8th, afternoon and evening, with John Sechler, vice president, presiding. The song service was led by C. H. Havens and with a special by the high school quartet. Devotional led by I. Konkle of Butler, who read nineteen verses of the second chapter of II Timothy and offered prayer. This was followed by the report of the secretary-treasurer.

CHILDREN'S DIVISION
Mrs. Cora Price, Superintendent

	C. R.	Beg.	Prim.	Jr.
Lutheran	10	12	11	6
M. P.	12	3	8	13
Concord	10	4	11	25
Christian	15	9	7	25
Total	47	28	37	69

St. Joe M. P. reported special services for the children with certificates of enrollment, besides Christmas cards and treat.

YOUNG PEOPLE
Leon Kees, Superintendent

Lutheran, 3 classes, 27 boys, 13 girls.

St. Joe M. P, 1 class, 3 boys 9 girls.

Concord M. P., 2 classes, 19 boys, 16 girls.

Christian, 3 classes, 14 boys, 18 girls.

Total enrollment for the township, 119.

Nine classes in the township with six of them chartered. The township young people perfected an organization last year on July 20th, with Leon Kees as superintendent; Vernon Woodcox, Vice President; Lucile Curie, Secretary; Ida Kinsey, Treasurer. A young people's conference was also held January at the Lutheran church Miss Harriett Wasson having charge of the devotion and S. D. Steffey giving the address.

ADULT DEPARTMENT
J R. Shilling, Superintendent submitted the following:

	Class	Chart	Enr.	H. D.
Lutheran	4	4	56	12
M. P.	4	3	72	5
Concord	3	3	52	5
Christian	3	3	64	8
Total	14	13	244	30

EDUCATIONAL DEPARTMENT
Mrs. Grace Dilley, Superintendent reported by township secretary in absence of superintendent. Those taking training course are as follows:

Christian, 12; St. Joe M. P, 2; Concord, 2; Lutheran, 9; a total of 26. Temperance and Missionary instruction given in all schools as well as missionary offerings.

Nominating committee reported the following officers:

President—John Sechler.
Vice Pres.—B. E. Widney.
Sec.-Treas —Ada Bassett.
Supt Children's Division—Cora Price.
Young People—Leon Kees.
Adult—J. R. Shilling.
Educational—Arline Koch.
Administrative—Harriett Draggoo

F. S. Dowdy, pastor of Hicksville Church of Christ was then introduced and gave the address of the afternoon. His topic was "Reasonable Course of Study," and recommended that the bible be studied as one would study history or any other text book. Not haphazardly as most people do but systematically. Some points of the address follow: "The bible has been the inspiration of every book ever written that is worth the paper it is written on." It will answer the one question in all its phases, "What shall I do to be saved?" The new testament scriptures will solve all problems, domestic or foreign. If we would enthrone Jesus Christ in our hearts and every one live the true christian life there would be no need of laws. If you are teaching the divine word you are advancing the kingdom of God. We need to know the bible as we know no other book.

Offering taken was $4 00. Closing song was led by Harvey Hull and prayer of dismissal by S. D. Steffey.

The evening session began at 7 o'clock. Song service was led by Harvey Hull with Stanley Means in charge of the devotional Matthew 57: 55 to 62, being used as the scripture, his theme being, Love of man for Christ. County superintendent of young people, Leon Kees, then gave a short talk on county work. The influence of home and church on the lives of young people, and urged all to attend the county convention. Master Ronald Borthwick favored the audience with a solo. County superintendent of Adult division, J. N. George, of Auburn, boosted the banquet to be given at the county convention, to be held in the M. E. Church at Auburn, Thursday and Friday of this week.

Miss Truly Fosbrink of Corunna was then introduced and brought a fine message on "Fellowship." Some of the fine points of her talk were: "The thing we most lack is personal contact. Jesus was never in too big a hurry to do good deeds to man kind." She then gave four kinds of fellowship. First, that of the home, she said she owes to her home influence all that she is or hopes to be. Second, Fellowship in the school. Her motto is to go out of the way to do something nice for some one else each day. She urged the young people to not be "snobs" to be just as nice to the poorly clad student as those in the richer class. Third, fellowshipping in the church and community She belives in feeding the young people on religion and not social things. Fourth, fellowshipping with Christ, take him with you every day. Miss Fosbrink's talk was most interesting all through and her talk most contagious.

Harvey Hull sang a solo after which an offering was taken. S. D. Steffey then gave a short talk and gave the benediction.

Parent-Teacher Association

E. R. KINSEY, - - Reporter

Dr. H. L. Feeman, of Adrian College, will give an address at the Parent-Teacher meeting on February 20th. Subject, Religious education of a child.

St. Joe Girl Is Expected to Broadcast

Miss Margaret Tustison, former St. Joe young lady, will take part in a sacred musical program to be broadcast from Wittenberg radio station, W. N. A. P., on Feb. 13. She will appear in a trio, "Sweet is the Work" as the soprano, W. E. Schaefer, tenor and J. T. Williams, baritone St. Joe radios ought to tune in on Springfield, Ohio.

Former St. Joe Pastor Writes

J. C. Coons, of Hanfield, Ind, former pastor of Methodist church writes the editor that his work is going fine and his new church is nearing completion with possible dedication in April or May. He further states that Mrs. Coons has not been well for months, hardly able to do her house work, but now she seems some improved and they have hopes of her recovery in time. The other members of the family are well.

Local Briefs

A baby daughter was born Friday to Mr. and Mrs. Marion Jennings, north of town.

Dr. Minnick attended the County Medical Association meeting at Auburn last Thursday afternoon.

We are replacing Electric Iron Elements fits most any kind of an iron-Get them at Widney's Electric Shop.

Dale Trostel, who has had a severe attack of kidney trouble for the past four weeks is still unable to attend school.

Persons wanting hatching done, will do well do call Mrs. Harvey J. Lindley. Room for 500 eggs. Hatching during February and March. 7 to 3.

The following K of P. members attended the county K. of P. meeting held Monday night at Spencerville, Ira Bone, Walter Baker, Will Koch, Clarence Hull, Donald Kinsey, H. E. Randall and Derwood Ridgway.

Mrs. Virginia Lawson had as Sunday guests, Walter Lawson, his daughter, Miss Naomi and two friends of Fort Wayne, Chas. Lawson, wife and daughter, Frieda, of Auburn, Harvey Lindley, wife and daughter, Ethel and Mrs. Vernon Woodcox and son, Billy.

Obituary

Sarah Ellen Wise, second child of George and Harriett Wise, was born in Portage county, Ohio, June 24, 1848 and departed this life February 6, 1925, aged 76 years, 7 months and 12 days. She was one of three of the children that survived infancy.

She was married to Harvey Walter and to this union was born a daughter, Flora V. Mr. Walter died in about two years after they were married and the daughter about four months later.

Sarah Ellen was again married to Baltzer Koontz on August 29, 1875. To this union was born three children, Hattie C. and twin and Elveda. Hattie lived seventeen years and the other two died in infancy. Mr Koontz died March 12, 1922 Aunt Sarah leaves to mourn their loss, one brother, Frank; a step son, John Baltzer Koontz and a sister-in law, Mrs. Mellie Wise and nieces and nephhews.

Aunt Sarah has belonged to some branch of the church as far back as the memory of our older people goes.

Funeral from M. E Church Sunday afternoon, Rev. R S. Brown, officiating. Burial in White City cemetery.

The Ladies Aid of Coburn's Corners will meet February 19th, with Mrs. Pluma Hamilton.

Two good games of basket ball are scheduled for Spencerville, February 12, Corunna and February 19, Harlan State Bank team.

Mrs. F. M. Monroe and Vernie Monroe and family, spent over Sunday at West Unity, Ohio, with the former's son, Stanley, and family.

The following from here attended the American Legion meeting Monday night at Auburn, Francis Hickman, E J. Smith, C. P. Bassett, Lester Coburn. Roy Maxwell, John Crothers, Leon Kees and Harvey Hull.

Florence Buchanan and George Wade of this place, Ben Soule and wife and Kenneth Miller, wife and two children of Spencerville, Mrs. Mattie Hart and daughter of Coburn's Corners, were the Sunday guests of Mr. and Mrs. Daniel Oberholtzer.

NOTE—Pay your accounts. They are due now.

To Every Boy and Girl

This bank would like to see every boy and girl start a savings account. There is no one thing which would do more to build business for them, that to learn systematic saving.

Persons who by middle age have accumulated a surplus have usually not done so because they have made so very much money, but because they have always made it a point to put away a little out of everything they have earned.

Perhaps you have a crisp dollar bill or a shiny five dollar gold piece laying idle. The thing to do with that money is to bring it to our bank and start a saving account. We pay special attention to the savings account of beginners. We know that they are going to be the successful men and women a few years hence.

WEAK, RUN-DOWN NERVOUS, DIZZY

Mrs. Lee Suffered From All These Troubles, but Lydia E. Pinkham's Vegetable Compound Made Her Well

Terre Haute, Indiana.—"I was weak and run-down and in such a nervous condition that I could hardly do my work. I was tired all the time and dizzy, had no appetite and could not sleep. I tried different medicines for a year but they did not help me. Then my husband saw the ad. for Lydia E. Pinkham's Vegetable Compound in the newspapers and had me take it. I regained my strength and never felt better in my life. It completely restored me to health. I had practically no suffering when my baby boy was born and he is very strong and healthy. I know that the Vegetable Compound is the best medicine a woman can take before and after childbirth for health and strength. I would be willing to answer letters from women asking about the Vegetable Compound."—Mrs. Wm. J. Lee, Route E, Box 648, Terre Haute, Indiana.

Lydia E. Pinkham's Vegetable Compound is a dependable medicine for all these troubles.

For sale by druggists everywhere.

If frequent shaving irritates your skin use

Resinol

Perhaps the daily shave makes your sensitive skin burn and smart, or it may cause a rash which is uncomfortable and embarrassing. Resinol Ointment helps greatly to relieve and clear away such ailments, but Resinol Shaving Stick tends to prevent them entirely. Its rich, generous, non-drying lather makes shaving a pleasure because no after-shaving lotions are necessary, and the face is left smooth, cool and soft. *Resinol products at all druggists.*

ROAD BUILDING

HIGHWAY SAFETY IS OF BIG IMPORTANCE

The bureau of public roads believes that consideration of highway safety is of the greatest importance in view of the great increase in highway traffic and highway accidents. A careful study of existing conditions has led to the following statements of basic principles:

1. The development of safe roads by elimination of all known dangers in so far as such elimination is possible within physical and economic limitations.

2. Warning of uneliminated dangers by means of easily recognized signs and other devices of standardized form, uniformly placed with respect to the danger.

3. The development of safe vehicles by perfection of running parts and adoption of safety devices.

4. Diligence and care in the licensing of drivers of motor vehicles to eliminate the incompetent, careless and irresponsible driver.

5. The development of simple, uniform, and effectual traffic regulations and the education of the whole public to a complete acquaintance with them.

6. The rigid enforcement of traffic regulations.

There is little doubt that a solution of the problem worked out on the basis of these principles would have the effect of reducing the dangers of the open road to a minimum.

Increased Traffic Calls for Wider Paved Roads

A catechism for highway users:

Paved roads are necessary to carry present-day traffic.

When roads are paved they increase the traffic over them; road users naturally forsake dirt roads for the paved highways.

Wider roads are absolutely necessary to accommodate this increased traffic; what may have been a sufficient width in the case of the dirt road promptly becomes inadequate when the pavement brings a steady stream of motor vehicles.

The greater speeds possible on paved highways make wider roads necessary for safety; rapid traffic on a narrow, congested road is certain to increase the number of accidents, resulting in a great loss of life and property.

Evidence of the truth of these statements is found in the fact that many paved roads are now being widened, even though it was thought at the time they were built that they would be adequate for many years. Road statisticians often have found that almost as soon as the concrete on a road is ready for traffic, the number of vehicles on the road has jumped far beyond expectations, and widening of the road has been necessary in a short time to prevent dangerous congestion.

Build Future Highways to Take Care of Traffic

"It is natural that the change in highways has not been able to keep pace with the swift change in the character of the traffic, but it is important that road developments now be carried forward rapidly to meet present and future traffic conditions," says an official of a big automobile concern.

"Highways must be built to meet the new conditions of automobile traffic just as railroads have been built to meet the conditions of fast rail traffic.

"One-way thoroughfares with roadways kept clear and view unobstructed, will go a long way to solve the present day problem of combining speed and safety. Elimination of blind curves, grade crossings and unguarded crossroads, also the clearing of roadways of pedestrians and parked or stalled cars, must ultimately come."

Police Commissioner Is Opposed to "Jay Walking"

Police Commissioner Enright of New York city declared that if the authority to regulate pedestrians as well as vehicular traffic is obtained by the police department he will order the arrest and fining of "jay-walkers." He proposes to have pedestrians cross streets at intersections only and at the direction of traffic officers.

In Baltimore Police Commissioner Gaither defends so-called "jay-walking." He says that crossing thoroughfares in the middle of the block has the advantage for the pedestrian in that he must only look two ways for traffic, whereas if he crosses at intersections he must watch for vehicles coming from four directions. Commissioner Gaither also declares that when all pedestrians cross at intersections it creates an unnecessary congestion of [illegible] traffic.

A Modest Man

"Professor, you are known as a profound student. I want to get your advice."

"Perhaps it would be better not to come to a student for advice," said the professor mildly. "Sometimes I feel that the more I study the less I know."

Aerating Water

To avoid the flat taste peculiar to boiled water, pour it several times from one jug to another.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1925, Western Newspaper Union.)

The Fort That Figured in a Scandal

Neither the Belknap or Teapot Dome incidents are the only cases of scandal in the President's cabinet, for in 1858 Secretary of War John B. Floyd was under fire for his connection with the sale of Fort Snelling, Minn., to Franklin Steele for $90,000. The usual congressional investigation followed and eventually the federal authorities recovered possession of the post.

The history of Fort Snelling dates from 1805 when Lieut. Zebulon Pike purchased from the Sioux Indians a tract of 100,000 acres, valued at $200,000, at the confluence of the Minnesota and Mississippi rivers. Pike must have been a shrewd bargainer for he got it for $200 worth of presents and 60 gallons of whisky!

The War of 1812 delayed establishing a military post there until 1819 when Col. Henry Leavenworth with the Fifth infantry began building Fort St. Anthony which in 1824 was renamed Fort Snelling by Gen. Winfield Scott in honor of Col. Josiah Snelling, Leavenworth's successor.

Fort Snelling had a long list of commandants who later became prominent, among them Zachary Taylor, the "Old Rough and Ready" of the Mexican war and President of the United States; W. T. Magruder and C. F. Smith, Civil war generals, and E. R. S. Canby, the "martyr of the Lava Beds" in the Modoc war of 1872-73. The famous Dred Scott case is also connected with Fort Snelling for Dred Scott was the slave of Post Surgeon Emerson at Snelling and Scott was married to a negro girl there in 1836.

By 1840 Fort Snelling was an important place because it was the extreme northern outpost in the march of civilization into the great Northwest. There thousands of Indians gathered to trade—and also to fight, for the ancient feud between the Sioux and Chippewas repeatedly blazed out into war. In the Civil war it was the rendezvous for Minnesota troops and it was the center of activity during the terrible Sioux outbreak of 1863.

Snelling was also the scene of a training camp during the World war, and it is now one of the important military posts maintained by the War department. Not far from the field where St. Paul society today parks its automobiles to watch the officers from the post play polo, there stands an old vine-covered stone tower, the only relic of the Fort Snelling of pioneer days and an interesting symbol of contrast between the old and new.

Where the "King of the Missouri" Ruled

When Kenneth McKenzie, the stern old Scotchman who later was known as the "King of the Missouri," was put in charge of the American Fur company's business on the upper Missouri in 1828, he built a fort at the junction of the Yellowstone and the Missouri in the extreme western part of the present state of North Dakota. At first this was known as Fort Floyd, but McKenzie changed that name to Fort Union because he intended to make it the center of both mountain and river fur trade.

Fort Union is said to have been the best built post on the Missouri, and with the possible exception of Bent's fort on the Arkansas, the best in the entire West. Here the "king" reigned over his turbulent subjects, both white and red, and for the next quarter of a century Fort Union retained its importance, which was not true of many of the fur trading posts built during that era. But the end came in 1864 when a steamer, sent by Smith, Hubbell and Hawley, who had bought out the American Fur company, appeared at Fort Union to transfer its goods to Fort Benton in Montana.

In the words of one historian, "when that steamer backed away from the landing, leaving the stout walls of old Fort Union to crumble into dust, she had turned the last leaf on the closing chapter of an epoch which for thrilling romance has seldom been equalled in the history of the continent. Fort Union had been the greatest of the Indian trading posts within the boundaries of the United States. For years the most powerful tribes of the Northwest had come there to trade; there had come the factors of the company's other posts from all over the vast watershed of the upper Missouri; there had assembled the bold voyagers of the wilderness from the Great Slave lake and the Platte, from the Rocky mountains and the Red river of the North; there had visited at one time and another some of the world's most famous scientists and explorers, among others, George Catlin, Prince Maximilian and Audubon.

"When Fort Union passed away, there passed with it the last vestige of the fur trade as an independent commercial institution, and there remains today but little trace of the place where "King" McKenzie ruled until his clandestine distillery operations within its walls brought down upon him the wrath of the United States government and virtually put to an end the usefulness of one of the great figures in the fur trade."

POINTS ON KEEPING WELL

TICS

TRAVELING on a limited train recently, I went into the diner for lunch. The conductor seated me at a small table, opposite a well-dressed, intelligent-looking man of about thirty-five. After giving my order, I sat looking around idly. My table companion was intently reading a newspaper. Suddenly the whole right side of his face was contracted in a spasm. Watching him closely, I saw that about every three minutes the muscles of his face jerked, drawing his mouth, cheek and eye into a grotesque grin.

A middle-aged man, sitting across the aisle, also observed this peculiar performance. Following me into the smoking room after lunch, he said: "I see you were watching that man across the table from you. What do you suppose is the matter with him?" I said: "He has a tic." "Well, I'll be darned," he said, "I knew ticks gave cattle fever but I never heard that ticks made a man make faces."

Tics are not insects. They are habit spasms. They are habitual, purposeless muscular acts which the person afflicted with them indulges in, regularly and often unconsciously. The name comes from the German ticken, because the spasm comes with such clock-like regularity.

You have all known persons with tics. Perhaps you have one yourself. Some are spasms of the face, twitching of the nose, jerking of the corners of the mouth, winking or squinting of the eyes, frowning or raising the eyebrows. Other facial tics are snuffing, making sucking or blowing noises with the lips, whistling, chuckling or crowing. Some people have so gotten into the habit that they are unable to begin any sentence without making some peculiar noise. Jerking or shaking the head, grinding the teeth and biting the lips belong in the same group. The tic may take the form of shrugging the shoulders, scratching or stroking some part of the face with the hands or fingers. One well known and brilliant actor shows in all his pictures, no matter in what part, a characteristic motion of touching his mustache with the knuckle of his right index finger.

Some persons, in walking, must always step on a crack in the pavement, others will as carefully avoid it. Stammering and stuttering are tics of speech. So is the habit of beginning every sentence with "I say," "Listen," "Look here" and other exclamations.

Tics are personal, habitual peculiarities. They are the results of habits formed usually in early childhood, sometimes through mimicking some older person. They are most commonly found in nervous high-strung persons. In adult life they are practically incurable.

Proper training and the development of self-control in children will prevent their being hampered by these strange, useless, and often ridiculous habit spasms in later years.

WHAT CAUSES GALL STONES?

MOST women over forty have gallstones. They are about three times as common in women as in men. They are most frequently found between fifty and sixty.

Gallstones are found in the gallbladder, a pear-shaped sac which is the overflow tank of the liver. In it the surplus bile, secreted by the liver, is stored until it is needed. If the lining of this tank becomes irritated and the bile in the tank becomes too thick, then the mucus secreted by the inflamed membrane unites with the thickened bile to form solid masses. It is claimed by some physiologists that the starting point of a gallstone is always a bunch of germs which have gotten into the gallbladder, started an inflammation of the lining and then become the center around which the gallstone forms.

Some gallstones are soft, others are hard. Some are very small, no larger than a pinhead, others may be so large as to fill the whole gallbladder. When a gallstone starts it grows like a snowball, but in layers. If a number start about the same time and grow with equal rapidity, they are squeezed on each other by the elastic pressure of the gallbladder and so have facets or sides.

Does the infection and inflammation of the gallbladder cause the gallstones or do the scratching and irritation of the gallstones cause the inflammation? Which existed first, the fowl or the egg?

Gallstones themselves do no harm. Probably every one past forty has one or more and never knows it. It is only when they become too large or too numerous or when they try to get out through the duct or canal into the small intestine that they cause pain, or by plugging up the canal and so preventing the flow of bile, they cause jaundice. Then they must be removed.

What causes them? Two things, which are responsible for a good share of human ills. Eating too much and not working enough.

Be sure of a light sweet dough: use **Yeast Foam**

Such flavor!

King Has Monopoly

When the king telephones, let all other instruments be dumb! That's the rule in Mecca, where King Hussein of Hedjaz has had a telephone system installed, says a recent article in the New Zealand Herald.

The rule is effectively enforced by an automatic device which instantly disconnects all other telephones whenever the receiver is lifted from the king's instrument. As long as King Hussein's telephone is in use, no other telephone can be used in Mecca, save only the one with which the king is talking.

Ho You Know

That mashed turnips and squash are improved by the addition of a small quantity of Calumet Baking Powder?

Personality is something others see in you, but which you can't exactly measure yourself.

If a shiftless man has a wife he usually blames her for his inability to accumulate wealth.

Removing Rusted Screws

To remove a rusted machine screw from metal parts, put a little oil on the screw. Heat a long iron wire over an alcohol burner or other heater to red heat and hold the wire on the screw head for a minute or more. Let the screw cool, adding more oil if all has evaporated. When cold the screw usually can be removed with ease. If it still refuses to loosen heat again and apply more oil.—Popular Science Monthly.

Happiness

Happiness, of all elusive things, is so elusive that often one doesn't know that he has it. But years afterward he realizes when it was his.

For bloated feeling and distressed breathing due to indigestion you need a medicine as well as a purgative. Wright's Indian Vegetable Pills are both. Adv.

A man who can "handle men," often doesn't want to.

Mankind is everywhere the same.

CHAPTER VI—Continued

—24—

There are moments when revelation is self-illuminative. This was one of them. Myrtile, gazing almost in terror into the face of her benefactress, knew that she was hated, and, with an extraordinary insight, she knew why. She saw the crumpled up telegraph form; she guessed at everything which had lain unspoken between them. She closed the door firmly behind her, came across to Lady Mary's chair, fell on her knees and struggled with her sobs.

"I know! I know!" she cried. "I am very miserable!"

Mary looked at her coldly and critically. All the natural impulses of her heart seemed dried up. Even her pride refused to come to her aid. The truth lay naked between the two.

"I was a fool not to realize what bringing you here meant," she said. "It is too late now. Here is the telegram. Christopher is elected."

Myrtile brushed it away. It was a thing of no account.

"I care nothing for Christopher and you know it," she declared passionately. "I do not care whether he is elected or not. Nothing about him makes any difference to me, or ever will."

Myrtile was speaking the truth. To Mary it seemed amazing, but she knew that it was the truth.

"It is only a fancy which Christopher has for me," Myrtile went on. "It will pass—oh, I am sure that it will pass! Deep down in his heart I know that there is another feeling."

Her anguish was apparent. There was something almost unearthly in the sorrow which shone out of her eyes. Mary's heart began to fail her. Her fingers rested on the top of the other girl's head. A gleam of coming kindness shone mistily in her eyes.

"It wasn't your fault," she said.

"It is my fault that I am alive!" Myrtile moaned. "But listen, please. I have my plans. I am going away."

"What good would that do?" Mary asked doubtfully.

"It would do great good," Myrtile declared. "I shall remove myself altogether. Christopher's fancy will pass. And besides—I must go."

"My father would never spare you," Mary said, ashamed of the joy with which the thought filled her.

"I have thought of everything," Myrtile insisted. "Lord Hinterleys has been very kind to me, but he will forget. If he chooses to see me sometimes, it will be possible. Let me tell you, please. I have a plan. Only yesterday I heard from the cure. He is back again in the valley. He is at the church there now. He says, if I need ever to go back, I can teach at the school. All my people have gone away many, many miles. My stepfather has a larger farm. I shall go back. I should never have come away."

Mary looked at her searchingly. All the suffering in the world seemed to be quivering in Myrtile's sensitive face. She leaned a little forward towards the kneeling girl.

"Myrtile," she whispered, "there is pain in your heart, too."

"Oh, God knows it!" Myrtile sobbed. "There will be for ever and ever. It is for my sake that I must leave. I thought that love was a toy, and I laughed to find it in my heart. And now I know that it is a torment. I want to go back along the road I have come and hide."

"We have both been a little foolish," Mary said kindly. "You looked out into life, expecting to find happiness, just as children go into the meadows to pick flowers. And I, too, forgot that happiness only comes when it is earned. Now let us try and be sensible. I think that yours is a very good idea. We shall miss you very much here, but perhaps it will be best for you to go away for a little time."

"I must go," Myrtile insisted fervently.

"But teaching?"

"There is no need for me to teach," Myrtile declared. "This letter that I have from the cure; it was written to tell me that my mother's brother, who went to Geneva many years ago, has died and left me some money. An avocat at Toulon has it for me. It is quite a great deal. I thought that I would buy a small farm and work in the fields there; work and work until I got brown and hard and grew like those other peasant girls there, lumps of the earth to which they stoop all the time. In a way I used to love the farm," she went on, "when I was alone—those first few mornings when the fields began to show purple with the budding violets, and the still evenings when the cypress trees looked as though they had come out of a box of children's toys—and the colors the sunset used to draw out of the mountains, the magentas and purples, and the pink glow coming in such unexpected places."

"Why, you're positively homesick!" Mary exclaimed.

"No, I am not homesick," Myrtile assured her gravely, "but I am like an animal that has been hurt and wants to limp back to its home. A little time ago it was different. Every fiber of me longed for escape, to be where life was. Now I would like to go where I can forget it."

Mary sighed.

"Fortunately," she said, "you are very young. You will learn soon that here are many men of Gerald's type, and that they are not to be taken too seriously. They have the trick of making you believe what they want you to believe, and they use it because they must. They are never quite bad. They certainly are not worth a broken heart. Now we must take this message down to my father and send a reply. Afterward, I will talk to him about you. I shall have to be very eloquent, for I know he will hate your going."

"If it could be before Gerald comes back," Myrtile pleaded.

Mary had even more trouble with her father than she had expected. At the first mention of Gerald's name in connection with Myrtile's desire to return to France, he stiffened.

"Mary," he insisted, "I shall require you to tell me the exact truth in this matter. How much blame is to be attached to Gerald, and precisely what are his relations with Myrtile?"

"Gerald is to blame only for thoughtlessness," she assured him. "He is a born philanderer, just as Myrtile was born to be a ready victim. Myrtile loves him, and I am afraid she will never care for any one else. Other women have to bear their hurts, though, and I dare say she will get over it."

"Gerald is a fool," his father declared. "Marrying in one's own class is well enough in an ordinary way, but—well, there isn't another woman like Myrtile in the world. Gerald is an ass not to realize it instead of going to Russia, risking his life and liberty for the sake of this Russian girl. I don't like Russians—never did. You are a person of common sense, Mary. If you say Myrtile must go, go she must, but I'd much rather Gerald came to his senses and married her."

"Men are rather difficult in that way," Mary rejoined, a little bitterly.

Chapter VII

The butler made his announcement to his mistress a little doubtfully.

"There is a person here, your ladyship, who desires to see you."

"What sort of a person?" Lady Mary inquired.

The butler coughed.

"A woman, your ladyship. She struck me as being some sort of a foreigner. She assured me that her

"It Wasn't Your Fault," She Said.

business was urgent. I have shown her into the morning room."

Mary rose to her feet at once.

"A foreigner?" she repeated, with suddenly aroused interest. "Perhaps she has news from Lord Dombey."

Nevertheless, when she entered the little room where Elsa Francks was waiting, it scarcely seemed likely that news of so fastidious a person as her brother could come from such a source. Her doubts, however, were soon set at rest.

"Are you Lord Dombey's sister?" the woman asked bluntly, without offering to move from her chair.

"I am," Lady Mary acknowledged at once. "Have you brought news of him?"

"I have brought him home," was the unexpected reply.

"You?" Lady Mary exclaimed.

The woman laughed coarsely.

"Yes, me!" she declared. "I have saved his life a dozen times over, as I dare say he will tell you some day. Even now I do not know why."

"But where is he?" Lady Mary demanded.

"He is safe in the Charing Cross hospital," the woman replied, "and if you want to know all about him, you will give me some wine quickly."

Mary, scarcely conscious of what she did, rang the bell. This woman was certainly the strangest visitor who had even penetrated the portals of Hinterleys house. She seemed larger and coarser than ever. Her clothes were showy, but unbrushed and crumpled as though she had slept in them for nights; her hair was yellow, but untidy. The rouge and powder were distributed upon her face in ungainly daubs. She breathed an atmosphere of stale scent. Notwithstanding all these things, she had news of Gerald, Gerald who for seven months had been lost! Lady Mary waited eagerly for the butler, who entered the room, full of the confident anticipation that he would be asked to remove this incongruous visitor.

"This lady would like some wine," Lady Mary announced. "Do tell me what you would prefer?" she added, turning toward her guest.

"Champagne, if you have it," was the prompt reply.

"Bring champagne, Richards," his mistress directed. "Perhaps you had better tell his lordship. This lady has brought us news of Lord Dombey."

The woman held out her hand.

"Don't bring any lordships here," she begged. "I will tell my story to you, ma'am. I am very near hysterics myself. To reach here from Sokar has taken us a month. We tried at seven places on the frontier before we could get into Poland."

"Poland?" Mary exclaimed. "But here is the wine. Do, please, help yourself."

The woman was served with champagne and dry biscuits, which latter she scornfully rejected. She drank three glasses of champagne, however. Then she filled a fourth glass for herself and began to talk.

"Well, here is my story," Elsa Francks said, draining the contents of her glass and refilling it. "Remember it, for I shall never tell it again. It is a story I would like to forget."

"I will certainly remember it," Mary promised.

"Twelve months ago I went to live at Sokar," Elsa Francks began. "It is a miserable place, but I went there to be near my friend Ivan Krossneys, the governor of the fortress. In that fortress was confined a man whom your brother went to Russia to rescue. He came to me to ask me to help him bribe the governor. That was in the month of October last year. He was a very different person then, and I thought that I liked him very much."

The woman sipped her champagne. The warmth of the room, and the wine, had moistened her face. A little streak of rouge had spread upon her left cheek. There were black lines under her eyes. Her voice, however, was stronger.

"He offered a great deal of money and I agreed to help. I sent for Ivan and, although he made difficulties, he was easy to persuade. It was all arranged. The prisoner—No. 29, we called him—walked out of the fortress in your brother's clothes and with his American passport. Your brother was to take his place for twenty-four hours. Then he was to leave the prison in the funeral coach of another prisoner who had died.

"This was seven months ago," Mary faltered.

The woman wiped her lips, shivered at the sight of the color upon her handkerchief, closed her eyes for a moment and recovered herself.

"That seven months," she said deliberately, "has seemed like seven years, and each year like a lifetime in hell! Listen. I go on with my story. Your brother entered the fortress as arranged, changed his clothes with No. 29, who walked out of the place and came, without doubt, to London. Your brother was to spend that night in the fortress. Krossneys came down to me. We were both excited. It was a great sum of money which we had been paid, and life in Russia is a horrible burden. We drank a great deal of wine. The more we drank, the more quarrelsome Ivan became. He resented having to part with so large a share of the money to me. We quarreled. Once or twice we made it up. Then Ivan's anger flared out again. In the end, he declared that he would take away a part of my share. We had a struggle. Somehow or other, his revolver went off. He went backward with a groan. He was dead."

The woman dabbed at her face. Mary could find no word of any sort. Her visitor's eyes seemed fixed in a rigid stare. It was as though she were living through the scene again.

"The police came," she went on. "I was arrested. I told my story. There were no witnesses. After four days they had to let me go. The moment I was free I went to the fortress. Ivan's deputy was taking his place. He was a man of a different type, a politician, a Bolshevist from conviction. Every time he mentioned No. 29, he spat. I had much trouble with him."

"Go on," Mary begged, glancing at the clock.

(TO BE CONTINUED.)

Believed Part of It

The men and officers of the navy are known all over the world for their smart appearance, and it was for this reason that one of the officers on board a battleship was rather disgusted at the untidy appearance of a certain midshipman.

One morning the "middy" strolled into the wardroom wearing a collar that was, to say the least of it, extremely soiled. This was too much for the officer and he decided to tackle the young man on the matter.

"Look here," he said, "you ought not to come in here wearing a filthy collar like that round your neck."

"Filthy, sir," replied the middy: "I assure you this collar was washed ashore only yesterday."

"I don't doubt that," was the quiet reply, "but from which wreck?"

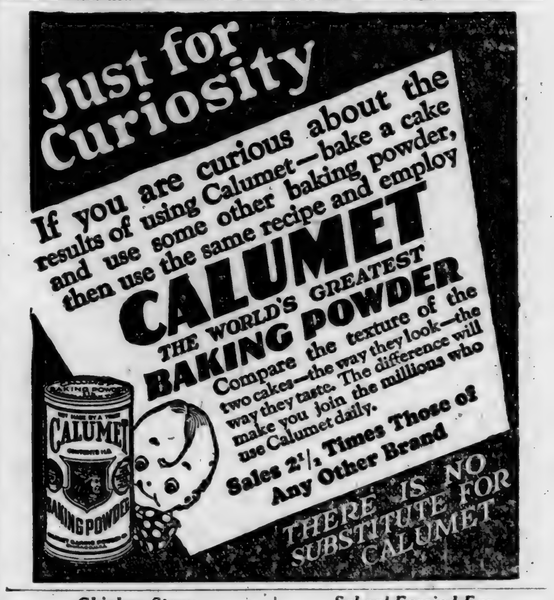
New Dish

The young man who was accustomed to having an early breakfast every day was absent one morning, having gone to see his wife off on an early train.

Returning to the house some time later he said to the cook:

"Well, Jane, I have no spouse this morning."

"Tain't my fault, suh," she replied, indignantly. "I sho' cooked it fo' yuh. But you jes' wouldn't come eat it."



Chicken Story

Bobby was four years old when he went to visit Aunt Millie in the country. He heard her say that she was going to dress a hen and expressed a desire to watch the proceedings. He looked on quietly until the feather-plucking stage was reached and then excitedly demanded, with the first handful of feathers:

"Why, Aunt Millie, you're undressing it, aren't you?"—Indianapolis News.

Boschee's Syrup

Allays irritation, soothes and heals throat and lung inflammation. The constant irritation of a cough keeps the delicate mucus membrane of the throat and lungs in a congested condition, which BOSCHEE'S SYRUP gently and quickly heals. For this reason it has been a favorite household remedy for colds, coughs, bronchitis and especially for lung troubles in millions of homes all over the world for the last fifty-eight years, enabling the patient to obtain a good night's rest, free from coughing with easy expectoration in the morning. You can buy BOSCHEE'S SYRUP wherever medicines are sold.—Adv.

No Encouragement

Magistrate (severely) — Prisoner, how did you have the audacity to break into this man's house at midnight and rob him?

Prisoner (indignantly)—But, your worship, last time I was before you you wanted to know how I could have the audacity to rob a man on the highway at noon. When can I go on with my work?"—From the Baille.

Shave With Cuticura Soap

And double your razor efficiency as well as promote skin purity, skin comfort and skin health. No mug, no slimy soap, no germs, no waste, no irritation even when shaved twice daily. One soap for all uses—shaving, bathing and shampooing.—Advertisement.

Correct

Science Teacher—Name a liquid that won't freeze.

Student—Hot water.

When pugilists begin to use soft answers the chances are they will fight.

School Ferried Far

Taking a schoolhouse off dry land, floating it through canal locks and towing it seven miles across Puget sound to a new location on an island, was the unusual feat accomplished recently by a firm of contractors in Seattle, Wash., says Popular Science Monthly. The schoolhouse originally was situated on the shores of Lake Washington, adjoining Seattle. With powerful winches and screwjacks operated simultaneously, the building was raised off the ground and skidded on rollers onto a large barge. Two tugs then towed the school through Lake Washington canal to Puget sound. The school arrived undamaged.

It Depends

"Is marriage a failure?"

"You never can tell until you've seen the wedding presents."

When a wise man argues with a woman he says nothing.

Stop Child's Cough Quick--To-day

Before it has a chance to develop into croup or something dangerous, get right after that cough of your child's. No use to dose with ordinary cough syrups. At once give Kemp's Balsam—a fine old-fashioned tried and proven medicine safe for children. It heals the throat and prevents the cold from going through the whole system. Only 30 cents at all stores.

For that Cough! KEMP'S BALSAM

W. N. U., FORT WAYNE, NO. 6–1925.

Teach your child Internal cleanliness

THE mother who permits constipation in her baby or older child is risking the health, even the life, of her little one.

Fretfulness, feverishness, night terrors, grinding the teeth in sleep, biliousness, coated tongue, loss of appetite, any of these may indicate constipation. Poisons from the child's stagnant intestine are flooding the little body, and if left unchecked may lead to serious consequences.

Avoid Laxatives—Say Doctors

A noted authority says that laxatives do not overcome constipation, but by their continued use tend only to aggravate the condition.

Medical science has found in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and hastens its passage through and out of the body. Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless.

Let your infant or child have Nujol regularly, and see rosy cheeks, clear eyes and happiness return once more.

Nujol is used in children's and general hospitals and is prescribed by physicians throughout the world.

The Why of Superstitions

By H. IRVING KING

DOGS AND THE WIND

A COMMON sailor's superstition is that when a dog howls aboard ship he predicts a storm and the wind will come from the quarter to which the dog points his nose at the time. Among sailors and fishermen there are many superstitions which can be traced back to Norse mythology and this is one of them. Considering the maritime supremacy once exercised by the Viking race it is quite natural that remnants of Scandinavian mythology and folklore should still linger among those who go down to the sea in ships. The only wonder is that there are not more of them. The relation between the dog and the wind comes from his connection with Odin, the great Norse god who was also a wind god and swept land and sea in his furious "wildhunts." Odin in these hunts was accompanied by a retinue of souls, which souls, according to one version, assumed the shape of dogs whose howlings could be heard amid the tempest.

When a storm sweeps over the Welsh mountains the superstitious hear in it the howling of the "dogs of Annwyn," and in Devonshire it is "the health-hounds" calling to this day—both superstitions offsprings of the story of Odin's "Wildhunt." In the Odin saga the little preliminary puffs of wind which herald the coming of the gale are said to be the souls of women hunted by Odin and his crews.

So when a dog on shipboard points his nose and howls it is quite evident that his instinct tells him that his master, Odin, is abroad in the winds, the "wildhunt" is on and he longs to join in the chase.

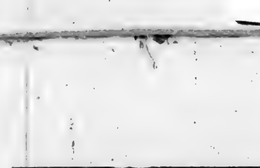
LABOR AND WAIT



"So that millionaire laid the foundation of his fortune by serving in the dining room of a hotel?"

"Yes."

"I'd like to know what his motto was."

"Learn to labor and to wait."

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name: its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

LUCY

THE charmingly quaint and old-fashioned name of Lucy is derived from the Latin lux, meaning light. Lux gave the favorite praenomen Lucius, one born at daylight. It was first used in Rome by Lucius Tarquinius Priscus. The first feminine form was Lucia and belonged to a virgin martyr at Syracuse whose name of light, being indicated by early painters by a lamp or an eye, led to the legend that her beautiful eyes had been put out. The old English version cuts off her head, but the indomitable lady goes on talking until she has received the Holy Eucharist.

The Sicilian saints were especially popular and Santa Lucia is not only the patroness of Italian fishermen, and namesake of their daughters, but she was early adopted by the Normans and even in the time of Edward the Confessor, the daughter of the Earl of Mercia had been thus baptized.

The house of Blois were importers of sacred names and Lucie was a sister of Stephen and was among those lost on the White Ship. The name has since flourished in England and France; it is particularly popular in the latter where many noble ladies were called Lucy, though poetry called them by the more fashionable Lucinda.

The English forms of the name are Lucy, Luce, and Lucinda. France calls her Luce and Lucie. She is Lucia to Spain and Italy, which also adds Lusia. Russia terms her Lusilja.

Lucy's talismanic stone is the king of gems, the diamond. Its dazzling brilliance gives fearlessness to its wearer, and invulnerability. To bring victory to any endeavor, it should be set in gold and worn on the left hand. Saturday is Lucy's most fortunate day and 5 her lucky number.

The SANDMAN STORY

TOM KITTEN'S LUCK

TOM KITTEN had had a hard time of it ever since he could remember. If he ever had a mother he did not remember her, and he never had a home.

Tom slept anywhere he happened to find a place when he was tired running away from big dogs. In fact, most of his life, it seemed to Tom, had been spent in running from dogs and dodging stones and brooms.

One day Tom found himself in a place where there were no high buildings or noisy street cars. Tom Kitten did not think there could be so many trees in the world as he could see now.

He felt so happy he ran, and the farther he ran the nicer things looked,

Awakened by a Big Dog Barking Right In His Face.

little white houses and more trees and flowers, and best of all, Tom found garbage cans.

"This is a pretty good country to live in," thought Tom that night when he crept behind a barrel on the soft grass to sleep, but he was rudely awakened in the morning by a big dog barking right in his face.

Tom was city bred and quick at jumping, and he was on top of a fence before the dog had recovered from his surprise at a scratch Tom gave him on the tip of his nose, and pretty soon the dog tired of barking at Tom, ran away, and Tom went hunting for his breakfast.

He found plenty to eat, and that night he slept under some steps, where he found an old bag, the nicest bed Tom ever had known, and in the morning, when the sun shone in through the cracks nice and warm and awoke him, Tom Kitten for the first time in his life did not have to jump and run.

Instead he stretched himself and yawned, and if he were not so hungry Tom thought he would like to stay there the rest of his nine lives, for he was certain something dreadful must be awaiting him outside.

But when he crawled out from under the steps and looked around all was still, so he walked up the steps and sat in the warm sunshine to make his toilet.

Tom eyed a bottle of milk on the steps. There was no way of getting any, and he had tasted milk only a few times. That was when someone broke a bottle and he was able to get a few laps before he was driven away.

While he was washing his face someone opened the door, and instead of a bang from a broom a pleasant voice said, "Hello, puss, where did you come from?"

Tom was quite surprised at the nice sound he made as he rubbed against the nice voiced person. He had never done much purring, and he was pleased with the sound.

The kitchen door was open, and as Tom looked in he saw a mouse, and forgetting brooms and stones he ran in and caught it.

"Well, if this puss can't catch a mouse!" exclaimed the nice person. "You are a real cut. You don't wait for your breakfast to be brought to you on a plate. You shall have a saucer of milk."

Tom crawled under the stove. He had never seen one before, but somehow he knew just what to do, and while he was dozing he heard someone say, "We'll keep that kitten. He knows how to catch mice."

That night behind the stove Tom found a nice bed made for him. "This is what I call luck," said Tom as he curled up for a good night's sleep. Not all night, of course, for Tom knew that mice run about mostly in the dark, and he wanted to show he was grateful for such a good home, so he slept with one ear open, ready to catch the tiniest sound.

Patch Tupper's Decision

By WILLIAM M. ROUSE

(©, 1925, Western Newspaper Union.)

WHEN folks on Coon mountain said that Patch Tupper was shiftless it was because they did not understand his soul. That he was content to live in a two-room shack with his hound dog, Pedro, was because he had never seen any other condition of life that promised adventure enough in the getting of it.

"Tain't lively enough," was Patch's reply to every offer of a job.

That was his feeling about matrimony until he met Rose Garvey at a kitchen dance on Solomon's flats. Then his lean and muscular and good-looking six feet roused to action.

"Rose," he said, huskily, "I want you and, by crimus, I'm going to have you!"

Scarlet flamed in her cheeks. Her mouth suddenly lost its curves and little lights played in her black eyes. Patch stepped forward and swung her up over his shoulder.

With a double armful of wildcats he would have had a comparatively peaceful trip over the shoulder of the mountain. She left red furroughs down his cheeks before he got her wrists under control; then she bit his ear and he had to shift her under one arm, like a bundle of old clothes. Before he got her fairly settled she had blacked an eye.

At last Patch set her down carefully in his own kitchen, and jumped back out of range. He set his back against the door and took out his watch.

"We got five minutes left before the Reverend Simmons gets here," he said. "He's coming to marry you and me. Maybe you want to fix up a little. No use argering, Rose, for I made up my mind!"

The fight lasted three of the five minutes. It ended when Patch got her over his knee and spanked her with a hearty hand. To his surprise, when that was over, her arms went around his neck; she hid her face against his shoulder.

"I guess . . . I guess I love you, Patch!" she whispered. "I thought you never would show any spunk!"

The rest of that day was filled with joy for Patch Tupper. The gold ring upon the hand of his wife gleamed like a beacon of happiness. She cooked the best supper he had ever eaten in his life.

It was in the cold hours just before dawn that the first rift appeared. Pedro, the hound, came as had been his privilege from puppyhood to share his master's bed when the kitchen grew chilly. A yelp and a thump awakened Patch. He explained Pedro's habits.

"That dog can have a blanket and a feather pillow and a ribbon around his neck, if you want him to," said Rose, "but I never slept with a dog yet and I shan't begin this spring!"

"My dog can sleep wherever he wants to!" Patch told her, indignantly.

Just how it happened he never knew, but before he could gather himself for defense his head was being bumped against the floor.

"Dog!" panted Rose. "Kitchen!"

"All right!" yelled Patch. "It's too late to arger tonight!"

Patch Tupper was not of the stuff that yields without fighting, but he got tired. Rose was never tired. However, when Saturday of that first week came she went too far.

"Patch," she said, giving him a cake of yellow soap and a towel, "go down to the creek and take your bath!"

"My bath!" he cried. "I ain't got any particular bath!"

"You're going to have one," she told him. "Every Saturday, summer and winter, the year 'round!"

With a yell of defiance Patch Tupper flung down the soap and leaped through the doorway.

"They's some things a man won't stand!" he shouted, from the safety of the steps, and then he bolted for the woods.

Patch nursed his wrongs upon a rocky ledge. Hours passed, and with the placid stillness of the May night an idea came to him. He had got his wife by main strength and daring; by boldness and main strength he would take her back to her father's house and leave her there to think it over for a while.

With the stealth of a panther he approached his house and got a coil of half-inch rope from the woodshed. Except for the ticking of the clock all was still in the kitchen. He stepped over the threshold of the bedroom.

A thousand streaks of fire shot before his eyes. He melted down, sliding against the wall, with his head rolling foolishly. A light flared up and he saw Rose, with her unbound hair like a burst of flame about her head. She certainly was a good-looking woman. She carried a stick of stovewood handily as she came and stood over him.

"What was you fixing to do with that rope?" she asked.

"Why . . . Rose . . . I wasn't going to hurt you any!"

"Patch," she said, earnestly, "did you figger you licked me the day we was married?"

"Well, Rose, I kind of thought I did—"

"Then you thought wrong! I hadn't even started to fight! Think it over! The question right now is whether you're going to take that Saturday bath, or whether I got to give it to you!"

"Rose," said Patch Tupper, "I've made up my mind to take it. They's no use of argering about it tonight."

St. Joe Figures In Garrett Contest

Several St. Joe horse shoe sports attended the tourney at Garrett, Friday evening. They were Geo. Swineford, Chas. Rice, Wm. Keeler, Ed Miser and sons Harcourt and Frank, Francis Hickman and Chas. Jordan.

The scores are as follows:

Doubles, each team playing for best two out of three contests for fifty points:

Team No 1:
St. Joe, first 50, second 50
Garrett, first 30, second 25.

Team No 2:
St. Joe, first 37, second 49.
Garrett, first 50, second 50.

Team No 3:
St. Joe, first 16, second 28
Garrett, first 50, second 50.

The contest for individual scores resulted as follows:

1. Jordan, St. Joe, 70 points, 10 ringers.
2. Kistler, Garrett, 67 points, 12 ringers.
3. Smith, Garrett, 67 points, 8 ringers.
4. Rowe, Garrett, 62 points, 8 ringers.
5. Mann, Garrett, 57 points, 8 ringers.
6. Kukuck, Garrett, 52 points, 11 ringers.
7. Rice, St Joe, 51 points, 7 ringers.
8. Clady, Garrett, 46 points, 6 ringers.
9. Keeler, St Joe, 46 points, 4 ringers.
10. Schulthess, Garrett, 44 points, 5 ringers.

These scores were the results of thirty pitches by each individual.

Christian Church Notes

Bible School at 9:30, communion service immediately following. Morning worship

A number from the local congregation attended services at Newville, Tuesday evening and heard F. S. Dowdy of the Hicksville Christian church, who is holding a week's meeting there

St. Joe Folks Ought to Adopt Custom

The first day of the Chinese new year, February 16, is not only a day of festivity but is also the day on which every Chinaman pays his debts and starts out with a clean slate. In the Chinatowns of San Francisco, Chicago and New York, this ancient custom still commands reverence and unquestioning obedience. To the average Chinaman death is preferable to the dishonor of being unable to pay his debts on New Year's.

Ohio Led in Roads

The first concrete road of which the bureau of public roads has any record was built in Bellefontaine, Ohio, in 1893-94.

The SANDMAN STORY

MARY'S TOYS REBEL

LITTLE MARY sat up and rubbed her eyes. She was on the sofa in the playroom, where she had thrown herself because her mother would not let her have a fire lighted in her little kitchen stove.

You would guess that Mary was a very good little girl, but the truth is that she often was not good, and wanted to do things her mother did not think best, and then she would cry, and sometimes had to be punished. And that was what had happened this time. Because it was raining she had to play in her playroom, and because she did something very naughty her mother told her she could not come

She Was on the Sofa in the Playroom.

downstairs to lunch until she said she was sorry for what she did.

"What did she do?" I hear some one ask.

It was so bad I hate to tell you, but it was something she did with her tongue. It was a pretty little pink tongue, but it did not look pretty when Mary put it out, but there, I won't tell any more, for she was a good girl soon after and sorry for what she had done.

Mary sat up and rubbed her eyes because she heard the toys talking.

Said Calico Cat: "I was as quiet as any puss could be the other day, and she boxed my ears and put me under the table."

"She made me go to bed in the daytime," said Marie Doll, "and all because she had been naughty and sent to bed. I don't think it is fair."

"Neither do I," said Teddy Bear. "When she is bad and has to stand in a corner with her face to the wall she drags me by the shoulder with her and then because she feels cross she bangs me against the wall."

"Yes, she is pretty bad lately," said Little Dog on Wheels. "She kicked me the other day because her mother would not let her do something she wanted to, and sent me running across the room, and I bumped my head against the wall, and here I have stood ever since."

"Well, I for one, am tired of having such a naughty girl for my little mistress," said Calico Cat. "What do you all say if we run away? We can jump into Marie's carriage. And there is that nice rocking horse that the little boy who was visiting left here so he could have it when he came again. He didn't like girl's toys, you know. I am sure we could get him harnessed to Marie's carriage and run away with us. What do you say?"

"I'll go," said Marie Doll.

"So will I," said Teddy Bear, scrambling into the carriage.

"I'll go, I'll go," came from all parts of the room, and all the toys ran toward the doll carriage to get ready to run away. And that was the reason Mary sat up on the playroom sofa and rubbed her eyes.

She had never heard her toys speak before, but here they were finding fault with the way she behaved, and if she did not stop them she would not have a toy left to play with.

Her darling Marie, too, was ready to leave with the others. This was more than Mary could bear. "I'll be good, I'll be good. Please don't run away!" she cried.

"I am not going to run away," said her mother, picking Mary up from the sofa.

"But all my toys are going to run away because I am a bad girl," said Mary, who was only half awake.

"I guess you have been dreaming," said her mother. "You have been asleep, and I hope that naughty little girl that made the ugly face has gone, and my good little girl is here to stay. Is she?"

"Yes, mother," answered Mary. "I'll be good. I am sorry I was so bad."

Mary looked over her mother's shoulder as she carried her out of the playroom. She hoped all the toys heard her promise, and that she would find every one there when she came back.

The Appleton Family

Mr. Lysander John Appleton
Mrs. Lysander John Appleton
Miss Daysey Mayme Appleton
Master Chauncey Devere Appleton

MRS. LYSANDER JOHN APPLETON claims to be the neatest housekeeper in her town. Her kitchen

floor was painted two months ago, and she points to it with pride now. Not a vestige of paint left on it. Ordinarily, it takes three years to scrub all the paint off a kitchen floor, but Mrs. Appleton did it in two months.

• • •

If Lysander John Appleton gave the guests all the chicken his wife begs them to eat, there would be nothing left for the Appleton family but the neck and the gravy.

• • •

Daysey Mayme Appleton has issued a card to the public as follows: "Perhaps, being only a simple little girl, my influence in this great world will never amount to much, but what little weight it may possess I wish to throw in the interests of peace. I desire to ask kind friends that they no longer invite my father, the Honorable Lysander John Appleton, to any evening entertainments. When he gets the invitation he roars till he has reached the hostess' door, and is cross for a week afterward. He always says he won't go, and my mother always makes him, and he gets so riled up that it is almost impossible for me to coax any money out of him for a month later. If kind friends will add to their invitations, 'Mr. Appleton Not Expected,' I may get him back to that calm, submissive state of mind where it will no longer be necessary for me to pick his pockets after night."

Valuable to Science

The American Nautical Almanac is a mathematical publication of the bureau of equipment of the naval observatory. It contains tables of positions of various heavenly bodies at stated times and other information of like nature and is issued several years in advance. It is used by navigators, astronomers and geodesists.

Something to Think About

By F. A. WALKER

A RAY OF SUNSHINE

IT MATTERS not how lowly we may be, nor how dread life-tides about our little selves may ebb and flow, there is always some one among our friends and acquaintances upon whom we can shed a ray of sunshine.

Some one is living under darker skies than we, longing for encouraging words or cheering smiles; some one is starving for affection which means to him or her a lamp of hope; some one is striving to overcome ruinous habits, too weak to hold his or her frail craft on a safe course.

Each one needs a ray of friendship, the blessed boon which if used aright would make the whole world brighter, knit mankind closer in happiness, soothe aching hearts, dry burning tears and hide from cold stares the beggar's outstretched hand.

There is something in soul-sunshine that penetrates the toughest fiber in human nature.

So send forth this mystic cheer far and wide.

There are hungry hearts everywhere, behind walls of marble and slabs of hovels, praying for appreciation and sympathy.

Find one if we can and blow to flame the spark that kindles love. Scatter sunshine across the sea and over the land until it shall turn night to noon-tide.

We may speak different dialects, but we can punctuate our sentences with cheer and make ourselves understood, not clumsily nor dimly, but easily and clearly as the sunlight of heaven.

And if we have within us the right spirit, we can continue this beneficent work until love shall canopy the earth, faith and hope flood the dark places with glorious light and sorrow turn to gladness. Whatever the number of good deeds we may have done, however far we have flung the sunshine, there will be times in our lives when we shall feel that we have not done enough to merit the peace which is ours—unspeakably sweet and rich beyond price.

ANOTHER

Double--Header

This week C. G. Gorrell near Woodburn, now has both our Service Light Plant and Atwater Kent Radio. We also installed an Atwater Kent for Ross Bair and Dwight Coolidge this week.

Spencerville Now Has
14 Radio Outfits
10 of them are Atwater Kent.

There is a reason. Stop at the Bert Davis restaurant and see and hear for yourself or call us and we will bring one to your home for demonstration.

HERMAN REASONER
SPENCERVILLE, IND.

PUBLIC SALE

The undersigned will sell at public auction, due to moving to the state of Delaware, at the farm ½ mile north of Mark Center school house, 5 miles south of Farmer, 4 miles west and ½ mile north of Sherwood, 7 miles east and ½ mile north of Hicksville, commencing at 10 o'clock, on

Tuesday, February 17, 1925

THE FOLLOWING PROPERTY:

7—HEAD OF HORSES—7

Full blood Belgian mare 9 years old, strawberry roan, weight 1900, sound, an outstanding good mare; pair black well matched mares coming 5 years old, weight 2900, well broke and a good pair of workers; bay mare coming 3 years old, Belgian, eligible to registry, weight 1600; bay mare coming 3 years old also Belgian and eligible to registry, weight about 1500; roan Belgian mare coming 2 years old, eligible to registry; coming 4-year-old roan gelding, weight about 1600, will make a big slave.

10—HEAD OF CATTLE—10

Nine Holstein cows, one registered, all good ones and some exceptionally good. Some fresh, some close up springers. Two-year-old Holstein bull.

21—HEAD OF SHEEP—21

Twenty head of good breeding ewes; good blooded buck.

7—HEAD OF BROOD SOWS—7

These are all full blood Spotted Polands, due to farrow from the middle of March to first week in April.

180 CHICKENS—80 White Wyandottes, mostly pullets; 60 Brown Leghorns, mostly pullets; the remainder Anconas. One two-year-old gander.

THRESHING OUTFIT

20-horse S. C. Pitts engine; 36x58 Greyhound separator, tank, tank pump and hose complete. No. 3 Enterprise saw mill, 3-head-block; 56-inch inserted-tooth saw; blower; all in good shape. This outfit will be sold so the purchaser will have the chance to pay for it by its own labor. 10-inch 70-foot 4-ply Condor belt, been used about three weeks, in the best of shape. 15-horse 2-cylinder Cushman gas engine on trucks, practically new.

FARM MACHINERY, ETC.

8-foot-cut John Deere binder, fair shape; 6-foot-cut McCormick mower in good shape; Dain side rake, practically new; 2-row P. & O. corn plow in extra good shape; low down Ohio manure spreader in good shape; International web single drum hay loader in good shape; 16-disc Roderick Lean tractor disc, a good one; Roderick Lean Fordson disc; Hayes corn planter, 120 rods of chain; 16-disc Superior grain drill in good shape; 12-inch walking plow; Oliver 12-inch 404X plow nearly new; 3¾ skein Turnbull 4-inch tire coach tongue wagon practically new; 3½ inch Weber wagon in good shape; hay tedder; 6-foot clover buncher; two hay racks; two surface cultivators; Letz No. 30 feed grinder, a good one; extension rims for Fordson tractor; Clipper fanning mill; 800-lb. platform scales; blacksmith forge, extra good one; 150-lb. anvil; 5-inch vise; two good sets of work harness, one of them heavy breeching harness nearly new; 100-gallon hog waterer; 60-gallon feed cooker; 30-gallon iron kettle; lard press; power sausage grinder; 30-barrel stock tank, nearly new; Cowboy tank heater; 1½ horse gas engine; 60 rods 6-inch-stay hog fence nearly new; about 400 rods heavy barbed wire, nearly new; five 10-gallon milk cans; 4 oil drums; two hog self-feeders.

BUILDINGS—12x24 shingle roof drop-siding building on runners, a good one; 12x24 shop or garage building with galvanized roof; 3 open-end chicken coops, two of them 8x16, one 12x20; four 6x8 farrowing pens.

GRAIN AND SEED—About 300 bushels of New Victory seed oats, extra fine; about 30 bushels of sweet clover seed.

HOUSEHOLD GOODS—Round Oak hard coal base burner, 17-inch; 20-inch Renown soft coal burner; 5-burner oil stove, in good shape; two other stoves; bath tub; book case and desk combined, nearly new; cupboard; washing machine; dresser; commodes; refrigerator; jars; fruit cans, and lot of other articles such as beet forks, shovels, wrenches, etc.

OWING TO HAVING SUCH A LARGE AMOUNT TO SELL WILL START SALE AS NEAR 10 O'CLOCK AS POSSIBLE.

TERMS—All sums of $5 and under, cash. On sums over $5 a credit of 9 months at 6 per cent interest, purchaser giving note with approved security. If not paid at maturity 8 per cent thereafter. Four per cent discount for cash on sums over $5. No goods to be removed until settled for.

MARK CENTER LADIES' AID WILL SERVE LUNCH

JERRY MILLER

A. E. Lybarger and J. A. Elder, Auctioneers. Guy D. Wilson, Clerk.

SPENCERVILLE

Miss Margaret Lake returned home Sunday after a visit with Ft. Wayne relatives.

The trustee, Wm. Lake, had lightning rods put on the school building last week.

Harry Denter, wife and son, Billy, were Sunday visitors in the Jerry Markle home.

Mr. and Mrs. Henry Hesly of Fort Wayne were weekend guests in the A. R Stackhouse home.

Mrs. John Bachmann, who has been visiting relatives at Fort Wayne, returned home Sunday.

For Sale: Four pair Bantam chickens. Will sell right if taken soon. Phone Rev. S. D. Steffey.

The Home Missionary society of the Methodist church will meet on Thursday afternoon with Mrs. Lina Odel.

The Spencer Township Sunday School Convention will be held on Sunday, February 22, at the M. E. Church.

The Home Missionary society of the Methodist church held their mite box opening Sunday evening at the church.

Raymond Rhodes and wife entertained several guests at dinner Sunday in honor of their daughter, Miss LaVern's birthday.

Vinton Miller and family, Kenneth Miller and family and Mrs Sophia Miller, were Sunday dinner guests of F. W. Silberg and wife.

Charles Hahn and family were guests Sunday of Mr. and Mrs. Warren Moor of Angola. Miss Dora will remain for a weeks visit.

The meeting of the C. C. Club which was postponed last week on account of sickness, will be held Friday afternoon at the home of Mrs. Flossie Rhoades.

The following guests very pleasantly surprised Mrs. Jessie Summers last Sunday when they arrived with well filled baskets to remind her of her birthday anniversary. Those present were Mr. and Mrs. Rolla Moffett, Wm. Roderfer and wife, Ray Roderfer and wife of Auburn, Paul Adams and wife of Fort Wayne, Frank Baltz and wife and Mr. and Mrs. Jacob Baltz.

CONCORD

Mrs. Jane Hull is about the same as she has been.

Mrs. Minnie Goings is some better at this writing.

Sale on Percales beginning on Feb. 14, at Tope & Co.

Harry Moor and family spent over Sunday with his parents, Sam Moor and wife.

Cleota Morr remained last week over Sunday with friends near her school, north of Butler.

We sure thank the boys and Rev. Havens, also Miss H lda Koch for the effort they made Sunday eve. They sure did fine. Come again.

Ford Jackson and family spent Saturday night with his uncle Holl Jackson and wife. Sunday they went to Auburn and spent the day in the Less Sebring home.

A quiet wedding took place Sunday morning at 8 o'clock at the M. P. parsonage, by C. H. Havens Carl Johnson and Miss Mary Bishop of Jackson township. Concord neighborhood wishes them the best success.

Mrs. Elsa Fetters was pleasantly surprised recently when a number came in to remind her of her birthday, bringing with them three freezers full of ice cream and a galgon of oysters. All did justice to the eats and departed wishing her many happy returns of the day.

The Aid Society met with Mrs. George Johnson last Thursday all day and we sure had a big day of it, about forty ate dinner, men and all. The collection was over $16. Mrs. L. D. Nelson of Auburn was a guest. She remained over night with Mrs. Johnson and visited the next day with Mrs. Jane Hull.

Mrs. Jay Fetters and two children spent Sunday with Aaron Carper and wife.

Will Keeler and family spent Sunday with his mother, Mrs. Ira Bone and husband.

Burnie Rhoades and family spent Sunday in the Chas. Morr home. They also attended the convention at St. Joe Sunday evening.

Obituary

Catherine M. Zehner was born in Ashland county, Ohio, October 8, 1848 and died at her home in Spencerville, Indiana, January 28, 1925, aged 76 years, 3 months and 20 days.

At an early age she came to Indiana and has been a continuous resident here since that time. She was married May 1, 1866 to Henry Markle who died about two years ago. To this marriage one child, Irene, was born, who remains to mourn her loss. She leaves one brother, Samuel Zehner, 9 grand children and 21 great grandchildren. Two grandchildren are dead.

Mrs. Markle was baptized in infancy and at an early age she was confirmed as a member in the Lutheran church and remained a faithful member till the end of her life. She was a good mother grandmother, neighbor and friend. She had been sick for a long time with an incurable disease and finally died in peace.

The funeral was held from the Lutheran church, at 2 o'clock Feb. 1, 1925, Rev. Steffey officiating. Burial in White City cemetery.

LOCAL NEWS ITEMS

B. & O. train No. 46 was ditched Monday evening at Galitea, Ohio, by a booze truck running into the baggage car. The booze runners were not hurt much.

Lester Pugsley and wife has as Sunday dinner guests Mr. and Mrs. Al Jennings and Mr. and Mrs. George Edwards and baby of Butler.

The eighty-eighth anniversary of Coburn's Corners church will be celebrated next Sunday in an all day meeting. Basket dinner at the noon hour. Friends are invited.

Hall's Catarrh Medicine

Those who are in a "run-down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that while Catarrh is a local disease, it is greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years. Sold by all druggists.
F. J. Cheney & Co., Toledo, Ohio.

WOMEN
Like to Come to This Bank

There's a spirit of friendliness and cordiality about this bank that radiates and promotes a Good Will not found in a bank that is merely a stronghold of stone and steel. And that's why women make this their headquarters for their financial dealings. They like the cheerful atmosphere and the sincere courtesy. You too, will see a difference when you come in to get acquainted.

Farmers' & Merchants' State Bank
Spencerville, Ind.

All size Electric Bulbs at the Widney's Electric Shop.

Betty Jane Mavis, of Auburn, is here the guest of her grandmother a few days. She was sick with the croup the first of the week.

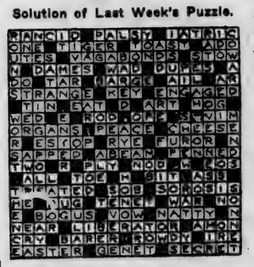
Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Basilica Greek Name for Hall of Justice

The word basilica is of Greek origin, being derived from the Greek word, (written with Latin letters), "basilikos," meaning kingly. From that word has been formed the English adjective, basilic, meaning royal, also said of certain parts or substances on account of their supposed importance or efficiency. The word basilica, as a term of architecture, meant originally at Athens a portico on the agora in which the archon-basileus dispensed justice, that is, at Athens the basilica was the porch of the courthouse. Later, when Rome had become the mistress of the world, the word basilica meant a rectangular hall, divided into nave and aisles by ranges of columns, and with a raised platform, called the tribune, at one end. It was used as a hall of justice, a hall for the use of the high courts. It was in such a hall that the praetors held their courts and later under the emperors the prefect's courts met in a basilica. The prefect or judge sat on the tribune or platform, with the assessors or law advisers on either hand. Sometimes an emperor presided when the case was an appeal, in a criminal matter, from the decision of a governor of a province. It was before such a court, held in such a hall, that the appeal of St. Paul was heard. In later years when Christianity had spread throughout western Europe, the Christians often adopted the basilica as the pattern of their larger places of worship. Hence basilica now means a church built on the plan of the basilica of ancient Rome.

Willing to Dicker

Higgins—"So you wrote to Helen every day for six months. I suppose your letters mean a great deal to the lonely girl?" Wiggins—"Quite a great deal, although she offered to sell them to me for $50 each."—Farm and Fireside.

Spread of Democracy

Liberty makes progress. Years ago only a queen could poison surplus men.—Lexington Leader.

Yukon Gold

The first placer mining of gold in the Yukon territory was carried on along a small stream which was a tributary to the Klondike. The first white man to take advantage of the rumors of gold circulated by the Indians was J. W. Carmack, who had worked with the Dominion land surveyor, William Ogilvie, in 1887. He located a claim on a small stream that came to be known as "Bonanza Creek." There is, however, an account that holds that the discoverer of gold on the Klondike was Robert Henderson, who came upon gold-bearing dirt in August, 1896.

Burmese Superstition

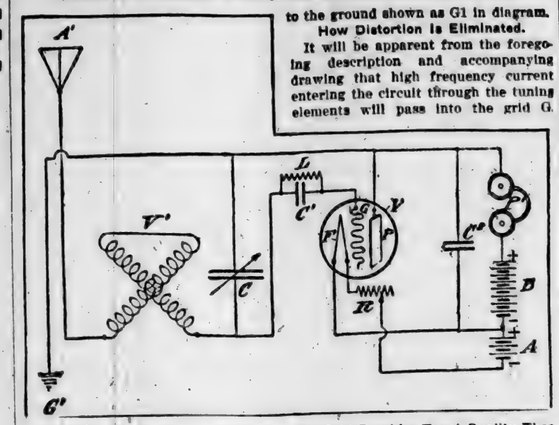
The Palaungs are a people dwelling in Burma. The Palaung child is taught never to go under a ladder, because the influence of the person upon the ladder—or that of the last person who climbed it—may descend upon the person underneath.

Identified

There's one born every minute. You can recognize him by his conviction that he can beat Wall street.—Rochester Times-Union.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)



Application of Above Method of Tuning the Grid Provides Tonal Quality That Equals the Crystal, Its Inventor Claims.

A tuned, open grid circuit, arranged so that high frequency current may pass into the grid and thus eliminate objectionable noises occasioned when low frequency or rectified current passes into the grid, is claimed by Charles Kosnick, of New York city, in an application for a patent. Benefits said to be derived from the arrangement include a set that is non-radiating, sensitive, selective and remarkably free from distortion. An added advantage is the low cost of construction.

Description of Circuit.

Mr. Kosnick's patent description of his circuit follows:

Referring specifically to the drawing, the vacuum tube which is shown at V is of the three electrode type, the plate being indicated at P, the filament at F and the grid at G.

The plate P is connected in circuit with the usual battery and connected in this circuit are phones or receivers P1, while the fixed condenser C2 is connected across the circuit from one side of the phones P1 to the minus of the B battery.

The filament F is connected in circuit with an A battery and included in this circuit is a rheostat R, by means of which current to the filament may be controlled. The filament and plate thus receive low frequency current.

The grid C is connected in an open circuit with tuning elements, herein shown as a variometer V1, with a variable condenser C connected across the plate, the grid of the tube V, one side of the variometer being connected to the aerial A1. The opposite side of the variometer is connected with the grid G and included in this connection is a fixed condenser C1 and a grid leak L. The plate circuit is connected to the ground shown as G1 in diagram.

How Distortion Is Eliminated.

It will be apparent from the foregoing description and accompanying drawing that high frequency current entering the circuit through the tuning elements will pass into the grid G and as the circuit provides no grid return, such as is usually connected from the filament F to the resistance of variometer V1, no rectified or low frequency current will pass into the grid. This arrangement will eliminate objectionable noises commonly found in closed receiving circuits, will provide increased sensitiveness, strong and clear signals and will eliminate radiation. All of these advantages are due to the fact that there is no electric connection between the grid and plate.

While the tuning elements in the circuit are shown as a variometer and variable condenser, it is obvious that other turning elements may be substituted.

Right to Make Changes.

The invention is susceptible of various changes in its form, proportions and minor details of construction and the right is herein reserved to make such changes as properly fall within the scope of the appended claims, and the patent description.

The principal advantage of this circuit lies in its tone quality equaling that of a crystal detector. The tuning is fair and the excellent reception compensates for the lack of sharp tuning. Local stations, however, are easily separated.

Parts needed include the following:

Variometer 600 meters capacity.

Variable condenser five plate.

Tubes 201 A or U. V. 199 are suitable.

Grid leak is unnecessary.

Fixed condenser capacity .001 makes circuit non-radiating, but reduces the signal strength, therefore is conditional.

Radiation is slight without condenser.

Amplifier of any type may be added to this circuit.—New York Mail.

Important Improvement in Headphone for Radio

The radio headphone, though retaining many of the original principles, is being constantly improved to increase its sensitivity and electrical efficiency. Mechanical improvements are constantly being made to get the receiver as light as possible and to increase its strength and durability.

The whole secret of good headphones lies in the accuracy to which the air gap between the tip of the pole pieces and the diaphragm is adjusted. The distance between the diaphragm and each of the pole-piece tips must be the same and of the correct proportion so that the maximum volume may be had without distortion.

In the earlier type of headphone the magnets and coils were assembled on the inside of the back of the receiver case. The outside edges of the diaphragm then rested on the edge of the receiver case, and the distance of the diaphragm from the pole-piece tips depended on the trueness of the receiver shell. With the best of machinery and manufacturing methods the receiver shell cannot be made accurate enough to insure that the distance of the air gap will be uniform.

Showing the Various Parts of the Receiver.

Another disadvantage of this method of construction was that the case had to be made extra strong to hold the weight of the magnets and coils. The inner surface of the case had to be absolutely true and each side of the magnet drawn down evenly to the inside of the case with the mounting screws. This added considerably to the weight of the receiver.

An improvement has been designed by Maj. Herbert H. Frost, United States signal corps reserve, in the method of mounting the magnets and the pole pieces which eliminates the uncertainty of the diaphragm adjustment and permits the use of a much lighter receiver shell.

The magnets and the pole pieces are mounted on a strong aluminum stamping that has a flange for supporting and seating the diaphragm. In this manner the distance between the diaphragm and the tip of the pole pieces is always the same, within a very slight variation either way. The tips of the pole pieces can then be slightly ground down so that the distance is practically identical in every receiver. The ends of the phone cords are then attached directly to the coils and the whole thing inserted in the receiver case, much like the assembly of a watch.

The earpiece screws into the case and the magnet assembly and diaphragm are securely held in place. The troublesome nuts and connections for the headphones on the back of the case are eliminated and the chances for leakage of energy across the bushings, where the connections are brought through from the inside of the case, are done away with.

Try Switching Tubes to Increase Efficiency

You may be able to get an increase in efficiency equal to as much as 50 to 75 per cent by merely switching the tubes around in the different sockets in your set.

First tune in a signal, and then take two of the tubes from the sockets and reverse them, putting them each in the other's socket.

Keep on doing this in various combinations until you hit on the particular combination that gives you the best results.

Long Aerial Necessary for Your Crystal Set

A crystal detector set should have a long aerial, for the crystal detector relies exclusively on the strength of the incoming signal for its operation, as it has no local battery to assist it. The sounds heard in the telephone are the strength of the actual signals coming through after rectification by the crystal. The longer the aerial is within certain limits, the better the results should be on the crystal detector.

Bringing Aerial Through Window

Lead-in Strap Will Aid in Making More Efficient Installation.

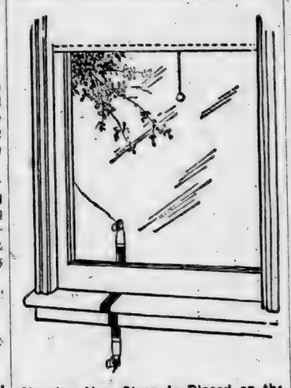
Radio has shown that many of us are far from being mechanical geniuses. In the early days of radio, back when every one built his own apparatus from socket to variometer, the problem of an aerial was an easy matter. The hardest job was convincing the landlord it would not invite disastrous calamity in the shape of lightning or flood.

The radio fan of yesterday was a mechanic from necessity. To install a radio set one needed to be an expert electrician. Where the lead-in came through the window and side of the house, for example, it was necessary to drill a hole and insert a long porcelain tube. Ordinary drills were too short for this purpose. It needed an extension bit, such as electricians use to drill through floors.

The inventive minds of the radio world have been busily training to ease the troublesome task of installing a radio set. One of the kinks along this line of progress that has come to notice is the lead-in strap that solves the particular problem of bringing the aerial through the side of the house into the room where the set is to be used.

The strap consists of a strip of heavily tinned copper which has a phone-stock clip soldered to each end. Heavy insulation is wrapped around the center of the strap and under this is placed a strip of stout webbing. The strap is placed on the window sill, as shown in the illustration, and the window is closed, the sill resting on the insulated part.

It is a difficult matter to solder connections in an aerial system and, unless the joints are soldered or well made, they soon corrode when exposed to the atmosphere. The lead-in wire may be fastened directly to the phone-stock clip; the wire to the set is fastened on the other end.



Showing How Strap Is Placed on the Window Sill.

It is often better to place a lead-in at the top of the window, where it will be out of the way and there will be no danger of disturbing it by opening the window. It is better protected from the window in this manner and the lead-in does not show in front of the window. This labor-saver lightens the task of erecting an aerial and makes a more efficient installation. It has gained the favor of the landlords because its use does not in any way spoil the appearance of the woodwork of the building.

RADIO RHYMES

By Robert Stewart Sutliffe.

TWO BUGS

YOUNG SLIM JONES was out for radio, with heart as well as head; it had him in a demon grip, the smiling neighbors said; he read it, talked it, wrote it, dreamed it, morning, noon and night; the old barn where he tinkered with it surely was a sight.

With odds and ends and things he'd purchase, he made many a set, and then he'd try out some new wrinkle to reception get; he'd take it down and reassemble, rebuild this or that, and when outdoors, he used an outfit built within his hat.

He had antennae on the housetop, loops he moved about; he even tried to get Alaska on a water spout; but the paramount ambition that was in his head, was how to get some good transmission, through springs upon his bed.

But this was where young Slim was bested, it somehow wouldn't go, although he tried a lot of tricks he'd learned 'bout radio; he tested out his whole equipment, tried a hundred things, but no signal, voice or music e'er came through the springs.

Then one day he told his problem to an engineer; told him how he had adjusted all his bedstead gear; how he'd tried out all the jim-cracks of his A1 set; but the springs had always failed him, not a sound he'd get.

Patiently the fellow listened; then said with a shrug: "Youngster, in your bedstead circuit, I have found a 'bug.'"

Chimpanzee in Church

The congregation of a church at Montecito, a fashionable suburb of Santa Barbara, Cal., was thrown into near panic by the appearance of a huge chimpanzee which walked calmly down an aisle and seated itself in a pew. The big simian was a pet of a member of the millionaire colony and had escaped from its home two hours before.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 23 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Problem of a Venus

A small boy, the heir of his father who has great possessions, was observed to be regarding, with a puzzled look, the statue of a Venus in the ancestral hall. He was told the story of the goddess, but did not seem impressed, and still look puzzled. "What I want to know," he explained, "is whether she is dressing or undressing."

To insure glistening-white table linens, use Red Cross Ball Blue in your laundry. It never disappoints. At all good grocers.—Advertisement.

MANY MEASURES ARE INTRODUCED

Bill Increasing Mortgage Exemption Is Passed by the Senate.

Indianapolis.—Although the number of bills introduced in the assembly has been comparatively small, the number killed and withdrawn has been unusually large, according to veteran legislators. A total of 197 bills has been introduced in the house, of which 14 have been withdrawn, 27 indefinitely postponed, 3 killed and 18 passed. In the senate 177 bills have been introduced and 5 have been withdrawn, 18 indefinitely postponed, 1 killed and 27 passed.

The Wright "bone dry" bill, providing for a codification and broad strengthening of the prohibition laws and the Murden-Hull farmer co-operative marketing bill, were passed by the house.

The farmer co-operative marketing bill, which was passed by the 1923 legislature and vetoed by former Governor McCray, passed without a dissenting vote.

The prohibition measure passed by a vote of 89 to 1, Representative Julius Schwing (Dearborn and Ohio, Dem.) cast the only negative vote.

Important Bills Introduced.

The week has seen introduction of several important measures, among which is the county unit education bill and a companion measure designed to abolish the office of trustee and the township advisory board.

One of the big administration measures, based on the recommendations of the survey committee, was introduced in the senate. It calls for the creation of the Indiana library and historical department out of the library commission, the legislative reference bureau, the historical commission and the law library. Other administration measures suggested in the survey report and by the legislative budget advisory committee, have been drafted.

The session was enlivened by a determined drive to discredit the state highway commission. The movement breaking out in a resolution demanding an investigation of the highway commission, introduced by Representative H. Walker DeHaven (Marion, Rep.), was checked when Speaker Leslie took the floor and spoke against legislative investigations until the resources of the courts and judicial systems are exhausted.

Mortgage Exemption in Senate.

A bill increasing mortgage exemptions from $1,000 to $2,000 and which, tax experts say, would take $500,000,000 from the tax duplicates of the state, was passed by the senate, and is now pending in the house. The farmers' co-operative marketing bill successfully survived amendments in the house, and is now awaiting passage there.

The week in the senate was enlivened by the killing of the Quillin bill, designed to bring holding companies under the public service commission. This measure had attracted a huge utility lobby and its death came as no surprise. Other utility bills and measures designed to bring automobile busses under state regulation are still holding the center of attraction.

A bill designed to make changes in the state banking law was unceremoniously killed by the senate. It will be redrafted, however, according to Eben H. Wolcott, state bank examiner, to meet objections raised in the senate debate, and will again be introduced.

Amendments to the bill designed to strengthen the blue sky law are to be proposed in the house. These changes have the effect of curbing the power of the securities commission, especially those relating to the appointment of assistants and fixing their salaries.

The week has seen the introduction of six bills that would have considerable effect on the state tax levy, if passed. Bills previously introduced would make necessary an addition to the state levy of 1.2 cents on each $100 of taxable property, over and above the items under consideration by the state budget officials. Further increases would be necessary under the bills introduced.

INDIANA STATE NEWS

Indianapolis.—Jerry Kinney, supervisor of detectives, recommended that a bill be passed by the legislature to limit the number of persons riding in the driver's seat of an automobile. Recently four persons, riding in a coupe, were injured when the car was struck by a traction car near Maywood.

Peru.—William Butt, fifty-seven years old, a farmer living near Macy, and Mrs. Loren Butt, twenty years old, his daughter-in-law, of Dayton, Ky., were killed when the automobile in which they were riding was struck by an interurban car near Gilead.

Franklin.—Ralph Lee, held for the murder of Abner Peek, Indianapolis grocer, is now locked securely in the county jail. Lee escaped but was captured two days later in the hills of Brown county by the Johnson county sheriff and his deputies.

Indianapolis.—John Strothenck, forty-seven, was sentenced in the Criminal court to two to twenty-one years' imprisonment for manslaughter. He was found guilty by a jury of causing the death of Mrs. Chester Hanse and her two small children in an auto accident.

CAN USE FUNDS FOR ANY PURPOSE

Indianapolis.—Arthur L. Gilliom, attorney general, in an official opinion delivered to Lawrence F. Orr, state examiner of the board of accounts, held that the legislature has full power to place in one fund all the state's revenue received from taxes or fees.

The opinion also holds that the diversions of the gasoline tax and the automobile license fees from the highway fund to the general fund would in no way impair the availability of federal aid.

With the issuance of the opinion clarifying the mooted question of whether the score or more of special funds can be reduced to one from which all appropriations are to be made, Representative L. A. Pittenger, majority floor leader in the house, will introduce a measure defining the general fund and providing for the concentration of all revenue now received by special funds into this one account.

Some authorities who have appeared before Mr. Orr, Ure M. Frazer, budget clerk, and members of the legislative budget advisory committee, have held that it would be unconstitutional to divert the gasoline tax from the state highway fund to the general fund. The assumption was that gasoline tax is collected only from those who use the highways and, therefore, must be spent for highway construction.

Attorney General Gilliom, in his opinion, takes the opposite view and holds that under the Indiana constitution there is no relation between the collection of fees and taxes and their expenditure.

Monticello.—Lying inundated by the backwater from the Norway dam which was just recently completed north of Monticello, two islands in the Tippecanoe river will be opened for entry on March 31, according to notice received. The islands are located near the Lowe bridge about seven miles north of Monticello. These are the islands over which a controversy arose, during the construction of the Norway dam, in regard to the title. It was found at that time that title to the land still remained with the government. The islands are now covered with the backwater from the dam and when properly claimed will no doubt be sold to the Indiana Hydro Electric Power company, builders of the dam, as were the other islands and land covered by the rising waters.

Evansville.—Sacrificing the property left her by the will of her husband, John A. Reitz, only under the condition that she refrain from marrying again, Mrs. Louise V. Reitz married William A. Foley in 1909, when she was forty-three years old and her bridegroom but twenty-five. Now, with her property gone and romance fled, she is suing her husband for divorce on the grounds of nonsupport, abandonment, cruel and inhuman treatment.

Muncie.—Charles Schwingel, alleged Texas land shark, who was arrested at Lafayette on complaint of D. S. Maynard, Delaware county farmer, who says Schwingel "fleeced" him out of $12,000 and his farm, was placed in jail here. Maynard also filed a civil suit against Schwingel seeking the return of his $12,000.

Culver.—Mrs. William McCoy, sixty-seven years old, of Kewanna, was killed instantly and Mr. McCoy died of injuries received when the automobile in which they were riding was struck by a Pennsylvania passenger train at DeLong.

Fort Wayne.—Fire almost destroyed the Washington Market building, entailing a damage to owner and tenants of approximately $50,000. The building is owned by Mrs. Elizabeth Moynihan.

Brazil.—Fifty head of live stock were burned to death when the large barn on the farm of William Williams, south of Bowling Green, was destroyed by fire, causing a loss of more than $5,000.

Decatur.—Apparently suffocated, the body of an unidentified man about forty-five years old was found in a tile kiln. It is thought he entered the kiln to sleep and was suffocated when the ventilating fans were turned off.

Franklin.—A pledge of $50,000 from Grafton Johnson of Greenwood to a $200,000 fund for the erection of a science building at Franklin college was announced by Dr. C. E. Goodell, president of the college.

Anderson.—Thefts of merchandise valued at hundreds of dollars during the last six months are believed by police to have been cleared by the arrest of Frank Little, proprietor of a barber shop.

Indianapolis.—James A. (Big Jim) Lucas, age forty-two, alleged whisky runner and a former policeman, died at the Methodist hospital from a bullet wound which he received when he was shot at his home. Before he died he told police two bandits held him up at the door of his garage and one of them shot him when he refused to put up his hands.

Fort Wayne.—The jewelry shop of H. M. Lehmann was robbed of watches and watch cases valued at $400 by two men after they bound and gagged the proprietor.

Lesson for February 15

JESUS IN GETHSEMANE

LESSON TEXT—Mark 14:32-42.
GOLDEN TEXT—"Not what I will, but what thou wilt."—Mark 14:36.
PRIMARY TOPIC—Jesus in the Garden.
JUNIOR TOPIC—Christ's Prayer in the Garden.
INTERMEDIATE AND SENIOR TOPIC—Christ's Prayer in the Garden.
YOUNG PEOPLE AND ADULT TOPIC—Lessons From Gethsemane.

I. Jesus Christ Suffering (vv. 32-34.).

1. The Place (v. 32). The garden of Gethsemane—an enclosure containing olive and fig trees, beyond Kidron, about three-fourths of a mile from Jerusalem. The name means olive press. The name is significant of the occasion. Edersheim says, "It is an emblem of trial, distress, and agony." Perhaps the garden was owned by some one of Jesus' friends. It afforded Him a suitable place to retire with His disciples in this trying hour.

2. His Companions (v. 33). He took with Him the eleven disciples that they might share so far as possible, this sorrow with Him. Being a real human being He craved human sympathy. He bade them watch with Him. While He knew that He must "tread the winepress alone," He had a keen appreciation of sympathy so far as those who loved Him could give it.

3. His Great Sorrow (v. 34). This is the same as the "cup" in verse 36. It was not primarily the prospect of physical suffering that was crushing Him; it was the suffering as a sin bearer—the sensations of His pure soul coming into contact with the awful sin and guilt of the world. In addition to this there was the judgment stroke from the holy God as it fell upon His Son instead of the sinner. God caused the iniquities of the world to strike upon Jesus (II Cor. 5:21; Isa. 53:6).

II. Jesus Christ Praying (vv. 35-42).

Though He prized human sympathy in the hour of supreme need, His only recourse was prayer. The sympathy of our friends is helpful, but in the great crises of life we can only find help as we go to God in prayer.

1. The First Prayer (vv. 35-38).

(1) His posture (v. 35). He fell on his face prostrate on the ground. In the hour of our great need we naturally prostrate ourselves before God—a becoming posture. (2) His petition (v. 36). "Take away this cup from Me." By the cup is meant His death on the cross. No doubt it was most grievous to Him to face its shame, but He pressed on knowing that for this cause He had come into the world (John 12:27, 28, cf. Heb. 2:14). He prayed that the "hour might pass from Him"—the burden was so great that it seemed His life would be crushed out. His prayer was heard (Heb. 5:7). When God hears our prayers He grants the petition desired (I John 5:14, 15). Angels ministered to Him, giving the necessary grace to endure to the end (Luke 22:43). (3) His resignation (v. 36). His will was in subjection to the Father. He knew that His death on the cross was the will of God the Father; for He was the Lamb slain from the foundation of the world. (4) The disciples rebuked (v. 37). He singled out Peter, since he had been the most conspicuous in proclaiming his loyalty (John 13:38). Though he would go with Him to death he could not watch one hour. (5) Exhortation to the disciples (v. 38). "Watch and pray, lest ye enter into temptation." The only way to be able to stand in the time of trial is to be watching and praying. Jesus knew that although the disciples meant it well they would fall in the trial unless aided from above.

2. The Second Prayer (vv. 39, 40). He withdrew the second time from His disciples and uttered the same words in prayer. This was not vain repetition. It is proper to repeat our requests. He found the disciples asleep again. Their shame and confusion were more marked than at first.

3. The Third Prayer (vv. 41, 42). He uttered the same words in His third prayer (Matt. 26:44). He tells the disciples to sleep on and take their rest, as the hour had now come for His betrayal. There is such a thing as being asleep when wanted and awaking when it is too late.

Thank God

Thank God every morning when you get up that you have something to do that day which must be done, whether you like it or not. Being forced to work and forced to do your best will breed in you temperance, self-control, diligence, strength of will, content and a hundred virtues which the idle will never know.—Charles Kingsley.

Doubts

Doubts about fundamentals exist in certain churches. Where there is a warm-hearted church, you do not hear of them.—C. H. Spurgeon.

War and Peace

Be at war with your vices, at peace with your neighbors, and let every year find you a better man or woman.

Power for Holy Service

The power for holy service is intercourse with God.

A Few Little Smiles

WHICH LIMB?

Uncle Sol threw aside the letter he was reading and uttered an exclamation of impatience.

"Doggone!" he cried. "Why can't people be more explicit?"

"What's the matter, pa?" asked Aunt Sue.

"This letter from home," Uncle Sol answered, "says father fell out of the apple tree and broke a limb."—Kreolite News.

Perfectly Democratic

The president of a large telegraph company was being introduced to the employees of his organization in a large western city and wished to show the proper spirit.

"My boy," he said to a freckled-faced messenger, "I am very, very happy to make your acquaintance."

"Don't mention it, mister, don't mention it," replied the youth. "'S all right by me, you bet."

MILL WENT ROUND

"So she married the rich miller, eh? Must have been a dusty courtship."

"No doubt he said it with flours."

All Wood

Oh, wooden grow the mighty trees
Of most tremendous age,
And wooden seem the chorus girls
Who practice upon the stage!

Woman's Viewpoint

Police Constable—Madam, you are interfering with the traffic.

Fair Motorist—Sir, I beg to inform you that the traffic is interfering with me.—Answers.

LAUGHING MATTER

Profe-sor Bug—I wonder what those fool kids are laughing about?

Had His Price

"Will you be quiet for a bit?"
His father said to Lew;
"No, sir," his slangy son replied,
"But I'll keep still for two."

What the Trees Heard

While viewing nature's gorgeous colorings the fair girl said: "Really, is there anything lovelier than fall?"

"Yes," replied her sentimental escort, "falling in love."

Interview

Caller (to head of the firm)—"I—er—think you—er—used to go to school with my uncle. His name was Whiffle. Perhaps if you are—er—requiring extra staff—

Head of the Firm (without enthusiasm)—Oh, did I? Was it? No! Good morning.—London Passing Show.

Mean Thing

Miss Hysee—I was encored three times, wasn't I?

Jealous Rival—Yes; the audience seems to realize that you needed practice.

Keeping Them Helps

"Yes, antiques are valuable. These things are very old."

"What if you don't sell them?"

"Well, they are getting older all the time."

Identical Thoughts

"Do you and your wife ever think the same?"

"When I'm out late at the club we do. She keeps thinking what she'll say when I get home, and so do I."

Why She Left

First Maid—How did you like working for the college professor?

Second Maid—Aw, it was an awful job. He was all the time quarreling with his wife, and they kept me busy running between the keyhole and the dictionary.—Salt Lake Tribune.

Other Way Around

Waiter—Well, my little man, what are you going to have?

Small Boy (alone with menu)—You mean what ain't I going to have.

Worn Out Since the Grip?

WEAK, nervous—just tired and miserable most of the time? Back lame and achy, too? Rheumatic pains torture you at every step?

Then you should look to your kidneys! Colds and chills are apt to weaken the kidneys and allow toxic poisons to upset blood and nerves. Then may come daily backache, stabbing pains, headaches, dizziness, and irregular or painful passage of the kidney secretions.

Don't risk neglect. Help your weakened kidneys with *Doan's Pills*. *Doan's* have brought new health to thousands. They should help you. *Ask your neighbor!*

An Ohio Case

A. L. Carls, horseshoer, W. Main St., Cardington, Ohio, says: "A cold settled in my kidneys and I began to have such backaches it was impossible for me to stay under a horse to nail a shoe. I had such awful catches over my kidneys I could hardly straighten. My kidneys didn't act right. I used Doan's Pills and two boxes cured me."

Doan's Pills

Stimulant Diuretic to the Kidneys

At all dealers, 60c a box. Foster-Milburn Co., Mfg. Chemists, Buffalo, N. Y.

Pulls Own Tooth

Walter Davis, a milk dealer of Candia, N. H., who has not missed a trip on his route for several years, suffered from toothache early one morning. He went to his garage, took a pair of pliers from his machine, pulled out a wisdom tooth and then started to deliver milk.

Foolish Question

"This item says an Iowan's speech was restored by three cyclones," remarked Mr. Grouch.

"Man or woman?" asked his wife.

"For the love of Mike, did you ever hear of a woman losing her speech?" demanded her husband.—Cincinnati Enquirer.

Children Cry for

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

Plausible Answer

"How is it that while only about one white person in ten thousand reaches the century mark we frequently see negroes one hundred and seventeen years old?"

"Uh-well, sah," replied Uncle Frosty, "as nigh as I kin proselyte de matter, it's due to judicial lyin' on de part o' de cullud race."—Kansas City Star.

Nothing hurts a conceited man like being ignored.

Plenty of It

"What were you doing at the information booth?"

"I wanted to find out something."

"You can't find out anything at an information booth."

"That's what I found out."—Life.

To act with common sense, according to the moment, is the best wisdom.

Happy are those who don't realize that it is a crisis until it is over.

Let Tanlac restore your health

IF your body is all fagged-out and run-down, if you are losing weight steadily, lack appetite, have no strength or energy—why not let Tanlac help you back to health and strength?

So many millions have been benefited by the Tanlac treatment, so many thousands have written to testify to that effect that it's sheer folly not to make the test.

Tanlac, you know, is a great natural tonic and builder, a compound, after the famous Tanlac formula, of roots, barks and herbs. It purges the blood stream, revitalizes the digestive organs and enables the sickly body to regain its vanished weight.

You don't need to wait long to get results. Tanlac goes right to the seat of trouble. In a day or so you note a vast difference in your condition. You have more appetite, sleep better at night and the color begins to creep back into your washed-out cheeks.

Don't put off taking Tanlac another precious day. Step into the nearest drug store and get a bottle of this world-famed tonic. That's the first important step back to health and vigor.

Tanlac Restored Her Health

"Typhoid fever reduced me to 95 lbs. and left me weak as a rag. Failing to get relief from other sources I tried Tanlac and after 6 bottles had gained 20 lbs. Now I enjoy a fine appetite and feel like a new woman. As a nurse I give Tanlac to all my patients."
Mrs. J. B. Terry,
1101 Park St., Ft. Worth, Tex.

Notice of Executors Sale of Real Estate

State of Indiana
County of DeKalb
In the DeKalb Circuit Court
December Term 1924
In the Matter of the Estate of Emillus Case, deceased.

Proceedings to Sell Real Estate

The undersigned, Executor of the Last Will and Testament of Emillus Case, deceased, hereby gives notice that pursuant to the terms and conditions of the Last Will and Testament of the decedent and to an order of the DeKalb Circuit Court of Indiana, he will on Saturday the 28th day of February, 1925 at the office of Henry C Springer at Butler, DeKalb County, Indiana, at the hour of 2 o'clock P. M. on said date, and from day to day thereafter at the same hour and place until sold, offer for sale at private sale, at not less than the full appraised value thereof, the following described real estate owned by the said Emillus Case at the time of his death, and located and situated in DeKalb County and State of Indiana and described as follows, to-wit:

The west half (½) of the northeast quarter (¼) of Section Twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east

Also the east half (½) of the northwest quarter (¼) of section twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east.

Also that part of the northwest quarter (¼) of the southeast quarter (¼) of section twenty-eight (28) in township thirty-three (33) north range fourteen (14) east that lies west of the St. Joe-Spencerville road and containing seven (7) acres more or less

Said real estate will be sold in one tract or in seperate tracts as the best interests of the estate may determine, for not less than the full appraised value thereof and upon the following terms and conditions, to-wit:

At least one third of the purchase price, cash in hand; one third in six months and one third in twelve months from date of sale, deferred payments to be evidenced by the promisory notes of purchaser waiving relief from valuation and appraisement laws, with attorney fees and in all respects fully negotiable and bearing interest at six per cent per annum from date and secured by a first mortgage upon the said real estate, to be executed by the said purchaser, his or her spouse, if any joining therein; purchaser to have the right to pay the entire purchase price in cash.

Said sale will be made subject to the approval thereof by the DeKalb Circuit Court of Indiana and the right to reject any and all offers is reserved by the undersigned Executor.

Sale will be made subject to the rights of any tenant upon the said real estate and further subject to the taxes for 1925 due and payable in 1926.

EDWARD PFLAUMER,
Executor of the Last Will and Testament of Emillus Case, deceased.

Henry C. Springer,
Attorney for the Estate.

NEWVILLE

Mrs. Julie Wyatt remains quite poorly in her son's home.

Willie Harter, wife and baby of Fort Wayne, were Sunday guests of his mother, Mrs. Jennie Harter

Mrs. Mary Mitchell fell recently while about her work, injuring herself so that she had to use a crutch for a few days.

Carl Clark, wife, mother and brother of Fort Wayne. were Saturday supper guests of John Miller and wife.

Leroy Kinney, wife and son, spent Saturday night at Auburn with their daughters, Mrs. Dewey Miller and Mrs. Robbie Wyatt.

The meeting continues at the U B Church Perhaps some of the seed falls by the wayside and some on stony places, but we trust that some will fall on productive soil.

Indian Tribal Language

American Indians are divided into groups and the languages of the various groups are found to differ to such a degree that one is not intelligible to another. Often within the same linguistic family different tribes speak radically different dialects. This is true of the Pueblos in the Southwest. Inhabitants of villages only 100 miles apart cannot understand each other's native tongues.

Home Bureau Club Now On Years Work

Programs for Concord township Home Bureau Club were printed by The News last week To give you an idea of the needed work of this organisation, we are reproducing the program, its membership, officers, creed and projects:

CLUB COMMANDMENTS

1. Thou shalt have these commandments before thee all thy club days.
2. Thou shalt keep in mind the time and place of thy club meetings.
3. Honor thy club sister.
4. Thou shalt prepare thy quotation for roll call.
5. Thou shalt work diligently with the committees assigned.
6. Thou shalt keep quiet while thy sister is speaking.
7. Keep these commandments that thy club days may be long and that peace may reign in the club forever and ever. —Selah.

CREED

We Believe:

1. Our homes are the most important of all institutions. It is a spiritual, moral, and patriotic duty to make them as happy, healthful and convenient as we can. The art of home-making deserves every possible encouragement.
2. Woman's greatest sphere is in motherhood and home-making. Herein lie the fundamental influences which determine the destiny of nations. A mother's influence is most lasting.
3. To be well born is a child's greatest heritage. A complete physical, educational and spiritual development of the child is necessary to the best interest of our citizenship.
4. The responsibility of motherhood and home-making demand women to be interested and informed on the economic problems of the community, state and nation.

Night Coughing—How to Stop It

Night coughing which, through loss of valuable sleep, often makes you feel utterly worn-out and useless during the day, and by quickly weakening the system lays you open to the most dangerous infections, can now be promptly checked by a very simple treatment. People who have hardly been able to rest on account of coughing spells have found that they can sleep the whole night through undisturbed often after the very first trial.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery. You simply take a teaspoonful at night before retiring and hold it in your throat for 15 or 20 seconds before swallowing it. The prescription has a double action. It not only soothes and heals the soreness and irritation, but it quickly loosens and removes the phlegm and congestion which is the real cause of the cough. The result is that you usually sleep as soundly as a babe the very first night, and the cough goes in a very short time.

The prescription contains no opiates or harmful drugs. Excellent for children as well as grown-ups. For coughs, chest colds, hoarseness, sore throat, spasmodic croup, bronchitis, laryngitis and bronchial asthma. At all good druggists. Ask for

NOTE—Pay your accounts. They are due now.

Cold facts must be faced in business

If a man smashed the thermometer because it said 20 below zero, it wouldn't make him any warmer. The thermometer was simply a humble instrument keeping him informed with the facts.

It isn't always pleasant to face facts because the facts are not always what we would like to have them. But isn't it a good deal better to form the habit of dealing with actual facts than to attempt to side-step them? You can turn your head away or you can shut your eyes, but the reality continues just the same, whether you see it or not.

Here in the bank we have to deal with facts. If we owe you money you expect to be paid in actual coin, and not in hope or in cheerful words or expectations. We must penetrate the confusing side issue, and find what the realities are in every situation. Perhaps we could help you to look over some of your problems, and see them from an unsentimental point of view. We are friendly to your undertakings but we know that it doesn't pay you or anybody else to let himself be fooled about the facts of his business situation.

The St. Joe Valley Bank, A STATE BANK

The Choral Band Recital

These two local organizations assisted by Mr. Press Wilcox and Miss Ferris, will offer you the following program at the Christian church Thursday evening, February Nineteenth:—

Choral	
March	Band
Vocal	Bridal Chorus from "Rose Maiden"
Reading	Miss Ferris
Overature	Troubadour
Vocal	Male Quartette
Choral	Softly Peals The Organ
Solo	Mr. Wilcox
"Humpty Dumpty" Chorus	Ladies
Knights Of Old	Band
Reading	Miss Ferris
Vocal	Mrs Jean Curie
Overature	Monoa
The Miller's Wooing Society	Choral
A Old Song	Nancy Lee
Reading	Miss Ferris
Descriptive Paraphrase	My Grandfather's Clock.

Program will begin at eight o'clock on account of prayer meeting.

Admission.... Twenty Five Cents

The proceeds of this concert go to the band. They are making a desperate struggle to raise funds for uniforms for next season, they do not receive a penny individually, for all the time and sacrifice to make the concert a success and no doubt the public realizes the necessity of these two organizations, so keenly that they will give their attendance at this entertainment.

Best Convention In Years at Auburn

From Auburn Evening Star

F. B. Leighty of St. Joe, was re-elected president of the DeKalb County Council of Religious Education at the sixtieth annual meeting of the organization in the First Methodist church in Auburn late Friday afternoon. F. C. Harding of Corunna, was named first vice-president; George E. Beugnot of Auburn, second vice-president; J. N. George of Auburn, third vice-president and Miss Sadie Coy of Auburn, secretary and treasurer.

Helen Manrow of Corunna, was selected as superintendent of the children's division of the organization's work; Stanley Means of St. Joe, superintendent of the young people's division; T. C. Cobler of Garrett, superintendent of the adult department; Josephine Smith of Ashley, superintendent of the educational department and Ward Jackman of Waterloo, superintendent of the administrative department.

The convention was largely attended Friday, the closing day. The meeting will come to a close tonight with a song service directed by Prof. C. A. Gerber. The Men's Gospel Chorus of thirty voices of Fort Wayne, will sing.

One hundred and twenty-five attended the banquet for pastors and officers Thursday evening which was served by the women of the First M. E. church at the hour of 5:30. G. E. Beugnot of Auburn, presided as toastmaster and responses were made as follows:

"The Sunday School and the Church," Monte L. Green of Garrett; "The Church and the Sunday School," Rev. E. E. Trippeer, pastor of the Auburn First M. E. church; "The Sunday School and the Superintendent," R. W. Newell of Ashley; "The Superintendent and the Sunday School," Ed. Storer, St. Joe; "The Sunday School Association and the Church," Harry G. Rowe of Indianapolis.

Many 100 Per Cent Schools.

Reports at the sixtieth annual convention of the DeKalb Council of Religious Education in Auburn Friday showed that DeKalb county has twenty-four 100 percent Sunday schools, according to the international standards of Sunday School work.

The county also has two 100 percent townships, Grant and Jackson.

To be classed as a 100 per cent school the following requirements must be met:

Cradle Roll (5 points), Home Department (5 points), Organized and Registered Young People's Class (5 points), Organized and Registered Adult Class (5 points), Teacher Training Class (10 points), Graded Organization (5 points), Graded Instruction (5 points), Missionary Instruction (5 points), Missionary Offering (5 points), Temperance Instruction (10 points), Definite Decision for Christ Urged (10 points), Workers' Conference regularly held (10 points), Full Denominational Requirements (10 points), Full Association Requirements, Annual Report to State Association (3 points), Delegates at Association Convention (4 points), and Offering for Association Work (3 points).

The following schools in DeKalb county have made the 100 percent class the past year:

Concord township—St. Joe Christian, St. Joe M. P. and Concord M. P. schools.

Jackson township — Hopewell U. B., Rehobeth and Meese Chapel, (M. E.) schools.

Spencer township, M. E. at Spencerville.

Wilmington township, Christian church school at Butler.

Smithfield township — Ashley Christian church school.

Union township, Auburn M. E., Presbyterian, Baptist and Christian Sunday schools and the Gospel Mission.

Keyser township Garrett M. E. and Baptist Sunday schools.

Grant township—Waterloo M. E., United Brethren and Evangelical Sunday schools.

Richland township - Corunna Christian and M. E. Sunday schools and Richland Center school.

Stafford township—Big Ruh Sunday school.

Newville township—U. B. Sunday school.

In recognition of the record made Grant and Jackson townships were awarded large banners at the convention as being 100 percent townships and each of the schools mentioned above was presented with a pennant in recognition of their splendid showing.

The interest and hard work of the county officers and workers is responsible for the exceptionally well organized Sunday school system in DeKalb county, known throughout the state of Indiana as a one hundred per cent county.

Something of the great amount of work which has been done the past year to accomplish the present standing of Sunday schools in almost every unit of the county may be gained from the reports submitted by the county officers.

Fred B. Leighty of St. Joe, the county president, found during the year fifteen townships organized. He traveled 999 miles. He found 24 schools out of the 59 in the county to be 100 percent schools. He attended three county executive meetings, seven township conventions, visited schools, held rallies, made a complete tour of DeKalb county the week of November 2 to 9, inclusive, and made association talks at practically every meeting attended. He mailed 204 cards, 234 letters and sent numerous telegrams and telephone calls in his work.

Ward Jackman of Waterloo, chairman of the administrative department, was also active in the work of the year having traveled 320 miles in his visits to schools, attending township conventions and other activities in his efforts to inspire workers to reach the highest standard of organized efficiency.

Josephine Smith of Ashley, superintendent of the educational department, visited 25 schools, gave 25 talks, attended 12 conventions, 3 council meetings and traveled 798 miles during the year in her work.

Miss Sadie Coy of Auburn, the county secretary was equally active. She traveled 400 miles in the county work in attending county councils, officers' meetings, township conventions, as well as keeping the records of the association.

Helen Monroe of Corunna, county children's division superintendent, organized five teacher's study clubs during the year. Five institutes or conferences were held in the county for teachers and leaders in children's work.

J. N. George of Auburn, superintendent of the county adult division traveled 450 miles in his work the past year in his visits to 26 schools, 17 township conventions, meetings of the adult division committee and other activities. He reported 50 out of the 59 schools in the county as having at least one adult class chartered, with a membership of 425 in the home departments in the schools of the county.

700 at Closing Session

Conceded the most largely attended, the most enthusiastic and best convention ever held in DeKalb county, the sixtieth meeting came to a close Friday evening with an attendance of more than seven hundred. Every seat in the auditorium of the First M. E. church was taken, the balcony was filled and the lecture room was provided with extra chairs to accomodate the crowd.

Harry G. Rowe of Indianapolis, the dynamic state worker who enthused the convention delegates during the two days' sessions thrilled his audience Friday night. He had spoken three times during the day and he was more forceful in the closing session than at any time during the convention.

The Men's Gospel chorus of Fort Wayne pleased everyone with a fine program.

The actual registration of delegates was 735 although the number attending the convention was between 1,000 and 1,100.

Committee Reports

A findings committee, consisting of Rev. E. E. Trippeer of Auburn, T. C. Cobler of Garrett and J. N. George of Auburn, made the following report.

Feb. 13, 1925.

To the Officers, Members and Friends of this Convention:

The findings committee herewith submit the following for your consideration and action:

We find:

1. That this is another of the many successful conventions of our county held in the interest of religious education.

2. That there seems to be a realization of the fact that our past methods and efforts have been inadequate.

3. That plans are now in progress and in some places are in operation whereby adequate religious education may be acquired.

4. That it pays to cooperate with our state and national resources in matters pertaining to this work.

5. That success is the result of the joint effort of all concerned.

We, therefore, at this time, wish to express our appreciation and thanks to Miss Young, Mr. Rowe, Mr. Burkhart and Mr. Gerber for their respective parts; to Mr. Leighty and his fellow county officers for their untiring efforts; to those who assisted at the piano; to the Methodist people for the use of their church; to those who furnished special music; to those who so well served us in the way of refreshments and to each and every one of you for your attendance and individual contribution.

And we recommend:

1. That the name of this organization now be changed from the DeKalb County Sunday School Association to the DeKalb County Council of Religious Education.

2. That the time of holding these conventions be left to the officers in charge.

3. That DeKalb county during the next year aim to make at least 50 per cent of its schools 100 per cent schools.

4. That a delegation of at least 200 go to the next state convention which will be held at Winona on June 16-17-18.

Milk Route to Start Monday

Koeppe Bros, of north of St Joe, have decided to start a milk route in St. Joe, beginning Monday morning. After a survey of town they find a nice bunch of customers to begin with They have a fine bunch of cows and all are T. B. tested, which guarantees customers good healthful milk and cream. They have installed aeration plant, which cools the milk immediately thus guaranteeing its healthful and pure condition. The deliveries will start Monday morning and as soon as warm weather comes, two deliveries will be made daily. Their price will be 6c. a pint or 9 for 50 cents.

No'ice Dog Owners!

Persons who have dogs are asked to keep them on their premises Unless this law is complied with, dogs will be taken and killed. Please give this warning your attention D. C. McCann, Marshal.

Production of Tobacco Small

Reduction Is Attributed to Decreased Plantings in All Growing Sections.

(Prepared by the United States Department of Agriculture.)

Production of all types of tobacco grown in the United States was smaller last year than in 1923, reports the United States Department of Agriculture. The total crop was 1,243,000,000 pounds as compared with 1,515,000,000 pounds in 1923. The cigar types show a cut of 24,000,000 pounds, and the types used for chewing, smoking, snuff, and export show a reduction of 248,000,000 pounds.

Decrease in Planting.

The reduced production is attributed to decreased plantings in practically all the important tobacco growing sections, and by decreased yields in many areas. The biggest decrease was in the Bright or flue-cured tobacco portions of Virginia and the Carolinas, where production of what are known as the Old Belt and New Belt type was 441,000,000 pounds or 152,000,000 pounds less than last year.

Of these two flue-cured types, the New Belt type showed the heaviest decline, production being placed at about 220,000,000 pounds as compared with 320,000,000 pounds last year. The department points out, however, that sales data in South Carolina are as yet incomplete and the production figures in that state may be raised several million pounds.

Burley Production.

Production of Burley, which is the most important single type of tobacco, was 311,000,000 pounds or 15,778,000 pounds less than last year. Production of One-Sucker, air-cured type was under 31,000,000 pounds as compared with 51,000,000 last year. Decreased acreage of Clarksville and Hopkinsville types was partially offset by a somewhat better yield, production being placed at 100,000,000 pounds as compared with 96,000,000 pounds in 1923. Production of Henderson type shows a cut of 25 per cent, and of the Paducah type a reduction of 31 per cent.

Total production of types used for cigars was 109,641,000 pounds as compared with 194,124,000 pounds in 1923. Production in the Connecticut valley was 4,332,000 pounds less than last year. Pennsylvania shows an increase of approximately 1,000,000 pounds, and Wisconsin a decrease of 11,432,000 pounds.

Management of Wood Lot Is Better in the East

Eastern farmers are ahead of their western brethren in the management of the farm wood lot. There the wood lot is preserved from fire and insects, and furnishes the owner with his fuel, fence posts, rails and even building timber for repairs. Many could improve and the average western farmer should do much better than is customary by making a study of the science of forestry as it applies to his own small tract. National Bulletin No. 42, issued by the forest service of the Department of Agriculture, gives much valuable information in the care of trees and how such a useful adjunct to the farm may be made to yield proper returns. The supply of timber in the United States is decreasing rapidly and an investment in growing trees is about as safe as government bonds and much more fun. The present annual consumption of lumber in this country is 50,000,000,000 feet. It will not last forty years at this rate. Better set out some trees.

Barium Carbonate Kills Harmful Rats and Mice

According to Kansas State college authorities, rats and mice in the United States destroy $200,000,000 worth of food and property every year. Rats are a menace to grain, poultry, household property, human safety, and human life. They ruin all kinds of food, clothing, and other property. Fires are started by matches gnawed by rats. They carry disease.

Barium carbonate is a cheap and effective control. It has no taste or odor, and it acts slowly on the rats. Rodents poisoned by it wander outside of buildings to die. One bushel of corn will buy enough barium carbonate to rid a farm of rats, and no time and money is better spent than that used in killing off these destructive and filthy pests.

Age for Caponizing

Fowls hatched any time of the year make fine capons, but the best age for the cockerels to be operated upon is when they are from two to three months old (not over six months) and weigh not less than a pound to a pound and a half. The size is equally as important as the age. June, July, August and September are the months generally taken for caponizing, for the reason that spring chickens arrive at proper age and weight during these months.

Male Is Half the Flock

Each male bird that is retained as a breeder in your poultry flock will contribute half the characteristics possessed by the chicks hatched this spring. Round up your males and see that all of them possess the traits you want to have transmitted to your next season's chicks. In case you buy baby chicks from a hatchery, it is an advantage to buy them where some attention is paid to getting eggs from well-bred flocks.

Cause of Paralysis Is Lack of Mineral

Lime and Phosphates Are Needed for Strong Bones.

Many hogs suffer from what is commonly called "getting down behind." Some scientists have for years been saying that this paralysis of the hind quarters in hogs is due to lack of mineral constituents in the feed. Others have held to the theory that it was due to lack of vitamines in the ration, resulting in a weakening of the nerves. On the other hand, many farmers believe that this trouble is due to kidney worms. Recently, however, the Ohio experiment station has come to a definite conclusion as a result of a number of experiments. This station claims that the immediate cause of posterior paralysis in hogs is lack of mineral matter in the ration.

Whenever a hog does not obtain enough lime and phosphates in its ration to build strong bones or maintain the bony structure already formed, the lumbar vertebrae become so weakened that they cannot sustain the tension of the powerful back muscles. Thus some lumbar vertebrae are crushed or shortened under the strain and bulging downward they cause impingement upon the spinal cord and paralysis of the hind quarters. If taken in time, this condition can be remedied by feeding more mineral matter and by adding a little olive oil to the ration, olive oil being rich in vitamine A. But this remedy will give results only if used immediately after the paralytic condition has been observed.

Those who would avoid paralysis in the hind quarters of hogs should see to it that a good mineral mixture is supplied whenever the ration fed is deficient in mineral constituents. Hogs that are fed farm-raised grains plus all the tankage they care to eat do not stand in as much need of a mineral mixture as those that are not fed tankage, yet in some cases the addition of mineral to a ration containing tankage has given still better results than when no additional minerals were supplied.

Manure Wasted if Left Exposed in Barnyard

Manure spread on the land directly from the stable has given larger crop yields than equal amounts of manure exposed in the open yard for some time before spreading, in the many tests at the Ohio agricultural experiment station.

The average increase of crops in favor of stall manure over yard-exposed manure, both applied at the rate of eight tons, was $3.40 per acre.

In this experiment extending over a period of 28 years the stall manure is spread on a one-year-old sod in January to be plowed under for corn in early spring. An equal weight of manure is taken from the stalls at the same time and exposed in flat piles until April when it is spread on adjoining plots, after which the treatment of all plots is the same.

Tests at the station show that manure thus exposed in piles lost 35.6 per cent of the original nitrogen, 22.2 per cent of its phosphorus, and 51 per cent of its potassium. This is about one-third of its fertilizing value and readily accounts for the difference in crop yields in favor of direct application.

Owing to the addition of moisture to manure exposed to the weather this loss may be unnoticed.

Birds Need Ventilation

Even in cold weather do not make the mistake of closing the poultry house so tightly that it does not have good ventilation. Chickens can stand cold better than they can stand stuffy dampness and foul air. One of the surest ways to bring on an attack of colds and probably pneumonia is to shut the houses so tight that they do not have good ventilation. Drafts, however, should be avoided.

Farm Hints

Use good clean seed for sowing the lawn.

• • •

Sharp farmers never tolerate dull tools.

• • •

Silage is a summer feed the year round.

• • •

A dairy barn doesn't need to be costly to be clean.

• • •

Snow keeps bees warm, but don't let ice form over the hives.

• • •

With a closed storage house the repairing of farm machinery is more tempting.

• • •

The prudent employer doesn't broadcast all the time; he frequently puts the receiver to his ear.

• • •

"There is nothing in which God asks so little of us and gives so much as in the planting of a tree."—Selected.

• • •

Prediction for 1925. It will be just as profitable to keep down farm expense as to increase the gross income.

• • •

Soy beans are unexcelled for planting in combination with corn for hog or lamb pasture. They make a heavy yield of seed and their erect growth prevents trampling by grazing animals, so that the crop is eaten almost completely.

GOOD ROADS

LINCOLN HIGHWAY IN ILLINOIS IS PAVED

The Lincoln highway for 165 miles across Lincoln's state is now all paved. The last stretch, near Joliet, was thrown open to the public recently and through traffic now rolls on smooth concrete across the state which ten years ago bore the reputation of having as bad roads as any in the Union.

Illinois has not stopped with the paving of the Lincoln highway. Frank T. Sheets, state superintendent of highways, says that without doubt the state highway department will soon complete 1,000 miles of concrete road and that 300 additional miles of pavement will be constructed by the counties under the supervision of the state, thus shattering all previous construction records in the United States. At the peak of the season over 9,750 men and 2,475 teams were employed directly on state road construction and close to 60 miles of new concrete pavement were being completed every week with 103 paving mixers.

In commenting on the spectacular record made in Illinois Col. C. R. Miller, director of the department of public works and buildings, said:

"Each week brings Illinois closer to the solution of her transportation problem. The roads Illinois is building start somewhere and go somewhere. A few years ago the finger of shame was pointed at Illinois, one of the most progressive states in the Union, as ranking twenty-third in road improvement. No longer can this charge be made. Illinois will not only surpass the world in mileage of pavement completed annually but also in the total mileage of pavement in the state."

New Highways Now Being Built Will Link Nation

An accomplishment is soon to be realized whereby the large cities of the nations will be linked up by a network of improved highways which will, at the same time, take in all cities and towns of any importance.

An analysis of the improved highway system for 35 states shows that of 1,100 cities of more than 5,000 population, all but 50 lie directly in the path of the system, and it is said that at least 90 per cent of the total population live within 10 miles of some route on these highways.

An outstanding achievement in this direction has been the work done in selecting the roads to constitute the federal aid highway system. This has been done in accordance with the provisions of the federal highway act, which require that a system of roads consisting of not more than 7 per cent of the total rural mileage in each state be designated, and that all federal aid be spent on such a system.

Intensive Inspection of All Concrete Highways

The highway research board of the National Research council, of which Charles M. Upham is director, is conducting an intensive inspection of reenforced concrete roads throughout the United States which have been in service for at least five years, with reference to all sorts of climatic and traffic conditions.

From this survey an effort will be made to determine the influence of steel re-enforcement on the resistance of the slab to traffic, subgrade and climatic conditions; the conditions under which steel re-enforcement is especially beneficial to concrete slabs; the effect of the slab design on the efficiency of the re-enforcement; the relative initial cost and annual maintenance and renewal charges of plain and reenforced concrete roads.

Hundred-Foot Road May Link Capital and South

A national 100-foot-wide highway from Washington, D. C., through the South is favored by Representative Grant M. Hudson of the Sixth district of Michigan, who has announced that he will introduce a resolution with such a project in view.

His resolution will call upon the bureau of public roads to conduct an investigation into the feasibility of such an operation, and the route will be determined by experts of the bureau. Hudson said there will be one branch from the highway to Savannah. The ultimate destination will probably be Key West.

"Several great concrete arteries now converge in the national capital," he added. "There should be a wide highway to the West and Southwest, and the federal government should get behind it. It should be a national project."

To Study Land Values

Just what effect state highway improvement has on adjoining land values, and the proportions of road cost properly chargeable to passenger cars and trucks, are to be among the matters studied in a joint investigation of road conditions and factors to be made by the United States bureau of public roads and the Connecticut state highway department. The investigation is to include a study of tax laws and methods to force in various state

Lesson for February 22

GOOD CITIZENSHIP

(Temperance Lesson.)

LESSON TEXT—Rom. 13:1-14.

GOLDEN TEXT—"Thou shalt love thy neighbor as thyself."—Rom. 13:9.

PRIMARY TOPIC—Love One Another.

JUNIOR TOPIC—Rewards of Obedience.

INTERMEDIATE AND SENIOR TOPIC—Obeying the Law.

YOUNG PEOPLE AND ADULT TOPIC—Obeying and Enforcing the Law.

It is highly important that the disciple of Christ should realize that he is a citizen as well as a Christian. Intelligent Christians will show loyalty to the state as well as to the church. In fact, the better the Christian, the better the state. The failure to recognize this truth has brought Christianity into disrepute in many quarters.

I. The Christian's Obligation to the State (vv. 1-7).

1. Obedience to the Rulers (vv, 1-4). This obligation is upon all Christians. The reason this obligation is universal is that civil government is ordained of God and the rulers are His representatives. It is God's purpose that man should live under authority. It is His purpose because man's highest good demands it. To refuse obedience to civil authority is to resist God. This of course does not mean that a Christian at the behest of the state should do that which is morally wrong, just as parental authority does not imply that the child is under obligation to do that which is morally wrong at the command of parents, but it does demand submission as the law of the believer's life. The Christian frequently has need to call upon the rulers for help and personal protection (Acts 18:12-17; 19:35-41; 22:25).

2. The Spirit of Such Obedience (v. 5). It is to be conscientious, that is, it is to be regarded, not merely as serving a good purpose, but morally right.

3. The Nature of This Obedience (vv. 6-7).

(1) Payment of personal and property taxes. The citizens who enjoy the benefits of government are morally bound to support it.

2) Payment of duties upon merchandise and license fees. The business exchange between nations must be regulated. For such regulations expenses incur for which benefits the citizens should pay.

(3) Veneration for magistrates—"fear to whom fear." Those who fear God should venerate His representatives, that is, civil rulers.

(4) The proper attitude—"honor to whom honor." This means that civil servants, officers of the law, should be honored because of the ministry they perform.

II. The Christian's Obligation to His Fellow Citizens (vv. 8-10).

This is summed up in the word "love." Love is a perpetual obligation. Paying of debts is obligatory upon all. Christians are judged by their promptness in paying debts. The only debt that is right to owe is that of love. Although we give love to the full each day, each succeeding day calls for it over again. Love works no ill to one's neighbor. This love forbids defrauding in matters of property; it forbids going into debt where there is no reasonable certainty of being able to meet the obligation; it forbids defrauding in matters of moral purity. Where there is real love, adultery cannot be committed, for it is a crime against one's neighbor. Love forbids murder. It forbids stealing. It forbids coveting. It forbids working ill to one's neighbor.

III. The Grand Incentive of the Christian's Life (vv. 11-14).

This is the coming of the Lord. The supreme call is to the Christian to awake out of sleep. The picture here presented is of one asleep when the sun is high in the heavens. Life's duties can only be properly executed when one is awake. The one going through life without thinking of eternity is asleep. Each day is bringing us nearer to the eternal goal and since that day is at hand, we should

1. Cast Off the Works of Darkness (v. 12). The works of darkness are the sins of the flesh such as dishonest dealing in business, rioting and drunkenness.

2. Put on the Armor of Light (vv. 12-13). With this armor on the Christian will (1) walk honestly, (2) not in rioting and drunkenness, (3) not in chambering and wantonness, (4) not in strife, (5) not in envying.

3. Put on the Lord Jesus Christ (v. 14). The only way to be free from the works of darkness is to put on Christ.

Fatal Prosperity

Often our trials act as a thorn-hedge to keep us in the good pasture; but our prosperity is a gap through which we go astray.—Presbyterian Record.

Our Love of God

Our love of God would be idolatry if we did not believe in His love for us—His responsive love.

His Written Word

God never leads us to do anything that is contrary to His written Word.

POINTS ON KEEPING WELL

DANGERS OF BASKET-BALL FOR GIRLS

THE girl of today is as different from her grandmother in her play as she is in her clothes. This is naturally the case; in fact, it is probable that present-day sports have been one of the important reasons for present-day clothes. Our grandmothers, who were taught to walk sedately, to sit quietly in their chairs, and never to do anything "boisterous or unladylike" would be horrified at the sight of a basketball game in any of our school gymnasiums or playgrounds.

Girls of today are better and more sensibly dressed than they have been in centuries. Athletic sports and outdoor games are far better for the growing girl than crocheting tidies and embroidering mottoes, yet there are dangers in excessive activity of any kind. In a recent issue of the Child Health Magazine, Dr. J. Anna Norris, physical director for women at the University of Minnesota, calls attention to some of the dangers in basketball for women.

As Doctor Norris well says, basketball is the most popular indoor game for girls. It affords opportunity for vigorous recreation, for team play, and for healthy social relations. It should, however, be played by girls' rules and under proper conditions.

It is a recognized fact that basketball as played by boys is too strenuous and severe a game for girls. The physical directors of the leading women's schools have modified the game so as to adapt it to the strength and endurance of girl players. The first important change in the girls' rules is to discourage personal contact and struggling by making it a foul to hold, block or snap the ball from the hands of another player. The second important change is to provide a number of different courts of different sizes, depending on the ages of the girl players. This makes it possible for each girl to play in her own court and with girls of her own age and physical strength. The third change is the division of the fifteen or twenty minute halves of the game into quarters, making the actual playing time not more than ten minutes at a stretch.

Probably the last change is the most important. The long playing periods, with the constant activity necessary in basketball, places a severe strain on the players' hearts. No girl should be allowed to play basketball until she has had a careful physical examination with especial reference to the condition of her heart and until a competent person has decided that she has a sound heart and is capable of playing without injury to herself. Both the games themselves and the practice periods should be strictly limited so that continuous playing is not allowed for more than ten minutes at a time.

MICE TAUGHT TO ANSWER DINNER BELL

DO WE inherit what our fathers learned and will our children inherit what we learn? This question, which scientific men term the problem of the "inheritance of acquired characteristics," has long divided the scientific world into two hostile camps.

Whether man inherits acquired knowledge or not, may be an open question, but apparently white mice do. Prof. Ivan P. Pawlow, the well-known Russian physiologist, tells in a recent issue of Science how he taught white mice to come to dinner when the dinner bell rang.

The first generation of mice required three hundred lessons before they learned the connection between dinner and the dinner bell. When they finally learned it, they trotted to the feeding-trough as soon as they heard the bell. Their children only needed one hundred lessons, while their grandchildren learned to come to dinner when the bell rang in one-third of the time their fathers required. The fourth generation did still better, while the fifth generation were apparently born with an inherited sense of the connection, since after the dinner bell had rung only five times, they were at the dinner table and all ready for their food. Professor Pawlow says that he expects future generations of these white mice to be born with a knowledge of the connection so that they will associate the ringing of the bell with their dinner the first time they hear it.

Will the same rule apply to human beings? We do not know. We can't experiment with men and women, boys and girls and babies as we can with white mice.

How many of us know anything about the personal habits or characteristics of our great, great grandfathers? The man over fifty who married at the average period, probably has grandchildren of from two to five years old. His grandfather, who is his grandchildren's great-great-grandfather, was probably born about a hundred years ago. Unfortunately, we haven't any records, either of the peculiarities of people born a century ago or even of the fact that they were born at all. We will know more about human animals when we keep as careful records of our children as we do of our prize bulls, fast horses, bulldogs, chickens and Persian cats.

BRINGS YOUTH TO OLD FOLKS

One of Tanlac's greatest blessings is the new life and vigor it brings to old folks. Men and women up in the seventies and eighties are writing to us every day to thank us for Tanlac's wondrous benefits.

Tanlac is a natural tonic. It drives poisons from the blood, stirs up the lazy liver and puts digestive organs in working order.

Made after the famous Tanlac formula from roots, barks and rare herbs, it is nature's own tonic and builder—harmless to man or child.

If your body is weakened and run-down, if you lack ambition, can't eat or sleep, you'll be delighted with Tanlac's quick results.

Take Tanlac Vegetable Pills for Constipation

TANLAC
FOR YOUR HEALTH

Garfield Tea
Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

Egotistic Ruler

In the early Christian era the use of mosaics for churches somewhat supplanted mural painting. Still, during the reign of Justinian the Church of Saint Sophia was built at Constantinople and its walls were adorned with paintings. It was upon the completion of this famous house of worship that the sultan exclaimed: "I have surpassed thee, O Solomon!"

When a good-natured, overimposed-on man gets mad he usually goes too far.

"My Rheumatism is *gone*——"

"THERE are thousands of you men and women, just like I once was—slaves to rheumatism, muscle pains, joint pains, and horrible stiffness. I had the wrong idea about rheumatism for years. I didn't realize that increasing blood cells had the effect of completely knocking out rheumatic impurities from the system. That is why I began using S. S. S! Today I have the strength I used to have years ago! I don't use my crutches any more." S. S. S. makes people talk about themselves the way it builds up their strength. Start S. S. S. today for that rheumatism. You'll feel the difference shortly.

Free Booklet
Send name and address to S. S. S. Co., 111 S. S. S. Bldg., Atlanta, Ga., for special booklet on Rheumatism & Blood.

S. S. S. is sold at all good drug stores in two sizes. The larger size is more economical.

S.S.S. The World's Best Blood Medicine

Healthy, Happy Babies

The best way to keep baby in crowing, contented health is Mrs. Winslow's Syrup. This safe, pleasant, effective remedy regulates the bowels and quickly overcomes diarrhoea, colic, flatulency, constipation, and teething troubles.

MRS. WINSLOW'S SYRUP

The Infants' and Children's Regulator

is best for baby. Guaranteed free from narcotics, opiates, alcohol and all harmful ingredients. Open formula on every label.

Permanent roads are a good investment —not an expense

Why America Must Have More Paved Highways

Almost every section of the United States is confronted by a traffic problem.

Month by month this problem is becoming more and more serious.

Hundreds of cars pass a given point every hour on many of our state and county roads. Downtown city streets are jammed with traffic.

Think, too, how narrow many of our roads are, and how comparatively few paved highways there are in proportion to the steadily increasing number of cars.

If the motor vehicle is to continue giving the economic service of which it is capable, we must have more Concrete highways and widen those near large centers of population.

Every citizen should discuss highway needs of his community with his local authorities.

Your highway officials will do their part if given your support.

Why postpone meeting this pressing need?

An early start means early relief.

CHAPTER VII—Continued

—25—

"You need not worry about your brother," Elsa Franks said. "He will not know you when you go to see him. He has forgotten most things. This man's name was Ahrensein. I told him the whole truth. I am quite sure that if he had come into charge of the prison whilst the real No. 29 had been there, he would have found some excuse for having him shot within twenty-four hours. He even told me so. He was furious at the trick which had been played. 'But,' he declared, 'the Englishman who has put himself in No. 29's place shall suffer for him!' I was allowed to see your brother. He had got over the first shock of what had happened and I found him full of courage. We discussed several plans for his escape, which, however, we never carried into effect. I do not believe that any one could have bought the life of No. 29 from Ahrensein for a million pounds. With your brother, however, it was different. In the end, I made over to him one of your brother's drafts—one I took back from Ivan Krossneys after he was dead—cashed one of the smaller ones, and one dark night we drove away from the fortress."

"But this is all so long ago!" Mary exclaimed wonderingly.

The woman nodded.

"We were in the train for Petrograd," she went on, "when I had a message from Ahrensein, telling me that he was superseded. His successor had arrived, and was holding an inquiry into the escape of No. 29. He advised me not to go near Petrograd. We left the train just as a company of soldiers from the fortress arrived on the platform. The train was held up and searched. We took a carriage and drove away, anywhere, into the plains. We had money but nothing else. We bought the carriage and horses, bought the driver, body and soul. Driving by night, resting the horses and hiding ourselves by day, we traveled a hundred miles southeastward."

"You must tell me the rest another time," Lady Mary suggested.

"What I am going to tell you, I shall tell you now or never," Elsa Francks answered fiercely. "It won't be much, I can promise you. When I leave this house, the story of these months is coming out of my mind, whether I have to dull it by drinking or even cut it out of my brain. We were always in danger, always being tracked. We went short distances by train. Sometimes we hired carriages. We even traveled for the whole of one day in an electric car which crawled between two small towns. Seven times we tried to cross the frontier into Poland, and each time we were turned back. Once they heard of us and we were placed under arrest. Your brother shot two of the guards and we escaped. After that it was life or death with us. We were passed across the frontier at last in a spot where the war zone had been. We were scarcely in Poland before half a regiment of Russians was after us. We were in Poland, however. We left them fighting. We heard afterward that the Russians who had crossed the frontier were wiped out. We got across Poland, somehow or other, into Germany. The rest was all discomfort and misery, but most of the danger was past. Your brother fell ill in Warsaw. Since then he has been dazed and weak, with a high temperature, and with fits of unconsciousness. How I got him here. I don't know. We arrived at Fenchurch street this morning. I drove to Charing Cross hospital and they took him at once. He was shouting like a madman. Then I drove here."

She poured out the last glass of wine from the bottle and drank it. Then she rose to her feet.

"It is a wonderful story, this!" Mary exclaimed. "You must not go away yet, or, if you do, you must come back again. My father will want to thank you."

"I do not want thanks," the woman scoffed. "I started out on this adventure because your brother had paid a great sum of money and because I had a fancy for him. I have lost that fancy, but I made up my mind that I would bring your brother home, and I have done it. I do not wish for any further payment. I have spent your brother's money freely, but I have enough left to give me all that I need in life. I do not like England and I am going away today. Is there any further question you wish to ask?"

"None that I can think of for the moment," Lady Mary admitted. "I think that it was very wonderful of you to run all these risks. You might have left my brother there and gone away with the money."

"I very nearly did," the woman confessed bluntly. "Many a time, on the way home, I wished that I had done it. Your brother has a fine courage at times, but he is a weakling in the ugly places of life. Often when I dragged him along through the mud, and he had to sleep on a stone floor, with coarse food to eat, and no wine, he would rather have come out into the open and fought for his life and ended it. I daresay, when he recovers, he will be grateful to me. There have been many times when he has hated me. Now I will go."

She rose to her feet, dabbed more powder on her face and looked at her hostess a little defiantly. Lady Mary rang the bell. Then she held out her hand.

"Thank you very much for bringing Gerald home," she said.

Elsa Francks laughed hardly. She refused the hand.

"You have no need for gratitude," she said. "I started on the job because I had a fancy for your brother. When I lost that, I went on because I am an obstinate woman. As for recompense, I still have a fortune, but I am glad that these months are over. You can tell your brother that I took

"Your Brother Has a Fine Courage at Times, but He Is a Weakling in the Ugly Places of Life."

Krossneys' share of the money as well as my own. When he comes to think it over, I think he will say I earned it."

She followed the butler out of the room. Mary watched her from the window with fascinated eyes, saw her hail a passing taxicab with her outstretched umbrella, watched her fling herself into it, put up her feet on the opposite seat and light a cigarette. She had the air of a woman who had accomplished a great task.

Lady Mary rang the bell.

"The car at once, Richards," she ordered. "Lord Dombey is in London. I am going to fetch him home."

Chapter VIII

Christopher had taken his seat—had already, indeed, made his maiden speech—when Gerald left the nursing home into which he had been moved from the hospital. The doctors, however, were far from satisfied with his condition. He was still thin, listless in manner, with long periods of absent-mindedness. He seemed, in a way, to have lost self-control. Mary, as they drove home together to Hinterleys house, made up her mind to break the long silence which had existed between them on the subject of Pauline.

"Gerald," she asked, "have you seen or heard anything of the De Ponleres?"

Gerald turned and looked at her out of his hollow eyes.

"Nothing," he confessed. "I wrote from the nursing home six times. I have had no reply. They must have left the hotel in South Kensington."

"Would you like me to try and find out?"

"It doesn't matter," he answered "I have made up my mind to go there myself this afternoon."

"May I come with you?" she begged.

"If you like," he answered halfheartedly. "They won't be there, though. I am just hoping that I may hear of them."

The hope, however, was not realised. Madame and mademoiselle had left the hotel many months ago, and had left no address behind."

Gerald and his sister drove away from the hotel in silence.

"You were disappointed?" Mary asked him anxiously.

"I thought they might have left a message for me," he admitted.

"You'll come down to Hinterleys tomorrow?"

He shook his head.

"I must find her," he announced, in a tone curiously devoid of [illegible] or hope.

Mary said nothing then, but she took him to task that evening. They had dinner tete-a-tete, Lord Hinterleys having already gone down to the country. For the first time Gerald showed some interest in Myrtle's absence.

"What did you say had become of Myrtle?" he inquired.

"She has gone back to France," his sister told him. "She had a little money left to her, and she wanted to go. I had a letter from her this morning. She has bought the old farm where you first saw her and is growing violets."

"Why did she want to go back?" Gerald persisted. "You were all kind to her, I hope?"

"We all tried to be," Mary answered. "Dad misses her terribly.—Why, here's Christopher!" she broke off suddenly. "Whatever are you doing, neglecting your duties in this manner?" she asked, as Christopher, still in morning clothes, was shown in by the butler.

"I've come to beg for some dinner," was the smiling reply, "and incidentally to welcome Gerald back."

Mary, who was watching him closely, fancied that his indifference was almost natural.

"Queer thing," he observed, "to think that she should end up there, after all. I wonder whether she blesses or curses us, Gerald, for taking her to the end of the road."

Gerald sighed a little wearily.

"Curses us, I should think," he replied. "All knowledge is pain; so is memory. Last night I woke up suddenly and I remembered fighting with that great brute on the Polish frontier. Did Elsa tell you about the man I killed there?" he asked, frowning.

Mary rose abruptly to her feet.

"Remember the doctor's orders," she insisted. "The last twelve months are taboo. There are worse things in the world than killing Bolshevists, anyhow."

"The chap had some one who was fond of him, I suppose," Gerald said gloomily. "You ought to have seen that woman who brought me home, Christopher. I can't get the thought of her out of my brain. The first time I saw her, I went to persuade her to bribe her lover, Krossneys. I thought her the coarsest, most brutal, most ungainly creature who ever abused the name of Woman. Then I saw her month after month, playing a man's part. She lied, she swore, she fought—fought with her fists if there was nothing else handy; she drank, once she almost carried me over a mile of marshland, with some outpost sentries sniping at us all the time. She was a hideous, glorious, epic figure. There was a man whom we both knew to be a spy and on my tracks. I saw her wheedle him into her room. Two minutes afterward, his blood was streaming out from under the door."

"Gerald!" his sister entreated.

"All right," he muttered. "I'm not sure that it doesn't do me good to talk of these things. They've been a silent horror with me for so long."

Later, the doctor called to see Gerald, and Christopher led Mary across the hall into the billiard room.

"Mary," he confided, as soon as he had closed the door, "I had a reason for coming round tonight. I have seen the girl."

"Where?" Mary asked breathlessly.

"Here in London. They were opening the gates of Marlborough house as I came along Pall Mall, and I was stopped for a moment on the pavement. A small brougham came out. The windows were closed, but I was within a few feet of it. The girl was inside with a young man."

"If only you could have found out where they went to!" Mary exclaimed. "Gerald will never be better until he has seen her."

"He can do that when he likes, then," Christopher replied. "I jumped into a taxi and followed the carriage. It drew up before quite a small, detached house at the back of Roehampton lane. I jumped out of my taxi quickly, and I was just in time to stop her as she was entering the gate."

"Go on," Mary begged. "This is exciting."

"She recognized me at once," Christopher went on, "and she made no attempt to get away. I told her that I was Gerald's friend and that he was looking for her. 'You can tell him,' she replied, 'that he can find me here.'"

"What did the young man say?"

"Nothing at all. He was very good-looking in his way, a great strong fellow, but he looked as though he had been ill. What are you going to do about this? Are you going to tell Gerald?"

She nodded.

"I think so. I don't believe this girl means to marry him. It is much better, however, that he knows the exact position."

(TO BE CONTINUED.)

Exploration for Truth

Forewarned that the vice of the times and the country is an excessive pretension, let us seek the shade, and find wisdom in neglect. Be content with a little light, so it be your own. Explore, and explore. Be neither chided nor flattered out of your position of perpetual inquiry. Neither dogmatize, nor accept another's dogmatism. Why should you renounce your right to traverse the star-lit deserts of truth, for the premature comforts of an acre, house, and barn? Truth also has its roof, and bed, and board. Make yourself necessary to the world, and mankind will give you bread and, if not store of it, yet as shall not take away your property in all men's possessions, in all men's affections, in art, in nature, and in hope —Ralph Waldo Emerson.

Children Cry for

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep.

To avoid imitations, always look for the signature of Chas. H. Fletcher

Absolutely Harmless—No Opiates. Physicians everywhere recommend it.

Laxatives do not overcome constipation

LAXATIVES and cathartics provide temporary relief only. Their continued use leads to permanent injury. In time, says an eminent physician, an almost incalculable amount of harm is done by the use of pills, salts, mineral waters, castor oil and the like.

Physicians advise lubrication for Internal Cleanliness

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Thus, Nujol brings internal cleanliness.

Nujol is used in leading hospitals and is prescribed by physicians throughout the world. Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless.

Take Nujol regularly and adopt the habit of internal cleanliness. For sale by all druggists.

Made Good Profit in Trading Parts of Car

Yankee shrewdness is proverbial. That the trait is still characteristic of the race we gather from a story in the Boston Herald:

Down at East Providence lives a man who had used a motor car the name of which is a household word, and he wanted to sell it. Disappointment came to him when he took it to a dealer. The owner's price was $100. The dealer's offer was $60.

"I'd rather sell it bit by bit than take any such price as that," the owner said indignantly.

So he went home and began to sell the car by bits. First he got rid of the tires; he took in trade for them another set not quite so good and a little cash. Next he swapped windshields; he took in exchange an older windshield and a little cash. He continued to trade the car piece by piece. He swapped brakes, lights and cushions and then began to repeat the process. He is now on his sixth body; he has collected $130 in cash—and he still has a car.

"I don't quite know," he says, "whether I shall call the street-cleaning department or the undertaker to remove the final remains."—Youth's Companion.

Educational Provisions in Semi-Arid States

People of the semi-arid states of the western highlands are generous in their provision for public schools, many districts employing teachers for children of a single family, according to statements made by James F. Abel, writing for School Life, a publication of the Interior department, board of education.

Nevada allows a school to be established where there are five census children and maintained if there are three in attendance. New districts may be formed in Arizona for ten children. Schools for eight pupils or fewer may be held in Wyoming. In Utah, where community life is developed more highly than in any other part of the United States and the schools centralized to an unusual degree, there are 125 one-teacher schools for about 2,500 children, an average of 20 pupils for each school. New Mexico supports nearly 700 small isolated schools, Wyoming about 1,200 and Arizona has 270 for 4,000 pupils.

Doyle Explains "Holmes"

Sherlock Holmes is a name that seems to fit the famous detective of fiction so well that a good many persons have probably wondered how the author happened to choose it. Sir Arthur Conan Doyle says that he called his hero Holmes because Holmes is a common name and he wished to break the Dickens tradition of making the name of an officer of the law a hint of his profession. There was a cricket player named Sherlock against whose bowling he had made 30 runs; the bowling was so bad that the name stuck in his memory.—Youth's Companion.

Girl Scouts Active

More than 300 camps were maintained by girl scouts during the summer of 1924. The number has grown "like a snowball rolling down a mountain side," according to Louise N. Price, secretary of the camp department of the organization. In 1921, the first year, only 46 camps were reported. An experimental station, called "Camp Andree," is maintained at Briarcliff Manor, N. Y., and there many of the camp directors and councilors are trained.

New Uses for Clothespins

By driving headless clothespins into holes bored in a three-quarter-inch board, it is possible to make a handy rack for small tools. A clothespin also makes a good handle for a safety-razor blade that is to be used as a scraper. Whittle the ends to fit two small blocks, place the blade between the blocks, and clamp tightly with a machine screw and thumb nut.—Popular Science Monthly.

Warns of Icebergs

A new device has recently been developed by the bureau of standards whereby the electrical conductivity of sea water may be measured and indicated in terms of its saltiness. This new application of electricity to the safety of those at sea is expected to be of great value in giving warning of the proximity of icebergs, since these often greatly dilute the saltiness of the water in their vicinity.

TOO MANY DROP OUT OF SUNDAY SCHOOL

Roy A. Burkhart Speaks in Auburn on "Claims of Our Young People Upon the Church

YOUTH NOT IRRELIGIOUS

Declares that Cold Rules and Forbidding Creeds Do Not Appeal —Homes Fail to Assume Responsibility

"The church must ultimately stand or fall by the way it serves its youth—the great period of life, between the quiet unfolding of childhood and the full development of maturity, known as adolescence," Roy A. Burkhart of Dayton, Ohio, declared in an address before the DeKalb County Council of Religious Education in the Methodist church in Auburn Thursday night. Continuing he declared. "It is sometimes considered life's crisis because it is so fraught with danger and so filled with opportunity. The greatest work in all the world is a helpful touch upon the life during this time when a mistake is an disastrous.

"In dealing with objects, the product marred in the making can be set aside or made over, but a life is for eternity. Mistakes in the process cannot be undone. They can never be wholly rectified, for life never yields up what is given it. Every thought, every act, every habit formed during adolescence stays in the life forever. In fact, there is reason to believe that, generally speaking, the destiny of a life is determined during this great life period.

"Many homes fail to assume their share of responsibility in this matter. Four-fifths of the young people to not go through High School and nine-tenths do not belong to the Y. M. C. A. and the Y. W. C. A. The church and the Sunday school teacher must have a big place in the lives of our young people. All of us, however, realize that too many are dropping from our Sunday schools and churches. There is not a more tragic picture than this. Recent investigations show that about sixty percent of all boys enrolled in the Sunday school drop out during the adolescent years; with girls it is about forty-seven percent.

"In short, this period between the ages of 12 and 24 years represents the church's crowning opportunity and responsibility for building of Christian character and training for Christian living and service. Not the church loses more than half of her young people during this time. They start dropping out with the dawn of adolescence and the coming on of life's temptations and they continue dropping out until twenty to twenty-five, when only one in five are left of those who were in attendance during the junior age.

"Sometimes we allow urselves to think of youth as irreligious. Nothing could be further from the truth. But youth has not cast its religion into cold rules and forbidding creeds. Formal religion not only makes scant appeal but frequently repels. But the fundamentals of religion revealed by Jesus Christ and lived by him, awaken always in the heart of a youth, even though he may be unconscious of their true significance, a definite and often compelling response. The living Christ challenges our young people today and we must help them to come into a fullness of the knowledge of him as their Savior and Lord.

"With Christ in our lives, the Word of God in their hearts, and with us as their leaders, they will enter with all the vision and energy of youth into a definite participation in the great program of the Church of Christ. Yes, our young people will hear and answer, and gladly, as they have done, if the appeal is clear and strong and high.

"The war gave us evidence of this truth. It was youth that first saw the real issues at stake. It was youth that caught the first vision of a needy and distressed humanity calling loudly for help. It was youth that first sensed the truth—that justice and honor and righteousness were the stakes in that great contest. Youth did not stop to count the cost. Youth offered everything, even its life, that the world might be safe for democracy.'

"Youth will likewise, give itself to the challenging task of the church and of civilization. America, after all, is a great laboratory where God is working out the blueprint of His Kingdom and the distributing station, out of which He is sending to the world the news of the Gospel of Christ. If America fails, God will get another laboratory and if America fails, it is because the churches of America have failed. If the churches fail, it is because the youth of America have failed. If the youth of America fail, it is because the churches of America have failed to do the right thing for her youth, so you see that it works both ways. By answering the claims of her young people the church will not only save them, but herself.

"It has been my opportunity to meet thousands of young people in the past few years and I have taken occasion to ask them what they feel the church should give them—what they had a right to claim of the church. Let me present them tonight:

"(1)—Every young person has a right to claim of the church a Christian heritage—the right to be born right.

"(2)—Youth have a right to claim of the church, and this follows naturally the first, Christian parents and a Christian home.

"(3)—The young people have a right to claim of the church a young people's church.

"(4)—Youth have a right to claim of the church a program that will not only meet their life needs, but that will insure their development in terms of the Jesus way of living. Surely we want our young people to have strong physical bodies, to be mentally alert and keen, to maintain right social contacts, to have a vital vocational aim, a real avocational pursuit, proper economic relationships, higher ideals of civic and community responsibility, a deepening and growing passion to share Jesus with the world and surely and certainly a personal and living religion.

"(5)—The young people have a right to claim of the church a leadership that is trained and equipped to lead them.

"These are the claims young people are making of the church. What will the church's answer be? The coming of the Kingdom depends upon us."

LOCAL ITEMS IN BRIEF.

Mrs. Jennie Sechler returned to Auburn Wednesday after spending a few days here.

Charles and Harcourt Miser and Merritt Sechler, were Sunday dinner guests of Charley Curie.

Clarence Moody and wife of Garrett and Sam Keesler and family, were Sunday guests of Wilbur Yeiser and wife.

Wm. Quance, wife and little son Auburn, Howard Shilling and wife, H G Hursh and wife, H. J. Renner and wife, Ye Editor and wife and Miss Ima Bray, were Sunday dinner guests in the O. E. Ginther home.

Fire scare Monday evening at Henry Krabill home, rubbish in woodshed caught on fire and portions of roof were burned. Blaze was soon under control. Little damage done.

Early "Rubber Stamps"

Rubber stamps were first used for signature facsimile during the Civil war, around 1860. Prior to that time impressions were made in engraving. Wood cuts were made, and then ribbons, similar to the ribbons used on our typewriters, were used, and the name stamped through them.

To Tell Weight of Coal

A solid cubic foot of anthracite weighs about 98 pounds. When broken it weighs about 54 pounds. Bituminous coal when broken up averages about 50 pounds per cubic foot. Therefore, simply find the contents of box or bin in cubic feet and multiply by one of these numbers, according to kind of coal.

Largest Sunday School Class in World

Through the columns of several thousand newspapers throughout the country, Rev. P. B. Fitzwater conducts the largest Sunday School class in the world. Readers of the St. Joe News who follow the Sunday School lessons in each issue are members of this record-breaking class.

Reverend Fitzwater is a member of the Moody Bible Institute faculty at Chicago. He is affiliated with the Church of the Brethren, but he is heartily interdenominational. Nine different denominations are represented on the faculty of the Moody Institute.

Observers have noticed that Reverend Fitzwater's writing reflects the wisdom of the broad student combined with the affability of a real Christian man. At the institute he teaches the English Bible, Biblical Introduction, Psychology, Christian Ethics and Religious Pedagogy.

Such authority and ability combines to produce the Sunday School lessons now a regular feature of The St. Joe News. Turn to today's lesson now and see what it offers.

HEARD AROUND THE CORNER

Buy Percales now for Spring. Tope & Co., St. Joe.

Mrs. F. H. Langley and Mrs. F. M. Thornton were in Fort Wayne, Wednesday.

B. V. Widney and wife of Columbia City, were dinner guests of Mrs. Alice Copp Sunday. In the afternoon they all called at the H. M. Widney home.

Mrs. Belle Keesler entertained the members of the Larkin club, Monday evening.

Mr. and Mrs. Frank Rhoads and daughter, Miss Doris, of Spencerville, visited Mr. and Mrs. F. Buchanan, Sunday.

Kathryn Curie of Auburn, was a recent two day guest and Herbert Curie of South Chicago, an over Sunday guest of their parents, F. Curie and wife.

Mr. and Mrs. Lorenzo Burch of Hamilton, came Monday for a short visit with the latter's sisters, Mrs. Earl B. Smith and family and Miss Rosella Mendallshon.

The Leaders class of the M. P. Sunday School were recently entertained by Mrs. George Kinsey and Mrs. John Betz at the latter's home. Fourteen were present to enjoy the program. Special mention might be made of the reading given by Mrs Kinsey and the bible contest given by Mrs. Charles Koch. The hostesses served refreshments.

NEWVILLE

John Rude moved recently to the Magginis farm on the Newville Hicksville road.

Argyl Sechler moved last week from St. Joe to the Cleve Washler home on the state line.

Mrs. Ethel McCullough of Mt. Pleasant, spent Sunday with relatives at Newville.

Joyce, the little daughter of Forrest Fusselman, has been ill the past week.

The youngest daughter of Floy Beree and wife has been seriously ill with congestion of the lung. Those people seem to be having their share of trouble. However, the little one is on the way to recovery.

C. O. Berry and family of near Auburn, were Sunday visitors of Mr. and Mrs. Sam Stafford.

Levertie McDaniels and wife of Fort Wayne, are the happy parents of an eight pound girl. They are former Newville people.

Baptismal services were held Sunday evening at the Christian church at the conclusion of the meeting, which lasted all last week.

The Rev. Clickner, wife and little daughter and Mrs. John Miller, spent Friday afternoon in the Sam Wyatt home. Mrs Julie Wyatt is quite seriously ill and not recovering as fast as her friends would like to have her.

Trace Ocean's Currents by Wandering Derelict

Floating unguided on the Atlantic ocean for more than a year; the wreck of the lumber schooner Governor Parr, abandoned by its crew in October, 1923, during a storm, has been used as an aid in charting the speed and direction of flow of the sea currents. Traveling thousands of miles since it was left to "run wild" on the sea, the ship has been constantly reported from widely separated points along the steamer lanes. By checking up this information, marine authorities are able to correct their charts. Several attempts to salvage or destroy the wreck have failed. Once taken in tow by a coast-guard cutter, the derelict had to be cast loose during a gale. Months later it was sighted off the coast of Portugal, and although set afire in the hope it would sink, the damaged vessel was seen again hundreds of miles from that place.

LOVE RETURNS

She—A man should pick a wife as carefully as he would a car, surely.

He—By the color of the paint, I suppose?

Local Briefs

Mrs E. R. Kinsey is sick with the mumps.

E. B. Smith, wife and little son, spent Sunday at Hudson.

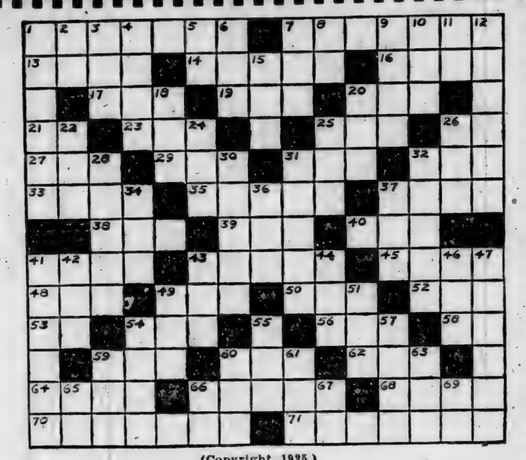
CROSS-WORD PUZZLE



(Copyright 1925.)

Horizontal.

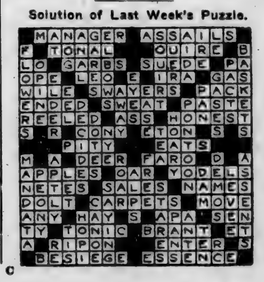
1—Herbivorous fish-like mammal of the Atlantic shores
7—Quick succession of notes from a horn
13—Minor prophet (8th century B. C.)
14—To conceal or store as in the earth; hide
16—A light-yellowish brown
17—A piece of metal that holds another in place, or adjusts a bearing
19—Regret
20—Scot.—"to go"
21—Close to; near by; in; within
23—Little island, especially in inland waters
25—Have a purpose; endeavor earnestly
26—Copper (chem.)
27—Roam idly abroad; ramble; stray
29—Changeling
31—Priest's white linen vestment
32—Close; obstruct; hinder
33—Shield or defensive armor, as the mantle of Minerva
35—Mountain range in N. E. Utah
37—Constituting a large number; numerous
38—Heavy textile fabric, made in one piece, to cover a portion of a floor
39—Parasite
40—Part of the verb "to be."
41—Notify or summon
43—Showiness of achievement; brilliancy
45—Bind to secrecy
48—Make, grow, or seem to grow
49—Exclamation of repugnance or disgust
50—Steep, or soak, as flax
52—Be slow; tardy; late
53—Preposition
54—Suffix used to form present participles
56—Pet or strike softly
58—Abbreviation for "company"
59—Brief poem characterized by exalted feeling
60—Carry all
62—Power of comprehending and judging
64—Slang for "no"
66—Court
68—God (Latin)
70—Betrayal; treachery; or breach of allegiance
71—Now going on; current

Vertical.

1—Carry out by action, effort, or skill of any kind
2—Part of the verb "to be"
3—Square or rectangular block of wood
4—Largest continent
5—Prefix, from, out of; used before many words beginning with a consonant
6—Auditory organ
7—Belonging to a particular genus or class; definite article
8—Seat; one
9—Flock; brood
10—Bad luck; loss; the worst; also the best
11—Abbreviation for "railroad"
12—Art or practice of foretelling by signs or omens
15—Drinking vessel
18—From Greek "life"; a combining form
20—Protecting crane-arm; jib
22—Something attached
24—Letter in the Greek alphabet
25—Biol: A wing, or a wing-like part
26—Be able
28—Funeral hymn or tune
30—Small seed-eating bird, as a bunting, sparrow
31—The fragrant essential oil extract from rose petals
32—Bark-tanned sheepskin for bookbinding
34—Woo
36—Nothing
37—Tangled
41—Secure a patent for
42—Gone by; past
43—Biol: An ovum or germ cell
44—Spread loosely for drying, as newly mown grass
46—Resinous substance exuded from an East-Indian scale-insect and used in making varnishes
47—One who advocates or practises egoism
49—French: Fem. gen. "one"; an.
51—Beat; torture; vex; also to harden or prepare
54—Any product of mental apprehension or activity
55—Conjunction
57—Offers
58—Poetic: to open
60—Bar
61—Drink slowly
63—Golf term
65—Conjunction
66—River in Italy
67—Conjunction
69—Prefix (negative)

Solution will be published in next issue.

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

GENERAL ASSEMBLY GETS BUDGET BILL

Appropriates $46,117,953 for Expenditure in State Departments.

Indianapolis.—The half way mark was passed by the general assembly last week and from now until adjournment Monday, March 9, longer sessions and busier committees are expected to be the order of the day.

The house has received more bills than the senate, but the latter has passed more bills than the house, according to a recapitulation of work accomplished at the end of the first 30 days. A total of bills introduced in the house stands at 275, of which 49 have been indefinitely postponed, 22 withdrawn, 3 killed and 49 passed. The senate has received 236 bills, of which 33 have been indefinitely postponed, 5 withdrawn, 1 killed and 67 passed. The house has passed ten senate bills, while the senate has passed only two house bills. Gov. Ed Jackson has signed seven bills, the first measures having reached him.

Budget Bill in House.

Of outstanding importance among the administration measures is the budget bill, asking a total appropriation of $46,117,953.65, which reached the house, and the bills passed on the survey committee report, and the legislative budget advisory committee recommendations.

Among these are the bills extending the budget to all phases of state activity and creating a permanent budget committee; bills establishing a single fund; the library consolidation bill; the department of safety bill and other consolidation and transfer measures predicated on the survey report. The budget expansion bill and the measure diverting all fees and separate funds into the general treasury have been advanced to third reading in the house. The bill diverting the special levies into the general fund and the bill creating the central purchasing board, both administration measures, have not yet been introduced. The library and safety department bills are resting in the senate.

Child Labor Bill Beaten.

The week saw the senate reject the child labor amendment to the federal Constitution with a decisive vote and unceremoniously lay to sleep the county unit education bill. The county unit bill came to its death after a powerful lobby maintained by the Township Trustees' association had worked against it.

Another of the outstanding controversies in the legislature is the Moorhead bill, which would place regulation of motor busses under the public service commission, and the Brown bill, which would place them under control of the state highway commission. The Moorhead bill survived a determined attack in the senate.

Would Increase State Expenses.

Many bills were submitted to the legislature during the week, which would have the effect of causing expenditure of state money, above that provided for in the state budget.

Bills in the house would appropriate $6,000 to the deep waterways commission, $90,000 this year and $20,000 each of the next two years for a naval militia and $50,000 for paving Forty-second street in Indianapolis adjoining state property. A senate bill, now enacted into law, appropriates $50,000 to combat the European fowl pest in Indiana. Another senate bill would require an annual appropriation of $250,000 for old age pensions.

Special appropriations now totaling more than $1,100,000 have been asked.

Only One Vote Against Bill.

As the only member of the house who voted against the emergency bill appropriating $50,000 to fight the European disease which has attacked Indiana poultry, Representative Bryan K. Johnson of Bartholomew county, a Democrat, said he opposed the measure on general principles.

ASKS $10,000 TO WAR ON INSECT PLAGUE

Indianapolis. — Two insect plagues are menacing the crops and pocketbooks of Hoosier farmers, according to Frank Wallace, state entomologist, who said that he would ask the legislature for an appropriation of $10,000 to use to fight them if an emergency arises.

The plagues are the European corn borer and the Japanese beetle. They have not reached Indiana, but are threatening this state from the north and east, Mr. Wallace said. The most deadly of the pests is the corn borer. He damages corn, according to his humor and voracity, from 3 per cent to 100 per cent.

Back in 1916 the European corn borer made his appearance in the United States. He voyaged from Austria in a shipment of broomcorn. Limiting his activities that year to an area of less than ten miles, the corn borer became dissatisfied with his surroundings and traveled to Canada along the Lake Erie coast and thence into Ohio, still along the shore. Michigan, Pennsylvania and New York are infested.

The corn borer travels in cornstalks floating down streams in the spring. Mr. Wallace expressed the fear that the borer will make his appearance in Indiana this year. The moths of the borer fly incredible distances, and with the pest as near to Indiana as it is, they are very likely to fly across the Ohio line, according to Mr. Wallace.

"Once in Indiana, the borer probably would destroy about 10 per cent of the corn, which is a considerable loss," Mr. Wallace said.

While the corn borer destroys only corn, the second plague, the Japanese beetle, is less choice about his food and eats 200 food plants, according to Mr. Wallace.

INDIANA STATE NEWS

Indianapolis.—Each year the loss column in the consolidated report of the posts of the Indiana department of the Grand Army of the Republic gives evidence that death is more and more invading the diminishing ranks of the veterans in blue. The report just completed for 1924 shows that 1,071 members have been dropped from the roster.

Newcastle.—John Hartmetz, twenty years old, of Evansville, was killed when an automobile driven by Herman Telfer of Hagerstown, in which he was riding, struck a cow and then crashed into an automobile driven by Wilbur Brown of this city.

Muncie.—Richard Henry Curtis, age seventy-five, retired banker of Yorktown, died at the home of his son, Charles Otis Curtis, in Muncie.

Cincinnati, Ohio.—An appeal to the United States Circuit Court of Appeals was granted Morton Hawkins, indicted president of the Hawkins Mortgage company, Portland, who is seeking to prevent his removal to Indianapolis, by Judge Smith Hickenlooper in the United States District court. He will be allowed 15 days in which to file his appeal, and his bond was placed at $30,000.

Valparaiso. — William Bundy, age sixty, a building contractor of this city, was killed when he was struck by a Pennsylvania passenger train.

Fort Wayne.—When Mrs. Mary Moss, Fort Wayne beer runner, was released from the Adrian (Mich.) jail, after serving a six months' sentence and was taken to Toledo by federal officers, who re-arrested her at the jail door, she talked too much, according to Fort Wayne police. The police rounded up Ray Worden, his father, Joseph Worden, and Clyde Rollins, a deputy sheriff, as the other members of the band of rum and beer smugglers who, it is alleged, have been operating in Ohio and Indiana for the past year and a half.

Indianapolis.—A virtual agreement whereby the Indiana Dental college will be bought and taken over by the state as a department of the Indiana university school of medicine, was reached following a conference held by Gov. Ed Jackson, representatives of the dental college, the dental school alumni, Indiana university and Representative J. Glenn Harris (Lake, Rep.), chairman of the judiciary committee of the house. It is said the price to be offered for the school will be $40,000.

Indianapolis.—A report submitted by the state board of tax commissioners to Gov. Ed Jackson estimated that the annual income of the state based on a 28-cent tax rate, would be $14,500,000, or $420,000 less than the amount expected from the present 28-cent tax rate. The report showed that the present valuation of property in Indiana is $5,850,000,000 and the board estimated that the new valuation would be $5,200,000,000 or $150,000,000 less than at present.

Indianapolis.—An increase of more than $20,000,000 in deposits in the banks and trust companies of Indiana during 1924 is shown in a report of the condition of banking institutions in the state, compiled by Eben Wolcott, state bank commissioner. The increase in the resources of the banks during the year is shown to be $28,659,260.80, while the decrease in bills payable since the call for statements December 31, 1923, amounted to $2,149,538.55.

Evansville.—Charles Vaught, thirty years old, auto mechanic, who supported two wives and one baby and kept up payments on an automobile, all on $35 a week, will spend the next six months working for the state. Circuit Judge Charles P. Bock sentenced Vaught to six months on the state penal farm on the defendant's plea of guilty to a bigamy charge.

Rockville.—Joe Stitz, Jr., pleaded guilty to manslaughter in Circuit court and was sentenced to the state reformatory from two to twenty-one years by Judge Omer B. Ratcliff. The crime was committed on a farm near Lodi, October 4, 1923, when Eugene Cossel was shot and killed from ambush during a blind tiger raid.

Logansport.—A wolf weighing 47 pounds, and said to have been the largest killed in this vicinity for some time was killed in a wolf drive near Headlee. The animal was killed by John Scott, of Idaville.

Richmond.—The body of a large fox squirrel, pet of scores of children and adults, has been sent to the laboratories of the state board of health for examination to determine if the animal was infected with rabies. The squirrel was killed by Cyril Fitzgibbons after it had bitten him.

Indianapolis. — James M. Dungan, seventy-three years old, pioneer music instructor, director of the Indianapolis piano college and founder of the former Indianapolis College of Music, died suddenly from an attack of heart disease in a street car.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1925, Western Newspaper Union.)

"Remember the Alamo!"

What Boonesborough is to Kentucky, the Alamo is to Texas, and both are more than the most famous forts in their respective states. They are monuments to the memory of two great American frontier heroes—Daniel Boone and Davy Crockett—they are national shrines.

The Mission of San Antonio de Valero, commonly called the Mission del Alamo (Alamo being the Spanish word for cottonwood tree) was founded by the Franciscans in 1703 and after various removals was established in its present location in 1722. Soon after the outbreak of the Texan War of Independence in 1835 the Alamo was seized by the Texans.

Its commander early the next year was Lieut. Col. William Barrett Travis, a young Carolina lawyer. Associated with him was Col. James Bowie of Georgia and of Bowie knife fame. They had only about 140 men but in February there came a welcome reinforcement in the person of Davy Crockett, accompanied by some of his neighbors from Tennessee.

On February 23, 1836, Santa Ana, the dictator of Mexico, appeared before the fort and demanded its surrender. Travis answered with a shot from his cannon and a defiant hoisting of his flag. The Mexican leader had more than 4,000 men but he did not care to risk an assault so erected batteries and opened fire.

For eleven days the siege was continued with heavy losses for the Mexicans but without a single casualty among the defenders. In the meantime Travis' appeals for help brought to the Alamo Col. James Butler Bonham, who slipped through the lines of the besiegers, and a detachment of 32 men, led by Capt. J. W. Smith, which cut its way through.

Finally on March 6 Santa Ana ordered a grand assault by a picked force of 2,500 men. Two attacks were beaten back by the desperate Texans but the garrison, weakened by the long vigil and lack of food, could not hurl back the third attempt. The Mexicans swarmed over the walls and for the next few minutes there followed one of the most desperate hand-to-hand encounters ever fought on the American continent. When it ended only five of the 180 defenders were left alive and they were wounded, helpless prisoners. By command of Santa Ana they were killed at once.

But the sacrifice of Davy Crockett and his fellow heroes was not in vain, for the battle cry which swept the field at the decisive battle of San Jacinto, was "Remember the Alamo!" On a monument in the state capitol at Austin commemorating their deeds is this line: "Thermopylae had its messenger of defeat. The Alamo had none."

"Old Shotto's Bloody Ranche."

"Oh, we don't mind the marching,
Nor the fighting do we fear;
But we'll ne'er forget old Harney
For bringing us to Pierre.
They say old Shotto built it,
But we know it isn't so—
For the man who built this bloody ranche
Is reigning down below!"

So sang the veterans of Gen. W. S. Harney's Sioux expedition who spent the winter of 1855-56 there, and this "bloody ranche" which they were execrating, was Fort Pierre, South Dakota's most famous fort. An army legend asserts that it was founded by Peter the Hermit, survivor of the First crusade, who selected this place near the Bad Lands because of its indescribable dreariness and desolation.

More authentic history informs us, however, that it was built on the west bank of the Missouri about three miles above the mouth of the Teton river by Pierre Chouteau, Jr. (of the famous St. Louis Chouteaus), in 1830, and was occupied as a post of the American Fur company in 1832. From that time until 1855 it was the most important post of the A. F. C. in the upper Missouri country and was the center of the vast trade in buffalo robes with the Sioux.

In 1855 the United States bought Fort Pierre for a military post, but abandoned it the next year and moved all its property to Fort Randall, about 150 miles down the Missouri. But even after the old post was abandoned, its name remained as a landmark for everybody in that region who still spoke of it as though it still existed.

From the day in 1804, when Lewis and Clark held their council with the Teton Sioux on this spot, it was visited every year for the next half century by a succession of noted travelers and explorers. Among them were George Catlin, the Indian painter, Prince Maximilian of Weld and Dr. Nicollet, who was accompanied by Lieut. John C. Fremont, as yet unknown to fame as "The Pathfinder." The first religious services in South Dakota were held at Fort Pierre in 1840 by Dr. Stephen R. Riggs.

In 1859 a second or new Fort Pierre was built as a trading post about two miles above the site of the old fort. Although it never became so important as the older fort, around it grew up the settlement which became the city of Pierre, South Dakota's capital.

To Cure a Cold in One Day

Take Laxative Bromo Quinine tablets

The tonic and laxative effect of Laxative BROMO QUININE Tablets will fortify the system against Grip, Influenza and other serious ills resulting from a Cold.

The box bears this signature

Price 30c.

Has Many Meanings

The phrase "in limbo" may be taken to mean an indefinite border region in the intermediate state, nearer hell or heaven according to the class of souls there detained; a place of confinement; a prison; a place, real or imaginary, to which things worthless or foolish may be relegated.

Green's August Flower

The remedy with a record of fifty-eight years of surpassing excellence. All who suffer with nervous dyspepsia, sour stomach, constipation, indigestion, torpid liver, dizziness, headaches, coming-up of food, wind on stomach, palpitation and other indications of digestive disorder, will find GREEN'S AUGUST FLOWER an effective and efficient remedy. For fifty-eight years this medicine has been successfully used in millions of households all over the civilized world. Because of its merit and popularity GREEN'S AUGUST FLOWER is found today wherever medicines are sold. 30 and 90 cent bottles.—Adv.

Charming Thought

It was after dinner and the talk had turned to psychology. This disturbing question had just been put: "When does old age really begin?"

To establish a formula was proving rather difficult, when one lady, who did not look her years, found the following:

"To me, old age is always 15 years older than I am."

Cuticura for Sore Hands.

Soak hands on retiring in the hot suds of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do if Soap, Ointment and Talcum are used for all toilet purposes.—Advertisement.

Years of Discretion

"I asked you to send me young lettuce."

"Yes, ma'am. Wasn't it young?"

"Young? It's almost old enough to wash and dress itself."—The Progressive Grocer.

When you decide to get rid of Worms or Tapeworm, get the medicine that will expel them with one dose—Dr. Peery's "Dead Shot." 373 Pearl St., N. Y. Adv.

January Their Hot Month

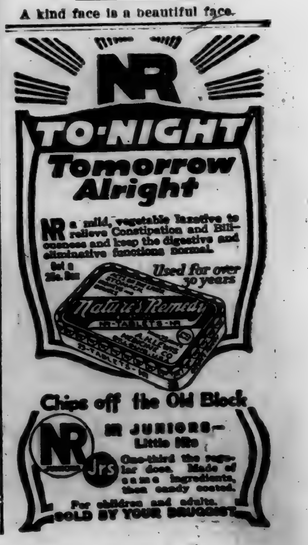
January is the height of summer time in Australia and the people then flock to shore and mountain in search of cool spots.

Roxzie's Croup Remedy checks congestion of the lungs. Used with great success for forty years. Kells Co., Newburgh, N. Y. Mfrs.—Adv.

No Car Trades

Dealers in England will not trade in a used car, an owner being compelled to dispose of it himself if he wants to change to a new one.

A kind face is a beautiful face.



Few Realize Great Pressure Under Sea

When you drop something into two or three miles of ocean, you immediately invite hard usage. First, there is the pressure of the water. The weight of the sea at 1,000 fathoms (approximately one mile) is one ton to the square inch, or 150 times as great as the air which we breathe. Go down 2,500 fathoms and there is a pressure many times more powerful than that of the steam in a locomotive boiler.

Captain De Carteret told me of a test that was made on the cable ship Colonia in midocean, writes George W. Gray in the American Magazine. An empty soda water bottle—one of the kind that has a conical bottom—was fitted with a long stopper of hard wood trimmed to fit the neck of the bottle snugly, and cut so as to make it barely touch the bottom of the bottle. The bottle was weighted and let down to a depth of 2,000 fathoms. When it was brought up, the point of the wooden stopper was protruding through the thick glass bottom. The pressure of the water had converted the stopper into a hydraulic ram, and had driven it so neatly through the bottom of the bottle that there wasn't even a star fracture in the glass.

Another cable seaman told of lowering a piece of meat, properly weighted to make it sink, in the mid-Atlantic. After being exposed to the near-freezing temperature and the squeezing weight of a thousand fathoms of ocean, that tough roast beef came up as tender as veal.

Tommy on Twins

A boy's composition on twins: "Twins is a baby, only it's double. It usually arrives about 4:37 in the morning, when a fellow is getting in his best licks, sleepin'. Twins is accompanied by excitement and a doctor. When twins do anything wrong, their mother can't tell which one to lick, so she gives it to 'em both to make sure. We got twins at our house and I'd swap 'em enny day for an airdale or most anything."—Boston Transcript.

Bee Really Stupid

That the busy bee is really awfully stupid instead of wise, that it is industrious because it cannot help itself, just as a clock that has been wound cannot help busily ticking, is the conclusion reached by Frank Balfour Browne, lecturer of the Royal institute of Great Britain.

"All through your observations," the lecturer declares, "you get the idea that these creatures are sensible but all the time these ideas are being destroyed. They are doing only these things that are inherent."

Oldest Almanac?

Probably the almanac preserved in the British museum, which dates back 1,200 years before the birth of Christ, to the time of Rameses the Great of Egypt, is the oldest in the world. It is written on papyrus, in red ink, and covers a period of six years. The entries relate to religious ceremonies, to the fates of children born on given days, and to the regulation of business enterprises in accordance with planetary influences.

SICK WOMEN SHOULD BE ENCOURAGED

Letters Like This Prove the Reliability of Lydia E. Pinkham's Vegetable Compound

Turtle Lake, Wisconsin. — "I took Lydia E. Pinkham's Vegetable Compound for weakness, backache and nervousness. I had these troubles for years and had taken other medicines for them, but I have found no medicine so good as the Vegetable Compound and I recommend it to my friends who have troubles similar to mine. I saw it advertised and thought I would try it and it has helped me in all my troubles. I have had six children and I have taken the Lydia E. Pinkham Vegetable Compound before each one was born, for weakness, vomiting, poor appetite and backache, and again after childbirth because of dizzy headaches. It is a good medicine for it always helps me. I have also taken Lydia E. Pinkham's Liver Pills for the last eight years for constipation." — Mrs. MABEL LA POINT, R. F. D. No. 1, Turtle Lake, Wisconsin.

In a recent canvass, 98 out of every 100 women say they were benefited by taking Lydia E. Pinkham's Vegetable Compound.

Frost and Its Causes

Frost occurs when there is a clear sky and little wind. Heavy, low clouds act as a blanket, preventing the earth from giving off its heat. A moderate wind is generally an effective deterrent to frost, since it keeps a thin layer of cold air from forming near the ground, mixing the warmer air of the upper regions with it.

The use of soft coal will make laundry work heavier this winter. Red Cross Ball Blue will help to remove that grimy look. At all grocers—Advertisement.

Defined

"Pa, what's a skeptic?" "A skeptic, my son, is a person who doubts anything you are sure of."

IF MOTHERS ONLY KNEW

During these days how many children are complaining of Headache, Feverishness, Stomach Troubles and Irregular Bowels and take cold easily. If mothers only knew what Mother Gray's Sweet Powders would do for their children no family would ever be without them for use when needed. These powders are so easy and pleasant to take and so effective in their action that mothers who once use them always tell others about them. Used by mothers for over 30 years. Sold by druggists everywhere. Trial Package sent FREE. Address Mother Gray Co., Le Roy, N. Y.

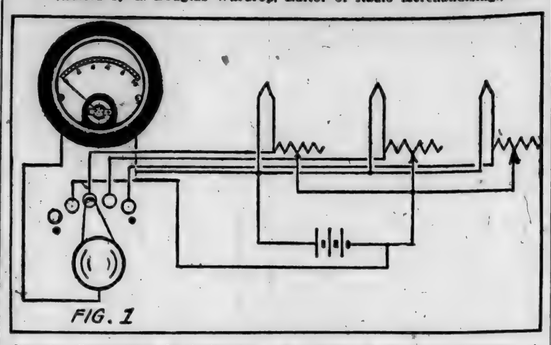
RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)



Showing Connections for Voltmeter. By a Twist of the Wrist, Condition of Various Tubes, as Well as Battery, Can Be Determined.

The word voltmeter, as defined by the technician, is an instrument for measuring the voltage, or pressure, existing in a given circuit or part thereof. To the nontechnical radio fan a voltmeter means something quite different, in all probability merely an instrument for ascertaining the condition of his storage or "B" batteries.

Every good radio installation should have a voltmeter, as it will prevent the vacuum tubes burning out prematurely because of excessive voltage applied to them. A voltmeter also facilitates the retuning of a distant station in that it will check up the action of a rheostat which often plays a very important role.

Although a voltmeter having a range of from one to ten volts is essential to one who is desirous of getting the most out of his set, it is seldom used because of its expensiveness. The real fan would not hesitate to purchase such a device for several dollars, but the trouble is that a voltmeter is of little use on a receiving set. If it be installed and connected across the battery it will tell the closed circuit voltage of that storage battery and nothing more. It will not tell the effective voltage applied to the vacuum tubes, since the rheostat varies this greatly.

If you have a three-tube set, it will be necessary to employ a voltmeter for each tube and one for the battery, which is not only prohibitive because of cost, but also because of space. It would be a ridiculous proposition to have four voltmeters on a panel, as the set would look like a power house and not like an instrument with which to listen to broadcast programs.

However, if a single voltmeter is used and a suitable switching arrangement provided, you will be able to get the voltage readings of the various tubes, as well as the battery, by a twist of the wrist.

The connections for such a unit are shown in Fig. 1. When the switch lever is thrown to the contact on the extreme left it will be out of the circuit. On the second contact point (from the left) it will tell the condition of the storage battery, the third contact point will give the condition of the first tube, the fourth the second tube and the fifth the third tube.

The entire switching arrangement, including a high-class voltmeter, is a well worth while investment as you will be able to burn your tubes at the rated voltage and thus prolong their life considerably.

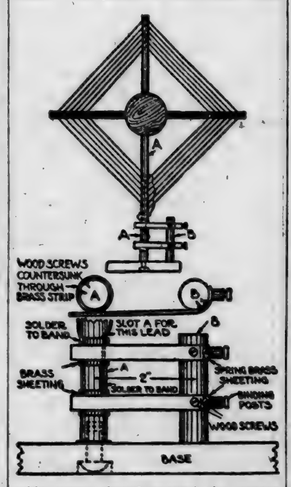
If you desire to construct the unit, you should first carefully decide just where to mount the parts on the panel so that it should not interfere with the symmetry of the panel. After you have definitely decided where to mount the voltmeter, carefully drill the hole and mount it.

Directly beneath the voltmeter mount the switch lever and the contact points and stops. If you are handy with tools it might be a good idea to engrave the panel where the different contacts are. For instance, the one on the extreme left is "off," the next one is "bat," the next "1st," next "2d" and the last one "3d."

The wiring of the system is not at all complicated and should present little or no difficulty at all. In fact the entire installation should not take more than an hour if one be handy with a drill and a soldering copper.

Revolving Loop That Proves Convenience

In order to have a loop that would turn all the way around as many times as necessary and to eliminate the wires attached directly to the loop that interfered with the turning, the apparatus shown in the illustration was devised. Two pieces of thin brass 1 inch wide were placed around the center post A and fastened with wood screws. The holes were level with the surface. Two contact springs were made of brass ¾ inch wide and 3½ inches long and fastened on the post B with wood screws. The leads from the loop were soldered to the brass spring strips. In this way much trouble is eliminated and also it gave a good appearance.—Radio Digest.



Home-Made Coil Winder and How It Is Operated

In the absence of a lathe, winding of inductances on bakelite or cardboard tubes is greatly facilituted by mounting both tube and wire spool on a small stick of wood so that the hands are free to guide the windings and to rotate the tube. A head or cap to retain the tube may be obtained from any drug store. It should correspond, in size, to the tube used. Both spool and head are fastened to the board with a small nail. Another larger nail is driven through the bottom and, with both feet resting on the projecting ends and the knees fixing the upper end, straight or bank winding is an easy matter.

Handy Tool to Remove Insulation on Wires

To remove insulation from a wire cut a V-shaped notch with curved sides in the end of a flat bar as shown in the illustration. For practical purposes a bar of steel 3 inches long, 1⅛ inches wide and ¼-inch thick will be required. Two holes are drilled below the apex of the slot for fastening the cutter to the workbench. When an insulated wire is pressed in the slot the sharp edges cut to the wire and its covering is readily removed by a quick downward pull.

Can Build Your Tube Protector

Old Lamp Socket and Some Sealing Wax Principal Things Used.

Ever burn out a tube? Fans who have done so find that it is rather expensive and disheartening, to say the least. Ever see a tube light up brightly for a second, and then go out forever?

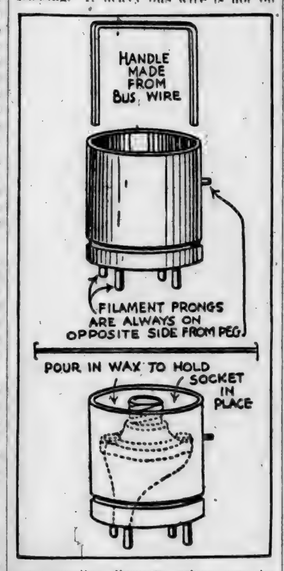
A local radio experimenter, says the Philadelphia Public Ledger, has devised a little instrument which can be made by any fan at a very small cost. This tester shows if there is a short circuit in the receiving set.

The construction of this "tube saver" is very simple, as reference to the accompanying diagrams will show. The materials needed are:

One piece of heavy bus wire five inches long.
One old "B" battery.
One old vacuum tube.
One eight-volt flashlight lamp, with socket.

In addition to these parts, a soldering iron and a blow-torch will be necessary.

First of all the bus wire is bent in the shape of a "U," as shown in the drawing. If heavy bus wire is not on hand smaller diameter wires may be soldered together to make a strong handle.



The next thing is to take a burned-out vacuum tube and break the glass. The elements inside are then broken off until only the base remains.

Finding the filament prongs is the next step. In the accompanying diagram the method of finding these prongs is shown. They are directly opposite the side where the "bayonet pin" is fastened. Wires from these two filament pins are run to a small flashlight lamp socket. The plate and grid wires are removed. It will be found that a Christmas-tree lamp socket will be very satisfactory. Solder all connections.

The handle of the unit is placed in the base of the vacuum tube socket. A torch or other heat is used to melt pieces of sealing wax taken from an old "B" battery. As the wax melts pour it into the vacuum-tube socket, being careful, of course, not to pour any into the flashlight socket inside. Keep pouring until you have the old tube socket completely filled. The handle will be imbedded securely when the wax hardens. Painting the socket will give the tester a neat appearance. Black shellac will be found good for this purpose.

When you want to use the tester insert the small eight-volt flashlight lamp. Suppose you have just completed wiring a receiver. Before placing the vacuum tubes in their sockets put in the tester. If by any chance you have the "B" batteries connected across the filaments the small lamp will burn out. As these lamps are not expensive, it is better to have this lamp burn out than the filament of an expensive tube.

If you wish to use the tube-saver only as a guard against connecting the "B" battery across the filaments of vacuum, the eight-volt lamp will be the only one necessary. However, if you are not certain of your "A" battery voltage, a lamp which is rated at 1½ volts would serve to show whether your battery was correct for a dry cell tube, such as the WD-11. A six-volt lamp could be used to show whether the voltage was right for the large six-volt vacuum tubes.

Nearby Metal Spoils Loop

Directional loops are hampered in reception by metal structures or parts of buildings. The magnetic properties of nearby metal diminish receiving qualities of loop antenna.

On Their Way

Private Johnson, of color, was on the rifle range, and not having any too good luck.

"What's the matter, Johnson?" asked the captain. "Where are they going?"

"Ah dunno, suh—bang!—but dey sho' am leavin' hyah!"—American Legion Weekly.

Conceited Weed

From the same old clod of earth grow both weed and flower—and the weed gives itself airs.—Bodenstedt.

Flowers Trim Hats

Not only do flowers themselves trim the piquant little hats of felt that are the smart fashion of the moment, but the colors are flowerlike in tone. Soft pinks and blues, brilliant yellows and greens, mauve and deep rose are among the shades seen.

Must Be Elusive

To be vogue, modern perfume must be elusive, must sneak up on the nostrils rather than strike an unexpected blow.

Consider the Printed Silk

Printed silks and chiffons are chosen for several of the prettiest of the new models. One is a slim, straight affair which has a narrow box-plaited flounce as a finish on the skirt. The silk has a white ground with a design of field flowers in natural colors.

Amber Combs

For blond hair there is nothing more attractive than the new amber combs that are intricately carved or studded with tiny rhinestones.

LIFE'S LITTLE JESTS

CORRECTING THE PROF.

A professor met two students outside the campus during one of the hours for study. He walked up to one of the students and, taking out his notebook to jot down the reply, asked:

"Pray, sir, what might your name be?"

"Julius Caesar," said the student.

"What, sir? Do you mean to say your name is Julius Caesar?"

"Sir, you did not ask me what it is, but what it might be."

Made a Serious Mistake

The star comedian in the road show didn't know what had caused the riot in the theater until the day he left the hospital.

He had thoughtlessly sung "It Ain't Gonna Rain No More" in the western town where a drought had prevailed for two months.—American Legion Weekly.

UNIMPORTANT THINGS

"We're made happy by the unimportant things."

"Yes—that is, if they're pretty regular in bringing their salaries home."

Evolution

Why should I climb, with study grim,
A family tree,
To meet upon the topmost limb
A chimpanzee?

Me, the Sacred One

A Mohammedan married a very ugly wife. On the day after the marriage the bride asked her husband, after oriental custom, before which people she might appear without her veil.

"Before anybody—except me!" replied her husband.—Munich Meggendorfer Blatter.

No, Indeed

Black—You didn't tell your hostess how much you enjoyed the evening.

White—That hardly seemed the thing to say when she and her husband had been quarreling all the time.

'Nough Said

Friend—Don't sit in that game, mister, them birds use marked cards.

Jack of Clubs—Aw, that's all right, pard. I got a pocketful of counterfeit dough.

Didn't Seem Likely

"Halloa! why are you rushing about like this?"

"I'm trying to get something for my husband."

"Had any offers?"—Stray Stories.

SHOULD BEGIN AT HOME

Lady Politician—We women are going to sweep the country, my friend!

Hubby—I could believe that more easily if you began by sweeping the house.

Preference

He was a jobless actor
And hunger reached his soul.
"I crave not bread," he sadly said,
"I'd rather have a role.

Wouldn't Have To

Father—You can't support my daughter. Twenty-five dollars a week won't even pay your rent.

Suitor—Surely you don't expect to charge Marian and Isrent?

Not Really Sudden

Miss Gladys (flustered)—Bridget, you mustn't come into the room so suddenly when I am entertaining gentlemen callers.

Bridget—Suddent? Suddent, ye call it, and me at the kayhole three-quarters of an hour!

Home-Brewed

"My wife is a great one to borrow trouble."

"Mine doesn't have to; she's an expert at making it."

After Years of Study

The Making of Father John's Medicine Is on a Scientific Basis

Years of study by competent experts added to exhaustive scientific research have so developed the process of compounding Father John's Medicine that it is today recognized as the finest preparation of cod liver oil scientifically blended with other ingredients obtainable.

While the formula remains unchanged, the process of preparation has been so developed at this great laboratory, which is devoted exclusively to the making of Father John's Medicine, that it has been found possible to maintain this high standard.

Father John's Medicine has been tested through 69 years and has proved its merit by its continued and ever increasing success in the treatment of colds, coughs and body building.

The Laboratory and Executive Offices

Real "Cure" for Cold

A New York newspaper recently compiled a list of prescriptions for an ordinary cold. The readers sent in more than 3,000. And not one was like another. Perhaps the best prescription of all was given by a famous surgeon. He said: "Stay in bed and forget it."

In Praise of Thrift

If it were possible to inject the quality of saving into every boy, we would have a great many more men.—Sir Thomas Lipton.

The Woman Who Knows

New Albany, Ind.—"I had a trouble for about a year that was very weakening. I doctored for it but it didn't seem to do much good, so I thought I would try Dr. Pierce's medicines which I had heard so much about. I took five bottles of the 'Favorite Prescription' and two of the 'Medical Discovery,' and I feel like a different woman. I recommend Dr. Pierce's medicines to all suffering women."—Mrs. George E. Mottweiler, 1747 Shelby St.

You can always get Dr. Pierce's family medicines at your neighborhood store, in tablets or liquid.

"...help! help! digestion in distress!.... here's right-away relief!.....couple o' Jaques' Capsules with a swallow of water and all's well again.—go round with that 'comfort within' smile that makes you welcome everywhere.

PUBLIC SALE

The undersigned will sell at public sale at the Yeiser farm, ½ mile west of Newville on Auburn-Newville road.

Friday, February 27.

At 10 o'clock, The following described property towit:

4 HORSES—Bay mare 6 year old, weight 1400; Bay gelding 10 year old, weight 1350; Black mare due to foal in May; 1 work mare.

5 COWS—Holstein cow 6 year old, giving milk, an exceptionally heavy milker; Holstein cow 9 year old to freshen by day of sale (one of the Dilgard herd and a good one); Roan cow 8 year old with calf by side; An A-1 Jersey cow giving milk; 7 year old red and white cow to freshen soon; 2 year old Holstein Bull.

HOGS—2 Hampshire sows bred Jan. 6 and Feb. 8.
Eight 50 pound shoats.

CHICKENS—100 Hens, mostly Plymouth Rock, good layers

MACHINERY—7-ft. McCormick binder, good as new, 10-disc Superior fertilizer drill, 5-ft. McCormick mower, Keystone web hay loader, Gale corn planter, 2 Oliver riding corn cultivators, New Idea spreader, 5-shovel cultivator, 2 hog feeders, set 3 horse eveners, double trees, neckyokes, 2 oil drums, ½ bbl. Bordeau spray mixture, post hole diggers, 46 new grain sacks, Harpoon fork, rope and pulleys, horse sling, 3 log chains, 2 grass seeders, scythe, 20 and 30-ft ladders, 2 sets of work harness, set single harness, galvanized basket, Oliver riding plow, double shovel plow, Tandem Culti packer, Sap pails, spiles and 2 pans and barrels, 4 milk cans, etc etc.

A. B. C. power washer, Old Bluebell separator, water separator, ice box, iron kettle, 2 cross-cut saws, hand saw, sledge, 3 sacks good yellow seed corn, wood, 14 tons ensilage, 24 tons mixed and clover hay, 400 bushel oats, 20 shocks corn, 8 shock fodder. Leaving farm and everything is selling.

L. W. Yeiser & Son

Pest Club Starting Jan. 19 Ending February 13

The Pest Club was brought to a close as the clock struck 12 and the count given at 12:30 between the Freshmen and Senior High. Both sides being nearly equal Due to that earnest desire to win which all Freshmen have and our Freshmen are more plucky than others they were victorious and were most pleasantly entertained by the losers.

The program started with two reels of pictures and a short talk by our county agent, Mr. Repp, on club work. The rest of the evening was spent in jokes and games and a fine lunch of ice cream cake and cocoa was served and the Freshmen were given pink water as first course.

The best part of the hunt was the good they did to this community by killing so many pests. Its remarkable what pupils will do in a contest. The count was as follows:

FRESHMEN
1,105 Sparrows.
429 Mice.
144 Rats.
1 Weasel.

SENIOR HIGH
767 Sparrows.
312 Mice.
110 Rats.
2 Owls.
1 Weasel.

A total of 1,706 sparrows, 740 mice, 254 rats, 2 owls and 2 weasels.

Obituary

Daniel Judson Baker, son of Stephen and Catherine Baker, was born in Tieking county, Ohio, April 15, 1856 and died at the home of his daughter, Mrs. Esther M. Bowman, at St Joe, Indiana, February 11, 1925, aged 68 years, 9 months and 26 days.

At the age of 16 years he came to Indiana, and, with the exception of three years spent in Iowa, and a short time in Ohio, he was a continuous resident of this community.

He removed from St Joe where he had been a Hardware merchant in 1911 and engaged in the same business for a season in Montpelier, Ohio, afterwards the Real Estate Business in Fort Wayne until the failure of his health compelled him to give up an active life. He returned to St. Joe in April 1924 and has been confined to his home most of the time since.

He joined the Lutheran church at St. Joe under Rev. Fryberger in 1886 and when he moved away there being no Lutheran church where he lived he transferred his membership by letter to the Presbyterian church and upon removal to Fort Wayne became a member of the Third Presbyterian church and was elected an elder and so remained until death. He was a very active and efficient member while here, holding offices at different times and being a sucsessful teacher in the Sunday School of many years standing. At Fort Wayne he was particularly successful in teaching the large men's Bible class of that church. His health did not permit him to be active since his return but he died in the complete assurance of Eternal Life.

He was also a member of the Masonic lodge and a charter member of the K. of P. lodge at this place.

February 17, 1876 he was united in marriage in Keswick, Iowa, to Miss Emma J. Dean of that place. To this union one child, Mrs Esther Bowman, was born, who with the wife and mother and one granddaughter, Eloise Bowman remain to mourn their loss. Besides he also leaves one brother, Willis Baker and one sister, Mrs. Joseph Hull, both of this community.

He was a good citizen, an excellent husband and father and a consistant christian and died in the full assurance of everlasting life.

The funeral was held from the home Friday afternoon, with Rev. Steffey officiating. E R. Kinsey, funeral director.

Card of Thanks

We desire to return our sincere thanks to our friends and neighbors for their many kindnesses and their thoughtfulness during the sickness, death and burial of our dear husband and father and we are especially thankful for the fine floral decorations and the splendid music. Mrs D J. Baker
Mrs. F. R Bowman.

Those from out of town who attended the funeral were Dr. and Mrs. W. W Carey and Mr. and Mrs. C. A. Patterson of Ft. Wayne, Mr and Mrs. Mahlon Baker and Mrs. Sarah Hendricks of Auburn.

Basket Ball Victory Over Waterloo

The Spencerville high school basket ball team won a thrilling game of basket ball Friday night over the Waterloo team. It was a fast game from beginning to end. Waterloo was leading at the half by a score of 10-11 but the fast Spencerville five came from behind and won by a close score of 20-21.

The line-up was as follows:

Spencerville		Waterloo
Beams	F.	Voss
Bowser	F.	Showalter
Wilmot	C.	Kelly
Howey	G.	Ayers
Hart	G.	McIntosh
Lippe		

Spencerville plays Huntertown Friday February 20, Ashley Feb 21 and the closing game of the season with Fremont Feb 27 all at Spencerville.

Notice to Non-Resident Defendants

State of Indiana
County of DeKalb
In the DeKalb Circuit Court
December Term 1924
Cause No. 13364
In Partition.

Edward Pflaumer, Executor of the Last Will and Testament of Emillus Case, deceased
vs
William L. Hollabaugh et al.

Comes now the plaintiff, by H. C. Springer, his attorney, and files his complaint herein, together with the affidavit of a competent person that the defendants Martha E Dilley, Frank Case, I. B. Case and Berton Case are non residents of the state of Indiana and that this said action if for the purpose of partitioning certain real estate in DeKalb county, state of Indiana, which is described in the said complaint herein and which said real estate is described as follows, to-wit:

The east half (½) of the northeast quarter (¼) of section twenty-eight (28) in township thirty-three (33) north, range fourteen (14) east.

Also the northeast quarter (¼) of the southeast quarter (¼) of section twenty-one (21) in township thirty-three (33) north, range fourteen (14) east.

Also the southeast quarter (¼) of the northeast quarter (¼) of section twenty-one (21) in township thirty-three (33) north, range fourteen (14) east.

Notice is hereby given said defendants named above that unless they be and appear on the 4th day of April, 1925, being the 30th day of the March Term 1925 of the DeKalb Circuit Court, at the court house in the city of Auburn, DeKalb county, Indiana, and answer or demur to the said complaint the same will be heard and determined in their absence.

In witness whereof I have hereunto set my hand and affixed the seal of the Court at the office of the Clerk thereof in the city of Auburn, Indiana, this the 27th day of January, 1925.

J. H. Knauer
Clerk of DeKalb Circuit Court.
H. C Springer,
Attorney for plaintiff. 6t8

In Society

Guest evening, the annual event of the Culture Club, was held Wednesday evening February 11th at the home of Mr and Mrs. Ed Leighty. Forty-nine members and guests were present The rooms were most artistically decorated with St. Valentine emblems, hearts cupids and streamers suspended from the ceiling in various rooms and gave the atmosphere a festivity of Lovers Day. The program was as follows:

Welcome song, "How We Ladies Shine," by the entertainment committee, Mesdames Jenkins, Leighty, Widney, Mayola Kinsey and Grace Sheffer; Reading, Dorothea Scholes; Music on Victrola; Duet, harp and mandolin, Mesdames Mayola Kinsey and Grace Sheffer; Ladies Jubilee Singers, "Old Black Joe," "Swanee River" and "Poor Old Ned"; by committee assisted by Donald Kinsey and Harry Hursh; Reading, Mrs. Catherine Bowser. Each number was well given and greatly enjoyed.

The game of Hearts was played and Mrs. Jenkins and Lessie Meek were the fortunate ones to receive prizes. Partners for the banquet were chosen by nature's mimic with the men and ladies seeking the mate. Immediately after this they were seated in various parts of the house where tables were decorated with blocks of red crepe paper, cupids and favors of red satin hearts and baskets. The three course luncheon was served by the banquet committee the Mesdames Copp, Hursh, Curie, Rickett, Sechler and Ridgway. The menu consisted of: First course, Fruit cocktail; Second course, Hot rolls, pressed chicken, olives, salad and creamed peas in patties; Third course, Angel food and devil's food cake, coffee, brick ice cream with red heart centers, salted nuts and mints.

At a late hour we returned to our respective homes knowing that it is well for us to gather in the social functions of our community. It drives away cares of life for the time, it rests the nerves of each individual, it creates love for one another, yea, it does more than this, it makes life worth living with a fellowship that money cannot purchase. May we all live for many annual guest meetings of the Ladies Culture Club and may our host and hostess enjoy a pleasant journey with us down the river of time. A Guest.

The Ladies Literary Club was pleasantly entertained on Wednesday evening, February 12, at Summit City, Fort Wayne, being guests of their husbands. Reservations had been made, by the committee in charge, in the balcony, where a party of lovely appointments was given to the members. Following a bounteous six o'clock dinner a theatre party was made and enjoyed an evening of merriment. Mr. and Mrs. C. A. Patterson, of Fort Wayne, were also guests of the club. One present.

The Rural Housewives club met with Mrs Minnie Gee, Wednesday afternoon. Seven members, one associate member, Lizzie Hart and four guests, Mesdames Fred Gee and Ed Lindley, Vivian Mason and Dale Trostel, were present at roll call responses on Lincoln were made. After refreshments were served a valentine exchange was held. Club adjourned to meet February 26 with Mrs. Grace Laub.

New Way to Quickly Stop Worst Cough

A remarkable new and simple method for treating a cough gives relief with the first doses and usually breaks a severe cough in 24 hours.

The treatment is based on the prescription known as Dr. King's New Discovery, for Coughs. You take just one teaspoonful and hold it in your throat for 15 or 20 seconds before swallowing, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. People have been astonished at how quickly the coughing stopped with this new treatment, and the whole cough condition goes in a very short time.

The prescription is for coughs, colds, croup, bronchitis, bronchial croup, etc. It is excellent for children as well as grownups—no opium or drugs. Economical, too, as there is only one teaspoonful. At all good druggists. Ask for

PUBLIC SALE

Having rented my farm, I will sell at public sale at my residence, located 1 mile north of Concord, Ind., 5 miles east and 1½ miles south of Auburn, commencing at 10 o'clock a. m., on

Tuesday, February 24, 1925

THE FOLLOWING PROPERTY

2—HEAD OF HORSES—2

A matched team of black geldings, coming 10 years old in June, a fine farm team, weighing 1400 lbs. each.

6—HEAD OF CATTLE—6

Black Jersey heifer, 2½ years old, will be fresh July 1; Jersey and Durham cow, 8 years old, will be fresh April 7; Jersey heifer 1 year old; Jersey heifer 9 months old. These heifers are from extra good milk and butter cows. Jersey cow 7 years old, calf by side; red cow 8 years old, will be fresh by day of sale.

14—HEAD OF HOGS—14

Spotted Poland sow due to farrow by day of sale; black sow half Big Type and half Spotted Poland, due to farrow Feb. 26; two Spotted Poland sows due to farrow in March; Spotted Poland sow due to farrow first of April; Spotted Poland male hog, 1 year old; two feeders weighing about 140 lbs.; six fall pigs weighing about 80 lbs.

14—HEAD OF SHEEP—14

14 head of breeding ewes, bred to lamb in April.

CHICKENS AND DUCKS

75 Rhode Island Red laying hens and 4 Rhode Island Red roosters. 4 duck hens and 2 drakes.

FARM MACHINERY, ETC.

Waterloo Boy tractor 12-25, in good shape; ten roll corn husker; six-ft.-cut Milwaukee binder; 5-ft.-cut Deering mower; 9 foot Deering hay rake; 7x16 ft. hay rack; Oliver breaking plow, No. 404; spring-tooth harrow; riding corn plow; check-row corn planter, 80 rd. of wire; 10-hoe Hoosier grain drill; two 3-inch tire wagons; 26 inch grain tight wagon box; set of dump boards; New Idea manure spreader; single-shovel plow; double-shovel plow; 5 shovel cultivator; No. 9X Letz feed grinder; 30 feet doubled 6-inch stitched belt; 12 feet doubled rubber belt, 6-inch; 3½ horse New Way tractor; 1½ horse gas engine; 110 gal. gasoline tank; 30 gal. coal oil steel drum; 30 gal. gasoline steel drum; 1 can Eureka harness oil; set of brass mounted breeching harness; set of buggy harness; 2 odd sets for third horse; Queen incubator, 140-egg, new; 5 gal cream can; 3 galvanized chicken coops; 16-foot partitioned chicken coop for 8 hens; wire duck pen, 6 ft. square; wire duck pen 6x8 ft.; set of castings for a drag saw outfit; forks; shovels; one 3-gal. cedar churn; Primus cream separator; about 200 yards of gravel; two 40-rod rolls of hog fence.

FEED—About 12 tons of Alsyke and red clover hay with a small per cent of timothy; about 150 bu. of good oats and some corn.

TERMS OF SALE—Sums of $5 and under, cash. Sums over $5 a credit of 9 months will be given, purchasers giving notes with approved security. Without interest if paid at maturity, if not, 8 per cent from date.

An Epic of the Airplane

SINNERS in HEAVEN

By CLIDE ARDEN

A crack flyer, an English girl and the latter's chaperone, started via the air from London to Australia. They did not go to heaven but they dropped into an earthly place that was paradise for awhile.

Their adventures were entirely out of the ordinary and very thrilling, but in no way to be compared with a moral question that faced them. Can clean hands and a pure heart break a sacred convention? Can two people be married without a civil or religious ceremony? Did they dodge the difficulty or did they solve it? Did they regain their heaven?

NOTE—Pay your accounts. They are due now.

Cold facts must be faced in business

If a man smashed the thermometer because it said 20 below zero, it wouldn't make him any warmer. The thermometer was simply a humble instrument keeping him informed with the facts.

It isn't always pleasant to face facts because the facts are not always what we would like to have them. But isn't it a good deal better to form the habit of dealing with actual facts than to attempt to side-step them? You can turn your head away or you can shut your eyes, but the reality continues just the same, whether you see it or not.

Here in the bank we have to deal with facts. If we owe you money you expect to be paid in actual coin, and not in hope or in cheerful words or expectations. We must penetrate the confusing side issue, and find what the realities are in every situation. Perhaps we could help you to look over some of your problems, and see them from an unsentimental point of view. We are friendly to your undertakings but we know that it doesn't pay you or anybody else to let himself be fooled about the facts of his business situation.

Musical Concert Thursday Evening

The Band and Choral concert given at St. Joe last Thursday evening was not accorded as large an audience as they deserved, but the concert, as a whole, was well rendered and the audience fully appreciated the efforts of the two organizations

The band, under leadership of C. A Woodcox, is making progress and a number of new recruits have been added during the past few months. They are having regular rehearsals and continually getting new music in shape for the coming season. Some of their special concert numbers were rendered in good shape on this program and we can look forward with great pride to the summer programs of this musical organization.

The Choral Society, another community organization, joined their forces in co operating with the band, in rendering a number extra fine musical selections. This organization has attracted the attention of musical people for miles and have received numerous compliments on their musical ability, drawn from such a small community. This year many nights of practice have been spent in preparing a variety of selections that might be used on different occasions.

Mr. Woodcox is director of both the above musical organizations and is demonstrating his worth to the community as a teacher of music.

A number of special numbers made up the concert program, besides the two organisations named.

The fact that the community needs a public meeting place was demonstrated by this concert, making a very crowded condition for the players and singers, and which ought to lead to some discussion as to just how it can be remedied.

The Lutheran church was used because of Christian church being painted.

Jimmie Monroe Entertains His Pals

A number of little folks gathered at the home of James Monroe, Saturday afternoon to help him celebrate his fifth birthday anniversary. Contests and games were played after which all were seated at the dining table which was beautifully decorated with crepe paper and were served with home made ice cream and cake. Each small guest received a favor. The small host's mother, Mrs. Verne Monroe, was assisted in entertaining and serving by Mesdames Frank Sechler and Wm. Staman, Jr, and Martha Miser. The little folks present were, Louise Sechler, Jean Ridgway, Dorotha Maxwell, Romaine Curie, Jean Havens, Junior Curie, Jacques Smith, Leonard Curie, Charles Thornton, Dickie Jordan, Kent Curie and James Monroe.

Threatened With A Severe Illness

Mrs Jacob Krabill is threatened with an attack of pneumonia caused from exposure during the past week in driving the school hack and doing the farm chores, in the extreme damp weather. All this work was taken over by her because of Mr. Krabill being laid up from being kicked a few weeks ago. It is hoped the physician can ward the disease from her lungs.

The Warner Hat Shop will have their first showing of Spring and Summer Hats on MARCH 13-14.

What they think about it

By Their Fruits Ye Shall Know Them

The Hon. G. W. Burkhardt said one time, "Let me drive by a man's farm and I can tell you what his character is." Another has said, "Let me go to the barn with a man to do his chores and I will tell you what kind of a disposition he has."

"As ye sow, so shall ye reap."

I am wondering how many are thinking seriously about, "What will the harvest be." We have waited in vain for some one to accept the invitation of The News to express their views for the betterment of St. Joe and community. Is it true there is no interest or is it fear of criticism? We do not know. It matters not what it is, we feel that conditions challenging the wellfare of our community should receive discussion, not as criticism or personal attack but as a problem to solve for the whole of our community For the text of the brief note the writer wants but one word, STREETS!

It is a shame that St. Joe must be the mark for unkind criticism by the entire public. From Fort Wayne to Hamilton you get just one grand Bump and that is at St. Joe. Now, something is wrong when a village like St Joe can not keep and maintain one mile of road in a fair condition.

First, you have piled gravel in the streets of St. Joe so much that you have buried all walk crossings and made water ways of them. Next you have oiled and oiled the streets with the chuck holes filled with scrapings from the street or some times fresh gravel, thereby making an oil coated mud hole that stays moist or wet until the heavy traffic throws this fill out, thereby more ruts for more oil and rough roads for criticism. By filling to excess the center of the streets, residents have been forced to fill in accord their sides of the street. The question now is, What can be done?

First, the entire grade should be broken to break the cemented condition created by continued oiling. Many places there is too much gravel and it should be taken away. The tool needed is a good heavy scarifier with a heavy tractor for power. There should be in charge of this work a man who has more interest than the drawing of his wage at the end of the day. The time should come when the street of St. Joe will be a pavement but if you neglect the maintainance and show no pride in maintainance you no doubt will loose this opportunity.

A PROPHESY

In five years from now the Leo, Spencerville, St Joe and Butler road will be a state road known as the Fort Wayne and Toledo Highway, in this five years it will be pavement to the Tonkle Corner or Auburn road. In the next five years to come with wide awake citizens on the route the pavement will reach Butler. Is St. Joe a wide-awake or are you sleeping with opportunity at your pillow.

One Who is Interested.

Some Horseshoe Game

A card from D. F. Benninghoff and wife of Lake Worth, Fla., states that they are leaving for St. Augustine. The national horse shoe tournament is on and 32 men and 12 ladies are playing in the game. The card written Feb 20 says, the world's record for good pitching was beaten yesterday, (Thursday) 90% ringers. How does this appeal to St. Joe professionals? Some pitching.

Parent-Teacher Association

E. R. KINSEY, - - Reporter

The Parent-Teacher Association held their regular meeting last Friday night with a record breaking crowd. It was the twenty-eighth anniversary of the establishment of child welfare work and twenty-eight lighted candles burned on top of the piano. After singing America in unison we were favored with a duet by Hilda Koch and Paul Hadsell. The health pageant given by children from Miss Wasson's room, supplemented by Mrs. Thornton, was especially good and well received. Miss Alice Tustison sang the National Parent-Teacher Hymn in her usual pleasing [illegible].

The speaker secured for the evening, Dr H L Feeman, President of Adrian College, was introduced and gave a splendid address on "The Religious Education of a Child." Dr. Feeman is a forceful speaker with a pleasing personality and has many good thoughts to improve ourselves intellectually, socially and religiously.

It was then announced that, instead of having the regular meeting next month that a religious drama "The Rock" will be given in one of the churches. Advertisements of this play will soon appear.

Inmate Held Over St. Joe Woman

Because of being mentally shattered although physically well, Mrs [illegible]low Ulm was taken into custody Tuesday by Sheriff Morr. Wednesday forenoon Dr. Sheffer and Mr. Ulm made a trip to Auburn when an inquest was held. Mrs Ulm has been ailing since last summer.

Attention Cross-Word Fiends

The Cross-word puzzle department of The News is being watched very eagerly from week to week and to again be friendly to our readers we will give to the first correct solution from a St. Joe reader anything we sell up to 25c. and a rural subscriber any article we sell up to 35c. Solution must be in by next Monday evening.

Thousands Recommend it

THEY have learned from experience that no matter how many other treatments have been tried without success, Resinol Ointment is often the one that brings speedy relief from chafing, eczema or similar itching, embarrassing eruptions.

Its soothing healing action is brought about by qualities which cause it to sink deep into the pores and reach the very root of the disorder. It is absolutely harmless and does not smart or burn when applied to the most irritated surface.

To keep the skin healthy many people have adopted the daily use of Resinol Soap. Unsurpassed for toilet and bath. All druggists sell Resinol products.

RESINOL

Quick Relief From Coughs and Colds

It Is Exceedingly Dangerous to Let Coughs and Colds Develop. Easy to Check Them.

For fifty-three years Porter's Pain King has stood in the front rank of home remedies for the relief of colds, coughs, croup, hoarseness and similar ailments.

Porter's Pain King is made of pure, wholesome ingredients, perfectly harmless and amazingly effective. By merit alone it holds an honored place in hundreds of thousands of American homes the year 'round.

Right now is a good time to read the circular wrapped around every bottle. Many families who have this good old-time liniment in the house suffer needlessly because they do not know all of its many uses. Porter's Pain King is more than a remedy for colds. It soothes aches and pains, soreness, swollen joints, tired muscles, lame back and rheumatic misery. It heals burns, scalds, cuts, chapped hands, frost-bitten feet. Why not use it today?

Made and guaranteed by The Geo. H. Rundle Co., Piqua, O. Sold by dealers everywhere.

CHAPTER VIII—Continued

—26—

"I wrote down the address and here it is," Christopher said, handing a card. "If I can be of any use—"

"You dear man!" she exclaimed. "We must leave it to Gerald. I hope that he will let me go with him. I think he ought to find out just where he stands at once."

"I am not going back to the house," Christopher remarked. "Could we have one game of billiards?"

"I should love it," she answered. "Gerald will come and look for us as soon as he has finished with the doctor. You used to give me fifteen. wasn't it?"

Gerald came in presently. Mary seated herself by her brother's side.

"Gerald," she said, "Christopher has discovered Pauline's address. It is quite close by here. You must go and see her tomorrow. Would you like either of us to come with you?"

Gerald began to tremble.

"She is here—in London—all right?" he demanded.

"Absolutely," Christopher declared. "She was looking quite well. Her brother was with her."

"I will go alone," Gerald decided. "I will go tomorrow. Now you have told me something worth hearing. Perhaps tonight I shall sleep."

* * * * * * *

Gerald, after all, derived small satisfaction from his visit on the following day. He found his destination easily—a small, detached house in a retired back street, with a bell at the front gate and spiked railings. He was admitted without undue delay by an ordinary-looking parlor maid and conducted into a small sitting-room. After waiting a minute or two, the door was opened and Madame de Poniere entered.

"You have come to see my niece, Lord Dombey?" she inquired after a word of conventional greeting.

"Is it very surprising that I should come?" Gerald rejoined, a little bitterly.

"Perhaps not from your point of view," was the equable reply. "My niece has, in fact, been anticipating your visit."

"It would have been kinder of her," Gerald ventured, "if she had let me know her whereabouts. I have been in the hospital and afterward in a nursing home for some time."

"My niece had other matters to consider," Madame de Poniere declared dryly. "She is living in the utmost retirement, through force of circumstances."

"Can I see her now?" Gerald asked bluntly.

"She will grant you an audience," Madame de Poniere replied. "I have her permission to disclose her whereabouts to you only, enjoining secrecy."

"Where is she?" Gerald asked.

"My niece is to be found at Duvenny castle in Scotland," Madame de Poniere announced. "It is a somewhat inaccessible place. Particulars of how to reach it are here."

She handed him a slip of paper.

"In Scotland?" Gerald repeated, a little wearily. "But she was here yesterday."

"She left at night," Madame de Poniere reminded him.

Gerald folded the slip of paper and put it in his pocket.

"Very well," he said, "I will go to Scotland."

Madame de Poniere looked at him through her lorgnettes for a moment thoughtfully.

"You have been ill," she remarked.

"I have been ill," he assented.

Madame de Poniere lowered her lorgnettes and closed them with a little snap.

"If I thought that you would accept it," she said, "I would give you a word of advice."

"I can at least hear it," he suggested.

"Go back to the manner of life you were living before you met Pauline—and forget her. Your visit to Scotland will be of no service to you. It will only end in disappointment."

Gerald shook his head.

"That," he said obstinately, "I must discover for myself."

Gerald, following in the main the directions on the slip of paper given him by Madame de Poniere, reached his destination on the afternoon of the third day. He was in the car which he had hired at the last town on the railway route, a town which seemed to him, unacquainted with this corner of Scotland, almost an outpost of civilization. After miles of moorland, unbroken except for huge boulders, the way had led around a range of smaller mountains until he had suddenly encountered, when he had been least expecting it, the tang of the sea. Many hundreds of feet below he saw at last his destination, a dwelling of stone as ancient and rudely fashioned. It seemed, as the massed-up boulders on every side. The road by which it was approached was precipitous, in places almost impassable. The last quarter of a mile was along a narrow bank, unprotected on either side, with the spray from the waves leaping up into his face. The road ended in a circular sweep, surrounded by a high wall. In front of him was a massive gate, closed and barred. The porter who appeared in answer to the bell kept him waiting while he communicated with the house. Finally the gates were pushed open and the car allowed to proceed up a steep, stone-paved ascent to a courtyard also flagged with stones and also surrounded by a high wall. In front was another massive door, which, however, already stood open.

By E. Phillips Oppenheim

Copyright by Little, Brown & Co.

Two men servants, both foreigners, awaited his arrival. One attended to the closing of the door and remained with the chauffeur; the other silently beckoned Gerald to follow him across the stone floor of the bare, circular hall into a room at the further end. He stood aside to let Gerald precede him.

"The gentleman will please be seated," he said.

Gerald found himself alone in an apartment not unduly large but exceedingly lofty. It was simply but magnificently furnished, but only a single rug lay upon the floor. The windows looked sheer over the sea, and the thunder of the waves against the jagged rocks seemed almost at his feet. The windows themselves were narrow—the windows of a fortress—and the depth of the window seat showed the thickness of the walls. Gerald had little time to take note of these things, however. Within a moment or two of his being left alone the door opened and Pauline entered.

Speech of any sort, it seemed to Gerald, must be pitifully inadequate. He stood looking at her, wondering if anything in her expression would give him the clue to her mysterious behavior. She came toward him, however, as composed and unresponsive as ever. There was nothing whatever in her manner to indicate the fact that she was greeting the man who had risked his life in a mad enterprise for her sake.

"You have had a long journey, Lord Dombey," she said.

He bowed over the hand which she had extended to him.

"A long journey, indeed," he assented, "A journey down into h—l and back."

"Sit down," she invited, "and I will give you the explanation I owe you."

"Thank you," he answered. "I do not feel at home in this house. Let me remain standing until after you have told me what it all means. I have done your bidding. I have come to beg for my reward."

Her eyes looked at him coldly.

"I promised no reward," she reminded him.

"Not in words," he admitted. "Yet you know what I desire."

"What you desire is absurd," she declared. "That is what I wish to explain. You have discovered, perhaps, who I am."

"You Have Had a Long Journey, Lord Dombey," She Said.

"I learned who your brother was."

"My brother!" she smiled. "Well," she went on, "listen. I am the Grand Duchess Pauline of Russia, princess and hereditary ruler of the Caspian provinces, and nearest in kin among living women to Nicholas, who was murdered by the people. The man whom you rescued is Paul, grand duke of Volostok, hereditary ruler of seventeen provinces, and nearest in the male line to the crown of Russia. He is my cousin."

"Your cousin?" Gerald exclaimed.

"And my husband," she answered calmly.

Gerald was extraordinarily cool. The situation began slowly to shape itself in his mind.

"It has been the province of royalty," Pauline continued, "to make use of their courtiers, without explanation, in whatever way may seem good to them. I have made use of you. I did not seek your acquaintance or your friendship. I have made you no promises. I have kept you much further away even from hope than would many of my illustrious ancestresses. Yet, in these days, you will probably think that you have been ill-treated. I cannot help it. I and others of my race have been ill and mercilessly treated. Yours has been a small wrong. I made use of you and your devotion to free my cousin, to whom I was affianced. So far as my thanks can satisfy you, I tender them."

"You are very gracious," Gerald acknowledged, forgetting all his weariness and holding himself like a man. "May I ask, were you married to the grand duke when I fetched him from his prison?"

"I was not," Pauline assured him. "I was married a month after his return to England, with the consent and the approbation of my relatives here. Paul and I have but one hope and one desire—to live until the time when the people of Russia return to their allegiance, and to re-establish the Romanoff dynasty in Russia, either through ourselves or our children. For that reason we are living here with an unseen guard provided by the English government. When you first met us we lived in seclusion, because already four times my life had been attempted. There are still men pledged to destroy us root and branch. Here they will not succeed. We are surrounded by faithful guards, and our lives are consecrate. Not until the children live and flourish who shall carry on our name will I or my husband take the slightest risk. The world may see something of us later. For the present we have only one thought."

Gerald stood among the wreck of his dreams. He seemed to be listening to the thunder of the sea, to be watching the queer-shaped shaft of sunlight which stretched across the floor. He found speech almost impossible. The silence lasted so long, however, that he was compelled to break it.

"Your highness' explanation is complete?" he asked.

"It is complete," she replied. "You will understand that your—shall I call it admiration?—was, in a sense, an offense to me. In Monte Carlo I will admit that through sheer weariness I was perhaps a little indiscreet. The situation then seemed hopeless."

"I understand," Gerald murmured.

"The grand duke, my husband, will wish to offer you some hospitality," she said, touching a bell. "Be so good as to await his coming."

Prince Paul entered the room a moment or two later, a touch of sunburn on his cheeks, erect and handsome a very different person from the broken prisoner of a few months ago. He advanced toward Gerald with outstretched hand.

"It gives me great pleasure," he said, "to welcome you in my very bad English to our home. You see, I reached England safely. Perhaps you will give us the pleasure of your company to dinner tonight?"

Gerald shook his head.

"I have promised the owner of the car which I hired," he said, "to return it to him tonight. I must, in fact, be leaving at once."

A servant entered with a tray bearing wine and whisky. Paul served his guest himself.

"They tell me that this is the most hospitable country of the world," he observed. "Even in Russia we should not let you depart without a toast. You will wish us those things for which her highness and I live."

Gerald bowed and raised his glass to his lips.

"I shall drink to you and to your country," he said, "and to the good of both."

He set down his glass empty. Pauline smiled her goodby, but they handed him over to the care of servants with the air of royalty. Gerald drove through the opened gates, heard the bars grind behind him, and, looking around for a last view, was dimly conscious of men who watched. Years afterward this strange visit, with all its trifling events, assumed its proper proportions in his mind. That night, however, he drove over the moors and around the mountains absolutely without any direct emotions. It was impossible to believe that his visit had not been the phantasy of an afternoon's slumber.

Chapter IX

After they had left Toulon the two men seemed almost to change places. Gerald, who for the last four days had been in much the same mentally comatose state as he had been since his return from Scotland, sat up and for the first time began to look about him with interest. Christopher, on the other hand, who during the whole of their journey had been continually endeavoring to amuse and entertain his companion, gradually relapsed into a rare fit of thoughtfulness. They had passed through Hyeres, however, and were winding their way around the Foret du Dom, before any direct allusion was made to the subject which in varying degrees was foremost in the minds of both of them.

"About an hour and a half beyond this, wasn't it?" Gerald asked.

Christopher nodded. It was significant that he made no comment upon the fact that Gerald had caught up with his own train of thought.

"Just about this time of the year, too," Gerald went on, ruminatingly. "I remember these orchards were just showing a little pink. And you say she's back again there, Chris. I wonder why? There wasn't any trouble at home, was there?"

"Not the slightest," Christopher assured him. "In fact, all the time you were in Russia your father seemed to rely upon her absolutely. It was a great blow to him when she made up her mind to go back."

(TO BE CONTINUED.)

Tars Superstitious

When the West Campgaw ran into 48 hours of ensuing gale and fog in a region infested with icebergs, the sailors attributed their bad luck to hymn singing by two preachers who were working their way to Europe as cattle men aboard ship. The black robe of a churchman in the early Middle ages was regarded as certain misfortune for the craft he sailed on.—Chicago Post.

Current Wit and Humor

SURE!

"Any good going to that factory for work?"

"Sure! Just go in at the gate that has 'Keep Out' on it, and cross the yard. Then you'll see a door with a 'No Help Wanted' sign. Go right in, and there'll be another door at your left with 'No Admittance' on. If you see a big man in there with a bull-terrier tagging him, that's the foreman. He only speaks Rumanian, but you'll understand him."

Fireproof

"You are sure that this metal filing cabinet is absolutely fireproof?" asked Biggs of the new furniture salesman.

"Absolutely, sir," replied the latter. "Why, do you know, sir, that one of our filing cabinets came safe and sound out of the big Spoof Bros.' fire, although everything inside it had been burned to ashes?"—Everybody's Magazine.

Promising

"When two people like the same thing their married life is bound to be happy," sighed the engaged girl.

"Well, you and Tom ought to be happy, then," remarked the girl, who wanted Tom but didn't get him. "I know you love him, and I notice he is fond of himself."

BUT HADN'T MADE UP YET

"You and Dick should kiss and make up."

"Oh, we've already kissed, but I haven't had time to make up yet."

The Poor Fish

"Has the young man any property?" Her stern papa demanded;
"Well, pa," the blushing girl replied,
"I can say that he is lauded."

Tired of That Question

"How is your rheumatism, Uncle Si?"

"Still got it," rasped the dean of the grocery lyceum. "Had it for forty years. If I ever get rid of it I'll issue cards."

Fly in the Ointment

"Why are you looking so blue, Marie?"

"I was just thinking what a horrid world this is. One must marry to get alimony."

That Was Different

Dora—I'm going to be married.

Cora—But I thought you detested all men?

Dora—Yes, but one of them proposed to me.

He Seizes Anything

"What is an opportunist?"

"One who meets the wolf at the door, and appears the next day in a fur coat."—Gargoyle.

NOT ON BILL OF FARE

Guest (to waiter with noiseless tread)—Waiter, have you rubber soles?

Waiter (indignantly)—You'll have to go somewhere else, sir, to get that kind of fish!

Overheard in S'siety

The human male doth now attain
A most submissive lot;
A lady may use words profane,
A gentleman may not!

Ananias' Calling

Dentist—Now open your mouth wide and I won't hurt you a bit.

Patient (a few minutes later)—Doctor, I know what Ananias did for a living.

Wasted Time

"How is it that Betty and Jack have given up golf? It was their constant occupation last summer."

"Well, you see, since then they have become quite confidential and found out that they played only because each thought the other liked it."

Truly, a Land of Promise

"Buy a place out near us, old man; it's the land of promise!"

"I'll say it is—they'll promise you anything to get you to buy out there."

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1926, Western Newspaper Union.)

Guardian of the Trail to Santa Fe

Since Gen. Henry Leavenworth established two of the most important forts in the early days of the west, it is especially appropriate that one of them, still one of Uncle Sam's greatest military posts, should bear his name. So Fort Leavenworth in Kansas keeps alive today the memory of this gallant soldier who first distinguished himself in the War of 1812 but who won even greater laurels in the West.

By 1827 the volume of trade to the old Spanish capital of Santa Fe had become so large that the government found it necessary to take measures for its protection from hostile Indians. Accordingly General Leavenworth was ordered to establish a fort for such a purpose and he selected the present site of Fort Leavenworth. Soon afterwards the military stores at Fort Atkinson in Nebraska were removed to Fort Leavenworth and it became the principal outpost on the great trail into the Southwest.

At the outbreak of the Mexican war the "Army of the West" was organized at Fort Leavenworth and in 1846 Col. S. W. Kearney set out from this post with his dragoons on the historic march to conquer the Southwest. In 1854 Fort Leavenworth became the seat of civil as well as military government in that part of the country when Andrew H. Reeder, the first governor of Kansas, arrived there to establish the territorial government.

The next year the old fort saw Gen. W. S. Harney starting on the expedition against the Brule Sioux which resulted in the crushing defeat of these Indians at the battle of Ash Hollow. In view of Fort Leavenworth's later prominence as a military prison, it is interesting to note that the seven Sioux chiefs who surrendered to Harney as hostages for the good conduct of their people were sent there for safekeeping. Thus these original Americans were the first to be "sent down to Leavenworth" with all the sinister meaning that those words still carry.

But for all of Fort Leavenworth's later reputation as "a good place to stay out of," in the old days it was a place of refuge for it was the eastern terminus of the Kansas stage line which ran to Denver and the Pikes Peak gold diggings, and many a passenger on one of these stages, after a thrilling ride to escape hostile Indians, drew his first free breath when he saw its friendly old walls.

The Fort That Saw Two Decisive Battles

Few forts can claim the distinction of having had a part in two decisive battles in American history. Yet Fort St. Philip in Louisiana has the right to that claim. It was built in 1814 as a defense for New Orleans at a bend in the Mississippi some 65 miles below that city.

After Gen. Andrew Jackson's victory at New Orleans, a part of the British fleet bombarded Fort St. Philip for five days but failed to reduce it. The American loss was only two killed and seven wounded, a fitting conclusion to "Old Hickory's" great victory, which was remarkable in the fact that he lost only eight killed and 13 wounded as compared to the British loss of 700 killed and 500 taken prisoners.

At the opening of the Civil war Louisiana state troops seized Fort St. Philip and its sister stronghold, Fort Jackson, (built between 1824 and 1832) on the other side of the river. They mounted 75 guns on Fort Jackson, 40 on St. Philip, stretched a chain across the river below Fort Jackson and placed a fleet of 15 vessels above the two forts. With these defenses they believed New Orleans safe from any attack.

In March, 1862, Commodore David Farragut arrived on the Mississippi with a fleet of 48 vessels, bearing more than 200 guns, and orders to take New Orleans. For six days the mortar flotilla of Commander D. D. Porter bombarded the two forts without much apparent success.

Then Farragut decided to try to run past the forts, an undertaking which the Confederates considered sheer madness. Early in the morning of April 24 Farragut started up the river and through a perfect storm of shot and shell from the fort, the fleet, with the exception of three vessels, safely made its way. The Confederate ships were destroyed and on May 1 New Orleans was in the possession of the Union forces.

In the meantime Porter kept up the bombardment of the two forts and with the co-operation of troops under Gen. B. F. Butler, compelled the Confederate Gen. J. K. Duncan with his force of 700 men in each fort to surrender on April 28. Farragut's loss in this affair was only 37 killed and 147 wounded. His was one of the most brilliant feats of the war and when Fort St. Philip and Fort Jackson surrendered it marked the beginning of the chain of events which enabled Abraham Lincoln to write "The Father of Waters now flows unvexed to the sea."

Genuine BAYER

ASPIRIN

SAY "BAYER ASPIRIN" and INSIST!

Unless you see the "Bayer Cross" on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians 24 years for

Colds	Headache	Neuralgia	Lumbago
Pain	Toothache	Neuritis	Rheumatism

Safe — Accept only "Bayer" package which contains proven directions.

Handy "Bayer" boxes of 12 tablets
Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Low-cost Transportation

Star Cars

The Quality Leader of the Low-Priced Field

FROM the beginning the Star Car has established a newer, higher standard of engineering in the low priced field, being the first to include the following quality features:

1. Forced Feed Motor Lubrication
2. Silent Chain Front-end Drive
3. Single-plate Dry-disc Clutch
4. Semi-elliptic Springs, front and rear
5. Worm and Gear Type Steering Gear
6. Vacuum Fuel Feed with Tank at Rear
7. Durant Tubular Backbone
8. Removable Valve and Tappet Guides
9. All Main Units Separately Removable

Prices, f. o. b. Lansing, Mich.

Touring $340 — Roadster $540 — Coupe $715
Two-door Sedan $750 — Four-door Sedan $820 — Commercial Chassis $445

Tanlac puts flesh on scrawny folks

YOU simply can't expect to get back your health and strength as long as your body is scrawny and underweight. Let Tanlac put some good solid flesh on your bones, put your stomach in shape again and purify your blood. Then see how much better you feel.

In our files are more than 100,000 glowing letters of praise from men and women who credit their present vigorous health to Tanlac. What it has done for them it can surely do for you.

Tanlac is Nature's great tonic and builder. It is compounded after the famous Tanlac formula from roots, barks and curative herbs. It gets right down to the seat of trouble—makes you feel a lot better right from the start.

Don't put off taking Tanlac another day. Don't go on dragging your poor, sickly body around when this great tonic and builder is ready to help you.

In cases of torpid liver, rheumatism, sleeplessness, lowered resistance, indigestion, malnutrition and general debility, Tanlac will accomplish wonders. Get a bottle this very day and start feeling better tonight.

Made Her Feel Like New Woman

"My appetite was gone, and I was losing weight fast. Couldn't sleep—my general health was bad. Tanlac brought my weight up 15 lbs. and made me feel like a new woman."

MANY MEASURES KILLED IN HOUSE

Deluge of New Measures in General Assembly—Governor Signs Seventeen.

Indianapolis.—Although the deluge of bills, covering practically every phase of human activity, continues in the Indiana general assembly, the legislators summarily executed an unprecented number, according to a review of the week's activities in the statehouse.

Governor Signs Seventeen Bills.

The house has indefinitely postponed 80 bills, 34 have been withdrawn, 4 have been killed by adverse votes, and 71 have been passed. The senate has indefinitely postponed 39 bills, 6 have been withdrawn, 4 have been killed and 97 have been passed.

The governor has signed 17 bills.

The appropriation measure, which carries a total of more than $16,000,000, is now being discussed by the house ways and means committee and senate finance committee.

The library consolidation bill was passed by the senate and is now awaiting action in the house. The blue sky bill passed the house without a dissenting vote and is now resting in the senate, where some amendments are being discussed. The house also passed a bill placing the School for Feeble-Minded Youth at Fort Wayne and the Feeble-Minded colony at Butlerville, under one board of trustees.

To Act on Gas Tax

One of the measures diverting special fees and incomes also was passed by the house and has gone to the senate, and the house also has passed the budget expansion measure. A twin to the fee bill, which would place certain special tax levies in the general fund and which would double the poll tax, has been drafted along administration lines, but has not been introduced.

Only one of the so-called administration measures has been killed or materially changed. This was the bill proposing to combine under a single secretary all of the professional boards.

The Moorhead bill for the creation of a state department of public safety, was killed in the senate by an overwhelming vote. The bill would have combined the offices of the game wardens, oil inspectors and others with the state police. The department would have been composed of the governor, secretary of state, adjutant general and two persons to be appointed by the governor. It also would have provided for the establishment of a state police force, which would have comprised five sections, the state police, factory inspectors, boiler inspectors, fire prevention and the division of women and children.

The Cann 3-cent gasoline tax bill survived a determined attack in the senate and is ready for third reading. It has been amended, however, to provide that one-fourth of the money raised by the extra 1-cent tax shall be distributed among cities and towns for street repairs and maintenance. It seems to be the plan to give this bill right of way over all other measures designed to increase the gasoline tax.

The bill creating a department of public safety is still resting in the senate finance committee.

Cosmetology Bill Killed.

One of the outstanding features of the week was the tilt over the chiropractic bill. An unprecedented incident took place in the house, when, after a debate on the bill, Eugene Ford, president of the Indiana State Chiropractors' association, was brought before the bar of the house and required to apologize to Harry G. Leslie, speaker, for remarks he had made relative to rulings of the presiding officer.

The house killed the cosmetology bill which would have provided a licensing board for beauty parlors.

The house killed the Lisius Lake county road bill.

Budget Additions Sought.

Almost $200,000 would be added to the appropriations outside of recommendations of the state budget officer, if bills introduced should be passed. They brought the total "extra" appropriation requests to a total sum of more than $1,300,000 above the budget recommendations.

O. K. $225,000 BUDGET FOR THE STATE FAIR

Indianapolis.—A budget of $225,000 for expenses incident to the Indiana state fair and work of the state board of agriculture for 1925 was approved by the board at a meeting held in Indianapolis. It was agreed that the expenditures of all departments be kept under the budget figures.

The board announced the awarding of the carnival concession to the Cheasley Brothers Carnival company of Washington. Negotiations were terminated when the Cheasley concern offered to bring the largest carnival ever shown at the fair ground and offered to pay the fair board a flat rate of $7,500. This is $2,500 more than has ever been received for such a concession, members of the board said.

Other arrangements made by the board were to accept the offer of the Gordon Fireworks company to give a fireworks pageant each night of the fair at a cost to the board of $4,000 and free acts to be given by the Gus Sun Booking agency and the Western Vaudeville Managers' association between shows in the Coliseum at night and between races on the track during the afternoon.

The board engaged the John C. Weber band of Cincinnati and the Indianapolis Military band to provide the paid music during the fair.

Richmond.—The petition of Edgar F. Hiatt, deposed president of the Dickinson Trust company of this city, for a rehearing of his case filed in the Circuit Court of Appeals at Chicago, was overruled for the second time, according to advice from that city, received in Indianapolis. Hiatt is under sentence in the Federal court at Indianapolis for violation of the banking laws, in connection with an alleged manipulation of assets of the Dickinson Trust company.

Indianapolis.—Otto Wellbrenner, Republican chairman for Posey county, has been named acting postmaster at Mount Vernon by Harry S. New, postmaster general, according to information received at the Federal building at Indianapolis. Mr. Wellbrenner was selected to succeed Ab Mackey, who died a few days ago.

Lafayette.—Thomas Sharpe Wilson, age thirty-six, formerly of Lafayette, is dead at Denver, Colo. He was graduated from Purdue university with the degree of bachelor of science in mechanical engineering in 1911. He married Miss Margaret L. Diver of Lafayette in 1915. Mr. Wilson was one of the organizers of Battery C, First Indiana field artillery.

Indianapolis.—Word has been received by Indianapolis friends of the death of Dr. David Owen Thomas, age seventy-five, Minneapolis physician. Doctor Thomas was the husband of Mrs. Anne Thomas, who before her marriage was Anne Butler, daughter of Ovid Butler, who founded Butler college.

Indianapolis.—The Indianapolis city plan commission shortly will ask the legislature to amend the thoroughfare law, so that it may make use of approximately $80,000 that has accumulated in a thoroughfare fund, in improving the thoroughfares of Indianapolis, it was said by J. Clyde Hoffman, counsel for the commission.

Indianapolis.—Lawrence Burnett, alleged leader of a gang of whisky runners known as the "Burnett gang," was sentenced by Judge James A. Collins in the Criminal court, to a term of one to two years in the Indiana reformatory, with an appeal bond fixed at $10,000.

South Bend.—Wilbur E. Gorsuch, eighty-two years old, former department commander of the G. A. R., an aid on the staff of several national commanders of the G. A. R., and for more than fifty years a member of the Knights of Pythias, died of heart trouble.

Bloomington.—Johnson Coleman, sixty-five, builder of the Chicago Bloomington stone mill, Clear creek quarries plant and other large stone mills near Bloomington, was killed when he drove his car on the Monon tracks.

Anderson.—Ivan Richardson, Charles Pugh and Lewis Richards, Fort Wayne youths, who were arrested here, will be released to police of Seymour, where, it is charged, they stole an automobile.

Elkhart.—Rev. A. U. Ogilvie, for 26 years pastor of the First Congregational church of Elkhart and widely known in Congregational circles throughout Indiana, tendered his resignation to the church board of trustees.

Winchester.—William Shockney, farmer, age fifty-seven, was killed when the automobile in which he was riding was struck by a freight train of the Pennsylvania railroad at Saratoga.

Shelbyville.—Robert M. Tomlinson of Indianapolis has filed a complaint in the Shelby Circuit court attacking the will of his father, John R. Tomlinson, who died at Fairland, Shelby county. The Tomlinson estate is valued at $40,000. The plaintiff alleges that his father was of unsound mind.

Portland.—When two federal officers, accompanied by the police, raided the home of Daniel Burkey they found a 20-gallon copper still in the house, together with four gallons of moonshine liquor. Burkey and his illicit outfit were brought to the

INDIANA STATE NEWS

Richmond.—Efforts to bring about a merger of Grace and First M. E. churches, two of the largest Methodist churches in eastern Indiana, have failed, according to an announcement which sets forth the views of the two congregations.

Anderson.—The Farmers' State bank and the Middletown State bank at Middletown will be merged. The combined resources of the two banks are more than $600,000, it was said.

Fort Wayne.—Pearl Friend, age twenty-five, a car inspector, was crushed to death beneath the wheels of a freight car in the Nickel Plate yards.

Anderson.—An investigation is being made by police detectives, working under County Coroner Earl Selis, into the mysterious death of Mrs. Nora Smith, fifty years old, whose body was found in the rear seat of a touring car on the outskirts of the city by Thurman Utley, a farmer.

Indianapolis.—John W. Atherton, financial secretary of Butler college, announced a gift of $300,000 to the college building fund from William G. Irwin and his sister, Mrs. Linnie Irwin Sweeney, wife of Rev. Z. T. Sweeney [illegible] Columbus.

A HOME WITHOUT CHILDREN

Lacks the Greatest Joys of Life

Many Wives are Childless Because of Ill Health. Read How Lydia E. Pinkham's Vegetable Compound Helped Mrs. Benedict

MRS. MARY R. BENEDICT
813 PAYSON STREET, KEWANEE, ILLINOIS

Kewanee, Illinois. — "When I was married about a year and a half I took Lydia E. Pinkham's Vegetable Compound because of ill health. I did not have any children. I now have two healthy little girls and I am sure I would not have had them had it not been for your medicine. Last spring and summer I got all run down, irregular, and I had awful headaches, and my back and side hurt me so that I could stay up only a short time. My limbs would get so tired and ache till I could cry. I started to take the Vegetable Compound again and used the Sanative Wash, and it was not long till I was relieved. Now I do all my own work and help others. I sure praise Lydia E. Pinkham's medicines to any one I meet that is suffering from similar troubles. I think if mothers with girls would give it to them when they come to womanhood it would make them stronger. People who have known me all my life are astonished to see me now as I was always sickly when in my 'teens until I started taking the Vegetable Compound."—Mrs. MARY R. BENEDICT, 813 Payson Street, Kewanee, Ill.

Has a Beautiful Baby Girl Now

Bridport, Vermont.—"In the first place I wanted a baby, but none seemed to come to me. I just love children and my husband is away all day, so I was not happy at all. A doctor told me I could not have a baby until I went to a hospital. But my sisters said, 'Take Lydia E. Pinkham's Vegetable Compound and you will be O.K.' I was nervous, had organic weakness, with backache, sideache, headache and no strength. I had been in bed nearly a week when I began taking the Vegetable Compound. It was all that ever helped me and I just wish you could see my beautiful baby girl. I am fine now, and so is she. I am still taking the medicine as it keeps me well. You may be sure I am recommending the Vegetable Compound and always will."—Mrs. A. W. HOWE, Bridport, Vermont.

Don't be foolish and run yourself down when your neighbors are only too glad to do it for you.

Pompous people are seldom flouted; and when they are it alters them not.

CHILDREN CRY FOR

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

A wise man looks into things in order to size up the outlook.

If we take life too seriously we will lose our share of laughter.

Yeast Foam — The favorite of good bread makers

Two Forms of Tassels on Willows in Spring

Willow trees have striking characteristics of flowers and fruit. This family peculiarity manifests itself in early spring before the leaves appear, when trees loaded with tassels on every branch are found in the forest, in parks, and on streets and lawns. This is late in March or early in April, says "Tree Habits," from the American Nature association of Washington. Several days later it may be found that the tassels on one of these trees have fallen to the ground. Examination of these worm-like objects will show that they are made up of small flowers containing remnants of pollen dust. The catkins fall as soon as the pollen-bearing flowers have done their part, and the time required for the flowers to ripen, burst open, and release the pollen is but a few days. A similar tree near at hand may show the tassels still hanging and you will naturally wonder why the one tree has shed its tassels and the other holds them. Close examination of the tassels will show that those which dropped bore pollen-bearing blossoms, while those remaining on the trees are made up of seed-producing flowers.

Tortures Suffered by East Indian Ascetics

There are itinerant East Indian ascetics that lie for hours at a time balanced on a tight rope or slack wire, with a pile of thorn scrub below to discourage them from a fall. They are thus described:

"His is the torture of immobility. Very different is the procedure of the holy man who lies at full length in the road with a stone in his hand, places the stone as far ahead as he can reach, gets up, walks three short paces to the stone, picks it up, and then goes down flat again," London Sphere says.

"Another sandhu, whose numbers, if not literally legion, are at any rate very considerable, is he who for many years has kept his hands behind his back, with the palms touching and finger tips touching the nape of his neck. Long ago they have withered and are no longer of any use to feed him—he has to be fed like any baby."

His Midnight Fright

A Detroiter fell asleep in his favorite chair the other night, and his wife, a little later, turned out the lights and went to bed. About midnight, he was awakened by a soft tap-tap on the stairs. Instantly, there flashed into his mind all the stories of burglars he ever had read. In the brief moment before the dim ray of a flashlight came in view, he lived through centuries of criminal review. He was unarmed, defenseless. The feeble ray of light came on, the tap-tap grew louder. And then he breathed a sigh of relief. His small son had awakened, remembered a toy he wished to take to bed with him, and had used his Christmas gift flashlight to find his way.—Detroit News.

Risked Life for Goldfish

At a fire in a Manchester (N. H.) block the firemen, as usual, went through the apartments to arouse the sleepers. They awoke a man who sat up and inquired what the matter was. They told him and added to get dressed and get out. His first thought was for his pet goldfish. In his haste he dropped the bowl and the goldfish were squirming on the floor. He hurried, got a tin dipper, picked up the fish, ran to the sink and filled the dipper with water. Then he and his goldfish were ready to go to a place of safety.

Mission "Made Good"

The old Bowery mission, long known as "The Place Where Crooked Men Are Made Straight," was organized in 1879 by a little band of earnest workers at 55 Bowery, New York city, where the Gombossy music hall formerly had been domiciled. The enterprise first met with scorn and derision, but the persevering institution carried on in the face of opposition until today it stands as a respected haven of refuge.

Antelope a Nuisance

Within the radius of 40 miles of Taber, Alberta, it is estimated that 1,000 antelopes are now collected, and they are reported to be eating the farmers' green feed, reserved for their cattle. The antelopes were near extinction at one time, but under protective measures they are coming back.

Prisoner in Lagoon, Whale Destroys Nets

A whale, chasing a school of herring into a lagoon in high tide at Kachemak bay, Seldovia, Alaska, found himself trapped and, before he followed a gasoline boat three weeks later out of the lagoon toward the north Pacific ocean, damaged more than $5,000 worth of fishing nets after being wounded by hundreds of bullets, Fish Commissioner William P. Studdert recounted on his return to Cordova.

Twelve nets were destroyed the first day the whale made his appearance. Fishermen, aided by Commissioner Studdert, trained every shotgun in camp on the whale as he sped from one end of the lagoon to the other without finding an exit. Hundreds of nets were ruined before he followed a small boat through the channel.

MAKES IT ENDURABLE

Old Multirox—Why do you always close your eyes when I kiss you?

His Young Fiancee—So I can use my imagination and think it's someone else.

New Race-Track Idea

A revolving periscope is being tested at the Vincennes race track, the only trotting track in the Paris region. Its purpose is to enable the judges to watch the starts and follow the horses around the track without moving from their positions. Placed on a level with the horses' heads, it has worked excellently so far and seems likely to be adopted at other tracks, as it allows the high-platformed finish stand to be cut down so that it no longer obstructs the spectators' view of the back stretch.

Another contemplated application of the device is its installation in the press stand in such a way that the newspaper men can work while they watch.—Philadelphia Inquirer.

Useful Fad

Are cross-word puzzles helpful? The other day we were doing one when we had to find a six-letter synonym for "lazy." As a starter we already had "o" and from somewhere within us came the whisper "otiose." We hurried to the dictionary and verified its meaning. "Otiose" has now become fixed in our vocabulary. Not only that, but we have directed the attention of friend wife to the word, with the hope that when next she feels like characterizing us with the shorter and uglier term, she will substitute "otiose." It is much less jarring.—Boston Transcript.

Deer's Diet

After tramping the hills in an unsuccessful pursuit of a deer, Augustus Cebula of Ware returned to his automobile and decided to take a little nap before returning home. In the front seat was a cushion filled with straw, and when Cebula, who took his nap in the back seat, woke up he said the straw had all been eaten from the cushion and there were numerous deer tracks about the machine. He has decided to give up deer hunting.

Sectional Desk Now

Building your own desk to fit your particular needs has been made possible by the recent invention of a sectional desk, designed on much the same principle as the sectional bookcase, according to Popular Science Monthly. The units are manufactured in standardized dimensions so that filing cabinets and drawers of specified sizes can be installed as desired.

Ingenious Swindle

In court at Atlantic City, William Green, garbage collector, charged James Caldwell with having "covered" his district Christmas and having collected gifts householders had intended for Green. Caldwell got only 60 days in jail, despite Green's request for life imprisonment.

Skunk and Porcupine Not Given Their Due

The porcupine is the most maligned animal in natural history fiction with the possible exception of the skunk, according to Guy Powers, United States forest ranger in Glacier National park. "Many stories have been told about porky throwing his quills at people and animals from a distance of several feet," he says. "As a matter of fact, no porcupine ever threw a quill at anybody in his life, and couldn't if he tried. If you took hold of a porcupine the quills, which are very lightly fixed in the skin, will come out and stick in your hand, but that isn't porky's fault. If you take hold of a live wire, you must expect to get burned. The skunk also is a much-abused animal. I never heard of him annoying anyone unless others annoyed him. If let alone he is perfectly willing not to create a stir, and will even make friends if opportunity offers. On many occasions I have had skunks come into camp for food, and I even made a pet of one and carried him around for weeks without disastrous results."

Birds in Fellowship at Hunger's Bidding

Class distinction among the "birds of the air" is a matter of seasons. It is all very well for the meadow lark to spurn the society of the noisy and common English sparrow, and for the blackbird to look with scorn on the gossipy bluejay, but winter in Indiana does away with castes when the question of food arises. Better to mingle in the good fellowship of all fowls and be fed than to stand aloof and go hungry.

So reasoned eight meadow larks, one blackbird, one bluejay and a dozen or so English sparrows who frequent the Broadview apartment house in Broad Ripple in quest of sustenance. And rarely are they disappointed, for the tenants have made it a point to put out food regularly for their feathered friends. The first meadow lark appeared in the midst of the snowstorms New Year's day, and afterward at each feeding time brought in other birds.—Indianapolis News.

Good Definition

It was the first time the two dusky ex-stevedores had met since the war, and they were comparing their more recent personal history. "Mose," announced Rastus, "Ah's got a good job now."

"Yo' got a good job? What at?"

"Ah's got a job bein' p'fessor of pathology to the college."

"Huccum, p'fessor of pathology, big boy? Yo' kain't read nor write."

"Seems lak you' don' know what is it a p'fessor of pathology. Lemme 'lucidate. A p'fessor of pathology is de p'fessor what shows de folkses how to go in an' out of de college grounds."—American Legion Weekly.

Puzzled Youngster

Lord Frederic Hamilton, the English diplomatist, told an Anglo-Indian story on his last visit to New York.

"A little English boy was born in India," said Lord Frederic, "and at the age of seven his mother brought him home to England to put him to school.

"As the train whizzed across the English countryside the little chap said to his mother:

"'Mamma, what a queer country England is. All the natives seem to be white.'"

Birthdays to Order

Mary, aged five, is a devoted advocate of more holidays such as Christmas, birthdays and various other smaller festivals which involve in their celebration the giving of gifts. Recently she had an original and very happy idea.

"Daddy," said Mary, "it's been a long time since I've had a birthday, a long, long time, and I want another one. I want to have another birthday today."

Mail in Garbage Can

"Delayed owing to having been deposited in rubbish can," was stamped on a quantity of Christmas mail from Randolph, Mass. A green-colored rubbish can located in front of the post office was responsible. When someone suggested to the postmaster that he examine the can he did so, and was astonished to find such a large amount of mail matter there, letters and packages, but mostly post cards.

Wilde True to Pose Even in Extremities

The late Harry Furniss, well-known British cartoonist, whose "Some Victorian Women" proved one of the most amusing books of a year or so ago, followed it, appropriately enough, with "Some Victorian Men." This latter contains a host of good yarns about the celebrities of yesterday. Wilde, of course, comes in for his share.

Mr. Furniss says that Oscar Wilde became an eccentric in order to advertise his poems, and eccentricity paid. At Oxford he so exasperated his fellow-collegians that they took drastic measures to cure him.

"They tied him hand and foot and carried, or rather dragged him to the top of a steep hill overlooking the surrounding country, and there threw him into a muddy, shallow pool. Wilde, suffering and exhausted, raised himself and surveyed the landscape with a nonchalant air, and, after a long pause, exclaimed in affected tones of great enjoyment:

"'Oh! What a lovely view!'"

JUST SO

First Turtle—He's a pessimist, isn't he?

Second Turtle—Yes, a regular croaker.

In the Past

A traveler riding over wild western prairies a half century ago inquired of a native, "Does Walter Halter live near here?"

"No," was the reply.

"Well, do you happen to know where I could find him?"

"No," said the other.

The traveler was puzzled. "Dear me," he said, "I must have lost my way. Perhaps you can tell me where Mr. William Bluff, familiarly known as 'Grizzly Bill,' hangs out."

"I can. Right here. I am Grizzly Bill."

"But," expostulated the tenderfoot traveler, "they told me that Halter lived within gunshot of you."

"Well," said the other, "he did."

The Handiest Number

Tricks with numbers are almost unlimited but the figure nine, an important digit in many mathematical stunts, is put to practical use in banks and other institutions in finding errors in balances. If the deficit or surplus in a sum is divisible by nine, the chances are that a transposition of numbers has been made. For instance, suppose 69 is put down instead of 96. The deficit, 27, is exactly divisible by nine. If 816 should be written for 168, the surplus, 648, also divisible by the digit "detective," points to the transposition error as the cause of the trouble.—Popular Mechanics Magazine.

Smiles and Autos

A charming young woman stood on the street corner, smiling at her own thoughts. A susceptible motorist thought the smile was meant for him. He stopped his car and blew the horn. Just behind was another susceptible motorist. He turned to wave at the girl and crashed into the car of the first susceptible motorist. While the two men were arguing about it, the charming young woman boarded a street car.—Exchange.

Survived Loss of Scalp

In 1868, Comanche Indians attacked a wagon train on Walnut creek, near Great Bend, Kans. A boy of eighteen, Allen Edwards, was stunned by a blow from an Indian war club, scalped and left for dead. Edwards' death at Wankomis, Okla., was reported a short time ago. His hair never grew again where the scalp had been removed and he had to wear a wig to cover the unsightly scar.

Fright Cured Hiccoughs

K. A. Goodwin of Salem, N. J., who had been suffering with hiccoughs for several days, attributes his cure to the blowing of the fire siren. When he heard the whistle he rushed out of the house, believing that his place of employment was on fire. In his fright he forgot to hiccough.

The Revelation

By CRITTENDEN MARRIOTT

(©, 1925, Western Newspaper Union.)

MECHANICALLY Edward Curley made his way upstairs, pressed the push-button just inside the door of his room, dropped into a chair and stared blankly into the still smoldering embers of the fire.

He had been proposed to! By a girl! A girl whom he scarcely knew. Well, not scarcely "knew," of course. He knew Rose Dunlap well enough; in fact, he had known her for years. But he had scarcely thought of her for about half those years. And now she had—Good Lord! How could she have done such a thing! He could kill himself laughing at it.

Laughing at "it," not at her, of course. He wasn't such a blackguard as to laugh at Rose! Rose was an awfully nice girl—always had been. That was what made what she said sound so queer! And she must have found it mighty hard to say it. He'd have found it mighty hard himself to propose to her—to any girl. He'd been trying to propose to Susy Blair for six months, and he hadn't yet managed to make a beginning. And Rose—she was such a little thing. She certainly had nerve, all right.

Susy Blair wouldn't have had the nerve to say a thing like that! And Rose meant it, too. That was what got his goat. Susy wouldn't have meant it! And she wouldn't have got his goat even if she had meant it. At least he didn't think she would; she wasn't that kind. Susy was all right to play around with; but a man got tired of that sort of thing after a while. Now Rose—he didn't believe anyone ever would get tired of Rose.

Rose always had been particular. That was why she hadn't been a belle; that is, not much of a belle—except—come to think of it, she really was popular with the right sort of men, men like Manley, for instance, even if she wasn't popular with the harum-scarum gang he'd been running with; the gang that thought life was all jazz and didn't know a real girl when they saw her. Now, if he thought that he had the ghost of a chance—

Good Lord! What was he thinking of? He did have a chance. That very night Rose had said—said—

What had she said, exactly? He couldn't quite remember! He had been so flabbergasted.

Mrs. Blair had asked him to see Rose home from the dance, had told him that she hated to impose on him, but that he lived right across the street from Rose and that Mr. Manley, who brought Rose, had been called away and had telephoned that he couldn't get back!

And then he had started home with Rose. Susy Blair had seen them off. She had told Rose something he didn't quite understand; she had said that she knew that he was quite safe with Rose. She meant that Rose was quite safe with him, of course; and he had said so. But Susy had laughed and Rose had flushed, and—he wondered what the dickens it all meant. Something catty, he supposed.

How in the mischief had she learned so much about civil engineering? Why, when he told her of that bridging problem that was troubling him she understood it right away, and she suggested—no, she didn't suggest, exactly; she merely said something that made the solution of the problem pop right into his mind. It was just chance, of course; but Rose had to be pretty well up even to say what she did say. And then—oh, yes! he remembered now—then they got to her home and he unlocked the door and gave her back the key and thanked her for helping him to the solution; and she said that—that she'd like to help him all her life, and—and her voice quavered, but she went on and said she wanted him to know that she cared for him a great deal. And then she slipped into the house and shut the door.

And—and—Great Scott! Was that really all she said? It couldn't be. It seemed like so much more. Oh! What an ass he was! That wasn't any proposal! Proposal? Rose wouldn't dream of proposing to any man! And yet—her voice—her—oh! Could she really have meant it the way he thought? If she did—he'd have to know tonight, right away! Mr. Dunlap was reading in the parlor when he had left Rose at home. He had seen him through the window. He might be up yet; and if he was, Rose probably was, too. He could see from his window if the lights were burning! . . . They were!

He'd go over right away . . . Where in thunder was his hat? . . . Oh, hang the hat! He'd go without it. Mr. Dunlap might put out the lights while he was hunting for it. . . . No! They weren't out yet. . . . Gee! It took a year to cross the street . . . And what was the matter with the Dunlap gate that it wouldn't open? . . . There! He guessed it was just his own butter fingers. . . . Stumbled on the steps, of course! Lord, he was nervous! . . . Lucky the window blind wasn't down. . . . There was Mr. Dunlap reading. And there was Rose, thank heaven! . . . Where was that darned bell? Never had had any trouble in finding it before. . . . Got it at last! Now if Rose came to the door! She's getting up. Yes, she's coming! Gee! he was trembling like a leaf. He—

"Rose!"

"Eddie!"

• • • • • • • • •

After a while they heard Mr. Dunlap stirring and went in to break the news.

Mr. Blinky-Blink Was Lonely

By EDITH H. OLIVER

(©, 1925, Western Newspaper Union.)

"HELLO, Mr. Blinky-blink," said the boy putting his head through the open door.

"Hello, boy."

John Farnsworth hastily edged himself out of his chair between the oil stove on its battered tin tray to the left of the typewriter, and the piled-up books and manuscripts to the right. There was only room for one table, but he was careful never to cook anything that spattered.

It had been different with John Farnsworth. He had plunged in himself when he took possession of the room fifteen years ago, a "cub" on the Comet, writing his first assignment with the world illumined by the rising sun of success. He could not have told why that sun had painted the sky with a promise never to be fulfilled; why he was still in the little room where he had only meant to stay until he found just what his work would be, and where it would take him. Least of all, could he have told why he was still a hack writer, a dried-up husk of a man grinding out miserable commercial platitudes on a typewriter, blinkity-blink, blinkity-blink, blinkity-blink.

He had ceased to question or demand of life. Every evening when he did not go to the Eureka restaurant to dine he came back to his room with numerous bags and a bottle of milk, and persuaded himself that he cooked a cozy, appetizing meal. His room was a dreary place; but still he clung to it, came back to it with a pathetic pseudo feeling of home, and inserting himself between the precarious piles on the table blinked out the requisite number of words to spell "ready-to-wear clothes." He could almost have done it with his eyes closed, especially the weekly article about the ladies' ready-to-wear garment trade—until that night when the boy first came to the door in shirt and dress trousers, newly shaved, eager, excited.

"I say, Mr. Blinky-blink, help me out, will you? I've left my back collar stud in the shirt that's gone to the laundry and I'm due at a party. I'm assigned to write up the Merrington wedding, and there's no telling what may come of it if I please them. Don't mind my calling you Mr. Blinky-blink, do you? You're always blinkity-blinking when I go past—Oh I say—don't take your collar off—I can use a safety pin—you might want to go out yourself."

"I never go out," said Farnsworth struggling with his collar.

"Rats! said the boy, "but if you aren't going tonight I'll be everlastingly obliged, and I'll put the stud in a bit of paper under the door. Thanks again."

He ran out whistling, and in a few minutes he ran downstairs and slammed the door, and John Farnsworth went back to his writing, feeling old and lonely.

It is not possible to resume a routine that has once been broken. Every night after that the boy put his head through the door that was always left open, and told the story of his day, and the older man's starved heart warmed to him and took him in, yet, something within him whispered, "why waste time on that boy when you can send your own voice into the world and become famous?"

Through the long hours while his fingers mechanically blinked out the unworthy articles, his brain harked back to his own youth and gradually, battling all the way with a dulled and listless conscience, it showed him a short and easy way to success. He took the boy's stories and rewrote them into brilliant things of wit, humor, pathos. He had only to take one of them to the Comet and land at once far above the lad's plodding feet. One night he got as far as the door of the Comet with an especially good one, but he came back, and that night when he heard the cheery hail, his soul cried "Thank God." And when one night the boy came in pale and very sober, he had got his big chance at last. He told Farnsworth all about it, in all innocence giving him the means of his own undoing.

Behind the two closed doors the machines blinked that night until each writer felt that he had accomplished a masterpiece; but while the boy rose from his work, yawned stretched and tumbled smiling into bed, the older man still sat rigid, staring at the written sheets with unseeing eyes while his soul fought its lonely battle.

In the gray dawn he rose slowly with the stiff motions of an old man. His face was drawn and haggard, but his eyes shone with the light of victory as he tore the typewritten sheets, and tore them again and again into fragments.

That night the boy began to shout—"Oh, Mr. Blinky-blink" before he was half way upstairs and he plunged into the room radiant with happiness.

"I've got it! The old man himself said it was good, sound work. I rushed home to tell you, for I owe it all to your advice, you know."

Farnsworth looked steadily into the eager young face.

"I'm glad to think you do owe something of it to me, boy—It's a great thing to be young, such a great thing that it only comes once in a lifetime. Don't waste it, by—as I did."

Every evening when the hour comes, Mr. Blinky-blink stops work and listens, but the boy has gone to life, and love, and happiness. No voice calls to him, no one comes to the door, and he goes on with his report of the ladies' ready-to-wear garment trade—blinkity-blink, blinkity-blink.

Obituary

Vernie Samuel Kelley, second son of Ida and Dallas Kelley, was born in DeKalb county, on May 29, 1888 and departed this life February 15, 1925, age 36 years, 8 months and 17 days.

On July 3, 1915, he was united in marriage to Theresa Hay and to them were born five children, one dying in infancy. Also, he was preceded in death by one brother, his mother and father. Surviving to mourn their loss are the widow and four children: Madonna Eloise Earnest Marion Wanda Marie and Victor DeWayne; two brothers. Clarence of Spencerville, Corma, of Salt Lake City, Utah and two sisters, Nellie Carr of Auburn and Lena Zimmerman of Spencerville Surviving also are his grandfather, Kelley who is past 84 years of age and uncles, aunts and cousins besides a host of friends.

Vernie united with the Methodist Episcopal church under the ministry of E. H. Peters. His hand was always open towards his neighbor and oftentimes, when scarcely able to do his own work, he could not resist the call of others.

Funeral was held Wednesday afternoon from the M. E. Church, Rev. Brown officiating, assisted by Rev. Steffey. Burial at Spencerville, E R. Kinsey, funeral director.

CARD OF THANKS

The family desires to express their sincere gratitude to all who so kindly assisted them during the hours of their recent affliction

Mrs. Kelly and Family.

A Good Thing - DON'T MISS IT.

Send your name and address plainly written together with 5 cents (and this slip) to Chamberlain Medicine Co., Des Moines, Iowa, and receive in return a trial package containing Chamberlain's Cough Remedy for coughs, colds, croup, bronchial, "flu" and whooping coughs, and tickling throat; Chamberlain's Stomach and Liver Tablets for stomach troubles, indigestion, gassy pains that crowd the heart, biliousness and constipation; Chamberlain's Salve, needed in every family for burns, scalds, wounds, piles, and skin affections; these valued family medicines for only 5 cents. Don't miss it.

Brother of Spencerville Lady Killed

Lee O. Hemrick, age 35, was instantly killed Sunday night by an east bound Pennsylvania train while he was walking across the railroad bridge over the St. Mary's river, south of Sminney park. The body was not discovered until 5:30 o'clock Monday morning at Fort Wayne, although death had occurred several hours before, according to Coroner Harry G. Irwin.

Hemrick, a rural route mail carrier, had been in ill health for several weeks after having suffered a stroke of paralysis in which his right side became paralyzed. He left his home about 7:30 o'clock Sunday evening, telling members of his family that he intended to take a walk. When he had not returned at 10:30 o'clock the police were called, but were unable to locate him.

Coroner Irwin stated the cause of death was "crushed by Pennsylvania train" with a contributory cause being "mentally unbalanced due to illness." The belief was expressed today by friends that Hemrick after walking for a time became confused due to the heavy fog and his mental condition and wandered onto the railroad bridge. His head was crushed, both legs were broken and the left arm almost severed between the elbow and wrist. The body was indentified by a name written on a coat pocket card. His body was discovered on the bridge south of the tracks.

Hemrick was born in Spencerville, DeKalb county, and had lived in Fort Wayne for the last thirty years. He had been employed at the postoffice as a city and rural mail carrier for fifteen years.

A sister, Mrs. Daisy Butler of Spencerville, is among the surviving relatives.

NEWVILLE

Elmer McDonald of Mishawaka, was an over night guest of the John Miller family the first of the week.

People in this vicinity are grateful for rain as a number of wells that were never known to fail now have gone very near dry. Some of us can scarcely get enough water to do our house work.

Little Russell Shaffer has been having a bealing in his head and the earache very severe, but is better at this writing.

Mr. and Mrs. Joe Rhoads are both very poorly, neither one able to care for the other. Their children are looking after them.

The young people had a surprise party at the Richard home on some member of the family, Friday evening. A large crowd was there and a fine time enjoyed by all.

Willie Miller is ditching preparing to make a cellar under his house. The ground has been frozen hard up to about the present time which no doubt causes the lack of water in wells.

John Miller and family went to Auburn last week and brought little Harold Mendenhall home with him. The little boy has been sick with the flu and unable to attend school the past four weeks. We expect him to be able to return to school by the first Monday in March as he is improving fine now.

SPENCERVILLE

Born to Wm Allen and wife on Tuesday morning, a daughter.

Miss Hazel Woolever of Auburn, was a dinner guest in the J. C. Valieu home, Sunday.

The community hall stock holders met on Friday evening in a business session at the bank.

John Zimmerman and wife of Fort Wayne, were weekend guests in the John Bachmann home.

Joel Betz and wife spent several days last week with their daughter Mrs. Walter Perkins and family.

Perry Miller, wife and daughter of Huntertown spent several days last week in the F. W. Silberg home.

Mrs. Amanda Rhodes entertained the Ladies Aid Society of the Lutheran church Thursday afternoon.

Charles Timmerman, who has been suffering several weeks with his head, was taken to a Ft. Wayne hospital, Monday.

The Ladies Aid of the Methodist church will be entertained on Thursday afternoon at the home of Mrs. Gust Cupp.

B. F. Markle and family and Margaret Lake, were Sunday visitors in the Mrs. Matilda Oberholtzer home near Harlan.

Gust Hafner, wife and son, Robert, Earl Stiman and family and Irene Webb, were Sunday guests of Frank Wertman and wife.

Alva Place and family of Fort Wayne, Ray Baker and wife, Chas. Brettian and family and Mrs. Theresa Kelley and children, were Sunday dinner guests of their parents Mr. and Mrs. Vol Hay.

The following guests enjoyed a weiner roast at the home of Frank Baltz and wife Sunday afternoon: Rolla Moffett, Wm. Rhodarfer, Ray Rhodarfer and their wives of Auburn, Joseph Borden and family of Garrett, Paul Adams and wife of Fort Wayne and Mr. and Mrs. Jacob Baltz.

Mrs. Georgia Jenkins very pleasantly entertained the C. C. Club Friday afternoon. One contest was enjoyed, Mrs Catherine Bowser winning the prize. The guests present were Mrs. Mae Miller, Mrs. Catherine Steward of Garrett Mrs. Catherine Bowser, William and Fred Steward, Warren Rectenwal, Ernest and Wanda Kelley and Orpha Silberg. The next meeting will be held Marsh 6, at the home of Mesdames Jane and Daisy Butler.

Mrs. Maude Beams and Mrs. Shull of Coburntown attended the Mother and Student week at Muncie, Friday, Saturday and Sunday. On Friday morning all mothers were asked to attend classes. A reception was tendered the mothers Friday afternoon which was followed by a banquet in the evening which was attended by over 700 mothers and students. Saturday a basket ball game was staged by the normal and Sunday was given over to church and seeing the town.

Ralph Bolyard, wife and son William, of New Haven, spent the weekend with relatives and friends at this place.

Clarence Widdifield moved his household goods to his father's farm near Auburn last week Mr Widdifield and family will stay a few weeks with his parents on account of the illness of their baby

"Big Rich" a gold mine of fun, at Community Hall, on Thursday evening March 5, auspices P T A. —a Hoosier poet and humorist Is know as the great "Old Man" impersonator, an evening of fun, instruction and inspiration.

The Spencer Township Convention was held Sunday at the M. E Church. The afternoon session was opened at 2 o'clock with a song service led by Mabel Rhodes Prayer by Rev. Steffey followed by a song and address by Rev. F. S Dowdy of Hicksville on the Youth and the Church, which was enjoyed by all present. The evening session was opened by song service and the music was by the community orchestra. Devotion, Rev Brown. Religious education by Kermit Steffey; Duet, Mr and Mrs. Odle; Reading, Alice Hart; Vocal solo, Doris Beams; Violin solo, Doris Rhoads. The following officers were elected: Pres Glenn Hart; Vice pres., Wm. Lake; Sec.-Treas., Dora Hahn; Superintendent of Children's Division, Mrs. Bernice Wilder Young People, Garnett Beams; Abult, Floyd Coburn; Educational, Prof. Smith; Administration, Ray Farver.

Hall's Catarrh Medicine

Those who are in a "run-down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that while Catarrh is a local disease, it is greatly influenced by constitutional conditions.
HALL'S CATARRH MEDICINE is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years.
Sold by all druggists.
F. J. Cheney & Co., Toledo, Ohio.

WOMEN
Like to Come to This Bank

There's a spirit of friendliness and cordiality about this bank that radiates and promotes a Good Will not found in a bank that is merely a stronghold of stone and steel. And that's why women make this their headquarters for their financial dealings. They like the cheerful atmosphere and the sincere courtesy. You too, will see a difference when you come in to get acquainted.

Farmers' & Merchants' State Bank
Spencerville, Ind.

CONCORD

Mrs. Jane Hull is not much improved at this writing.

Mrs. James Goings is some better and able to be up some.

Alice and Billy Baker have both been sick and under Dr. Shook's care.

Roy Keller and wife and Mrs. Will Miller, were at Fort Wayne, Friday.

Ilene Johnson, who has been threatened with typhoid fever, is some better at this writing.

The little babe of John Draggoo and wife is threatened with pneumonia. We hope it can be warded off.

Ford Jackson and wife entertained at Sunday dinner, Holl Jackson and wife, Bert Jackson and daughter, Miss Edna, Mrs. Catherine Rickett and Chas. Jackson and family.

Fred Draggoo, who has been poorly for so long was taken quite serious one day last week and was taken to the Garrett hospital for treatment. He had been expecting to go some time this spring to the government hospital in Illinois, but the attack came on suddenly. We all hope to see Fred come home a well man. Just before going to press we understand that Mr. Draggoo underwent an operation.

Jealousy Common Fault

When two start into the world together, he that is thrown behind, unless his mind proves generous, will be displeased with the other.

Potato Reliable Farm Vegetable

In Spring Plow, Disk and Harrow Until Soil Is in Good Condition.

The "Irish" potato seems to me, says a writer in an exchange, to be one of the most profitable and reliable vegetables than can be grown, as it is a crop that very seldom fails.

For early potatoes an ideal place should be selected, such as an old garden spot that has been improved for several years, or a place where clover has been plowed under for several years in succession. The clover causes the land to be rich and loosens up the soil. The soil should be of a medium nature, light sandy just enough to be in a good state of fertilization. Manure the patch broadcast with good stable manure. In doing this not so much is needed in the row at planting time. Break the ground good and deep, then in the spring replow, disk and harrow until the soil is in a good pulverized condition. Lay off the rows 8 or 3½ feet wide, making the rows good and deep. If possible cut your pieces of potatoes so as to have two eyes on each piece and use the whole potato in doing so, as the larger the piece the better the germination and start the young plant will have.

Plant Quite Early.

Plant earlier than any of the rest of your neighbors, say in March, covering the potatoes after dropping, with manure and then deep with soil. Even if the ground does freeze on top the potatoes are getting a start. As soon as the freezing weather has passed take a drag and run it across the patch, then give a harrowing which will again loosen up the soil. Planting at this time, we know it is too cold for the young potatoes to come up, but the pieces will sprout and take root and young potatoes will begin to set on even by the time the plant reaches the top of the ground. Try a small patch planted at this time and see the results, then compare with your neighbors and see if you don't have earlier and better potatoes.

Strawing Late Potatoes.

In strawing late potatoes prepare your ground in the same manner as you would if going to plant without the straw, having it in a good condition for planting. Lay it off in rows about 2½ feet wide and drop the potatoes about 10 or 12 inches apart, covering them with an inch or so of soil. Now bring on your straw and scatter it over the entire field of potatoes to a depth of 3 feet, as after a rain or two the straw will settle down. After the planting is all done, nothing more is required until digging time.

In digging, a manure fork is used, the straw being lifted off and your potatoes are found lying on top of the soil. Planting in this way saves a great deal of time and extra work and they will stand more of a drought than those planted in the soil. The straw, when once it becomes wet, holds the moisture, thus causing the small potatoes to continue growing while, if in the soil, they would not have enough moisture, as it soon becomes dry and hard.

Tricks of Trade During Winter Orchard Pruning

Growers of fruit trees who do their own pruning will find it both interesting and profitable to apply some of the "tricks of the trade" during this winter's pruning. One of the most interesting of these is to put living ties in the tree. They are of principal value when applied to young vigorous trees. If a tree of this type is found to have a scaffold limb which is not firmly knit to the trunk of the tree it can be tied there by twining together two twigs from 6 to 18 inches above the crotch and one of which has its origin from the weak limb and the other from the more solid part of the tree. These should be wrapped around each other as tightly as is possible without breaking the wood and the ends should not be cut off until after several years' growth and the twigs have firmly grafted together. Such treatment will form a living tie which will have a greater strength than any artificial one that could be put in.

Balanced Grain Rations Favored for Dairy Cows

The following balanced grain rations to feed dairy cows cost approximately the same. They are recommended for supplementing corn silage and alfalfa hay, and should be fed at the rate of seven pounds for each pound of butterfat produced.

The first ration is 600 pounds cornmeal and 400 pounds bran. The second consists of 500 pounds corn and cob meal, 400 pounds ground oats, and 100 pounds cottonseed meal. The first ration, with corn at $1 per bushel—allowing 12 cents per hundredweight for grinding and bran at $1.25 per hundredweight—costs $1.65 per hundredweight. The second ration—allowing the same price for corn and with ground oats at $1.85 per cwt. and cottonseed meal at $2.45 per cwt.—totals $1.68 per cwt.

Feeding Baby Chicks

Baby chicks must not be fed under 48 hours from the time they are hatched, declared A. G. Philips, of Purdue university. The yolk of the egg which the chick takes into its body before it is hatched, is provided by nature to furnish food during this length of time. If additional food is given diarrhea and other digestive troubles are likely to result.

Crop Rotation Big Benefit in Garden

Good Way to Avoid Perpetuating Diseases.

The same crops should not occupy the same space in the garden from year to year. There are several reasons for this. One of the chief ones is to avoid perpetuating disease which may have afflicted some of the vegetables the germs of which may carry over in the soil. As members of the cabbage tribe and the bean and pea family suffer from different ailments their positions should be switched in order that any such pests may be discontinued.

A good plan is to reverse last year's plan and then change it back again next year, thus furnishing a rotation of crops. If this is not done, at least the arrangement should be changed by moving the sections devoted to one vegetable this year to some other position in the garden removed a few feet at least next year.

A good rule would be to plant the root crops next year where the leaf crops such as lettuce and spinach have grown this year or to give the root crops the space next year where the legumes, a term applied to members of the pea and bean family, have been this year. It will not be a difficult matter to study out this arrangement with a little practice.

Planting the taller growing crops such as corn and tomatoes on one side of the garden one year and then moving them over to the other side the following season will be a convenient method of securing rotation. If rotation cannot be conveniently arranged because of the small size of the plot, the best way is to make up for the deficiency by careful fertilizing and occasional liming of the soil to sweeten it up.

Should Get Acquainted With Various Machines

During the winter months is a good time to get acquainted with the farm machinery and equipment. The more we know about our machines, the more efficiently they will be handled and the less trouble will be encountered, and the more pleasure we can obtain out of farm life.

Start with the tractor and automobile; they are similar in a good many respects. Get the instruction book and study the motor; note how it operates how the carburetor works, how the gas is ignited, how the mechanism is lubricated, why some parts need more and a better grade of oil than others. Study the troubles of the motor, and the causes. After the motor and its accessories are thoroughly understood go to the transmission, then the wheels. On the automobile, find out all you can about tire repairing.

Other machines can be studied in the same way, the lighting system, the water pump, the spraying machine and the farm implements. They can not only be studied with the idea of using them more efficiently, but so that repairs and adjustments may be made without outside assistance.

Fertilized and Limed Soil for Clover Crop

At the Ohio agricultural experiment station on land that has been properly fertilized and limed and worked into a good seed bed, six pounds of clover seed per acre has produced a seven-year average yield equal to that from twelve pounds of seed under the same conditions.

Slightly acid soils now in winter wheat, according to L. E. Thatcher, associate agronomist at the station, may be put in good condition for red clover by top-dressing the wheat with a ton or more of finely ground limestone per acre when the ground is bare and frozen. A top-dressing of acid phosphate or 0-14-4 fertilizer early in the spring before sowing the clover will greatly help the stand and reduce the amount of seed needed.

FARM FACTS

Let's adopt now a permanent policy of legume growing.

* * *

Fruits and vegetables are health and health is more than farm profits.

* * *

Top-dressing with manure is decidedly beneficial, with little danger of injury.

* * *

"Like father, like son" is as true in the plant world as among men and animals.

* * *

Flax may be seeded early in the spring or up to June 15. The earlier seeding is generally better.

* * *

A farmer in one community can capitalize on the experience of farmers in other communities through the medium of the county agent.

* * *

A one-cent postal card may bring you from the agricultural college publications worth hundreds of dollars towards better farming.

* * *

The best time to sow alfalfa is undoubtedly in August, after the first good rain, but a spring seeding may be successful if the conditions are good.

* * *

Hogging off corn has been found to be a very satisfactory method of harvesting the corn crop and finishing pigs for the market and is becoming a popular practice.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for March 1

CHRIST BEFORE PILATE

LESSON TEXT—Matt. 27:11-31.

GOLDEN TEXT—"He was wounded for our transgressions; He was bruised for our iniquities."—Isa. 53:5.

PRIMARY TOPIC—How Wicked Men Tried Jesus.

JUNIOR TOPIC—The Trial of Jesus.

INTERMEDIATE AND SENIOR TOPIC—The Trial of Jesus.

YOUNG PEOPLE AND ADULT TOPIC—Christ Before Pilate.

In order to have a proper perspective for this lesson it will be helpful if we view in their proper relations our Lord's trials.

A. Ecclesiastical.

1. Before Annas (John 18:13).

2. Before Caiaphas and the Sanhedrin (Matt. 26:57, 59-66; Mark 14:53, 55-64; Luke 22:54; John 18:19-24). This was an irregular meeting and held at night.

3. Before the Sanhedrin (Matt. 27:1; Luke 22:66-71). This was held at daybreak and was a formal meeting.

B. Civil.

I. Before Pilate (Matt. 27:11-26).

The ecclesiastical powers had voted a sentence of death upon Jesus, but they lacked the right to inflict capital punishment, as this power had been taken from them by the Romans. For this reason they delivered Him to Pilate, the Roman governor. It was in the early morning after the mock trial before the high priests and Peter's denial that they bound Jesus and delivered Him to Pilate. It turned out, therefore, that both Jews and Gentiles were guilty of the crucifixion of the Savior.

1. Pilate Questions Jesus (vv. 11-14).

(1) "Art thou the King of the Jews?" (v. 11). When the trial was transferred from the Sanhedrin to Pilate they changed their charge of blasphemy to that of sedition or treason.

(2) Jesus' answer (v. 11). He admitted His claim to being a king but explained that His Kingdom was not of this world, else would His servants fight to put Him on the throne (John 18:3, 37). He declared that He was born and had come into the world to this end.

(3) "Hearest Thou not how many things they witness against Thee?" (v. 13). The members of the Sanhedrin—the priests and the elders—joined in their accusation against Him. They brought a three-fold charge (Luke 23:2).

(a) Perverting the nation—guilty of sedition.

(b) Forbidding to pay taxes to the Roman government.

(c) Claiming to be a king, thus changing the charge from a religious to a political one.

(4) Jesus' Behavior (v 14). His silence under such provocation greatly astonished Pilate.

2. Pilate Giving a Choice Between Jesus and Barabbas (vv. 15-26).

(1) The offer made (v. 17). It was the annual custom at great festivals to release a prisoner chosen by the people. Because he knew that for envy they had delivered Jesus he gave them the choice between Barabbas and Jesus. After several unsuccessful efforts to escape responsibility the expediency of letting the people choose between Barabbas and Jesus was resorted to. Pilate no doubt thought they would choose Jesus rather than the notorious Barabbas.

(2) A message from Pilate's wife (v. 19). She warned him against having anything to do in the condemnation of Christ.

(3) The choice made (v. 21). Influenced by the warning from his wife Pilate wished to give Jesus another chance by having the people choose between the innocent and the guilty. They actually chose the notorious criminal Barabbas instead of Christ.

(4) The demand that Christ be crucified (vv. 22, 23). Pilate, the judge, showed great weakness in asking the crowd in the court room what should be done with the prisoner. With one voice they cried, "Let him be crucified."

(5) Pilate washes his hands (v. 24). This was the sign that he was innocent of the blood of Jesus, but guilt could not be so easily removed. The blood of Jesus was on his hands.

(6) The people's awful choice (v. 25). The history of the Jews from that day to this shows how awful has been the execution of this curse upon them.

(7) Jesus scourged (v. 26). It seems to have been the custom to scourge before crucifying. This was so terrible that sometimes the victim died as the result of it. Pilate stands for the man of expediency. The opportunist is a most contemptible man.

II. Before Herod (Luke 23:7-11).

The Best Man

The best man is the one who wishes and seeks best. His ability to do may be limited, but he touches his restrictions.—Presbyterian Record.

In Our Prayer

In prayer it is better to have a heart without words than words without a heart.—Bunyan.

To Win Souls

If you want to win souls, love them seek them, go where they are.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)

Radio Station at the University of Illinois—Part of Broadcasting Studio, Transmitter and Power Room All in One.

Success of the noncarrier wave system of broadcasting, which was developed by H. A. Brown and C. A. Keener, members of the electrical engineering staff of the University of Illinois, is announced as positive after another series of tests which bore out the results of previous tests held over a period of more than a year.

The elimination of "fading" is an added feature of the new broadcasting system which now seems possible. In the last series of tests, instruments which accurately measured the curve of audibility of both the carrier wave system and the new noncarrier system were set up a distance of 100 miles from station WRM, the university's radiophone with which the experimental work is carried on. These instruments showed the usual fading when the old system was used, but did not vary a particle when the noncarrier was employed. However, this advantage is not yet being claimed, because it has not been subjected to enough tests to establish it as a fact.

Previous advantages which were claimed for the system and which the final tests show as outstanding over the system now in general use include increased sending efficiency, more selective tuning at the receiver with greater possibility to tune out local stations, opportunity to cover greater distances and the elimination of all sorts of sounds which are impressed on the carrier wave and which only perfect modulation at the transmitting end and perfect detection at the receiver can eliminate.

The suppressed carrier or noncarrier system differs from the present type of broadcasting in that the carrier waves go out only when a note is sounded or a syllable spoken. Between notes or spoken words, the carrier wave does not go through the air. That is, the sound and the wave on which it rides leave the broadcasting apparatus simultaneously. This interval of time between sounds when there is no carrier wave in the air makes possible the advantages noted.

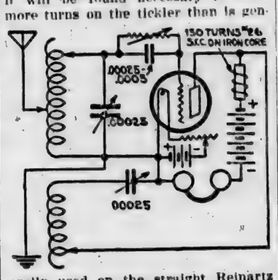
This Hookup Based on Old Weagant Circuit

By EARL T. DENTON

Some time ago there appeared in Radio Digest a Reinartz hookup by C. T. Hanavan, and I have tried this circuit with good results, but with the tickler coil placed as shown in the accompanying diagram I obtained much better results. This arrangement is based on the original Weagant circuit.

This hookup gave louder and greater distance signals than the straight tickler coil arrangement of the Reinartz circuit.

The only trouble that was experienced in building the set using this circuit was to find the correct size of the tickler coil. The exact number of turns on this coil must be found by experimentation, as it varies with the design of the set. But in most cases it will be found necessary to have more turns on the tickler than is generally used on the straight Reinartz set. Do not give up on the first try-out, because the set will work and it will be well worth the effort used in experimenting with the tickler coil.—Radio Digest.



Use Indoor Loops to Escape License Fee

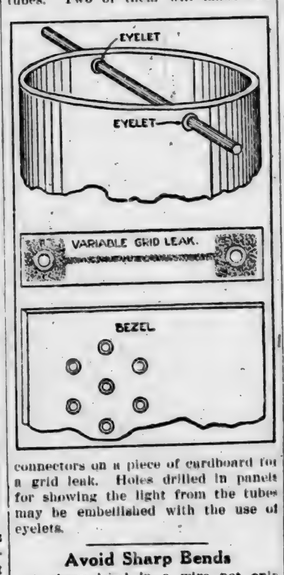
The British postmaster general is meeting with serious difficulties in handling radio receiver licensing regulations, for it is estimated that there are about 2,000,000 persons who have receivers in their homes and who are not provided with licenses.

Indoor aerials make it impossible for the authorities to know if there are sets or not, and direct intervention in private dwellings on mere suspicions or denunciations is not permitted in the British Isles.

The authorities are therefore in a quandary, especially as it is believed that many amateurs will refuse to renew their licenses. The loss of revenue to the B. B. C. would be enormous.

Shoe Eyelets Serve as Rotor Shaft Bearings

Shoe eyelets come in handy in radio work where a person builds his own sets. They make good bearings for shafts in variocoupler and variometer tubes. Two of them will make end connectors on a piece of cardboard for a grid leak. Holes drilled in panels for showing the light from the tubes may be embellished with the use of eyelets.



Avoid Sharp Bends

A sharp bend in a wire not only offers a good point for energy to be radiated from, but it also changes the resistance of the wire. All wires should be led directly to the proper terminal without bending, if possible. Where it is necessary to bend a wire at right angles, use round-nose pliers or some other tool to make the curve a large one.

Defective Tubes Cause Havoc

Tubes are primary causes for batteries to run down prematurely. Many defective tubes draw more plate current than they are rated for. Bootleg tubes sometimes draw two or three times more current than standard ones and this causes havoc with B batteries.

Antenna Joints

Joints of an antenna should be first soldered and then wrapped with several layers of tinfoil and then a layer of waterproof tape.

Low Heels Fashion

Low heels on one's slippers today are not indicative of low tastes. Some of the smartest of the evening pumps and sandals feature Cuban heels of moderate height rather than the Louis XV type.

Charming Gown

Blue taffeta with large overplaids of white makes a charming gown when collar and cuffs of white ermine are added.

Bow as Ornament

The girl who puts her best foot forward nowadays is likely to have a ribbon bow on it, adorning a blond tan kid pump with an extremely short vamp and rounded toe.

Silk Voiles for Lingerie

Silk voiles, including triple voile, are used for handsome garments. These sheer silks are replacing the fine cotton materials that have been so long in vogue for handmade underthings.

Marcelle Cold Cream and *Marcelle* Vanishing Cream relieve the dry, parched condition of the skin which comes with exposure to the weather.

The cold cream is a cleansing and healing cream and leaves the skin soft. To do the most good it should be applied at night. On dry skins it may be used as a foundation for powder.

Marcelle Vanishing Cream is the better cream for daytime use and as a foundation for face powder, as it is greaseless and cannot reappear through the powder in a shine.

The creams are on sale in both tubes and jars.

Steal an hour off of your rising time and it grows to three before night.

Cuticura Soothes Baby Rashes

That itch and burn, by hot baths of Cuticura Soap followed by gentle anointings of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finish. 25c each.—Advertisement.

With too many people charity is more of a fad than a virtue.

No matter how careful you are, your system needs a laxative occasionally. Wright's Indian Vegetable Pills help nature gently, but surely. 372 Pearl St., N. Y. Adv.

Even the lowly hog wants the lion's share.

When You Feel a Cold Coming On Take Laxative Bromo Quinine tablets

to work off the cause and to fortify the system against an attack of Grip or Influenza. A Safe and Proven Remedy. Price 30c.

BROADCASTING BETTER TEETH

THE radio in some form is almost as common in the home as the telephone. Broadcasting stations have increased until every radio owner can tune in on some station. One may hear, any evening, jazz bands, dance music, symphony orchestras and monologues.

Numerous health talks have been broadcast. Station WEAF of New York thought that something ought to be said about the teeth, so Dr Richard F. Doran, a prominent dentist of New York city, was asked to tell thousands of listeners how to take care of children's teeth. These are a few of the suggestions Doctor Doran made:

The responsibility for good teeth rests largely with mothers, in the care given to children's mouths and teeth before they are able to care for them themselves.

Good teeth mean good health, strength and freedom from illness.

From the time of the child's birth up to the appearance of the first tooth, which is at about the sixth month, the baby's mouth should be carefully wiped out daily with a very soft cloth and warm water. When the baby is about six months old the first teeth appear. They are the two lower and the two upper front teeth. From this first appearance these teeth should be carefully cleaned each day with a soft cloth. Later on, a small toothbrush should be used.

As the other teeth appear they should be given the same care. By the time the child is two and a half years old all of its first or milk teeth, twenty in number, should have made their appearance. Mothers should teach their children to brush the teeth morning and evening and to keep the gums and tongue clean.

If the teeth were continuous and were perfectly smooth there would be no trouble. But they have numerous grooves in their surfaces and there are small spaces between them. In chewing, food is often crowded between the teeth or left in some of the little grooves. If the teeth are not immediately cleaned after eating these food particles will decay, producing an acid which dissolves the enamel and results in decay of the teeth themselves.

Many mothers believe that the milk teeth are of little importance; that there are no nerves in them; and that their decay is of no importance. This is a serious mistake.

Decayed teeth cannot chew properly and are very apt to cause decay in the permanent teeth after they come in. Every child should learn to brush its teeth after every meal and to keep them sound and free from decay.

DIABETES ON THE INCREASE

SO MUCH has appeared in the newspapers during the last two years about Doctor Banting and his insulin treatment for diabetes that many are under the impression that this disease has been practically wiped out or will disappear in the near future.

This is a grave mistake. Insulin is in no sense a cure for diabetes. It is merely a substance which enables the diabetic patient to live a little longer than he otherwise would. It has no effect, so far as we now know.

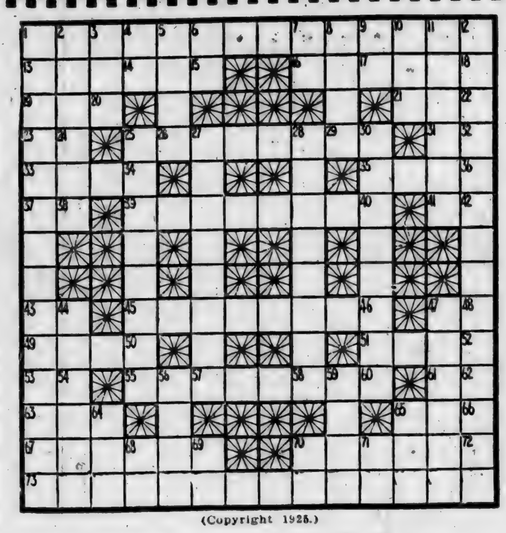
While diabetes has been known ever since the time of Hippocrates, it is probably more common today than ever before and is constantly increasing. Our statistics on diseases are so recent as to give us little information regarding their frequency a hundred or two hundred years ago but we do know that diabetes is much more common today.

New York city was one of the first communities in this country to keep any records regarding the causes of death. In the late 60's, just after the close of the Civil war, one death from diabetes occurred in every 2,400. In 1923, there was one death from diabetes in every 51.

As diabetes is not a contagious disease but is due entirely to personal habits, probably largely to diet, this increase must be due to some change in our manner of living. In a recent issue of the Survey Dr. Haven Emerson shows that the increased use of sugar is probably responsible. Fifty years ago sugar was a luxury and was eaten in comparatively small amounts. A few pieces of barley sugar or a little home-made molasses taffy was about all the candy available for children. Adults used small amounts of sugar on their foods. Today, there are candy stores on every corner, candy stands in every drug store, lunch room and hotel lobby. The consumption of soft drinks, ice cream and other sweet things has enormously increased. The average amount of sugar eaten today by the American people is far beyond that of any other period in the world's history.

Now, sugar, itself, is an excellent food but we are consuming today more sugar than ever before in our food, with candy, sweet drinks, and ice cream thrown in for good measure. The discovery of insulin will not in any way diminish the amount of diabetes. Only sensible regulation of our diet can do that.

CROSS-WORD PUZZLE



(Copyright 1925.)

Horizontal.

1—A large city of Europe
13—Having got up
16—Pertaining to Ionia
19—A hole in the ground
21—The conclusion
23—An abbreviation for "every other"
25—Members of the Hindus' highest caste
31—A dipthong
33—That which aids in solving a mystery
35—A plant used in making soup
37—A personal pronoun
39—The act of sticking
41—Initials of King Victor
43—A plural personal pronoun
45—One who holds ideals
47—Abbreviation for railroad
49—Abbreviation for unanimous
51—Always
53—Abbreviation for a sacred person
55—A fine, flimy substance or fabric
61—Fifty-one
63—Relatives
65—Fifty-four
67—Pertaining to irony
70—Bring back to life
73—A city of British Columbia

Vertical.

1—The extreme northern point of Asia

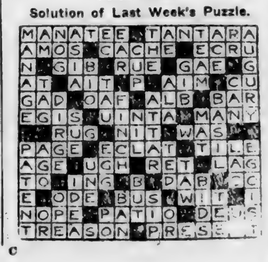
9—Upon
10—A popular dessert
11—A county of Scotland
12—A stream in Australia
25—Attractively suitable
27—Those who stand by
28—The doctrine of the Arians
30—One who sings
44—Whole
47—To live again
56—First name of author of "A Kentucky Colonel"
59—Not odd
64—At present
65—Ablaze
68—A point of the compass
69—Initials of a religious sect
70—Initials of an eastern state
71—Against

The solution will appear in next issue

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number and "vertical" defines a word which will fill the white squares to the next black below. No letters go in the black spaces. All words used are dictionary words except proper names. Abbreviations, slang, initials, technical terms and incomplete forms are indicated in the definitions.

Orchid Hunters Live on Brink of Grave

Orchids are paid for with human lives as well as with gold. Of all occupations, orchid collecting has the highest death rate.

A few years ago eight orchid hunters, working in Madagascar, dined one evening at Tamatave. They arranged to have another reunion dinner the following year. When the appointed day arrived seven of them were dead. The eighth was in a hospital. He stayed there for a year, and then sailed for Europe with permanently broken health, says the Buffalo Express.

That was unusually hard luck, but every orchid collector knows of many such cases. A collector, a German, who jeered at an idol in a Madagascar jungle village, was soaked in oil and burned to death.

You are always on the brink of the grave while orchid hunting. Invariably these bizarre, quaintly contorted little blossoms lurk in the unhealthiest depths of the jungle, where fever, snakes, great cats and ambushed savages with poisoned darts combine to wreak vengeance on the man who violates their privacy.

Process of Mapmaking Is Long and Tedious

One of the youngest of all the hooks that circulate in the government departments in England is to be found at the ordnance survey office at Southampton, where maps are made. Now the ordnance survey office is engaged in printing a wonderful array of new maps covering the whole country in scales ranging from one-sixteenth inch to the mile to twenty-five inches to the square mile, says the London Observer.

The book contains "successive proofs" of the different maps, showing the stages through which a map goes before it finally reaches the public.

The first page shows the map printed in black ink in skeleton form, giving nothing but the names of different places. The next page is devoted to perhaps only two thick red lines—the main roads wending their way through the particular section of the country.

The third page will show the skeleton map with the main roads printed on it, while the fourth will give four or five minor and proposed roads. The fifth will show those roads on the skeleton. The sixth page is a veritable Chinese puzzle in green—the highest points of the country.

All the series of outlines and daubs are in their turn printed on the top of the skeleton map, and the finished plate gives the map as it is issued to the public.

Toys From Grownups

"I never was prosperous so long as I designed toys that interested children only," a Detroit inventor said. "I learned that adults will not pay liberally for such playthings. The big profits, I discovered, come from toys and novelties which adults pretend to buy for the children, but which they really desire for their own amusement. That discovery is making me wealthy, but has robbed toy designing of its sentimental phase."

Mineral From Greenland

Trade of the United States with Greenland, says the National City Bank of New York, runs at the rate of nearly a quarter of a million dollars a year, and has aggregated approximately $2,000,000 in the last dozen years. Nearly all of our trade with Greenland consists of imports, and our own purchases from that island are chiefly composed of cryolite produced by an American corporation from a mine near Ivigtut on the southwestern coast. This peculiar mineral deposit, cryolite, discovered by the Danes 130 years ago, is the biggest known deposit of this material in the world, and the fact that we have a limited supply of this material in the state of Colorado has not prevented the American company, which controls the Ivigtut mine under a concession from the Danish government, from bringing many thousands of tons from the western coast of Greenland, about 2,000 miles, to the eastern ports of the United States, chiefly Philadelphia.

Just the Place for Him

A clock and watchmaker in a country town decided to go to California. A few days before his departure he met a friend, who asked him to what part of the world he was going.

"That's a terrible place!" remarked the man. "Why, only a short time ago there was an earthquake there that shook the town to its foundations. You wouldn't like that, would you?"

"Would I not?" responded the other. "Look at the number of clocks that would be needing mending after a kicker like that!"

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Some have much and some have more,
Some are rich and some are poor;
Some have little, some have less,
Some have not a cent to bless
Their empty pockets, yet possess
True riches in true happiness.
—John Oxenham.

GOOD THINGS

Here is a soup that is good enough for anybody and liked by all:

Queen Victoria's Favorite Soup.—Chop one cupful of baked chicken, add one pint of chicken broth, one cupful of sweet cream, salt and pepper to taste, and lastly add the mashed and riced yolks of three hard-cooked eggs.

Lettuce and Pepper Salad.—Prepare heads of lettuce cut into quarters, if large, and sprinkle over the lettuce chopped onion, celery and shredded green peppers. Season well and serve with a French dressing.

Salmon Salad.—Chop five good-sized pickles and the whites of five hard-cooked eggs. Rub the yolks of the eggs until smooth with a tablespoonful of soft butter, add two tablespoonfuls of diluted vinegar, one teaspoonful of salt, a speck of cayenne and one-half cupful of cream. Arrange the salmon on lettuce, sprinkle with the chopped pickle and pour over the dressing.

Spanish Steak. — Sprinkle a thick steak with salt and pepper, one tablespoonful of chopped onion and three quarters of a cupful of flour. Cook in a hot iron kettle in butter until well browned, then add boiling water to cover and simmer slowly for two hours. Serve with the gravy from the kettle.

Stuffed Eggs.—Take six hard-cooked eggs. Cook by dropping them into six pints of boiling water, cover tightly and let stand on the back of the stove for half an hour. Cut the eggs into halves, mash the yolks and mix half of them with a little ground ham or sausage, seasoning well. Refill the whites and add the other half of the egg yolks to two cupfuls of white sauce. Arrange the halved eggs in a baking dish and cover with the white sauce, making two layers if necessary. Bake twenty minutes. Garnish with parsley and small cooked sausages.

Pink Toast.—Put three tablespoonfuls of butter into a saucepan, and when bubbling hot add three tablespoonfuls of flour, with one-half teaspoonful of salt; stir in gradually one and one-half cupfuls of stewed strained tomatoes in which one-quarter of a teaspoonful of soda has been dissolved. Add one-half cupful of scalded milk and pour over six slices of well-buttered toast and serve at once.

Fried Oysters Delaware Bay Style.—Take one pint of crab meat, chop fine and mix with bread crumbs of equal quantity, season well with salt and pepper and dip the oysters into this after dipping them into egg. Fry in deep fat.

For the Family Meal.

A nice supper dish which is not hard to prepare and is wholesome and filling is the following:

Cheese With Celery.—Take the outer stalks from a bunch or two of celery, cut into half-inch pieces and cook until tender, saving the liquor to use with the white sauce. Prepare a white sauce taking two tablespoonfuls of butter, two of flour and cook until smooth, then add one-half cupful of milk and one-half cupful of the celery liquor; cook until thick. Put a layer of white sauce over a layer of the cooked celery in a buttered baking dish, cover with a layer of grated cheese, repeat, finish the top with a layer of buttered crumbs and bake in a moderate oven until the crumbs are brown.

Tapioca Pudding.—Cook one tablespoonful of tapioca in a pint of milk for 15 minutes. Dissolve a tablespoonful of gelatin in one-half cupful of cold water. Add one-half cupful of sugar, the yolk of an egg to the first mixture. Pour over stewed dried apricots or peaches and one-half of a sliced banana. When cool add one-half cupful of whipped cream.

Baked Lima Beans.—It is the tough outer skin of beans which most people find so troublesome to digest. Soak a cupful of lima beans in cold water to cover, over night; in the morning drain and cover with boiling water; repeat when cool. Slip off the skins and place the beans in a baking dish, cover with scalding hot milk and bake slowly for two hours. When the milk is all absorbed remove the cover, dot with bits of butter, add cayenne and brown lightly. Serve from the baking dish.

Spiced Prunes.—Soak one pound of prunes over night in water to cover. In the morning simmer in the same water until tender, adding ten cloves, the rind of a lemon, and the juice. When tender, drain and add one cupful of honey, one-half cupful of vinegar to the liquid. Simmer the prunes in this after bringing it to the boiling point for a half hour. Chill and serve.

Nellie Maxwell

Back Bad Since the Grip?

Has a cold or grip sapped your strength? Do you suffer constant backache, feel nervous and depressed? Then look to your kidneys! Many cases of kidney trouble are the result of infectious disease. The kidneys often break down under the strain of filtering disease-created poisons from the blood. That's why a cold or grip often leaves backache, headaches, dizzy spells and irregular kidney action. Help your weakened kidneys with *Doan's Pills*. *Doan's* have helped thousands and should help you. *Ask your neighbor!*

An Ohio Case

Mrs. William Davis, 305 E. Center St., Cardington, Ohio, says "My kidneys caused me to have a constant backache. When I stooped, my back was so lame, I could hardly straighten. I very often had headaches and spells of dizziness. My kidneys acted too often, also. I used Doan's Pills and they relieved the attacks, strengthening my back and kidneys."

"Avoid excessive fatigue to keep from catching cold"; and you notice countless ones practicing it.

Boschee's Syrup

Allays irritation, soothes and heals throat and lung inflammation. The constant irritation of a cough keeps the delicate mucus membrane of the throat and lungs in a congested condition, which BOSCHEE'S SYRUP gently and quickly heals. For this reason it has been a favorite household remedy for colds, coughs, bronchitis and especially for lung troubles in millions of homes all over the world for the last fifty-eight years, enabling the patient to obtain a good night's rest, free from coughing with easy expectoration in the morning. You can buy BOSCHEE'S SYRUP wherever medicines are sold.—Adv.

The governor who is governed by good impulses doesn't always make a good governor.

DO YOU KNOW

That one-quarter teaspoon of Calumet Baking Powder sifted thoroughly with the flour in making pastry helps produce a fluffy, flaky crust?

The highest radio station in the world is situated on top of Mount Corcovado, 2,000 feet above Rio de Janeiro, Brazil.

A Famous Horticulturist is Dead

Ray Reasoner, in reading his horticulture magazine a few days ago, came upon an article that shocked him, in the death of a relative, Rev. J. R. Reasoner. Five years ago he had attended the Reasoner reunion and for three or four years previous. No word had been received here by any of the Reasoners and it was their belief that he was dead. He with D. J Baker, deceased, were placed as historians of Reasoner families and a history was compiled by them covering a period of 300 years. He was a 33rd degree mason. Not many of the people here knew Mr. Reasoner, only the older generation. The account of his death is as follows:

Reverend J. R Reasoner, originator of the Senator Dunlap and Dr. Burrill strawberries, two of the best varieties in existence, died at his home in Urbana, Ill., on January 12, in his ninetieth year.

Reverend Reasoner was pastor of the Methodist Episcopal Church for many years. He was a lover of flowers, trees and plants in general, and in connection with his ministerial work, he grew and tested a considerable number of strawberry seedlings. In this way he developed the two varieties which have proved of such great value to both growers and consumers of this wonderful fruit.

Reverend Reasoner always took a keen interest in horticulture. In days gone by his name appeared on the program of many horticultural societies, and he occupied offices in a number of organizations Only a year ago the Illinois State Horticultural Society had Reverend Reasoner present as its honor guest at the annual banquet of the society.

Reverend Reasoner was also a collector of rare books, particularly those relating to horticulture. His collection of early horticultural literature is known widely in the United States, and to some extent in Europe.

The death of Reverend Reasoner marks the passing of a notable figure in Illinois horticulture. Of him it can be said very appropriately that he left conditions better for his fellowmen than he found them

A dime goes a good ways when you buy a Ladies Home Journal at News office We have all kinds of good magazines.

RESOLUTIONS OF RESPECT

In as much as the wise Father seen fit to remove from our midst one D. J Baker, our brother, friend and neighbor

Be It Resolved that we the members of St. Joe Lodge, Knights of Pythias, No 400, do sincerely extend to the widow, daughter and granddaughter our sympathy. In the departure of Daniel J. Baker from our sphere we have lost a most worthy man from our community. He was firm in his convictions and he was considerate, he was always ready to aid in all enterprises for the betterment of man. True at times he may have erred but to make mistakes is human. For consolation to his family and friends we would direct you to the Great Master of the universe, He alone knows that which is best and in Him we trust.

To the members of St. Joe Lodge Knights of Pythias, we say you can best honor him by exemplifying his good traits in your life May you be ever ready to meet the end of life with as clean a record of duty well done as has our Dear Brother.

And thus we say Fare thee-well.

Resolved that these resolutions be spread upon the minutes of St Joe Lodge, a type written copy sent to the widow and printed in the St. Joe News.

Signed.

Night Coughing Stopped Quickly By Simple Treatment

Thousands who are troubled with persistent coughing at night, which by robbing them of valuable sleep weakens their systems and lays them open to dangerous infections, can quickly act to prevent this danger through a very simple treatment. People who have hardly been able to rest at all on account of coughing spells have found they can sleep the whole night through undisturbed often the first time they try it.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring, and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct *cause* of the coughing. The result is you usually sleep soundly the very first night, and the entire cough condition goes in a very short time.

The prescription is highly recommended for coughs, chest colds, hoarseness, and bronchitis, and is wonderful for children's coughs and spasmodic croup—no harmful drugs. Economical, too, as the dose is only one teaspoonful. At all good druggists. Ask for

Satisfying to the Heart and Pleasing to the Mind

Sinners IN Heaven

By CLIVE ARDEN

A couple of human beings found an earthly paradise in which stern necessity prevented their adopting all the conventions laid down by social codes. The experience did not render them less fit for the more glorious heaven that is to come, however much prudish minds may affect to be shocked by their story. No one but will agree that the judges did not err when they awarded it the prize in competition with the work of some of the best of modern novelists.

Read This Great Novel in

The St. Joe News

St. Joe Woman Is Mentally Sick

A statement alleging the insanity of Mrs. Margaret Ulm of St Joe, has been filed by Justice of the Peace, T. C. Ford of Auburn, in the office of County Clerk, J H. Knauer

Mrs. Ulm first showed signs of insanity five or six years ago, when she would fly into a rage if anything was contrary to her wishes, her husband, Harlo Ulm, stated at the inquest. She is now seventy-eight years old. She thinks Mr. Ulm is not her husband and tries to drive him away from home. She is talkative, noisy, melancholy, hysterical at times and suicid l.

Mrs. Ulm's physician, Dr. B. S Sheffer of St. Joe, testified that for a year or more she has not been accountable. She is suspicious of the people she has business with and imagines they are trying to take advantage of her. If she has lost something about the house she is liable to accuse the last person there of having stolen it. She frequently went to Dr Sheffer with tales of wrong-doing about her neighbors that he knew to be unreasonable and without foundation.

Dr Sheffer was supported in his opinion that Mrs. Ulm is of unsound mind by Drs. U. G. Souder and J C Baxter of Auburn, who testified that her condition is due to senility and a vicious temper.

Great Services Billed for Auburn

The National Holiness Association, which is interdenominational, will hold a convention in the Methodist Episcopal church in Auburn beginning Tuesday evening, March 10th and closing Sunday evening, March 15th. This meeting is being advertised throughout the country and will be a great meeting.

There will be five preachers in the party. Rev. Paul Rees of Pasadena, Cal., who is a young preacher but is said to be one of the most powerful on the American platform, Dr. John Owen well known national evangelist, and Rev. John Paul president of Taylor university who is also a strong preacher, will do the preaching. The Rev. A W. Gould of Providence, R. I., and Rev. W. W. Caskey of Akron, Ohio, will have charge of the music. These men are great vocalists and very capable with the piano and stringed instruments.

There will be meetings each evening at 7:30 and each afternoon at 2:30 including Saturday and Sunday. This is a rare opportunity and every one who can should hear these men. Plan to attend the first night, Tuesday, March 10th.

Schools to Back Township Council

At the council meeting Wednesday night of the Concord Township Sunday School Association fourteen were present all township officers but two. There were also two county officers present. The business at hand was the deciding of sending two young people to Lake Geneva, Wis., training camp the coming summer. The council voted favorably on this and submitted the question to the four schools to be voted on Sunday. The township department superintendents also asked for report blanks suitable for the various departments for quarterly reports.

Sunday, every Sunday schools passed favorably and raised the finance to send two of her young people to summer training school.

What they think about it

Heard In A Taxi

PERSONS:—
CAB DRIVER.
TRAVELING MAN.

Traveling Man, (Rubbing his head after hitting cab roof when they crossed the east corporation line) "'Aint that h—l?"

Driver:—"Nope—that's St. Joe's BOULEVARD SYSTEM"

T. M.—'So these are the notorious streets that I have heard so much about—well, I must say the half has not been told"

Driver:—"Did ya hear 'bout the guy that started to town tother day with a load of hay? No? Well he lost most of his load and part of his wagon 'fore he got to the grist mill, and pieces of the wagon kept flying off an' bales of hay tumbling 'round 'n when he got in front of the garage the darn thing flew all to pieces 'an settled in the mud an' they never found hide ner hair of the man, team er wagon."

T. M.:—"Gosh, aint that too bad? No wonder the citizens hold up their hands to hide their blushes when a stranger tries to drive down these abominable streets."

"Out of the Mud."

WANTS TO CREATE GOOD WILL

An effort is being made to organize the business men, but it seems the proper interest to make it a success is not yet shown It would mean a great advantage for them, and they ought to do it, not to bring prices up, but to get more people to come here to buy their merchandise.—Butler Herald. A movement like that ought to be launched in St. Joe and we sure need it.

LODGE NOTES

St. Joe Lodge No. 400. K. of P. entertained several lodges in a county meeting at Castle hall, Wednesday evening, Feb. 25, Auburn, Waterloo, Spencerville, Ft. Wayne and Spencerville lodges were represented. Wm. V. Woblaugh, D. Grand Chancellor from Fort Wayne was present and told of the things the Knights of Pythias were doing in Indiana. He mentioned the Pythian Home that was to be built and said already over $100,000 had been collected. We also had with us the Knights of Pythias field man, Bro. Baumgartner, who gave a very interesting address on Pythianism.

Third Rank work was given after which a lunch was served to about sixty members Music was given by the K. of P. orchestra following the lunch hour.

Household Help Wanted

Small family at Albion, Ind., wishes to secure the service of a girl or woman for general housework. Country girl preferred. Pleasant people to work for. Work not hard and pay good. Position steady if mutually satisfied. Will exchange references if you wish Write Box 282, Albion, Ind.

Wanted some maple syrup at News office.

The Master Horseshoers of Indiana will hold their annual convention in Auburn, April 7-8. Nearly 300 people are expected to attend.

Tin Shop To Open Saturday

St. Joe will have another of her long felt wants met this week when Roy Bowser will open a tin shop in the rear of Central Grocery or in the bakery room. A west entrance has been made to this room and Roy will be equipped to do all kinds of tin work. He has been working for eight years at this work and is now quite an experienced tinner and is able to give figures on most any kind of work wanted such as tinning, spouting, roofing, furnace repairing installation of lightning rods, wind mills and general plumbing.

At Spencerville the shop will be in charge of J L. Reed, who has had two years experience and the young men are working together and are going to make things go. Both shops will be run under the same business standard, "Honest goods, better service and a living profit."

Whatever your needs may be, they will fill them and guarantee satisfaction.

Call and see them.

W. C. T. U. NEWS

Mrs. Loretta Hull entertained the W. C. T. U. Friday afternoon The devotional was prepared by Mrs. Mabelle Thornton and was read by Mrs. Hull. Mrs. Thornton being ill could not be present. The text of the scripture was Romans 12:11. Roll call with quotations from Frances E Willard as responses Reading of minutes of last meeting by secretary. Mrs Lillian Buckingham read an article showing the great need of a Federal Prison for female offenders of federal laws. Mrs. Nina Kees read an instructive paper on "Is the Temperance Instruction Effective?" Mrs. Buckingham then presented the work of the Flower Mission, showing that Indiana stands with California at the head of Flower Mission work in the W. C. T. U. A nice sum was given by those present for Flower Mission work. Mrs. Lora Leighty will be hostess of the March meeting.

Where Was Last Year's Living Made?

One of our friends was fortunate last winter in having a wife whose poultry flock brought in a steady income. On a good many farms the poultry and milk cows have been a saving factor and have kept a supply of ready money when it was needed.

Do you positively know which department of your farm made a profit last year and which made a loss? Are you able to sit down and command the items of last year's business to march in front of you in columns of figures and let you look them over?

A few hours of reflection on the results of last years efforts these winter days may save untold efforts that were a waste and can be avoided this year. Planning saves countless steps, but planning comes only from a study of systematic records.

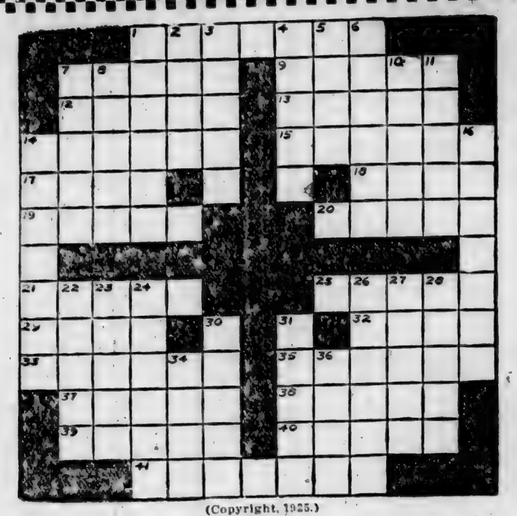
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—A hybrid animal
7—A kind of monoplane, originally designed by an Austrian
8—Cultivated
12—A knight of the round table
13—To march on
14—Three-banded armadillos of S. A.
15—One who edits
17—To separate
18—French artist
19—A colorless liquid
20—A place to sleep in
21—To demolish
25—Upper part of a hat
26—Heroine of Charlotte Bronte novel
32—To instigate
33—To predestine
35—Sets again
37—Encircles
38—To get up
39—First eight lines of a sonnet
40—A guest at dinner
41—Hurries

Vertical.

1—A Spanish copper coin
2—Biblical name
3—Stretched tight
4—In pursuit of
5—To fatten
6—An alloy, used in cheap jewelry
7—Reinting to type
8—To adjudge
10—To drive an auto
11—Amusement
14—A kind of pack saddle
16—Hunts again
22—Slowly
23—Pertaining to India
24—Lack
26—A dried fruit
27—Fat
28—Water (obs.)
30—The present month (abbr. pl.)
31—Swap
34—Notion
36—Where the River Shannon flows

The solution will appear in next issue.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Beautiful in Ruin Is Famous Dryburgh Abbey

A beautiful ancient church, like a fine old painting or poem, has a message for people of the present day. It is as if the builders challenged the modern world in this wise: "Here is our ideal of beauty; it breathes the life of our time and marks a step in our progress. Do you moderns surpass us in such expressions of beauty?"

The abbey of Dryburgh lies in Berwickshire, just across the border not far from Abbotsford and Melrose abbey, says the Christian Science Monitor. There is a question whether it was founded by David I in 1150, or by Hugh de Morville. Probably both men did much for it. The abbey today is surrounded by orchards and noble trees and crowns a peninsula around which sweeps the Tweed river. Two gables are still entire, and in the west one is a beautifully radiated circular window, called the wheel of St. Catherine. The general architecture of the abbey shows Roman, Saxon, Norman and Gothic influences. We associate the spot principally with Sir Walter Scott, but Thompson composed his "Winter" here, and long before that Gower, the friend of Chaucer, occupied a cell in Dryburgh abbey. Chaucer himself stayed some time here with his friend and rival.

Span of Worth-While Life Has Increased

In the time of Caesar the average Roman lived only eighteen years. Most of the great heroes and villains of the French revolution had made their mark and gone to the guillotine before they were thirty-five. In medieval times the average age of the best known public figures was sixty-two years. Today the average age of our notables is seventy-one years.

Apparently this is not, as some say, the era of the young man. We are led for the most part by elder statesmen, elder corporation presidents, elder professors. There is comfort in that, too, for those of us who are not infant prodigies can cherish the hope that there is plenty of time ahead in which to make good.

The span of life, increasing century by century, gives splendid proof that science is worth while, that the race has taken thought for the morrow, that fatalism is a barren philosophy and that man can indeed lift himself by his mental bootstraps.

The chemist pottering with test tubes, the biologist losing himself in the jungle, the engineer digging, the surgeon poising the knife, the physicist weighing dust and moisture, these are the life bringers, building toward immortality.

Research goes on in the noble faith that there is more to know and much to do. And thereby babies that would have died are made to live, and minds and bodies that would have worn out at forty are hale and strong, doing their work and getting their fun in a world worth having.—Collier's Magazine.

Fooled Fruit Dealer

A magician who played at New Bedford, Mass., sauntered over to a fruit stand there and bought three oranges. He cut the first one in half and "extracted" a $10 bill, and from the other two he took $5 and $20 bills. When he asked for more oranges the dealer refused to sell them to him. Later the magician learned that the Italian had cut up a whole box of oranges in search of more money, says Boston Globe.

First Recorded Divorce

A German magazine suggests that Thebes may have been the Reno of ancient Egypt. According to this paper, a papyrus document found in a tomb excavated on the site of that city contains the first divorce decree in recorded history which is thoroughly authenticated. The document is probably two thousand years old. It bears the signature of a notary named Thut. On the reverse side of the papyrus are the signatures of four witnesses. The grounds for the divorce are not stated. —Pathfinder Magazine.

Only in the Willows

A characteristic distinguishing the Willow family from practically all others is that both the pollen-bearing and the seed-producing flowers are arranged in drooping tassels, says "Tree Habits" from the American Nature association. Numerous other trees have their pollen-bearing flowers arranged in this fashion, but in no other family are the seed-producing flowers also grouped in this distinctive way.

Beethoven's Greatness

It has been truly said, that Beethoven spoke a musical language that had not been heard before. His great symphonies are all masterpieces that have never been equaled. The depth of feeling, broad conceptions, and truly wonderful developments are universally acknowledged. He widened the sphere of man's emotions, and left such monuments of musical thought that have been an inspiration to all who have heard them.—Pathfinder Magazine.

Hog Sanitation System Spreads

Industry Undergoing One of Most Important Improvements to Stop Disease.

(Prepared by the United States Department of Agriculture.)

In the rapid expansion in the use of the system of swine sanitation, commonly known as the McLean county system, the swine industry is now undergoing one of the most important improvements in respect to disease prevention since the general adoption of the preventive treatment for hog cholera. Reports from various states in the Central West to the United States Department of Agriculture indicate that this plan, which has for its main object the prevention of the large losses from roundworms and various filth-borne diseases of young pigs, is being adopted at an increasing rate. Extension forces have been taking up the plan with energy and in many instances swine sanitation has been made one of the major projects for the coming year.

Campaign in Iowa.

In Iowa, one of the heaviest hog-producing areas, a campaign to extend over a ten-year period has been outlined with the idea ultimately of getting the system generally adopted throughout that state and thereby increasing efficiency in pork production. Nearly one-half the counties in Illinois are said to be included in the coming year's program of work to reduce the ravages of roundworms and filth-borne diseases of swine.

Two years ago Nebraska got eight or ten county agents interested in this work and they in turn brought the new system to the attention of many of the progressive hog raisers. Considerable advertising is done through the newspapers, the use of department films, and through the efforts of the department specialist who co-operated in giving talks on sanitation as a means of combating roundworms. In that state the work has been growing steadily and is continuing to increase every day.

The growing interest in this improved system of growing hogs is indicated to the Department of Agriculture by the frequency with which county agents are now mentioning it in their reports. In the statements covering the work for the past year this subject is mentioned by 350 county agents. This year at the International Live Stock exposition many of the club boys who showed pigs in the competition had raised them according to the McLean county system or had at least adopted the general principles of sanitation. There also has been a great demand for the department film dealing with this problem. The Missouri Agricultural college has recently ordered a third print of it. The states mentioned above are only a few of those in which great interest is being taken in the subject. The new plan is being used as far east as Ohio and as far west as Nebraska and the Dakotas and interest in it has been shown in various other parts of the United States.

Essentials of Plan.

For the benefit of those who are not yet acquainted with the essentials of this new plan it may be outlined briefly as follows:

The pigs are farrowed in pens that have been thoroughly cleaned with lye and boiling water, and supplied with clean bedding. The sows before being put in the clean pens for farrowing are scrubbed with soap and warm water to free them of dirt which may contain eggs of roundworms and other germs likely to be abundant in the soil of permanent hog lots. Later the sows and litter are hauled (not driven) to clean pasture, preferably legume pasture, which has not been used for hogs since cultivation. Until they are taken to pasture the sows and pigs are kept strictly in their clean quarters, and until the pigs are at least four months old they are kept on pasture entirely away from the permanent hog lot. Pigs started this way are protected from the danger of serious infection with worms and hog-lot diseases and get a strong advantage over those that must take their chances with the ever-present pests. Experience has shown that the practice pays big dividends and the expense is small.

An Illinois farmer, expressing his views as a result of experience with the new system, says: "Rather than go back to former methods, I would quit the business. The practice of the McLean county system at present prices means the difference between profit and loss to the hog raiser. The system gives the little pigs a fine start and keeps them coming in healthy, thrifty condition from the very first, which is most essential, as a poor start means a runty, unprofitable pig later on. Thus I have been able to market my six-months pigs at weights of from 200 to 270 pounds. Under the old system my hogs often did not reach this weight as yearlings. By marketing hogs at six months of age I have been able not only to sell on the high September and April markets, but also to raise twice as many pigs with the same amount of equipment, with the additional savings of six months' upkeep and care."

The United States Department of Agriculture has detailed information on this common-sense system of reducing worm losses on the hog farm of the corn belt. Hog raisers may have it free by writing the department at Washington.

Too Many Animals Harmful to Ranges

Deterioration Is Largely Due to Overstocking.

(Prepared by the United States Department of Agriculture.)

Competent authorities in the range states estimate that the condition of the native pastures of that area is now only 10 to 50 per cent of their original productivity. This deterioration, says the United States Department of Agriculture, has been largely the result of overstocking. Another result of this condition has been smaller size of cattle even where they are well bred.

During periods of high prices stockmen are tempted to put on more cattle than the range can support without showing the effect in following years. There is also a tendency to stock heavily when pastures are especially good to recover losses sustained during bad years, with the frequent result that the gamble is carried too far.

The conservative cattlemen, says the department, who have developed the industry to its present high standard and acquired greater success in the range area, have learned to stock their pastures to meet adverse or subnormal years. When very good years come along additional stock is bought and held for a short time to make profitable use of the extra grass without taxing the range too much. On the other hand, many stockmen use up too much of the pasture and reduce the vigor of the palatable plants.

The department says it is next to impossible to give definite figures on the carrying capacity of the range. The extremely wide variation is shown by an investigation of a range area in New Mexico where the rainfall was practically the same. Here the acreage varied from 25 to 125 acres per cow per year.

Favor Dormant Spraying Because of Idle Hours

When speaking of pruning, the words "spring pruning" are generally used when "dormant pruning" is really meant. Much of this dormant pruning can be accomplished during the winter months. At this season there is more slack time in the orchard than at any other. If pruning is left until spring, the rush of spring work often arrives before the trees are all worked over in the orchard. The habit of leaving the dormant pruning until early spring, as a rule, results in one of two things, either a continuation of operations long after the sap has begun to move, with consequent poor healing of wounds; or results in unavoidably slipshod work over a large part of the orchard due to a desire to finish the pruning and get at other important seasonal operations. By making a start in the early winter, working on days when climatic conditions are not too severe, the work can be completed early enough in the season to avoid interference with early spring duties.

Fewer and Better Bulls Help Success of Dairy

The Wayne County (Pa.) Jersey Bull association has a record of accomplishment to which members point with pride. In three years' time the butterfat production of the herds in this association increased 47.7 per cent. At the same time the milk production went up 13.9 per cent, according to S. J. Brownell, dairy specialist at the Pennsylvania college.

Cow testing association records show that the increase in fat production alone meant a profit of approximately $8,000 per year. Other financial advantages of the bull association were a $2,875 increase in the inventory value of herds and a $420 decrease in the investment in bulls. Fewer and better bulls account for the smaller amount now invested in sires.

FARM NOTES

Protect your woodlot and it will protect you.

• • •

Keeping accurate accounts is the foundation of profit in farming.

• • •

One can't be too cautious around the barns with lighted lanterns.

• • •

Successful farmers are generally willing to learn and adopt new practices.

• • •

Much of the winter-killing of clover can be avoided by sowing native red clover seed only.

• • •

The poultry specialists say that greens for the poultry make greenbacks for the poultry keeper.

• • •

Farm woodlots believe in the Golden Rule: Protect the woodlots and they will protect you with a lot of wood.

• • •

In order to get all the plant food in manure returned to the soil, the manure must go back as soon as produced.

• • •

Co-operative marketing associations are business enterprises formed to render marketing services for their members.

• • •

Plenty of air and a temperature of around 34 degrees F. in the potato storage cellar will prevent potato black heart.

• • •

Rural co-operation will probably solve some of the farmer's problems but most farmers need to learn how to co-operate successfully with others.

POINTS ON KEEPING WELL

Dr. Frederick R. Green, Editor of "Health."

(©, 1925, Western Newspaper Union.)

CAUSES OF MENTAL BREAKDOWN

THANKS to numerous newspaper and magazine articles, health talks, and instruction in the public schools, it is now more generally recognized than ever before that the human body is a machine which must be wisely treated and well taken care of if it is to do good work. But the mind is still regarded by most people as something strangely mysterious and beyond understanding.

In the romantic novels which our grandmothers read, the heroine was always supposed to have "brain fever," whatever that was, after the shock of desertion of her lover, abandonment by her husband, or whatever other trials the author subjected her to. The idea still prevails that mental conditions are due largely, if not entirely, to love, grief, separation or other purely emotional states.

As a matter of fact, the workings of the brain are influenced by the same condition as those affecting other structures of the body. Poisoning, either from within or without the body, and insufficient or improper nourishment are responsible for most cases of mental breakdown, just as they are responsible for most serious affections of the heart, the kidneys or the stomach.

A careful study of 210 patients in a hospital for mental cases showed that 35, or 16 per cent, of the cases were due to direct infections of the brain, causing some form of meningitis. These infections came through the mouth, the nose, or the ear, and were preceded, of course, by infection of some part of the body. In 7½ per cent, the mental disorders were due to infections in more distant structures, such as the teeth, the tonsils, the gall bladder, or the appendix. In these cases, the infection was carried to the brain not directly but by the blood current. Ten per cent of the cases were due to the use of alcohol or some other drug. Twenty-six per cent were due to some defect in the constitutional make-up, that is, to some deficiency at birth of the brain or some other part of the body. Five per cent were due to old age, softening of the brain, etc.; 37 per cent to gland deficiency, such as defects of the thyroid gland in cretins; 10 per cent to defective food, prolonged physical work, either in the hot sunshine or under abnormal heat conditions, to childbirth and similar conditions. Only 15 cases, or about 7 per cent, were due to mental shocks, unbearable situations, excessive emotions, or great sorrow.

The normal human being is so constituted, mentally and physically, that he does not give way under mental strain or natural emotion. We all of us have our trials. If we were not able to stand them, most of the human race would be insane.

WHAT CAUSES BLINDNESS?

THE United States census report for 1922 shows that there are 52,567 blind persons in this country. In 35,788 of these, definite information was obtained as to the cause of their blindness.

In 13,818 cases, or 38 per cent, blindness was caused by some disease of the eye, itself, such as cataract. In 5,623 cases, or 15 per cent, blindness was the result of some general disease. The principal diseases which may cause blindness are measles, scarlet fever, diabetes, meningitis, influenza, Bright's disease, typhoid fever, and smallpox. Accidents were responsible for 5,913, or 16 per cent. Atrophy of the optic nerve, a mysterious condition in which the nerve of the eye shrivels up and becomes useless, caused 1,705 cases, or 5 per cent. Ophthalmia neonatorum, or sore eyes of new-born babies, caused 1,198 cases, or 3 per cent. This disease is gradually disappearing owing to the passage in most states of laws requiring the use of a weak silver nitrate solution in the eyes immediately after birth. Trachoma, or granulated lids, as it is sometimes called, caused about the same number of cases as ophthalmia neonatorum. Poisoning by wood alcohol and other poisons was responsible for a considerable number of cases.

Since the causes of blindness are so numerous, the prevention of blindness necessarily covers a wide variety of subjects. Blindness following contagious diseases can only be prevented by preventing the diseases which cause it, but accidents can be very largely prevented by proper precautions. The National Safety council, by a widespread educational campaign in factories and workshops during the past ten years, has greatly reduced the number of accidents to the eyes. Shields for drilling, filing and grinding machines, the use of goggles in all work in which the eyes might be injured, and the use of protective screens for blast furnaces, welding apparatus and other operations requiring strong light and high degrees of heat have greatly reduced the number of eye accidents.

Don't take any chances with your eyes. You can't get along without them either in enjoying your life or in earning your living.

Pass it around after every meal. Give the family the benefit of its aid to digestion. Cleans teeth too. Keep it always in the house.

"Officer, arrest that man for careless walking—he deliberately walked into my car and bent both fenders and a mudguard."—Life.

Permanent roads are a good investment —not an expense

The High Cost of Postponing Permanent Highway Building

Poor motor roads stifle industry and agriculture; waste huge sums annually in high maintenance costs, and greatly increase gasoline, tire and repair bills.

There is not a state, not a county, not a community, that isn't paying a heavy price for having too few *permanent* roads.

There are still many sections of the country—even whole states—that are trying to operate twentieth century traffic over nineteenth century roads.

This is costing millions of dollars every year, and will keep on costing millions until we have well developed permanent highway systems everywhere.

Even what we often call the more progressive communities are far behind the demands of modern highway traffic with its 15,000,000 motor vehicles.

From the Atlantic to the Pacific, and from Canada to Mexico, we need more Concrete roads —the roads for twentieth century traffic.

Your highway officials want to be of the greatest possible service to you. Get behind them with ways and means that will provide more Concrete roads and streets. Such an investment will pay you big dividends year after year.

SICK WOMEN OF MIDDLE AGE

Can Be Carried Comfortably Over The Critical Period by Lydia E. Pinkham's Vegetable Compound —Note Mrs. Headden's Case

Macon, Georgia.—"During the Change of Life I suffered with my whole right side and could not lie on my left side. I was in bed about two months and could not get up only as my son would lift me. After doctoring without relief a man who was rooming with us told my son that Lydia E. Pinkham's Vegetable Compound cured his mother at the Change of Life, so I began taking your medicine. After taking it for two weeks I could get out of my bed by myself. I am now 53 years old and in better health and stronger than ever in my life. I have recommended the Vegetable Compound to many suffering women, young and old, and you may use my name anywhere as long as you please. I will be glad to answer any letters sent to me." —Mrs. F. B. HEADDEN, 5 Holt Avenue, Macon Georgia.

In a recent country-wide canvass of Lydia E. Pinkham's Vegetable Compound, over 200,000 replies were received and 98 out of every 100 reported they had been benefited by its use. For sale by druggists everywhere.

CHAPTER IX—Continued

—27—

"But what made her want to leave?" Gerald persisted.

Christopher did not hesitate for a moment. He meant to take every possible advantage of this, the first sign of any real interest in life which Gerald had shown for months.

"Because she is very finely strung," he said, "and the situation was becoming impossible for her. She was very much in love with you, and you were crazy about some one else. I was very much in love with her, as I always had been, and I was ass enough to try and persuade her to marry me. Of course," he went on, "I ought to have realized the unconquerable fidelity of a nature like hers. An ordinary woman," he went on, leaning back in his corner and discussing the matter very much as he would have done a legal point presented for his opinion, "might select and prefer one man to all others, but if, for some reason or other, he did not return her affection, she would be able, in course of time, to feel practically the same thing for another man. Myrtle could never do that. She has that saint-like fidelity which is the joy and the curse of the best women. You are a very dear fellow, Gerald, and I am very fond of you, but I sometimes get fed up with your nerves, your blindness, your grand duchesses and your stark idiocy."

Gerald sat up in his place and stared at his friend in amazement.

"How long have you been keeping that bottled up, Chris?" he asked.

"Ever since Myrtle turned me down," was the prompt reply. "She was as kind as she could be about it, but she did her job like a surgeon. She hurt, but I knew it was no use ever thinking about her again that way. I am a dispassionate observer now and I can see the truth."

"I suppose I have been rather an ass," Gerald acknowledged, "but you must remember, Chris, I didn't quite know what I was in for when I took on that visit to Russia, and I don't think any one could go through what I had to go through without getting bowled over. Fancy being taken care of like a baby by that amazing woman, Elsa Francks! Having to owe her your life half-a-dozen times over! Seeing that great, coarse creature, with her hank of yellow hair, and her breath smelling of drink and patchouli, standing up one moment and defying death, and lying the next without a tremor to guards who would have set us up against the wall and shot us on sight if they had known the truth!"

"She was an epic figure," Christopher declared. "I wonder what has become of her."

"Heaven knows!" Gerald answered. "We may meet her queening it at Monte Carlo, or she may have married a respectable German tradesman and buried the past. She is wealthy enough. She got that fellow Krossneys' share of the money I took out, as well as her own. How these pine trees smell, Chris! And what sunshine! One could sleep here."

Gerald leaned back in his place with half-closed eyes and Christopher was well content to leave him alone. This was the first time he had spoken naturally of his journey to Russia and the terrible experience through which he had passed. All through the summer months he had lain about the gardens at Hinterleys, accepting life as an inevitable burden, gaining no strength, sleeping little, all the time engaged in a morbid struggle with the tyranny of his nerves. Nothing had moved or interested him. These last few sentences of his were the first evidences of his return to a natural outlook. Physically he had shrunken almost to a shadow. There was very little left of the gay and debonair young man who had passed his arm round Myrtle's waist and drawn her into the car, mocked at Christopher's remonstrances, and, with a few careless words, built up in Myrtle's heart the fairyland at the end of the road. Yet, as they drew near the place where they had found her, he seemed to shake off some of his torpor. He sat up and looked about him with reminiscent eyes. One more bend and they would see the gate!

"Would you like to stop for a moment?" Christopher asked. "Myrtle is almost certain to be here."

This was most assuredly a changed Gerald. He was almost diffident.

"If you think she would like to see us," he assented.

He sat upright now, leaning a little forward. They were round the corner, in sight of the little grove of cypresses. And there at the gate—Myrtle!—Gerald gave a little exclamation which sounded almost like a sob. His incredulous stare had something in it alike of pain and fear.

"I wrote her days ago and said that we should be passing," Christopher hastily explained.

She stepped out into the road to greet them. Even to Christopher her coming was almost like a vision. The small differences of clothing and circumstance seemed scarcely to exist. It was Myrtle who welcomed them, shyly but joyfully. Her eyes were fixed upon Gerald, and there was a touch of sublime pity in them as she realized the change. But from her face shone the same things.

"You will come in and see my home?" she begged. "The car can turn in here. The road is better than it used to be."

"I am tired of the car," Gerald said. "I would rather walk."

They moved slowly down through the cypress avenue, Gerald leaning a little on Myrtle's arm, Christopher loitering behind.

"It is the most restful and the most beautiful place I have ever been in," Gerald murmured. "Tell me, Myrtle," he added, "do you know all that has happened to me?"

"Everything! Christopher has written and I had a long letter, too, from your father. Please do not speak of those things which are finished. You are here to forget."

Involuntarily he looked away toward the road and turned back with a shiver. Whatever his thoughts might have been, he said nothing. A little French maid, in spotless white cap and apron, came out on the veranda in reply to Myrtle's call.

"A bottle of our own wine and glasses," Myrtle ordered, "some fruit and the sandwiches I told you to have ready, Marie. Come, we have another half-hour of sunshine, Gerald, you must take the sofa chair."

Gerald sank into a sea of cushions. Myrtle, bending over him, arranged them more comfortably. Her eyes were soft with the shadow of tears. Gerald, more weary than he had confessed, seemed for a moment almost to doze.

"He is very weak," Myrtle whispered, looking anxiously across towards Christopher.

Christopher nodded.

"It is the journey," he answered. "I wish that it were over."

The wine was brought, but Gerald was now in a deep sleep. Christopher and Myrtle sat at the other end of the veranda and talked in an undertone.

"Leave Him to Me, Christopher," She Begged, "He Needs Rest."

Presently the sun began to sink behind the forest-crowned hills, westwards. A cool breeze came stealing across the valley. Myrtle rose suddenly to her feet.

"He must not sleep any longer," she said firmly. "He ought not to be out at all as late as this."

They tried to rouse him. Three times Christopher laid his hand upon his shoulder and called him by name. There was no response. Gerald was sleeping heavily, his breathing was regular, the lines seemed to have faded from his face.

"This may be his salvation," Christopher declared hopefully.

There were tears in Myrtle's eyes. All the time she seemed to be listening.

"Leave him to me, Christopher," she begged. "He needs rest."

Christopher nodded.

"I'll send two of his bags down from the car," he proposed, "and some of us will come and have a look at him in a few days. His servant can stay here if you like, so that you have help if you want it."

She smiled through her tears.

"I shall need no help," she promised. "I will cure Gerald. Tell Lady Mary and Lord Hinterleys that I promise it. Only leave him alone with me. Do not come, any of you, until I send. If he wishes to leave, I can hire a car from San Raphael—he can be with you in a few hours. But I think he will be content. I think he will get better here."

Chapter X

"And now," Christopher said, as their car crawled up the last ascent, "to see if Myrtle has kept her word!"

"Personally," Lord Hinterleys declared, "I am confident. That young woman has powers beyond the ordinary human being's. Besides, our telegrams every day have assured us that all is well."

"It seems curious to me that Gerald should have been so content," Mary remarked. "Is this the place, Christopher?"

Christopher nodded. The car was slowing up. On their right was the little grove of cypress trees and the gate.

"Here they are!" Mary exclaimed. "Why, just look at Gerald!"

The two young people came down the cypress grove, arm in arm. Gerald was walking with much of his old swagger. Once more his head was thrown back; once more there was all the joy of wild spirits in the abandon of his enthusiastic greeting. Myrtle, on the other hand, seemed quieter than usual.

"Gerald, what have you been up to?" his father demanded.

Gerald laughed.

"Listen to that, dad," he said; "can see if you can't guess."

The bell from the little white church was tinkling away crazily. Gerald passed his arm around Myrtle.

"She's terrified to death," he declared. "Please every one tell her that they're glad."

Myrtle was easily persuaded. Her father-in-law dispossessed Gerald as they turned towards the house. Mary walked on the other side.

"You have now arrived in time for the celebrations," Gerald continued. "The feasting tenantry are in view on the far side of the house. You will presently have the opportunity of hearing me make a little speech in my most perfect French, which I have just learnt by heart."

"So you are really married!" Mary exclaimed incredulously. "Gerald Myrtle—how wonderful it all seems!"

"Amazing!" Gerald agreed. "Matrimony was evidently my predestined Mecca. I am no longer ill. I have never been so happy in my life. I was plowing for four hours yesterday, and practicing approach shots over the road to get rid of a little superfluous energy after tea. What I really covet is the job of Pierre, the head man but Myrtle won't listen to it. She says I don't understand the soil."

As they reached the house, the old cure came shuffling out, beaming with smiles, delighted to find that every one spoke his own language and that he could talk to them about Myrtle. Luncheon was spread out on the veranda, and Marie and a young friend from the village, with great bunches of white carnations fastened to their frocks, were waiting to serve. Gerald himself uncorked the wine.

"I propose to make a speech," Lord Hinterleys announced, holding out his foaming glass.

"It must be a short one," Gerald insisted. "The omelette won't wait."

"Then, as an omelette is my favorite dish and that one appears to be a chef d'oeuvre, I drop the speech," his father assented. "I will only say, Gerald, that you have made Mary and me very happy, and that no bride in the world was ever more welcome than Myrtle to our home and lives."

Every one began to talk at once. By and by, that curious sense of unreality, the feeling that the whole thing was a scene out of an old-fashioned comedy, passed away. Gerald, who was shamelessly holding Myrtle's hand under the tablecloth, raised his glass and looked into her eyes.

"It was I, after all," he whispered "who had no idea what lay at the end of the road. You were the wise lady and I the fool."

All through the afternoon the villagers came and went, and the young people danced in the field at the back of the farm. Many toasts were exchanged. Every one was extraordinarily happy. Then the time came for Christopher, who was on his way back to England, to leave. Mary, who was spending the night with her father at Cannes, walked with him to the road. They paused for a moment at the gate.

"And it was really here that you found Myrtle?" Mary remarked, looking around her with interest.

"We found her on this very spot," Christopher answered, "gazing along the road to the hills. All her life she had wondered what lay on the other side. Many of us never find out. I think that Gerald has been very fortunate."

"I am glad that you are happy about it," she said, with quiet but tactful significance.

"It is because I am happy about it," Christopher rejoined, turning towards her, "that I am going to venture—that Mary—well, I think I feel a little like the man who walked for a few minutes of his life in the moonlight and fancied that it was a day. I honestly thought that I was in love with Myrtle. I know now that there is no one I ever really cared for but you, Mary."

She raised her head and looked at him, yielding unresistingly to the arm which was drawn around her.

"I am quite sure," she murmured, "that this is an enchanted land."

Get rid of constipation by internal cleanliness

HEADACHES, biliousness, sleepless nights, heaviness, are Nature's warning that intestinal poisons are flooding your system. If this is allowed to continue, you may become a victim of serious organic disease.

Laxatives and cathartics do not overcome constipation, says a noted authority, but by their continued use tend only to aggravate the condition and often lead to permanent injury.

Why Physicians Favour Lubrication

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Thus, Nujol brings internal cleanliness.

Nujol is used in leading hospitals and is prescribed by physicians throughout the world. Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless.

Take Nujol regularly and adopt this habit of internal cleanliness. For sale by all druggists.

The Why of Superstitions

By H. IRVING KING

CAT'S BLOOD

IN FOLK-LORE medicine the blood of a black cat plays an important part. It is recommended for a sty, the shingles, and for a spavined horse, among other things. As a rule it is a few drops of blood from the tip of a black cat's tail which is specified as possessing the magic and curative qualities. For ringworm blood from either the tail or the ear will do. Canada and New England appear to be the regions in which this bit of folk-medicine is most popular.

This superstition, like all the other superstitions connected with cats—and there are many of them—has its derivation far back in the past. It is a remnant of the cat worship of the ancient Egyptians and of pussy's mysterious connection with the moon-goddess, Isis—a connection which may have at first been suggested by the physical peculiarities of a cat's eyes, their faculty of adjusting themselves to light and darkness so noticeably.

In all ages and in all mythologies the cat has appeared as a mystic creature, but her first appearance as a creature of magic was in Egypt; in which country, indeed, the animal is supposed to have been first domesticated and from which country both its name, "cat," and the reputation of mystic qualities attached to it, spread throughout the world. The use of the black cat's blood in folk-medicine is an appeal for relief to Isis—or, perhaps, to the cat-headed goddess Pshat.

Have You This Habit?

By Margaret Morison

FLY-AWAY NANNIE

"AND be sure to lock the door after you," ended Nannie's mother. But by this time Nannie was out of sight and hearing. It was always that way. This was just like her—going off half-cocked and losing the end of her mother's directions. Now the chickens would all escape while she was bringing in the eggs. Nannie was what the neighbors called a "fly-away child."

Then she grew up. She was pretty and she was pursued. Christopher pursued her with slow and deliberate methods. Christopher always weighed the consequences before acting. The ground was solid, not only beneath Christopher's feet, but also several yards in advance of him. Indeed, he cut a poor figure beside young Dashwood, who would take a situation by storm, who won—if he won at all—by his ardor and sweeping ways. Dashwood posed and gestured before Nannie with his hat on the side of his head and his air of "Take me or leave me and be quick about it—you won't get a second chance." But, in spite of the fact that young Dashwood was so gay and romantic, and Christopher unhurried and rather heavy, Nannie really liked Christopher better.

Then, one day at the railroad station in town, she thought she saw Christopher's broad shoulders through the crowd—Christopher and another girl. As she watched he bent and bestowed an unmistakable farewell kiss upon the lady clinging to him. Then Nannie, hot with mortification, boarded her suburban train. Presently Dashwood joined her. During their half-hour journey Nannie brought matters to a head and reached home engaged to be married. There on her own porch was Christopher, who had never been to town that day at all.

When Nannie had been married for a year young Dashwood left her. She had enough money to scrape along with—but that was all. One day she read the alluring advertisement of a mining investment. By purchasing shares at the existing low price she might triple her income in a month. If she waited a day to get advice from her broker her opportunity would be gone. Nothing venture, nothing have. Nannie got together every bit of her capital she could lay hands on and bought mining stock heavily. Then, before long, her friends heard that she was penniless. "Firing without aiming as usual," was the general verdict.

But Christopher went to see her. Laboriously and methodically he told her that he had always loved her. Nannie's reaction was outraged anger. She would show Christopher that, even if she was destitute and a beggar, even if her husband had deserted her, she would keep to the narrow path of virtue, she wouldn't be insulted by any one, she was still Dashwood's wife. So she interrupted him with old-time vehemence and Christopher went away for good. Too late she learned that, had she waited for the end of Christopher's long proposal, she would have known that he came to tell her the news of Dashwood's sudden death and her own freedom.

Her habit of pulling trigger before she took sight had lost her her last friend.

EXECUTOR'S PUBLIC SALE

The undersigned, Executrix of the Will of the late Verna Kelley, deceased, of Spencer township, DeKalb County, Indiana, will sell at Public Sale at the late residence, located 2 1-2 miles southeast of Spencerville, 3 miles south and 1-2 mile east of the Hadsell River Bridge east of St. Joe, on the farm known as the Sam Zehner farm, on

WEDNESDAY MAR. 11

Commencing at 10:00 o'clock the following property, to-wit:

4 Head of Horses:

Match span sorrel geldings coming 8 and 9 years old, weighing about 3,300 pounds, work in any harness and a fine pair; Bay mare 12 years old weighing 1,600; Roan mare weighing about 1100.

5 Head of Cows:

Dark Jersey 8 years old, to freshen April 4; Black cow 6 year old, to freshen April 5; Durham cow 6 year old, to freshen April 20; Durham-Jersey cow 4 year old, will be fresh July 23; Old cow not bred.

160 Laying Hens 160

Mostly Rhode Island Reds and also 7 Rhode Island Red Roosters. Real Chickens.

Brood Sow due to Farrow APRIL 5th

Farming Machinery

McCormick binder 6-ft. cut, New Deere double drum hay loader, Daine side delivery rake, Corn King manure spreader good as new, Gale corn planter, 3 1-4 inch Turnbull wagon, narrow tire wagon, wagon box, hay rack, Buckeye plain drill, Fordson tractor in good running order, Tractor plows, 14-16 tandem disc, McCormick 6 roll shredder, 8-ft. Dunham cultipacker, Letz feed grinder, buzz saw, 3-horse Fairbanks Morse gas engine, 1 1-2 h. p. John Deere engine, pair bobs, sleigh, Ohio cultivator 2 spring tooth cultivator, spike tooth harrow, Oliver riding plow, 2 walking plows, double shovel plow, single shovel plow, Osborne mower, 1,000 pound platform scales, set dump boards, scoop board, 2 iron kettles, copper kettle, lard press, dump scraper, wheel barrow, 2 pump jacks, tank heater, 2 steel oil drums, 110 gallon gasoline tank, jack screws, hay ropes, 400 lbs. phosphate, set heavy breeching harness, harness for third horse, set buggy harness, set fly nets, horse collars, Primrose cream separator good as new, a No. 12, forks, hay knife, shovels and other articles too numerous to mention.

About 6 tons of good Timothy Hay

200 bushel Oats. 20 bushel Rye.

TERMS:—Sums of $5.00 and under, CASH. Sums over $5.00, a credit of 9 months will be given, purchaser giving his note with approved security, waiving valuation and appraisement laws, and without interest if paid when due; if not paid when due, 8 per cent. interest from date will be charged. No goods removed until settled for. 4 per cent. discount for cash.

Miss Mary Zimmerman is visiting relatives in Fort Wayne.

Orla Woodring and family were Monday dinner guests of J. C. Vallieu's.

Mrs. Elsie Hughes and son, Oral were Friday guests of Wm. Vallieu and family.

Roy Bowser and wife were Monday dinner guests of George Kinsey and family at St. Joe.

Vinton Miller and family and Mrs. Margaret Rhodes, were Sunday guests in the W. O. Lake home

The fourth quarterly conference was held Sunday afternoon at the M. E church Rev. W. W. Martin was in charge.

Rev. R. S. Brown and Ray Farver left on Monday morning to attend the district convention of the Methodist church at Freemont, Indiana.

The Ladies Aid of the Methodist church were entertained Thursday afternoon at the home of Mrs. Gust Cupp. The guests were Mrs. Winnie Shook and Mrs. Wm. Moore.

August Baltali and family, John Zimmerman and wife, Alfred Bachmann and wife and Wm. Merrill and wife all of Fort Wayne, were Sunday guests in the John Bachmann home.

The Senior class was very pleasantly entertained Friday evening at the home of Miss Garnet Beams. The evening was spent in games and music after which refreshments were served.

The Rayo class of the M. E. Sunday School were entertained last Wednesday afternoon at the home of theirpresident, Mrs. Golden High, in a business meeting. The class will meet next Wednesday in a social meeting at the home of Mrs Beulah Vallieu.

Marcella Zimmerman entertained a number of her girl friends Friday evening in honor of her fifteenth birthday anniversary. Music and games furnished the evening's entertainment after which refreshments were served Those present were Janice and Mary Wade, Gladys Agler, Fern Ward, Virginia Goldsmith, Irene Webb and Dorthy Markle.

Samuel Markle and John Haifley were Sunday guests of Frank Wertman's.

Mrs Stella Goldsmith arrived home Friday evening after attending and addressing forty-seven Farmers Institutes of this state.

Edward Billman and wife, Frank Wertman and wife, Samuel Markle and Walter Perkins and wife, were Monday guests of Mr. and Mrs. Joel Betz.

History of Life of George Washington

The following essay was written by Miss Marjorie Shearer of Concord and read at her Sunday school a short time ago.

George Washington (1732–1799). The fame of George Washington is not accounted for merely by the record of his achievements. Like Lincoln, the man was infinitely greater than anything he did.

An able commander, he wrested liberty from tyranny. A statesman, he helped evolve a stable government from political disorder. A patriot, he cheerfully laid down power when he might have won a crown.

Much has been written about the ancestry and youth of George Washington His great grandfather, John Washington, came over from England in 1658 and established a tobacco plantation on Bridge Creek, Westmoreland county, in Virginia. The grandson of the immigrant, Augustine Washington, was married twice, Mary Ball, his second wife, being the mother of six children of whom the eldest was the president, George Washington was born at Bridge Creek the ancestral home on Feb. 22, 1732.

His father died when George was not quite 11 years old and his half brother, Lawrence, who was 14 years his senior, acted as guardian and loving counselor. Lawrence's share of the property which was the lion's share was a plantation on the Patomac which he christened Mount Vernon, in honor of Admiral Vernon, under whom he served for a time in the British navy. Here his brother, George, spent some of the happiest years of his youth.

A few years after Lawrence's death this rich estate passed by inheritance into George's permanent possession. George learned to read, write and "cipher" in a school kept by the sexton of the church. It was to his mother, a woman of strong and devoted character, that he owed his moral and religious training. When he returned from three years of hardship and danger and exacting work in mountain and forest, he was a handsome youth of 19. He had his full height of 6 feet 2 inches. At 21 he was Major of the Virginia militia at a time when the colonies were preparing war with France and he was entrusted by Governor Binwiddie with a message to a French post 600 miles distant. At the end of the war which he had fought so bravely in, the speaker of the Virginia House of Burgesses formally thanked him for his military services, he was too confused to speak. Thus in 1758 the period of his youth came to a close. He had inherited the estate of Mt. Vernon from his brother, Lawrence, and he soon afterward married a charming young widow, Mrs. Martha Bandridge Custer. He never had any children of his own, but to her's he was devoted.

He held many offices in the United States government and fought so bravely in the war for our independence. He was one of the United States greatest presidents. He died at the age of 67 years in the year 1799.

Marjorie Shearer.

Natures that have much heat, and great violent desires and perturbations are not ripe for action till they have passed the meridian of their years.—Bacon.

Old Custom Retained

"Great Tom," Oxford university's famous bell, booms 101 notes every day to proclaim the number of foundation scholars. This custom dates back to Henry VII.

Famous Greek Statue

Hermes, one of the masterpieces of Praxiteles, the ancient Greek sculptor, was found May 8, 1877, at Olympia. It is now preserved in the museum there. The figure of the youthful god is shown as the protector of his baby brother, Dionysius. The statue was made about 250 B. C.

Mother's Cook Book

There is no right without a parallel duty, no liberty without the supremacy of the law, and no high destiny without perseverance—there can be no greatness without self-denial—Francis Lieber.

SUNDAY NIGHT SUPPERS

THE evening meal on Sunday is usually a light one. To the old-fashioned folk, there is no dish that they like better than mush and milk.

For those who enjoy the chafing dish or who are fortunate to have men in the family who like to dabble in meal getting, Sunday night is a good time for their activities. Omelets, rarebits, with sandwiches and coffee, toast with various additions, are all good. Oysters stewed, fried or escalloped, are not beyond the ability of a tyro in cookery.

A good piece of toast may be the basis for any number of good things. Creamed eggs, fish, oysters or creamed vegetables of some kind, as vegetable oysters. An easy way to prepare fried oysters is to dip them in milk, then in rolled cracker crumbs and fry them until plump, in butter. Serve with a relish of some kind, even the ordinary cabbage finely shredded and dressed with vinegar and salt, is most palatable. If one wishes to be quite elegant, serve the relish in halves of lemon, one for each plate.

An onion sandwich is very popular for a night lunch. Cut the mild onion into very thin slices, dip in a good highly seasoned French dressing and use between slices of thin buttered bread. With a glass of hot milk, or a cup of cocoa, the appetite is satisfied.

Onions are especially recommended to ward off disease, and in keeping the body in good health.

A simple salad that even a child may be taught to serve is lettuce with peanuts and a mayonnaise dressing. Use head lettuce, sprinkle with chopped nuts, a very little minced onion and a generous portion of mayonnaise. This with bread and butter and a hot drink, is another good meal.

Cottage cheese with minced pepper, chives and a bit of salad dressing is a nourishing dish.

Cold meats, fish and fowl are always popular to serve for a supper dish. Any may be used as sandwich filling which are in too small pieces to serve as cold meat.

Sues Case Estate For $10,000

A record-sized claim for nursing and housework is that filed in the DeKalb circuit court Saturday by Mrs. Myrtle Malone of St. Joe, against the estate of the late Emillus Case. Mrs. Malone wants an allowance of $10,000.

The details of Mrs. Malone's case are set out in the claim prepared by her attorneys, Link & McClintock She is the wife of Samuel Malone and she states that Mr. Case was a rich bachelor sixty-eight years of age and living alone when she and her husband agreed to move into his home, located between St. Joe and Spencerville, in April, 1908.

Mr. Malone worked on the farm, while Mrs. Malone says she agreed with Mr. Case to do the housework and look after his personal needs. She said he promised to pay a reasonable amount for her services. Thereafter he promised to give her a tract of forty acres of land and erect a house on it for her, but he never fulfilled his agreement. He finally died last October at the age of eighty-six years without having paid her anything for her eighteen years' services.

Mrs. Malone states that Mr. Case was miserly, shunned the society of other people, was eccentric and suspicious. He did not welcome visitors to his home and objected to Mrs. Malone having company. As he advanced in age his peculiarities and eccentricities became more pronounced. He weakened in body and required her personal care and nursing. For long periods of time he was confined to the house. He lost control of certain functions of his body and his clothing and body required constant attention. This work required Mrs. Malone to stay at home and she had little opportunity to associate with other people.

Mr. Case, says Mrs. Malone, did not get along well with people generally and had a morose disposition, but he became greatly attached to her. She states that she was patient, forebearing, kindly and constant in her administration.

Mrs. Malone expected that Mr. Case would provide for her in his will, but instead he left all his property, valued at approximately $60 000, to his relatives, who include a sister, five nephews and five nieces. She says that for the first twelve years her services were worth $5 a week and for the last six years $25 a week.

Edward Pflaumer of St. Joe, is executor of Mr. Case's will and his attorney is Capt. H. C Springer. It is probable that an agreement will be reached as to Mrs. Malone's compensation. If there is no such settlement, a jury trial will be held.

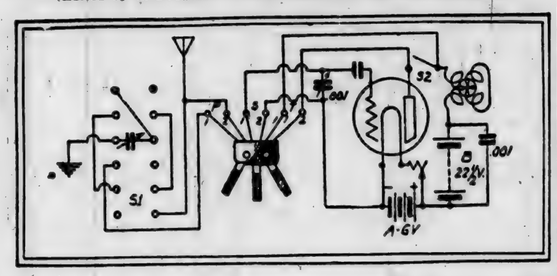
RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)



Showing Circuit Diagram of the Conventional Three-Coil Honeycomb, but With Slight Modification.

By HERMAN A. FISCHER

After having constructed, torn apart and rebuilt many kinds of receiving sets I decided that the next one would be a permanent fixture. This, however, was not an easy matter to do, as the market was saturated with a large assortment of new circuits and designs. My main desire was to have a set with which I could experiment and change about, but still have an outfit constructed in a cabinet which would present a finished appearance.

After careful consideration the set which I will describe was decided upon, and after testing I found that it met the rigid requirements in every respect.

The circuit is of the conventional three-coil honeycomb, but with slight modification.

A list of parts required to complete the outfit is as follows: One panel, 7 by 24 inches; 1 cabinet, 7 by 24 by 6 inches deep; 1 three-coil honeycomb mounting; 2 .001 mfd. vernier variable condensers, 1 plate variometer, 1 rheostat, 1 socket (combination preferred), 1 mica grid condenser with G. L. mounting, 1 anti-capacity switch, 3 4-inch dials, 1 rheostat dial, 14 binding posts, 5 lengths buss bar wire, 2 extension handles for H. C. mounting (hard rubber or bakelite).

Adaptable to Use of Amateur.

This set was designed as a combination long and short wave tuner and is adaptable to the use of the amateur, broadcast listener or ex-commercial operator who enjoys copying a bit of 600-meter traffic or press on longer waves.

Care must be taken when wiring the anti-capacity switch. Needing only a double-pole, double-throw switch, and as the anti-capacity switch I used was a four-pole double throw, I soldered the two poles together on each side.

S-2 in the diagram is a small single-pole, single-throw push-pull dashboard switch or, as in my case, a small push-pull canopy switch, as used in electric fixtures. This switch opens the plate to the tickler coil for regeneration by the feed-back method on waves above 525 meters (determined by size of variometer) and closes circuit, so that tuned plate regeneration is used on the lower waves. It will be noted that the plate variometer is in series with the tickler when S-2 is open. This will allow the plate to be tuned to a certain extent on the upper wave lengths.

Size of Honeycomb Coils.

The wave lengths which this set will cover depend on the size of the honeycomb coils used. However, the set is not limited to the use of honeycombs only, which is the reason for the six binding posts over the honeycomb mounting. The leads from the honeycombs, being flexible and having solder lugs as terminals, can be easily disconnected from the posts (connections being made from the outside), and the set is ready for experimental purposes.

If the user desires to try a new variocoupler which he has just completed he may do so by connecting the variocoupler primary posts to the primary posts on the set and the variocoupler secondary posts to the secondary posts on the set. Keeping S-2 closed he will secure regeneration by tuning the plate variometer. His primary and secondary circuits are tuned by means of the primary and secondary condensers in the set.

Suppose he now wishes to experiment with the much-abused single circuit. Removing his variocoupler from the circuit, he connects a buss connection from primary post No. 1 to secondary post No. 1 and one from primary post No. 2 to secondary post No. 2. He then either has the choice of connecting his secondary honeycomb coil in the circuit or use of an external coil. Setting the secondary condenser at zero and tuning with the primary condenser in series, he has his standard single circuit, using either tuned plate regeneration or feed back.

Other Combinations.

These are only a couple of the combinations. Others will suggest themselves. I am using an external three-coil spiderweb mounting at present and get fine results. With a combination of spiderweb coils I can cover a wave length range of from 175 to 1,000 meters. I expect to be able to get higher wave lengths shortly.

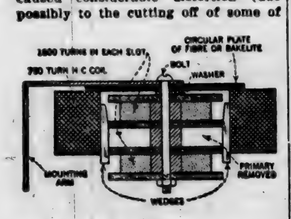
With spiderweb coils each of 50 turns as primary and secondary and .0005 mfd. condensers in the set, and using the plate variometer as the method of regeneration, I have heard the following stations in the middle of summer: WGY, Schenectady, loud and clear; WDAP, Chicago, fair and clear; WJAX, Cleveland, fair and clear; WBZ, Springfield, fair and clear; WMAF, Dartmouth, fair and clear; besides all the local stations with the phones lying on the table.

On 200 meters I can copy all districts except the 5-6-7 in hot weather, and on 600 meters I hear Canada and all along the Atlantic coast as far south as NGE, Miami, Fla. This reception was done on a UV200 tube, with 20V on the plate, and speaks well of the set for summer work.—New York Sun.

Filter Brings Sharper Tuning; More Volume

By J. S. WHITE

In putting up a super-heterodyne along the lines of a set using Acme 30 kc transformers, I found that the filter suggested, though not recommended, caused considerable distortion (due possibly to the cutting off of some of



the side bands). I then worked out a filter which not only produced no distortion, but which also brought about sharper tuning and more volume.

I removed the primary of 800 turns and placed the form bearing the two secondary coils inside a 750-turn honeycomb coil providing the necessary mechanical support as shown in the sketch.

Connect the small coil as an untuned primary and shunt the honeycomb coil with a .001 mfd. variable condenser or approximately .0005 mfd. fixed condenser, making this the secondary of the filter.

Whys and Wherefores of Radio C Battteries

It is essential that a C battery be used with any receiving set employing more than forty-five volts of B battery. Manufacturers of receiving sets are now providing two binding posts for the C battery. It not only saves on the B battery consumption but smoothes out the usual distortion which accompanies many two-step amplifiers. Not more than four and one-half volts of C battery is necessary with 90 volts of B battery.

Anti-Body-Capacity in New Shielded Panels

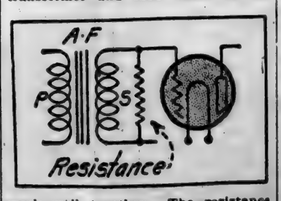
A new shielded panel is now available, for which the makers claim excellent anti-body-capacity qualities. The shield consists of pure perforated tin and is attached to the panel by a patented process. The adhesion of the tin is perfect. Sections of it may be cut out with an ordinary penknife.

The new panel has a hard rubber base with a low sulphur content and is artificially aged to minimize discoloration. Particular care is taken to proportion the filters and process of vulcanizing so as to obtain a high dielectric strength and surface resistance and a low phase angle difference and dielectric constant. Its machining qualities are excellent.

Besides the standard black finish the panels are furnished in all sizes with or without the shielding, in oak, mahogany, walnut and birdseye maple. These finishes are applied to the surface of the panel by a special process, which is accomplished so as to make it difficult to tell the panels from the real woods which they represent.

Proper Transformer Aways Best to Use

Use of a high resistance such as a grid leak across an audio amplifier is usually merely an attempt to tandem a transformer and tube which do not



work well together. The resistance simply introduces enough loss to make the two balance. Use of the proper transformer would seem to be more rational.

Loud Speaker and How It Operates

Unit and Horn Are Regarded as Essential Parts of Instrument.

By FRANK REICHMANN, B. S.

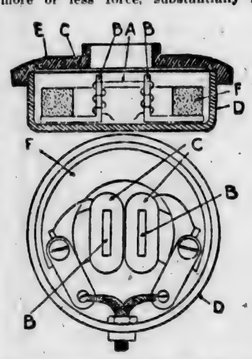
A radio loud speaker consists essentially of two parts, the "unit" and the "horn." The unit consists of an electro-magnet, with a vibrator arrangement, and a diaphragm. The electro-magnet, acting either through a vibrator or directly on the diaphragm, causes the diaphragm to vibrate. This motion causes the air to vibrate, and these impulses, when they strike the ear, create sound. The horn serves to amplify these air vibrations to create louder sounds.

Where Sound Originates.

In considering the construction of loud speakers it is well to deal first with the unit, as it is here that the sound originates. The loud speaker unit and the single headphone are fundamentally the same. The headphone is designed to give a very slight impulse to the diaphragm and the loud speaker unit is constructed to give as strong an impulse as possible and to handle very violent vibrations faithfully and accurately.

The sketch shows the arrangement of parts in an earphone or telephone type of loud speaker unit. "A" is the coil of wire connected by the phone cords to the output of the receiving set. "B" is the soft iron core around which the coils are wound. "C" is the soft iron diaphragm. "D" is the shell holding the various parts. "E" is the ear piece or cap of the unit. "F" is the permanent magnet.

Pulsating current from the receiving set in passing through the coil "A" sets up magnetism in core "B." Core "B" attracts the diaphragm "C" with more or less force, substantially in



Cross Section View of Loud Speaker Unit; Magnets, Coils.

proportion to the current flowing through the coil. As this current varies in strength it causes the diaphragm to vibrate back and forth. These vibrations produce sound waves.

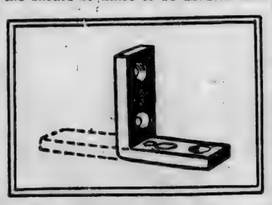
Unit Works Efficiently.

This type of unit works efficiently on moderate signals. On strong signals the diaphragm is apt to vibrate violently and strike the tip of the pole pieces, causing it to either "freeze" or to make an unpleasant rattling sound.

In the case of weak signals the greatest volume is derived when the space between the diaphragm and the pole piece tips is small. The reason for this is that the magnetism induced in the cores causes the diaphragm to vibrate, and the closer the distance between the poles of the magnets and the diaphragm the stronger this action becomes. A good many units using this general principle have some means of adjusting this air space, making it greater or less as the occasion demands. On weak signals this air gap can be made very small and the volume of the loud speaker increased. On powerful signals this gap can be increased to prevent the diaphragm from striking the magnets.—New York Herald-Tribune.

Rubber Panel Braces Can Be Easily Made

Handy angle "irons" or right angled brass may be made out of strips of discarded hard rubber panels. Cut the strip to the width and length desired by heating the hard rubber and the shears or knife to be used in boil-



ing water. Cut the rubber and bend it across a right angled corner and leave it there to harden, which takes a few moments. Then drill the screw holes and use. It will need to be larger than if of brass to compensate for differences in mechanical strength.

Feed-Back Control Is Worth Consideration

Probably the simplest method for controlling regeneration in a radio frequency set employing transformers for interstage coupling is to use a potentiometer connected across the A battery with the lever connected to the grid return of the amplifier tubes in questio-

STATE POLICE BILL KILLED IN HOUSE

Passage of Measure Granting More Powers for Deputies Favored.

Indianapolis.—The Wright bill, providing for a state police department, was killed in the house of representatives on recommendation of the judiciary committee. The Indiana Bankers' association actively supported the bill. At the same time the committee recommended for passage the Kissinger bill, providing for full police powers for deputies in the office of the secretary of state. The Wright bill contained certain restrictive clauses relating to the appointment of members of the state police force, as the bankers wished to make the department nonpolitical.

$10,000 Voted Mine Victims.

The general assembly voted an appropriation of $10,000 for the relief of destitute families of the 51 men killed in the mine disaster at Sullivan.

Within ten minutes after the introduction of the resolution by Senator Sims of Vigo county the measure went to the house, where it was concurred in at once.

The new blue sky bill, designed to add "teeth" to the existing Indiana securities law, and which was passed by the house by a vote of 90 to 0, also was among a number of other house bills passed by the senate. The vote on the measure was 40 ayes and 0 noes.

Mortgage Bill Passed.

The bill of Representative Truman G. Murden (Cass, Rep.), to provide for an increase in mortgage exemptions from $1,000 to $2,000, and which is backed by farmer organizations in the state, was among five house bills passed by the Indiana senate. The bill now goes to the governor for final action.

Senate Passes Eugenics Bill.

After considerable debate, the Holmes eugenics sterilization bill, relating to mental defectives and others regarded as mentally unfit, was passed by the senate by a vote of 31 to 12 and now goes to the house for further action.

The Murden-Hull bill to remove from the Indiana state board of health the power to condemn school-houses was sent to its grave in the Indiana senate.

Public Utilities Bill Passed.

The Quillin public utility bill, which would place subject to the control of the public service commission open-end mortgages and trust deeds executed by one corporation to another and would require the written consent of three-fourths of the voting stockholders before corporations could buy, sell or merge utility properties, was unanimously passed by the senate. The bill amends the present public utility law.

Religious Garb Bill Passed.

The house, by a roll call vote of 67 to 22, passed the Cooper (Vigo, Rep.) bill to prohibit the wearing by teachers in the public schools of a distinctive religious garb. Representative Brenton A. Devol (Clinton, Rep.), who opposed the bill, argued that the measure would be, in effect, prescribing a religious test for teachers.

House Passed Bar Bill.

Amid a flood of oratory by its attorney members, the Indiana house of representatives passed the Thiel house bill which is designed to raise the justifications of persons admitted to the bar as attorneys in Indiana. The vote on the measure was 82 ayes, 11 noes. The bill now goes to the senate.

By a vote of 90 to 0 the house passed and sent to the senate the Cooper (Vigo) house bill to require the governor to designate June 14 each year as Flag day and to require suitable exercises in the public schools of the state in its honor.

Market Bill to Governor.

Under suspension of the rules the Indiana house passed the Lindley senate bill providing for the formation of co-operative marketing associations of farmers. The measure passed without dissenting votes.

The bill is now ready for the signature of the governor.

INDIANA STATE NEWS

Washington, D. C.—Alice M. French, of Indianapolis, is designated as founder of the American War Mothers in the bill to incorporate that organization under the laws of the District of Columbia, passed by the house.

South Bend.—The South Bend Chilled Plow works, one of the oldest industries of South Bend, was sold to the Vulcan Plow company of Evansville. The business will be continued in operation here for a few months and will then be moved to Evansville.

Brazil.—Charles S. Nussel, age thirty-six, former prosecuting attorney of Clay county, and practicing attorney, died in a hospital near Los Angeles, after a lingering illness. He was stricken with pneumonia two years ago and had never recovered from the effects.

Columbus.—Bartholomew county farmers will receive $14 a ton for sweet corn, delivered at the plant of the Columbus Packing company, this summer, according to agreement reached between representatives of farmers and of the company.

CHICKENQUARANTINE LIFTED IN 8 COUNTIES

Indianapolis.—The quarantine against the movement of poultry or poultry products in nine counties of eastern Indiana, because of the European fowl pest, was lifted from eight counties by the state live stock sanitary board. The one county still under the quarantine is Delaware, where diseased flocks were found.

In Delaware county eggs from flocks which have been inspected may be sold, but no live poultry is to be sold or transported until after the survey in that county is completed, it was ordered in a letter sent to Dr. L. C. Henderson, county agent of Delaware county, by Dr. R. C. Julien, state veterinarian.

The order, in part, said:

"The poultry survey in some of the quarantined counties having been sufficiently completed to satisfy the state and federal authorities that fowl pest does not exist in them, and in order to relieve a patient and deserving public at the earliest possible moment, consistent with good judgment, the original quarantine is hereby modified . . . by eliminating from its first paragraph the names of the following counties: Madison, Hancock, Shelby, Rush, Fayette, Wayne, Randolph and Henry, and from its third paragraph the words 'within the quarantined counties.'"

Indianapolis.—Title to the assets of Warren T. McCray, former governor of Indiana, has been formally vested in R. Earl Peters, as trustee for the estate of the bankrupt governor, by order of the Federal court, with the exception of the security held by the Goodrich pool as collateral for a $350,000 loan made to McCray that he might meet "pressing obligations." Judge Robert C. Baltzell, who awarded the assets to Peters as trustee, will hold a hearing March 10 on the action of the trustee in seeking to set aside the pool agreement. The assets will be prorated among the creditors by the trustee.

Indianapolis.—Dr. R. C. Julien, state veterinarian, in a statement, issued a warning to farmers and residents living along the rights-of-way of railroads, particularly along railroads operating from the area of nine eastern counties recently under quarantine because of the presence of the European fowl pest, to patrol the tracks in their vicinity for carcasses of fowls that might have been dropped from common carriers, and destroy any such bodies by burning.

Sullivan.—Miners' open-flame lamps, which are believed to have ignited gas, causing the City Coal company explosion which cost 51 lives, are a necessity in Indiana mines, as they destroy gas formations before they become dangerous, mine officials and workers declared. The statements regarding use of the lamps were prompted by receipt here of dispatches quoting Secretary Work of the Interior department as saying that use of open-flame lamps was dangerous and should be abolished.

Anderson.—Lifting a ban on sale of poultry and eggs in Madison county resulted in a heavy delivery of eggs to dealers throughout the county. In Anderson numerous grocers bought 100 to 300 dozen eggs. From Summitville it was reported more than 900 dozen eggs were bought by dealers and at two places at Markleville many dozen eggs were bought.

Shelbyville.—Residents of Van Buren township, Shelby county, at their annual institute, held at Fountaintown, adopted a resolution indorsing the proposed law to put a five-year closed season on quail. The farmers of the township said that the number of birds is small, and that protection is needed if they are not to be exterminated in this region.

Columbia City.—Five railroad men were injured when the speeder on which they were riding, left the Pennsylvania tracks. The injured are Lamon Cullers, E. Greenfield, Martin Shaul, Newman Harper, Oren Comstock.

Fort Wayne.—Stealing away from her husband's side Mrs. Ida Sauer, age thirty-five, wife of Chancey Sauer, went to the Nickle Plate tracks and stepped to instant death in front of a west-bound passenger train. Ill health and worry are blamed for her act.

East Chicago.—Two youthful bandits committed a daring daylight robbery almost directly opposite the Indiana Harbor police station when they held up and gagged Samuel Berkovitz, a jeweler, and obtained $15,000 worth of uncut diamonds, jewelry and watches.

Miami, Fla.—Dr. Clark Day of Indianapolis, a winter resident, probably will hold the season's record for a sailfish catch in waters off Miami or Miami Beach. Doctor Day has succeeded in landing a sailfish which weighed 102 pounds.

Indianapolis.—The Martin bill, which would have the effect of giving persons injured in the Alfont wreck on the Union Traction company line, February 2, 1924, recourse in court to recover damages in spite of the fact the company recently has gone into the hands of a receiver, passed the senate by a vote of 28 ayes and 10 noes.

Shelbyville.—Harry Horst, age forty-six, a shoe merchant, committed suicide at his home by shooting himself. Mr. Horst left a letter addressed to his brother, George Horst, in which he said he was worried over business

Economical

Alabastine instead of Kalsomine or Wall Paper

Pound for pound Alabastine covers more wall surface than any substitute.

So easy to apply you can do a satisfactory job yourself. Ask your dealer for colorcard or write Miss Ruby Brandon, the Alabastine Company, Grand Rapids, Michigan.

Alabastine—a powder in white and tints. Packed in 5-pound packages, ready for use by mixing with cold or warm water. Full directions on every package. Apply with an ordinary wall brush. Suitable for all interior surfaces—plaster, wall board, brick, cement, or canvas. Will not rub off when properly applied.

all colors for all rooms

NOTICE!

To Livestock Owners

If You Own Any Horses, Cattle, Poultry or Hogs, by All Means Read This.

Safeguard your stock against the costly ravages of quick-spreading disease. Nature has provided wonderful health-giving roots and herbs which have proved unfailing in thousands of cases. These are combined in a time-tried, reliable remedy, Porter's Pain King—the standby of hundreds of farmers in this community. They recommend it highly for sores, colds and distemper in horses and for soreness of the udder, caked teats, and bloat in cattle.

With chickens becoming better money-earners, there is an increasing use of Porter's Pain King by careful poultry raisers everywhere. It is a positive relief for gapes, roup and parasitic growths. Sick hens are not good layers.

Use Porter's Pain King at the slightest sign of trouble. Just follow the directions with each bottle. It may save you several hundred dollars. Your dealer guarantees satisfaction or money back.

Musicians in Hard Luck

The Berlin Philharmonic orchestra is having a hard winter. The public is not patronizing it. If a singer desires the support of the orchestra in a concert he has to pay the organization $1,000 and, in addition, meet the expenses of hall rent and advertising. The box office receipts, even with soloists of standing, have not infrequently been less than $100.

For economy's sake, why not buy a vermifuge which expels Worms or Tapeworm with a single dose? Dr. Peery's "Dead Shot" does it. 372 Pearl St., N. Y. Adv.

Going Too Far

Psmear, the Artist—I'm going to make a speaking likeness of your wife.

ROAD BUILDING

WIDER HIGHWAYS TO BE STANDARD

A $32,500,000 road program for this year—$20,000,000 for new construction and $12,500,000 for reconstruction—favored by the New York state bureau of highways is based on a policy of making virtually all new highways of the so-called dual width, having two outside strips of nine-foot each. Such construction enables three cars to pass with ease, and more than double the capacity of a road as compared with the ordinary 18-foot roadway.

How much of the program it will be possible to put through depends on the money to be made available. The program contemplates paving 387 miles of new highway and old dirt roads and reconstruction of 301 miles.

On some of the reconstruction jobs sheet asphalt will be used for the covering, which proves a cheaper and satisfactory type of reconstruction on roads of this kind.

Nothing less than 18-foot roads will be built. The day of the 16-foot state road in New York is passed.

The program of 387 miles of new construction probably will increase to 400 before the engineers of the department complete their plans.

Of the $20,000,000 for new roads, the state would pay $13,000,000. The federal allotment would amount to $3,600,000 and the counties' share to $3,400,000. The $3,600,000 allotted to the state under the federal aid system already is available. All the state has to do to take advantage of the appropriation is to make the necessary appropriations and comply with the regulations of the federal government.

The state pays the entire cost of reconstruction work, unless the communities wish to share. Where a community shares in reconstruction of a highway its share amounts to 35 per cent.

Up to last year not more than three counties shared in the cost of such work in any one year. Last year the number rose to 19.

New York city will have unusual interest in the major project of the highway bureau for 1925. This is reconstruction of parts of the New York-Albany Post road that require the work. Much of this road is in excellent condition, but much of it still is in very poor shape.

The dual type pavement will be used as far as possible. This will put a 27-foot highway in place of a 16-foot road in many stretches.

Modern Transportation Demands Wider Highways

Modern transportation demands speeds as swift as will conform with the rules of safety. With millions of trucks and passenger automobiles in use, all capable of rapid traveling, it is only natural that the users of these vehicles and those benefited by their use should desire that motor vehicle traffic be as swift as possible.

More paved roads—and wider ones—alone can make swift, efficient motor vehicle traffic and give at the same time the necessary assurance of safety.

Evidence that highway department officials have recognized this fact is to be found all over the country; new pavements on highways are being laid several feet wider than was the custom only two or three years ago. And what is just as significant is the fact that in many places old pavements which are no longer wide enough to bear the constantly increasing automobile traffic are being widened with the addition of strips of concrete beside the old pavement.

These developments in highway building emphasize that wider roads are absolutely imperative in these days when automobiles are being built faster than pavements are being laid to carry them.

Good Roads Notes

Good roads are worth while.

* * *

The United States has nearly 85 per cent of all the automobiles registered in the world. Compared with this, our proportion of improved highways to rough country roads is the worst of that of any highly civilized country.

* * *

An increase of approximately 150 per cent in the average cost of road construction in Connecticut in the last ten years is shown by a statement made public by the state highway department.

* * *

Driving over rubber pavement for any appreciable distance might seem a luxury to the average motorist. But that is one of the experimental innovations on the current motordom calendar.

* * *

Track highways are a splendid safety device. The Chestnut street bridge in Philadelphia has steel tracks to keep vehicular traffic from the street cars.

* * *

Another important chapter is being added to the history of commercial transportation in this country by the sturdy motor truck and highways.

* * *

Constant patrol and smoothing of graveled roads is really a money-saver. The money has been spent. Let the highways be preserved so they do not have to be rebuilt in a few months.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for March 8

THE SAVIOR ON THE CROSS

LESSON TEXT—Luke 23:33-46.

GOLDEN TEXT—"He that spared not His own Son, but delivered Him up for us all, how shall He not with Him also freely give us all things?"—Rom. 8:32.

PRIMARY TOPIC—Jesus Forgives His Enemies.

JUNIOR TOPIC—The Savior on the Cross.

INTERMEDIATE AND SENIOR TOPIC—The Crucifixion of Christ.

YOUNG PEOPLE AND ADULT TOPIC—Christ Died for Our Sins.

This lesson brings us face to face with the greatest tragedy of all times. No record in the annals of history approaches it; it is the very climax of all history. Though unique in its blackness, from it flows streams of liberty and life for all the world. It is highly important that every teacher have personal experience of Christ's death for himself, and then get his pupils to see that Christ's death was instead of their own death.

I. The Place of Crucifixion (v. 33).

They led him away to Calvary, a hill north of Jerusalem, resembling a skull. "Calvary" is the Latin word and "Golgotha" is the Hebrew. This is a most significant name for the place where man's redemption was accomplished. The skull is an apt picture of man's condition as the result of sin—life and intelligence are gone, leaving only the dark, empty cavern which once contained them.

II. His Companions on the Cross (v. 33).

Two malefactors were crucified with Him. Their names are not given. This is a fulfillment of the Scriptures. "He was numbered with the transgressors" (Isa. 53:12).

III. His Forgiving Love (v. 34).

He cried, "Father forgive them." He doubtless had in mind not only the soldiers who acted for the government, but the Jews, who, in their blindness, were ignorant of the enormity of their crime.

IV. The World Revealed (vv. 34-43).

Jesus Christ on the cross is the supreme touchstone of human life, and discloses the world's heart. Take a cross-section of the world at any time since Christ was crucified, and representatives of the various classes therein were found around Jesus on the cross.

1. The Covetous (v. 34).

They gambled for His seamless robe right under the cross where He was dying. This represents those whose primary interest in Christ is a means to get gain.

2. The Indifferent (v. 35).

"The people stood beholding." They gazed upon Him with indifference. The great mass of the world gaze upon the crucified Christ with stolid indifference.

3. The Scoffers (vv. 35-39).

(1) The rulers reviled Him for His claim to be the Savior. They wanted a Savior, but not a crucified Savior. Many today are religious, but have only contempt for a salvation which centers in an atonement made by blood.

(2) The soldiers reviled Him for claiming to be a king. The title, "King of the Jews," had been placed over Him in bitter irony, but it was true for, by right of the Davidic covenant, He shall be one day King over Israel (II Sam. 7:8-16). The fact that the superscription was in Greek, Hebrew and Latin shows that he was to be king over all the world.

(3) The Impenitent Malefactor (v. 39).

This brutal man joined in reviling the Savior, even though he was under condemnation.

4. The Penitent Malefactor (vv. 40-43).

The conscious sinner who discerned the heart of the Savior prayed for mercy. The man confessed his sin against God and cried to Jesus for salvation. He saw that the dying One was the forgiving God. The fact that he acknowledged his sin showed that he was penitent. His request that Christ remember him when He came into His kingdom shows that he recognized that the One who was dying on the cross was making atonement for sin, and that He would come to reign as King. His salvation was immediate. Christ said, "Today shalt thou be with me in Paradise."

V. The Death of Christ (vv. 44-46).

So shocking was the crime that nature herself threw around the Son of God a shroud to hide Him from the godless crowd. When the price of sin was paid He cried with a loud voice, showing that He still had vitality, that His death was not through exhaustion, but by His sovereign will.

In This Life

It is in this life alone we can learn lessons of patience and self-denial, for there are no sick-beds to watch by, no sufferers to soothe, no mourners to comfort in the mansions of the Father's house.—George Macdonald.

Foundation of Peace

The Divine benediction is pronounced upon peacemakers. But then peace, to be of value, must be permanent; and to be permanent it must be founded on sound principles.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1925, Western Newspaper Union.)

Where the Power of the Sioux Was Broken.

In 1874 there was established near the Red Cloud agency in the northwestern corner of Nebraska a military post which is historically important because around it centered the events which broke forever the power of the Sioux and their allies, the Northern Cheyenne. Fort Robinson was its name and its presence in the midst of the Oglala Sioux kept thousands of them from joining the hostiles at the opening of the Sioux war of 1876-77.

Near it in October, 1876, General Crook further clipped their wings by surrounding the camp of old Chief Red Cloud and disarming and dismounting his warriors. From it the next month Col. Ranald S. Mackenzie led the expedition which defeated Chief Dull Knife and his Cheyennes, destroyed their village on the Crazy Woman's fork of the Powder river and scored the first real success in the campaign. There, too, Crazy Horse, the young war chief of the Oglalas, fell mortally wounded when he resisted an attempt to imprison him.

Perhaps the most dramatic incident connected with the history of Fort Robinson was the outbreak of the Cheyennes in 1879. Dull Knife's Cheyennes had been sent to Oklahoma but they hated their new home and jumped the reservation. After successfully eluding pursuit for several hundred miles, they were finally captured and taken to Fort Robinson. When told they must return to Oklahoma, they again attempted to break away. Many of them were shot down as they tried to escape from the fort, the remainder were recaptured and again they were returned to the hated Southland. So Fort Robinson marked the end of the Cheyennes as a warrior people, just as it did the Sioux.

The usefulness of Fort Robinson passed away with the end of the Indian wars. Today it is a place of ghosts—ghosts of the redmen and white who once helped make it famous. Near it are buried two renowned scouts—California Joe and Baptiste Garnier, the "Little Bat" of Sioux war days, both victims of an assassin. Somewhere near the fort, too, sleeps Crazy Horse in a secret burying place of which it has been said: "Just as the grave of General Custer on the barren hill above the Little Big Horn was the high-water mark of Indian supremacy in the trans-Missouri region, so the forgotten grave of Crazy Horse marks the ebb from which no tide has ever risen."

Romantic Belle Point and Prosaic Smith

It was one of the early French explorers of Arkansas who gave to this lovely spot on the Arkansas river the romantic name of Belle Point and there many years later was built a fort to which was attached the very prosaic name of Smith. The site for the post was chosen by Maj. Stephen Long, the explorer, in November, 1817, and when the first little stockade was erected later it was named for Brig. Gen. Thomas A. Smith of Virginia, a veteran of the War of 1812.

The first commandant at Fort Smith was Maj. William Bradford of Company A of the Rifle regiment, composed of men who had fought with "Old Hickory" Jackson at the battle of New Orleans. Bradford was succeeded in 1822 by Col. Matthew Arbuckle, founder of Fort Gibson, Okla. In 1838 the government decided to erect substantial fortifications at the place and plans for it were drawn by Vaubanne, the famous French fortification expert. Temporary quarters were erected by Capt. W. G. Belknap which were occupied by the troops until four years later when the new buildings were completed.

The commandant from 1841 to 1845 was Col. Zachary Taylor and Fort Smith is one of the several forts which claim to be the site of the elopement of his daughter, Sarah Knox Taylor, with Lieut. Jefferson Davis, although history has not yet decided just what were the facts connected with that romantic affair.

As the importance of Fort Smith increased the government selected the site for a new fort and purchased 300 acres for the reservation. Within this new fort several two-story buildings were erected but subsequently all except one were destroyed by fire. This one has particular interest because it was used as a United States district court and its basement as a jail for prisoners. Here the famous Judge I. C. Parker, in the turbulent days of Indian territory in the '70's and '80's sentenced hundreds of squaw men and territorial outlaws to death until the name of Fort Smith and Judge Parker became synonymous for probably the speediest and most summary justice ever meted out in the history of this country.

Almost from the beginning of Fort Smith a settlement was growing up within the shadows of its walls and the town of Fort Smith was incorporated away back in 1842. The government reservation and fort were given to the city of Fort Smith in 1884 and are now a public park.

A Little Bit Humorous

THE SAME THING

Sybil—It's no use denying it, Maud. It was too dark for me to see who it was, but I saw some young man kiss you in the garden. I'm ashamed of you.

Maud—I don't see why you should be. I've often seen George kiss you.

Sybil (engaged to George)—Yes, but I allow nobody but George to kiss me.

Maud—Well, nobody but George ever kissed me.

Many a True Word

"Papa, what is a low-brow?"

"A low-brow, my son, is a person who likes the funny papers, snappy stories, girl shows and the like and doesn't mind saying so."

"And what is a high-brow, pap?"

"A high-brow, my son, is a low-brow who won't admit it."—North Shore Bulletin.

DO YOU GET THE POINT?

Fair Voter—I wouldn't care to occupy the President's chair—it's too uneasy a seat for me.

He—Yes; it's scarcely possible to sit in it without being annoyed by the tax.

Clashes of Authority

The Cat looks at a Queen,
The Queen attempts to catch 'er;
The Cat, with nerve serene,
Reserves the right to scratch 'er.

His Dream

Two brothers were exchanging compliments, as brothers will, regarding their respective girl friends.

"I hope you're not suffering from any hallucination that your girl is a raving beauty," sneered the elder.

"I sure am," replied the younger Pettersby, "and I'm going to continue to hug my illusion."

Vicarious Benevolence

Little James (who has an inquiring mind)—Father, what do they mean when they call a man public-spirited?

Professor Broadley—Why, it usually means that he is very liberal in endeavoring to persuade other people to spend their money bountifully for the public good.—Stray Stories.

Too Good to Change

Alice—Dick is so nice to me.

Virginia—Why don't you marry him?

Alice—Oh, but I want him to keep on being nice.

Differentiation

"Is your husband an optimist?"

"Well," replied the tired-looking woman, "he's an optimist in hoping for the best, but a good deal of a pessimist in working it out."

DAY OF REST

"Why does he sit so far back in the shadows in church on Sunday?"

"To rest his eyes from sitting so far front in the stage lights in the theater all week."

That Woman

He gently opened the locket,
And scanned the pretty face;
"It suits my mind," said he, "to find
This woman in the case."

Wouldn't

"Are you in favor of a tax on bachelors?" asked a heckler, knowing that the candidate was unmarried.

"I thought, sir," was the reply, "that I had already said I did not favor a tax on raw material!"

Much Occupied

"Flubdub seems to be flustered all the time. Evidently a very busy man."

"He is. In addition to looking after his own business, he mixes in all the squabbles his wife has with her various friends."

Two Looks

"Did you notice that insolent conductor looking at you as if you hadn't paid your fare?"

"Yes, and did you notice me looking at him as if I had?"—Paris Le Rire.

GET FEELING WELL AGAIN

From Mother Nature's storehouse we have gathered the roots, barks and herbs which are compounded, under the famous Tanlac formula, to make Tanlac. This great tonic and builder has brought health and strength to millions.

If your body is weak and undernourished, if you can't sleep or eat, have stomach trouble or burning rheumatism, just you see how quickly Tanlac can help you back to health and strength.

Most people notice a big change for the better after the very first bottle. They have better appetites and more pep. The sparkle comes back to their dull eyes and color to their faded cheeks.

Don't delay taking Tanlac another precious day. Stop at your druggist's now and get a bottle of this, the greatest of all tonics.

Take Tanlac Vegetable Pills for Constipation

TANLAC
FOR YOUR HEALTH

Immense Electric Sign

In Philadelphia an electric sign weighing 50 tons has been set up which requires a total of 4,000 electric lamps to illuminate it. The individual letters of the sign are 50 feet tall and the electricity it utilizes would supply all the artificial light needed by a town of 6,000 people.

Her Bad Luck

Maud—Think of marrying a man for his money!

Marie—Yes, I've thought of it, often, but I could never get hold of the man.—Boston Transcript.

S.S.S. stops Rheumatism

"MY Rheumatism is all gone. I feel a wonderful glory again in the free motion I used to have when my days were younger. I can thank S. S. S. for it all! Do not close your eyes and think that health, free motion and strength are gone from you for ever! It is not so. S. S. S. is waiting to help you. When you increase the number of your red-blood-cells, the entire system undergoes a tremendous change. Everything depends on blood-strength. Blood which is minus sufficient red-cells leads to a long list of troubles. Rheumatism is one of them." S. S. S. is the great blood-cleanser, blood-builder, system strengthener, and nerve invigorator.

Ain't Men the Wow!

By M. and R. M. TERRELL

(©, 1925, Western Newspaper Union.)

"SURE, men are a wow"; Miss Lelia Leone confessed to Miss Claudia Duke, her best professional friend, "dearie, you said a whole conversation then. I remember a gag that one wise john put over on me that shines out of my past like a monologuist's glass ring across the orchestra. But you ain't in no fit mood for the confession patter, Claudia."

"Shoot!" said Miss Duke, hitching herself upon Miss Leone's professional trunk in her friend's two-by-two room; "resting round New York this way, dearie, I ain't had a laugh in my system for a month of Sundays."

Lelia needed no urging.

"This was years back," Lelia started, putting an extra pillow back of her head and making herself as comfortable as possible on the wreck of a sofa. "Bertie Kestler was massaging the tall weeds out of Chi with a number three company of 'Baby Blue Eyes'."

"Say, I remember that layout," interrupted Claudia, thereby showing her rapt attention. "You had Myrtle Percy and Teddy Roach—"

"As leads, yeh. Some frame-up, that company. I'll tell the world that we shook down! Anyway it was a blinky season and box offices as busy as Coney Island in January. Well, Claudia, we opened in Pickle, Minn., that's about as far as Bertie could take us on the money he dug up in Chi."

"Pickle, Minn.!" This last from Claudia with a squeal of delight. "That's the town with the hotel with two baths—cold and colder; I remember."

"Yeh, some baby burg—for a cockroach, tell me!" snorted Lelia. "And—other animals! Well, Claudia, in the show I was playing Gwendolyn Kale and Bertie had wished one big lemon number on me. In the second act I went to the mat with an alleged song entitled: 'You Stop Making Those Dating Eyes at Me.'

"It was the rottenest song I ever had heard. Bertie made it plain to me my meal ticket was a twin to that goshawful song. If it didn't go, I did. So I sang my little heart out in it and everywhere we played."

"Lelia, one-night stands is the limit. Those people don't know—"

"In the case of this cheese of a song, dearie, they did. A baby lunatic would have asked for his money back after having heard Mary Garden sing it!"

"What's that got to do with some wise john putting—"

"I'm serving that now," interrupted Lelia. "Somehow the show held on and in Cross Cut, Neb., I think it was, I noticed him first out there in front."

"This john had been following you—the show; gwan!"

"You're no more astonished than I was, Claudia. And in Cross Cut, where we played three nights in order to scrape up enough to get out, every jane in our company got wise to Mr. Lamp-the-show."

"What on earth was a human being doing out there with the wild and woollies? Course you met him, song or no song, dating eyes or no eyes, huh?"

"That's the kick to my story, Claudia. Nobody in 'Baby Blue Eyes' ever saw that bird anywhere except out in front at night."

"In little towns like them? With one hotel? Gwan!"

"As a mystery, Claudia, he was a wow! The Bat wasn't in with this john. Every night, out there piping us off, in every town all the way out to the coast. And in the daytime, in every town, among those missing."

"Gee, Lelia, he musta got everybody's goat? A kinda hoodoo?"

"No, Claudia, because pretty soon after Cross Cut he shows plain enough that the big hand he's giving us each night is for me and that dating nightmare I was trying to sing."

"Oh, I'm beginning to get wise. He was—"

"Wait! In Bevo Springs, Calif., he met me the night the show and the season closed and took me out to the best cafeteria in town. Before the banquet, he slipped me two brand new $100 bills."

"Shucks, he was a song plugger from Tinpan Alley and he was whooping up that punk song of yours all over the Woolworth circuit."

"Guess again, Claudia."

"Huh? Then he was a rubber-shoe for the angel in Chi that was backing Bertie and the show."

"No."

"One plot left! Somebody left the back door of a bug factory open and their best nut escaped."

"I'll remember his words to my last line on earth," Miss Leone chuckled. "'Miss Lelia,' he says, and he blushed like a lobster put in the pot, 'I hope you'll forgive me but I couldn't help it. I own a livery stable in Lively, Ind., and I ain't never had no more education than a mule, but when I wrote the music and words of that lovely song I knew I had composed the greatest lyric since—'"

"You don't mean—"

"I mean that poor spare nut wrote that ham-strung thing I'd been rendering all season and he published it himself and couldn't get anybody to sing it but me, thanks to a little money each week in Bertie Kestler's educated mitt. The poor crutch is out in Hollywood now, I understand. He's the guy that wrote 'Beautiful Snow' in the films."

Local Briefs

Wm. Harmon, wife and son were at Angola Sunday and Monday.

Mrs. Mary Rhodenbaugh has been ill for several days with the grip.

Cad Woodcox, of Garrett, is a likely candidate for Mayor of Garrett.

We make and supply poultry raisers supplies. Bowser & Reed.

Mrs. Delia Wade of Petoskey, Michigan, left Wednesday for her home after a short visit here.

For Sale: Durham Holstein cow, 7-yrs. old, fresh with calf by side. A. W. Trostel.

Mrs. Anna Dilley spent the past week with her cousins, Charles Watson and sister, at Spencerville.

Joe Folts spent Tuesday and Wednesday with his mother, Mrs. Margaret Folts, at Continental, O.

Wm. Miller and wife spent Sunday in the F. M. Monroe home. Vernie Monroe and family were also guests.

Wilbur Yeiser and family moved here Wednesday and will occupy a part of the Sam Keesler residence for the present.

A dime goes a good ways when you buy a Ladies Home Journal at News office. We have all kinds of good magazines.

Frank Moudy, of Churubusco, was a Saturday night and Sunday guest of his grandparents, Mr. and Mrs. Reuben Koch.

Floyd Ridgway and wife, Mrs. Belle Ridgway and Derwood Ridgway, were Monday guests of F. M. Monroe and wife.

Early Ohio Seed Potatoes grown from certified seed. 32-4 Spencerville, Lewis Washler. 10t2p.

Mrs. Emma Bassett of Hicksville came Thursday to be a guest in the home of Wm. Brown and wife for an indefinite time.

John Timmerman, wife and daughter, Alice, of Spencerville, were Sunday afternoon guests of Mrs. Nan Lysher and mother, Mrs. Mary Timmerman.

Among those called to serve on the grand jury are George Strong, Concord; Perry Provines, Jackson; G. W. Horn and H. C. Hathaway, Union township. T. A. Northrup of Spencer is to serve petit jury and Stanley Davis, Newville; John Timmerman, Spencer and Clyde Hart, Spencer, are to act as talesman.

L. W. Yeiser was in town Saturday calling on old friends. He had his sale last week and is now free. He likes South Whitley and reports that he has all the printing that his office can take care of. South Whitley is "looking up" now with the locating of a new canning factory, a branch of Reid-Murdock Co.

New Way to Quickly Stop Dangerous Cough

It is almost criminally careless not to properly attend a persistent cough, which by seriously weakening the system lays you open to far more dangerous infections. For by a very simple treatment you can stop the coughing spells almost instantly and often relieve the stubbornest cough in 24 hours.

This simple treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action—it not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. The prompt relief of the heaviest cough seems almost magical.

The prescription is highly recommended for coughs, chest colds, hoarseness and bronchitis, and is wonderful for children's coughs and spasmodic croup—no opiates or other harmful drugs. Economical, too, as the dose is only one teaspoonful. At all good druggists. Ask for

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MARCH, 12 1925 | NO. 11

St. Joe Meat Mkt.

Wm. Harman, Prop.

We are pleased with our trade and we try our best to give the BEST MEAT in return for your money.

Heavy Road Building Program On.

DeKalb county commissioners, meeting in Auburn last Wednesday decided to receive bids soon for the patching of the East Seventh street and Wayne street pavemenes in Auburn. The total length is about two miles. The concrete paving is full of holes and has long been in need of repair.

Contracts were awarded Baker & Keller for the construction of the Shird Platner road in Wilmington township commencing at township line south of Coleman's Corners and extending two miles north. The contract calls for $6,202 56. The gravel is to be laid ten inches in depth and ten feet in width with a grade of twenty-two feet.

No remonstrances being filed against the Samuel Shilling road petition in Jackson township, the petition was granted. Calvin C. Kain, county engineer, and Isaac Barker and W. A. Dannells were appointed viewers and were directed to report April 8.

Household Help Wanted

Small family at Albion, Ind., wishes to secure the service of a girl or woman for general housework. Country girl preferred. Pleasant people to work for. Work not hard and pay good. Position steady if mutually satisfied. Will exchange references if you wish Write Box 282, Albion, Ind.

NOTE—Pay your accounts. They are due now.

That Little Word "IF"

Around the corner stands an **IF.** Your plans, if they are good, will probably work out successfully **IF** you live. **IF** you avoid injury, **IF** the weather and other circumstances do not interfere.

Your family will be taken care of and will never lack for want of food and clothes and fuel and shelter **IF** you are here to provide for them.

But have you provided for what will happen in case some of these **IFS** interfere? You have around the house certain documents relating to your business which are important. You know just where they are and what must be done concerning them, but does any one else know? **IF** the responsibility should suddenly fall from your hands, would it easily be carried forward by some one else?

It is a good thing first to keep your important documents here at the bank, where we have safety deposit boxes for your convenience, and also it is a good thing to have everything labeled and explained in writing so there can be no misunderstanding.

The St. Joe Valley Bank, A STATE BANK

Busy

What they think about it

Good Roads For A Good Town

Mr. Editor:—

I have noticed for the past two weeks articles concerning the road conditions in St Joe, have appeared in The News All that has been said thus far is true, because the road speaks for itself. A real solution to meet this condition is what is needed. This is the common topic of all our people and visitors as well. Every town ought to be popular with its home folks and this can't be true with unpleasant road conditions as they now exist. No road will keep up its self, constant scraping and repairing is necessary because of the heavy traffic. Let me cite you to Boone Grove, Indiana.

"Boone Grove is a town with about one hundred inhabitants, situated in a good farming center and a distance of six to ten miles from any other settlement. About fourteen years ago the people of this town with help of others donated their work and money and put a fine gravel road through the town and connected it with a main gravel road.

"About three years ago the people went in debt about three thousand dollars and built a large community hall right next door to the church and put in electric lights. Everyone in the community gave money or helped in some way. This last month they had a fried chicken supper, cleared about one hundred and seventy-five dollars and burned the mortgage, thereby leaving the hall clear of all indebtedness.

"All farm meetings are held in this building. Last Friday night the Farm Bureau held its regular monthly meeting, there and about four hundred people attended. Each school in the county gave some kind of performance and the band from a town ten miles away played free of charge. Ice cream and cake with coffee were served for a small charge.

'They have a fine minister, so jolly, sociable and yet sincere in the gospel. Since he has preached here he has all the young boys and girls of the community interested in the church by keeping things so lively that they don't leave in cars for other towns to spend the evenings.

"A Parent-Teacher Association has just been organized and it held a fine meeting in this community hall two weeks ago. This organization is going to cooperate with the trustees and make the high school and common school of this town better by buying things they have needed for some time but never saw fit to buy.

"Boone Grove is known all over the county for its popularity."

There ought to be hopes for St. Joe if a town of one hundred can do all this. Local pride is as necessary to a town as to an individual. Citizen.

Why is it that the people of St. Joe put up with the swearing and cursing which goes on on the street as well as in the stores. I don't like to hear it, do you. A Citizen

To Back Community Activities.

The Fish and Game Club met at the town hall Friday evening and elected officers for the year. Tom Abel, president; Wm. Maxwell, vice president Ralph Sechler, secretary and M. A Hull, treasurer The membership for the past year has expired and a new committee composed of M. A. Hull, Lester Coburn, Wm Hamilton, Geo. Kinsey, Ralph Sechler. H. M Widney and Clare Hull were chosen to head the drive for 1925 memberships. The dues for the year will be 50 cents.

An application for pickerel and bass, to be placed in the river, is being made to the state department.

The association is expecting to broaden its activities this year by backing up local matters that are a community concern, which will be a valuable asset. The membership last year was near 130 and this many men can do some real work for the community.

Corn Testing Started At School

The 1440 ear tester built at the school house and operated by the vocational class under Mr Renner's supervision was started Tuesday eve. The testing will detect dead, weak kernels and root rot. Ten days are required to run it thru. A charge of 1 cent per ear is made. Each dead ear you plant means a loss of $3 or $4. Fifteen ears to plant an acre. $3 00 will test for 20 acres. Let the boys test your corn and you will know it will grow. For information see Mr. Renner or one of the boys.

Memories of the Days Gone By

In the days of long ago, many pleasant memories linger with our older inhabitants of St. Joe. Just to refresh your memory, J C Hull presents a few facts gleaned from one of his old papers. On November 6, 1899, Rev. Crates Johnson, M. E. Olds, B. S. Sheffer, Martin Tustison, Sol Barney, Frank Barney, August Kinsey, O H. Widney, M. T. Bishop, A B. Filley, Z T. Kagey and J. C. Hull, met in Widney hall and organized to carry on a lyceum course. The talent purchased by these gentlemen were:—Col. L F. Copeland, Prof. M. B. Beal, Col. P. E Holp, Albion College Octette and Grand Concert, at a cost of $210 00. The numbers were given in the three churches.

The Men That's Needed

The world today is looking for men who are not for sale; men who are honest, sound from the center to circumference, true to the heart's core; men with conscience as steady as the needle to the pole; wen who will stand for the right if the heavens totter and the earth reels; men who can tell the truth and look the world right in the eye; men who neither brag nor run; men who neither flag nor flinch; men who have courage without shouting to it; men in whom the courage of everlasting life runs still, deep and strong; men who know their message and tell it; men who know their place and fill it; men who know their business and attend to it; men who will not lie, shirk or dodge; men who are not too lazy to work; nor too proud to be poor; men who are willing to eat what they have earned and wear what they have paid for; men who are not ashamed to say "No" with emphasis and who are not ashamed to say, "I can't afford it."

Farm Bureau Meeting

There will be a meeting of all Farm Bureau men and boys interested in club work in Spencer, Newville and Concord townships at St. Joe school house, March 18 Plan to come and lets get club work started with a bang. Father's let the boys go in a club and have a real time. All indications are that we'll have a club camp this year. Local prizes are being put up for our shows.

RESINOL

Do You Know This Liniment and Salve?

Time-Tried Home Remedies That Have Many Friends in This Neighborhood.

Porter's Pain King is known and used in many homes hereabouts. This old reliable liniment has been making friends since 1871, and the directions wrapped around every bottle tell how to use it for colds, aches and pains, soreness, swollen joints, strained muscles and rheumatic twinges. It seldom fails to drive out the pain.

The Salve is made of the same pure drugs and herbs that go into the liniment and is named Porter's Pain King Salve. Its base is lanoline (pure wool fat), in itself wonderfully healing and soothing. Porter's Pain King Salve is recommended for burns, cuts, bruises, sores, wounds, chapped and cracked skin, boils, felons, itch, cold on the chest, croup, lumbago, varicose veins and piles.

It is said Porter's Pain King, the liniment, and Porter's Pain King Salve can be found in four of every five homes in this county. How many know all their many uses? Why not read the directions today?

LOVE FINDS A WAY

This is one of the many "Two-on-an-Island" stories that have been popular ever since Charles Reade's classic, "Foul Play," was published in 1869. So, of course, it is a story of adventure, love—and sex. Briefly, a young man and a young woman are wrecked in an airplane, land on an out-of-way island inhabited by cannibals, and fall in love. The situation is still further complicated by the fact that the girl is engaged to a man in England and has been brought up among people who are strait-laced and narrow-minded beyond belief. But love finds a way—as it usually does—even on cannibal-infested islands.

A feature of the story, of course, is the study of the girl's mind and heart in her struggle between love and duty, with Mrs. Grundy thrown in for good measure. So it is a story that a woman could write better than a man. The author is a Englishwoman, Clive Arden. Her story is not only her first novel, but a prize novel. It caused a sensation last year in England, has duplicated that success here and is now being shown in moving pictures in various parts of the country, the picture rights having been purchased for a very large price.

Quite an interesting problem, isn't it—two people in love, rescue improbable and no minister handy to tie the knot and transform sorrow to happiness!

PART ONE

—I—

Little Notes

I

Darbury was a small parish possessing an old church, a combined post office and sweet shop, but no actual village street.

As often happens with isolated people and places, the little parish was very self-important. The war and motor traffic had tended to modernize the community; and the new freedom rather went to its head. It was as yet not quite sure of its line, though painfully anxious to appear assured—one half shocked at the other half's doings, and altogether rather mixed.

This had been apparent, a year ago, when divorce had raised its ominous head for the first time within the memory of living inhabitants. Divorces took place elsewhere, of course, and Darburyites read and discussed the newspaper accounts with avidity; but that such things should happen within their own fold, between people known and even liked by everybody else, was an unheard-of idea. The topic, thrilling in the press, appeared indecent in these circumstances. Although it was Major Randall who had obtained the decree; and although his wife, instead of offering a defense, had brazenly gone away with another man, yet most people shrank from his society. As Mrs. Stockley, the widow of the late vicar, sagely remarked: "There are often two sides to these things; you never know."

Even the squire and Mrs. Rochdale, kindliest of the "old order," began to show a slight coldness. They placed the hospitable doors of Darbury house ajar, so to speak, instead of wide open, hinting to their only son that a little less golf with the major might be wise. But Hugh laughed at the hint, in his easy-going way. "That's all his funeral, not mine"; thus he waived responsibility for the morals of the house of Randall.

A wholesome young Briton, Hugh would abominate shady actions, if brought actually into contact with them; but he lacked the imagination to visualize what failed to interest him. His own purpose was single, his own heart fixed. Barbara Stockley, only child of the late vicar, had filled it entirely, since the days of frocks and perambulators. Growing up together, inseparable, their engagement was a foregone conclusion. Nobody therefore had been surprised at its public announcement upon Hugh's return from the war.

The wedding had been fixed for the following December. The happy pair were to live in one of the pretty modern houses at Hillbeak during the old squire's lifetime, continuing all their activities in Darbury as usual. Everybody would call upon them; and everything would be nice, respectable and conventional.

But while everybody purred contentedly over this satisfactory romance, a bombshell exploded in their midst, launched by the heroine herself. Instead of spending the next four months amid dainty needlework, her mind oblivious to all save the prospective bridegroom and the dressmaker, she shattered all traditions by announcing her intention to accompany an aunt, Mrs. Stockley's half-sister, to Australia. Darbury gasped. But it gasped yet more upon discovering that the journey was to be made, in ultra-modern style, by airplane. An ordinary ship would have seemed at least respectable.

The ostensible reason given was merely a visit to the aunt's colonial relatives. But, of course, everybody knew better than to believe that; a deeper motive was needed to inspire such a risky wild-goose chase. Could there be private trouble between the engaged couple? But the girl herself went about as usual, only a suppressed excitement deepening the already deep blue of her eyes, bubbling out occasionally into scraps of confidential speech which yet were no confidences at all.

"Such an adventure!" she exclaimed, when Miss Brown sought to probe to the soul of this problem. "The only one I have ever had. There will never be such another chance."

This from one who should have been deep in the adventure of marriage! Miss Brown was rather shocked. Hugh, she learned, had been averse to the idea at first. Quite right and proper! He had also steadfastly refused to go too; and Darbury had agreed with the decision. That a man should give up the routine of autumn pursuits was unheard of . . . Besides, he managed his father's extensive property, and the harvest would soon be in full swing. Darbury, like Hugh, was essentially practical.

Great difficulty, it transpired over the tea cups, had been experienced in overcoming Mrs. Stockley's objections. But as she, like many weak women, usually took refuge in tears when thwarted, little direct information was obtained.

However, Darbury persevered in its ferreting tactics, at last gaining a little more light. Mrs. Field paid one of her brief visits to her pretty house; and it became known that she had arranged everything. Everybody said "Oh-h!" in a drawn-out syllable which expressed volumes; for Mrs. Field was accustomed to doing extraordinary things, without bowing to convention. The aviator proved to be her cousin, Alan Croft, a man well known in aviation and in the engineering circles of many lands. After having swooped down upon England from Australia in a super-machine of his own design—brilliantly achieving the long test trip with two passengers in addition to his crew—an influential firm had cabled agreement of purchase, pending an immediate, equally successful, return journey. So much they gleaned. But why or how Mrs. Field had maneuvered for Barbara Stockley and her aunt, Miss Dolly Davies, to be his passengers on the return journey, Darbury was left to conjecture, Mrs. Field being a woman who kept her own counsel.

A rumor soon arose that the aviator might be expected at the "House on the Moor," Mrs. Field's home, for the week-end. This, clashing with a counter fete at which most of the Darburyites were assisting, raised them to a state of unusual excitement. He might be there. . . .

"That Won't Matter. He Is Only the Pilot."

II

The Darbury fete, being in aid of a hospital fund, was held in the grounds of a neighboring mansion, the winter garden of which was utilized for dancing.

Barbara and Miss Brown were in charge of the sweets and tobacco stall. After a morning spent in preparations for the fete, and an afternoon behind the stall, Barbara was feeling unutterably bored.

Then, suddenly, she was aware of a man's figure standing near; and knew, without looking up, that she was being intently scrutinized.

"I think you are so brave to fly to Australia!" Miss Brown exclaimed. "And with a strange man, too! Doesn't Mr. Hugh mind?"

Barbara laughed at this typical Darbury remark.

"No! Of course not."

"But suppose you don't like him?"

"That won't matter. He is only the pilot."

Glancing up as she spoke, she gave an involuntary start at finding a direct, piercing look fastened upon her. It was not the rude stare of a man who appraises women as if they were horses; rather did it seem to scatter nonessentials and to probe to the spirit within. For a moment her own eyes seemed held by a curious compulsion.

At the same instant Mrs. Field came briskly round the corner of the tent. "Ah!" she cried. "You are here first, Alan." Then, turning to Barbara, "I want to introduce you both," she said taking an arm of each.

And Barbara, feeling uncomfortably self-conscious, too bewildered to do more than stammer a conventional greeting, was forced to lift her eyes to his. They were deep-set and gray like those of his cousin, but lacking the tenderness which lurked in hers; the little lines at their corners, surely betokening humor, appeared out of place. In her rapid glance she was dimly aware of great height, broad shoulders and a lean, deeply tanned, clean-shaven face.

"Alan borrowed a car and turned up last night." Mrs. Field smoothed over the impending awkwardness; but at that moment some one called her away.

There fell a silence, which the girl racked her brains in vain to break. She was somehow conscious of feeling acutely disappointed. This was the man who, to her inexperienced mind, had seemed a dim, unreal figure crowned by a halo of glorious achievement! This the heaven-sent deliverer, who, unknowingly, had offered that hidden self the one chance of stretching its cramped wings! Even if, as she had told Miss Brown, it did not matter, it was, nevertheless, very disappointing.

Before the pause became too uncomfortable, Mrs. Field returned and insisted upon having tea. On these occasions tea suggests a gathering of the clans. All the little cliques of the neighborhood meet in the large marquee and discuss the news they have gleaned.

Barbara was detained at the entrance; and Mrs. Field looked at her cousin with kindly enthusiasm, when they found a vacant table.

"Well, Alan? Isn't she a dear girl? And pretty?"

He responded indifferently; stooped down to tuck his panama hat under the seat; then sat up and ran his fingers through his thick dark hair.

"D—d hot in here, Madge!"

She glanced round apprehensively; then leaned toward him. "Alan, for heaven's sake don't upset any of these good people, or she may not be allowed to go, after all!"

A smile of extraordinary infectiousness lit up his face, transfiguring it; the lines of humor proved that they were not, after all, misplaced.

"Try a muzzle, Madge! How the dickens do I know what may upset the old darlings—"

"Hush! Here is Mrs. Stockley."

The grim mask of reserve quickly covered his face again.

The Darburyites, hearing that the stranger had at last arrived, soon clustered round for introductions, anxious to impress him with their own intelligence. But, with Barbara, they were doomed to bitter disappointment; for this hero refused to be lionized, and declined to talk "shop." Their intelligent overtures left him unimpressed; no pumping drew other than the briefest trickle in reply.

Slowly, to Barbara, the time wore on. More and more weary of the monotony, sick of the smell of chocolate, she became consumed with restlessness.

All the social world had left long ago. From the glass walls of the winter garden came the exhilarating, if garish, strains of dance music, tantalizing in their infectious rhythm. Barbara hummed the tune, tapping her foot in unison, occasionally surprising her companions by performing a few revolutions round the tent. In the middle of one of these she halted abruptly, for a shadow had fallen across the rays of the sun streaming athwart the stall.

"Come and dance with me," said Croft.

Her face expressed blank astonishment.

"Oh!" she exclaimed, confusedly. "I—we—only the villagers usually dance here."

"Oh, good lord!"

The amused contempt in his voice made her flush. Then, conscious of having given a wrong impression of detestable snobbery, she felt furious with herself.

"You never swerve from convention, I suppose?" he asked, watching her sensitive face in his disconcerting manner.

She looked away, uncomfortably self-conscious.

"I—Oh—" She gave an embarrassed laugh. An opening door brought a louder riot of music flooding in with the evening sunshine. "I—really don't know."

Then some queer, psychological wave seemed to pass across the sweet-stall. It brought a strange current of air from the great Unknown without, from towering mountains and deep seas scarcely dreamed of in this pretty corner of orthodoxy. And it emanated from the figure standing motionless before her, whose very appearance seemed symbolical of freedom—the freedom of mind and freedom from petty tyrannies, which is only gained by depth of vision, breadth of outlook, contact with the forces whose existence was beginning to stir faint echoes within her soul.

"Come!" he exclaimed suddenly, an undertone of impatience sounding in his word.

"Very well," she said in a low voice, "I will come."

He threw back his head a little, and smiled again.

No modern affectation showed in Croft's dancing. He abandoned himself to the rhythm of the music, with an ease which swept the girl along in sympathetic exhilaration. She forgot the imperfect floor, the clumsy couples, the staring eyes, mere instinctive dislike of this strange man, and surrendered herself to the rare joy of perfect harmony in movement. When, for an instant, she glanced up at her partner, she saw in his face a corresponding light which filled her with a momentary sense of fellowship.

Afterward, they strolled out on the terrace, flooded in the red gold of the setting sun. Barbara sat upon the low parapet. Croft flung his long legs over and drew out his cigarettes. Presently she found his glance fixed upon her.

"Well?" he asked, without preliminaries. "What about our little trip? Have you counted all the risks?"

"Risks? No! Or I might never get there!"

His quick look of approval was lost on the girl, as she glanced away with a laugh.

"When there is a chance of getting your heart's desire, would you count risks?"

"No!" he ejaculated warmly. "That's my creed."

From the determined lines of his well-cut lips, she judged this to be the truth.

"But your 'heart's desire'?" he went on; "what do you mean by that?"

She flushed faintly; the shy reserve in her nature ever made personal talk difficult.

"Surely you have that?" he suggested boldly, waving his cigarette toward the diamond scintillating on her finger.

"Oh, yes. Yes. I have, of course in that way," she replied hurriedly.

The band struck up a stirring jazz tune, a medley bringing hints of tom-toms, drums, rattling castanets, the uncouth music of the East. . . .

"Oh!" she cried involuntarily, starting up; then sitting down again. "But you could never understand," she muttered.

"What?" He watched her closely, his cigarette burning, forgotten, between his fingers.

"The craving to live—really live!—for a time! To get out into the world; to—to experience everything instead of just reading about it all; to—feel life itself! In huge cities, among vast crowds. I want to find out—" She hesitated, looking away over the meadows, with a puzzled frown. "Something seems lost, missing in some way. I—I can't explain." She turned back to him, the color in her face heightened. But he did not laugh as Hugh would have done.

"'Huge cities'?" he queried slowly. "You think you will find it in them? Why not in remote villages?"

"Oh, no!" she cried. "Nothing ever happens in them! Villages are only full of little obscurities. I want to sample bigger things—"

"They will be but 'little obscurities' in fresh places," he interrupted. "The whole world is only composed of little notes, you know, and their reverberations."

She listened in surprise. In her experience, talk like this, especially from a man, was unusual; but from one famed for a life of action it seemed little short of miraculous.

"Well," she said, enjoying the novelty of metaphor, "I want to feel the big 'reverberations'—to get among deep chords, in fact!"

"They might be rather overpowering. It's having some sort of right keynote that counts."

Naturally you begin such a story with ideas of your own about such a situation. See if you stick to them.

English Law a Paradox

One may be fined for stopping a dog fight or not stopping a dog fight. But the post office can record something even better, the Manchester Guardian relates. At a seaside town a man walked into a post office followed by a huge dog. A woman was already at the public counter, and she also had a dog. The two dogs began to fight.

The man did not attempt to interfere. He appealed to the girl assistant, who was on the safe side of the counter, to come over and part the combatants. She declined, very naturally. Eventually the turmoil ceased, and then the dog owner lodged a complaint with the postmaster that a subordinate had permitted conduct in the office and upset the pu...

A COVINGTON, KY., WOMAN

Makes Remarkable Recovery

Mrs. Harry Ashcroft Tells How Lydia E. Pinkham's Vegetable Compound Relieved Her of Severe Illness and Pain

MRS. HARRY ASHCROFT
628 BEECH AVENUE, COVINGTON, KY.

Covington, Ky.—"I was so weak and nervous I could hardly do my housework as I could not stand because of the bearing-down pains in my back and abdomen. I sat down most of the time and did what I could do in that way—as washing dishes, etc. One day a book describing Lydia E. Pinkham's medicines was put in my mail box. I saw how the Vegetable Compound had helped others so I gave it a trial. I had to take about a dozen bottles before I gained my strength, but I certainly praise this medicine. Then I took Lydia E. Pinkham's Blood Medicine for poor blood. I was cold all the time. I would be so cold I could hardly sit still and in the palms of my hands there would be drops of sweat. I also used the Sanative Wash and I recommend it also. You may publish this letter and I will gladly answer letters from women and advise my neighbors about these medicines."—Mrs. HARRY ASHCROFT, 632 Beech Avenue, Covington, Kentucky.

Mrs. Boyer Also Found Help

Gilman City, Missouri.—"I was in such a condition that I could not eat nor sleep to do me any good and I felt draggy all the time. My head ached, my right side and back would almost kill me at times, and I could be on my feet only a short while at a time. I was irregular and so nervous, irritable and despondent that I thought I could not stand the strain much longer. I had been this way more or less for ten years, but the last two years was just terrible. I took medicines, but got little relief until I began to take the Vegetable Compound. I took three bottles before I could see any change at all. I have taken seven in all and am improving right along. I have used Lydia E. Pinkham's Sanative Wash and take the Liver Pills. I can do most of my work now, and I live on a farm and there is lots of it to do. I wash, iron, hoe the garden, raise chickens and tend to the milk."—Mrs. T. M. BOYER, Gilman City, Missouri.

Famous Tree Gone

The dwarf tree made famous by Robert Burns, who, under its sheltering branches kept tryst with the Mary that afterward slept by "sweet Afton's murmuring stream," was recently blown down, snapped at the butt.

The war has made table linen very valuable. The use of Red Cross Ball Blue will add to its wearing qualities. Use it and see. All grocers.—Advertisement.

CHILDREN CRY FOR

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Absolutely Harmless - No Opiates. Physicians everywhere recommend it.

Changing the temperature of the water in which fish live will produce new types, according to scientists.

A "pick-up" motor sweeper, with gutter broom, for cleaning streets, requires only one man for operation.

We want you to make this test

WE want every weak, puny, fagged-out man and woman in America to make this test: buy one bottle of Tanlac at your druggist's, take it according to directions for one week and see how quickly you get started back to full strength and vigor.

We know what we are talking about. Tanlac has helped millions. In our files are more than 100,000 letters of praise from grateful users.

Don't confuse Tanlac with ordinary patent nostrums. It is Nature's own tonic and builder, compounded from roots, barks and herbs that we gather at great expense from the four corners of the earth.

Tanlac goes straight to the seat of your trouble; cleanses and purifies the blood stream; puts your digestion in proper shape. First thing you know you have an appetite like a starved child. You rest at night and your whole body begins to feel the stir of strength and energy.

Don't you be discouraged. Don't put off testing Tanlac another day. Get a bottle now and in a week you should notice signs of real improvement.

Brought Health and Happiness

"Since the Civil War indigestion and stomach trouble have been the bane of my existence. Tanlac made my weak stomach sound and did away with all signs of indigestion. In fact it has brought me health, strength and happiness and I give it unqualified endorsement and praise."

Hon. A. P. Tarbox,
217 W. 23rd St.,
University Place, Neb.

GOOD ROADS

CONGESTION BIG RURAL PROBLEM

A notable step in abating traffic congestion, taken jointly recently by Chicago and the suburban towns near it, was brought to public notice at the motor rodeo dinner, held at the Union League club in New York city by Thomas H. MacDonald, chief of the United States bureau of public roads.

The motor rodeo dinner is an annual event, tendered to editors, writers and publishers by the highways committee of the National Automobile Chamber of Commerce. Roy D. Chapin, chairman of this committee, presided, and Roy L. McCardell spoke as representing the guests.

"One of the chief troubles with both city and rural traffic today," MacDonald said, "is that there is a 'no man's land' between city and rural communities, which chokes traffic in both directions. That is, in the outlying districts of most metropolitan areas there are villages or suburban cities which, either through lack of funds or for political reasons, do not develop a street system fit to handle the traffic.

"There is such a borderland area in Chicago, where the traffic of fifteen streets pours into three streets, causing congestion to back up all along the line. This is a typical case. Around and in close contact with Chicago are eighty-nine jurisdictions which are working together on a centralized traffic program which is to be developed as a unified system and all put into effect at the same time.

"Without some such unifying of traffic progress in all our large metropolitan areas is going to be very difficult, because, as matters now stand, such territory is often divided between city, state, county, village, township, suburban city and orphans, making jurisdiction uncertain."

A. J. Brosseau, a director of the National Automobile Chamber of Commerce, another speaker at the dinner, discussed highway finance, advocating that all motor vehicle fees should be devoted to highway purposes, and that the state should be the sole motor vehicle taxing body.

"The saving in cost of operation to the motor vehicle user who travels over an improved highway is more than enough to maintain the highway," said Brosseau, "so that in effect the user who agrees to maintain it reduces his expenses enough when he travels over an improved highway so that it doesn't cost him a cent."

On this basis, which was supported by the experience of North Carolina and other states, the speaker argued, the motor vehicle should pay for all highway maintenance, and in some cases, where it was no undue burden, should also pay part of the construction cost.

"All special taxes on automobile users," he said, "should be devoted to highway purposes—whether for maintenance, reconstruction or construction—and expended under the supervision of the state highway department. The state should be the sole taxing agency."

Pioneer County Gives Lesson in Wider Roads

Way back in 1908 Wayne county, Mich., built the first stretch of improved road. Little realizing that in a few years traffic would have increased many, many times, by virtue of Detroit's becoming the center of the automobile industry, the authorities built only a narrow strip at first.

Soon, however, this pioneer county recognized the need of wider roads to handle increased traffic efficiently, and began building all its new pavements wider. To prevent congestion on the earlier strips of road, it widened the old pavements by adding new strips at the side.

Now, as traffic in all parts of the country increases with the extension of paved roads and the increase in motor vehicles, other vicinities are rapidly recognizing the need of building wider road pavements and widening old ones which are no longer adequate to traffic demands. Those in charge of road building have come to realize that only by having wider roads can they have highways safe for modern heavy travel. They realize that congested traffic on narrow roads must necessarily result in more accidents and greater loss of life and property.

Major Road Project

One of the major road projects for this year is building roads that will open up the entire Adirondack mountains region to motorists. This project is expected to be well under way by summer and to be virtually completed by the end of 1926 or the summer of 1927.

Hazard of Straight Roads

According to the North Shore Motor club of Wisconsin, straight roads, with their fascination for the driver who likes to shatter speed laws, are responsible for more automobile accidents than curves, hills or even railroad crossings. The warning is based on a recent Wisconsin accident survey, which discovered that 2,044 of a total of 2,981 road accidents in the Badger state in 12 months occurred on straight roads which offered an opportunity for speeding.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1926, Western Newspaper Union.)

Outposts of the Old S. W. Frontier

When white "squatters" began trespassing upon the lands set aside for the Choctaw Indians in the present state of Oklahoma a hundred years ago, the government determined to establish military posts in that region to protect its red wards. Accordingly Col. Matthew Arbuckle, commandant at Fort Smith, Ark., was ordered to select sites for two new forts, one near the mouth of the Verdigris river in the valley of the Arkansas and the other near the mouth of the Kiamitia in the Red river country.

Arbuckle asked Col. Auguste P. Chouteau, a Creole French trader who was familiar with the region, to select the site for the post on the Verdigris and by the middle of April, 1824, Chouteau and Capt. Nathaniel Pryor, another well-known frontiersman of that day, had chosen the place. Within a few weeks Arbuckle had established there a stockaded fort and it was occupied by a force of 300 men. This was the beginning of Fort Gibson, named in honor of Col. George Gibson, then commissary general.

The first few years of Fort Gibson's existence were uneventful. It was a lonely outpost with canoe travel on the Grand river as the only means of communication with the outside world until 1828, when the first steamboat arrived. In 1832 Washington Irving visited the post, and in his book "A Tour of the Prairies" we are given some interesting glimpses of life at this far western military post.

In 1844 there was organized at Fort Gibson an expedition to return to their people some captive Kiowa and Wichita Indian children, who had been ransomed from the Osages, and Gen. Henry Leavenworth came to the fort to take command. This was the first appearance of the newly organized First dragoons which numbered among its officers such celebrities as Henry Dodge, Stephen W. Kearney, Edwin V. Sumner, Philip St. George Cooke and Jefferson Davis. George Catlin, the famous Indian painter, also accompanied the expedition.

From that time on Fort Gibson was an important post in the southwest and with the exception of three or four years just before the Civil war it was continuously garrisoned by regulars until 1890. During the Civil war it was the center of operations for the armies which were contesting for control of Indian Territory but after the war the frontier had been pushed so far beyond it that it gave place in importance to several other Oklahoma forts, notably Fort Sill.

A Citadel of the Plains

"Whenever the history of the Southwest shall be written, more than one long and interesting chapter must be devoted to the first permanent settlement on its plains and the first permanent settler there," writes George Bird Grinnell, the eminent historian of the west, and he is referring to Bent's Fort on the Arkansas and Col. William Bent, Colorado's first settlement and first settler. What Fort Laramie was to the Oregon Trail country, Bent's Fort (which, like Laramie, was also first called Fort William) was to the land through which ran the Santa Fe historic trail.

It was in 1828 that William Bent, his brother Charles and Ceran St. Vrain began this post, 15 miles above the mouth of the Purgatoire river, and when they had finished it in 1832 it was a veritable citadel of the plains. More than 150 Mexicans had labored on it, building it of adobe, 180 feet long, 135 feet wide, 15 feet high and with walls four feet thick, impervious alike to Indian arrow or torch. Two high loop-holed towers stood at opposite corners and over the main gate was a watchtower in which was mounted a telescope which swept the whole surrounding landscape.

Bent's Fort is rich in history for it stood on a great highway along which swept the whole colorful procession of western conquest. It saw the Doniphan and Kearney expeditions march past on the way to Mexico in 1846; it saw the long wagon trains of the Santa Fe trade winding along that historic trail and it was visited by many famous travelers and explorers.

After the decline of the fur trade Colonel Bent tried in the early '50's to sell his fort to the government as a military post but failed. So in 1852 he laid charges of gunpowder under it and blew its massive walls into the air. By this time the settlers were arriving and near here grew the present city of Pueblo.

In 1853 Bent began a new fort of stone on the north side of the Arkansas river about 38 miles below the site of the old one. In 1859 the government leased this fort and named it Fort Fauntleroy, then renamed it Fort Wise, in honor of the governor of Virginia. But when he joined the Confederacy at the outbreak of the Civil war it was renamed Fort Lyon in memory of the Union general who fell at the battle of Wilson's Creek, Missouri. Although the site of the post has changed several times, the Fort Lyon, Colo., of today claims as its progenitor the historic "Bent's Fort on the Arkansas."

Wanted a Witness

Dora's aunt gloomed at her severely over the breakfast table. "As I glanced into the drawing-room last evening, I saw you with a young man's arm around your waist."

"Yes, auntie," said Dora brightly, "I was waiting for you to pass the door and see us. You see, young men are so very slippery nowadays, one can't have too many witnesses!"

If you use Red Cross Ball Blue in your laundry, you will not be troubled by those tiny rust spots, often caused by inferior bluing. Try it and see. —Advertisement.

SINNERS in HEAVEN

by CLIVE ARDEN

COPYRIGHT BY
THE BOBBS-MERRILL COMPANY

Without doubt this story is the work of a master. The characters are real human beings. They were faced with a thrilling situation involving a problem too trying for the average sinner and probably too great for a saint to handle; nevertheless there were smug individuals ready to condemn them.

If you regard black as always black and white as always white, you may decide that the first word of the title is most appropriate; but if you can see varying shades of gray between black and white, you will be able to observe the peculiar fitness of the last word of the title. Any way you view it, it is a great story.

Dr. Minnick was at Marion Thursday and Friday, the guest of his sister, Mrs Amanda Haynes at the city hospital She had an operation last week, and the left kidney was removed She is on the road to recovery.

By a roll call of 77 to 6 the Indiana house of representatives Wednesday passed and sent to the state senate the Smith-Clark bill to provide that on petition of not less than 40 per cent of the patrons of the school, their children may be released for two hours religious training outside of the school each week, but no credit to be given the school for the religious training.

Edna Tichenor

"Vamps" add to the interest in the majority of pictures, and in playing such parts, handsome Edna Tichenor, the "movie" star, is doing her share. This is one of Miss Tichenor's latest pictures in one of her cleverest make-ups.

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name; its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

VICTORIA

THE regal name Victoria has a fitting origin since it comes from the Latin vinco, meaning to conquer.

Vincentius was an early masculine name borne by two characters of the Tenth Persecution, and later by one of the great ecclesiastical authors at Lerius in Provence. Vincente de St. Paul added honors to the name, but it was victor, the past participle, which gave rise to Vittore in Italy.

The first Victoria was a Roman virgin martyred in the Mexican persecution, from whose name came the Italian Vittoria, borne by the admirable daughter of the colonne from whom France and Germany seem to have learned it, since after her time, Victoire and Victorine became common in France.

It is fitting that the ruby, king of precious stones, should be the jewel assigned as Victoria's own. Its inextinguishable flame, as suggested by its color, asserts that its inner fire cannot be quenched. It is said to preserve the mental and bodily health of its wearer, remove evil thoughts, control high temper, reconcile disputes and dispel pestilential infection. To dream of rubies signifies unexpected guests.

Friday is Victoria's lucky day, and three her lucky number.

Wordsworth translated from the Italian of Michaelangelo a charming poem to Vittoria:

Yes, hope may with my strong desire keep pace,
And I be undeluded, unbetrayed;
For if of our affections none find grace
In sight of Heaven, then wherefor hath God made
The world which we inhabit? Better plea
Love cannot have, than that in loving thee
Glory to that Eternal Peace is paid,
Who such divinity to thee imparts
As hallows and makes pure all gentle hearts.

A LINE O' CHEER

By John Kendrick Bangs.

ST. PATRICK'S DAY

I WISH good old St. Patrick might
Come strolling back some pleasant night
And cure the awful indigestion
That rises from the Irish question.

He was so saintly, wise, and good,
I'm sure the fine old fellow could
Point out a way to final action
To everybody's satisfaction,

And start the world along the ways
Unto the dawn of happier days
And like the fields with spring's release
Make green the uniform of peace.

Mrs. Ethel McCulough and son, Ralph, of Mt. Pleasant, were Sunday guests of Mrs. Bessie Shaffer and children.

Byron Miller is razing the old blacksmith shop, an old land mark and was built and used for a dwelling house many years. A number of families have made their home there. Byron expects to build a garage on the site.

Come in and see the list of prominent farmers who have already placed their order for the new lime and phosphate fertilizer. At Curie's.

Tuesday was the fifth anniversary of little Russell Shaffer, son of Mrs. Bessie Shaffer. Relatives to the number of ten made the little fellow very happy by surprising him in the evening, bringing ice cream and cake, the cake having 5 candles representing five birthdays Those present were Alfred Smith and wife, Iven Smith and wife and Willie Miller and wife of this place, G. W. Cline and wife and Mrs. Omer McCulough and son, Ralph, of Mt. Pleasant. All left wishing the little fellow many happy birthdays. He received some nice and useful presents.

Community Building

How Newspaper Helps to Build Community

"The outstanding character of the newspaper as a medium in community advertising," says a bulletin issued by the Associated Advertising Clubs of the World, "is stressed in the book 'Community Advertising,' by Don E. Mowry, chairman of the extension committee of the community advertising department of the Associated Advertising Clubs." Quoting from Mr. Mowry's book, the bulletin proceeds in part:

"The newspaper is specific circulation in a territory you desire to reach. One can buy the circulation in the communities or sections he desires to reach by using the newspaper mediums in that community or that section. The whole question is approached in much the same manner that one approaches a problem involving the sale of any commodity. Commercial successes can be credited to the newspaper by the hundreds. Communities are recognizing the value of the newspaper.

"The newspapers of the country are behind all community undertakings," the author continues. "They help build communities. They have a right to expect support from those community advertising organizations which are aiming to develop communities. The money raised through newspaper publicity, if given freely, should not be expended in other mediums exclusively to the detriment of newspaper advertising."

Fire Protection Now Built In With Lath

A new tendency has been recently noted in the construction of better-built homes. The particular development referred to is the use of materials offering greater resistance to fire. Among these are metal lath and plaster, which having been officially accorded the National Board of Fire Underwriters' full one-hour rating as respects their use as protection for lumber studs and joists for walls and floor, are now recognized by leading architects as the most economical form of built-in fire protection suitable for home construction.

Mindful that fires which originate in basements are most inaccessible and difficult of control, it was decided to use metal lath and plaster on that portion of the basement ceiling over the heating plant and boiler room. This construction will confine a fire to the room of origin for one hour, giving ample time for occupants to escape from the building to summon the fire department and extinguish the fire before it has had a chance to spread and involve the entire building.

Making for Prosperity

Every citizen wants to preserve what he thinks is good; every citizen wants to improve what he thinks is bad; every citizen wants to look after his own private interests. These three desires are mingled in everybody, but in different proportions. A preponderance of the first makes a reactionary; a preponderance of the second makes a progressive; a preponderance of the third makes a self-seeker and a place hunter. Undue excess of any of the three produces a more or less evil result. Excess of the third no doubt produces the worst result; yet the third desire lies at the very root of true prosperity.—Arnold Bennett.

Just Like That

Elderly Movie Patron—I can never remember what pictures I have seen. They mostly go in one eye and out of the other.—London Mail.

CONCORD

Ralph Hull spent Sunday under the parental roof.

Mrs. Ira Bone called on Mrs. Jane Hull Sunday afternoon.

Miss Irene Ball spent from Friday evening until Sunday afternoon with Miss Cleota Morr.

Ford Jackson, wife and baby, Iris, spent Sunday with Floyd Farver and family at Auburn.

The road men are kept quite busy around Concord here of late, we sure do need good roads.

Howard Krise and wife recently called on Mrs. Mary Moor, who has been suffering with her limb.

Orla Baker and Ford Jackson are remodeling Jasper Snyder's house, recently purchased of Miss Pearl Shurts.

Mrs. Dell Draggoo's arm is getting better. She called on Mrs. Jane Hull, Mrs. Goings, and Ilene Johnson, last Friday, some were improving and others not so well.

"Our Flag"

A short historical essay on the making of our American Flag, as written by Paul Fetter, of Concord.

As you all know about 1775 or or '76 the British were pressing the Colonists very hard for taxes, so hard in fact that they were getting desperate. They wanted to be a nation by themselves, and you all know a nation needs and must have a flag. Up to this time they had been using the British flag, but now that they wanted one of their own many were soon made; such as the "Rattlesnake Flag," the "Pine Tree Flag," whose motto was an appeal to heaven, also the "Flag of the New Moon."

Congress had the say as to what flag should be used, so it was not until 1777 that they were ready to choose a flag. One day in May a number of congressmen accompanied by George Washington went to a lady seamstress known as Betsy Ross, and asked her to make a flag. Washington told her it was to have thirteen red and white stripes to stand for the thirteen colonies. In the upper left hand corner was to be a blue square containing thirteen white stars. Washington said to make the stars six pointed, but Betsy Ross said, "No, I will make them five pointed because the stars of heaven are the same.

Congress adopted this flag on June 17, 1777. The colonies at last had a flag under which they were soon to gain their absolute freedom. This flag was first raised at the masthead of the Ranger, the ship of John Paul Jones, and on the walls of Fort Schuyler in New York

Charler Sumner once said, the very colors of our flag have a language which was recognized by our fathers. White is for purity, red for valor, blue for justice and all together bunting, stripes, stars and colors blazing in the sky, make the flag of our country to be cherished by all our hearts to be upheld by all our hands. Since then the stripes have been left the same, but the stars changed one at a time as the new states enter the union, until now we have forty-eight states with forty eight stars in our flag

Our flag has never known defeat. To Washington it meant independence on July 4, 1776; in 1812 it meant freedom of the seas to all nations; in 1861, 2, 3 and 4 many died that no star should be removed and in 1917 our boys followed it across the ocean to take part in the World Wide War and struggle for democracy.

Folks we are the flag makers of tomorrow. The flag of the future will be what we make it, therefore let us help to make it great, even greater than it was yesterday.

Driver Changed His Mind Before Trial Commenced

Just before the case of the state against William W. Driver was to go to trial before a jury in the DeKalb circuit court last Wednesday morning, the defendant decided to submit to the penalty imposed by Mayor Warren Lige of Auburn and he therefore dismissed his appeal.

Driver's home is just south of the DeKalb-Allen county line and he is a well known farmer in the vicinity of Spencerville. He was formerly justice of the peace at Woodburn. He was arrested at Spencerville last September. He had driven his automobile into a telephone pole and then, hoping to elude the officers, he hid in an ice box in a Spencerville meat market.

Driver was first arraigned in Justice T. C. Ford's court on a charge of public intoxication. He pleaded guilty and was fined $5 and costs. Then he was taken before Mayor Lige to answer to a charge of driving an automobile while intoxicated. Seven witnesses testified against him and he was found guilty. He was fined $1 and costs and sentenced to the penal farm for ninety days. He thereupon took an appeal to the circuit court.

The prosecutor learned that Driver had been previously convicted in Allen county three times for driving a car while intoxicated and twice for public intoxication.

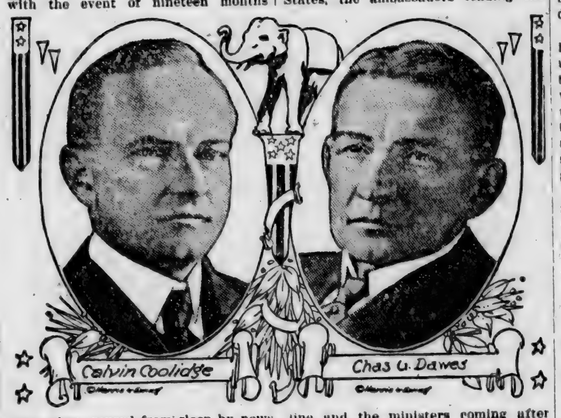
COOLIDGE, DAWES ARE INAUGURATED

Taft Administers Oath of Office to President and Vice President.

Washington.—President Coolidge was inaugurated with one of the simplest ceremonies of a hundred years. Almost at the same time Vice President Dawes also took the oath of office.

For the first time, not only the thousands who gathered in Washington heard a President deliver his inaugural address, but millions throughout the United States, and probably many elsewhere, heard the address by radio. President Coolidge spoke to probably the greatest audience, seen and unseen, that ever has been addressed by any other man in the history of the world.

With all its studied simplicity and lack of display, which was at the express direction of the President, the ceremony was in marked contrast with the event of nineteen months



ago, when, roused from sleep by news of the sudden death of President Harding, Mr. Coolidge took the oath of office administered by his father in the glow of an oil lamp in a Vermont farmhouse.

The only vice president since Roosevelt to succeed to the office by popular election, President Coolidge renewed his oath before Chief Justice Taft, the only President to take it before a former President.

Ceremony Follows Tradition.

The ceremony was the traditional one, and was carried out on a platform built at the east front of the capitol, before the great steps leading to the entrance at the middle of the building, a spot selected in the historic compromise of generations ago when the house and senate each contended that the inauguration should take place within its own precincts.

While congress was winding up its eleventh-hour business, the official congressional committee called at the White House to escort the President to the capitol. This was soon after eleven o'clock.

Pennsylvania avenue, despite the restricted program which cut down the show, was packed as the President, escorted by a troop of cavalry and guarded by secret service men, passed along.

At the capitol he went at once to the President's room, adjoining the senate chamber, and busied himself disposing of acts of congress.

The prelude to the inaugural procession—for the President's journey to the capitol is always the first part of the actual ceremony—was quite different from that of four years ago, for President Coolidge had no outgoing President to accompany him.

Changes of Four Years Recalled.

Four years ago Warren Gamaliel Harding, a picture of robust health, so soon to pass away, rode with the pathetic figure of Woodrow Wilson, and, with deprecatory gestures to the crowd, stilled cheers intended for him, out of consideration for the already dying man who rode in the carriage beside him. Little did anyone dream that before another inauguration had rolled around Harding would have preceded Wilson to the great beyond.

While President Coolidge was at work in the President's room at the capitol, Vice President-Elect Dawes and his party arrived and took their places in the vice president's room, where they were greeted by Senator Cummins of Iowa, who since Mr. Coolidge became President has presided over the senate. There Mr. Dawes and his party awaited the beginning of the vice presidential inaugural ceremonies in the senate chamber, which preceded by a few minutes the inauguration of President Coolidge in the open air outside.

The senate galleries early had been filled by those fortunate enough to get cards of admission. Many women, scarcely less well known than their husbands in national affairs, shared places with members and families of the diplomatic corps and the official set.

Dawes Takes Oath of Office.

Just as the Sixty-eighth congress died by constitutional limitation at noon, the senate of the Sixty-ninth congress came into being, called in special session to consider executive appointments and, incidentally, to inaugurate the vice president.

A special session of the senate is really not necessary to inaugurate the vice president; he could take the oath of office before a justice of the peace if he chose, and then meet with the senate when it assembles in regular session next winter; but it is the custom.

The diplomatic corps, all invited to the ceremonies, assembled in the marble room which adjoins the chamber, resplendent in their gorgeous full-dress court uniforms. A new doyen headed them this time, Senor Riano, the Spanish ambassador. He took his place as dean with the departure of the former French ambassador, Jules J. Jusserand, who had occupied the place of honor at five previous inaugural ceremonies.

The diplomatic corps entered the chamber according to rank and precedence, fixed in order of the time they have been accredited to the United States, the ambassadors leading the line and the ministers coming after them.

Then came the justices of the Supreme court, headed by Chief Justice Taft, in their somber black silk robes of the bench, and taking chairs placed for them at the right of the incoming vice president.

Senate Chamber Crowded.

After them, members of the house of representatives entered through the main door and took places reserved for them on the west side of the chamber, while the senators gathered at their reserved places on the east.

Sprinkled among them were distinguished officers of the army and navy, a few former members of congress, and, last, persons who have publicly received the thanks of congress and, therefore, are entitled to places on such occasions.

When all the party was assembled, the senate chamber—a comparatively small room which ordinarily seats 96 senators and attaches—contained more than 700 persons on the floor, with many of them necessarily standing.

When all was ready in the chamber, President Coolidge, escorted by the committee on arrangements, was shown into the chamber through the main door, and to a seat on the floor at the right-hand side of the center aisle, and facing the rostrum, on which Vice President-elect Dawes was immediately escorted to a seat.

The senate chaplain offered a prayer, and Senator Cummins, as president of the senate, called the assemblage to order.

A silence settled over the company as Senator Cummins and the vice president-elect faced each other. Both raised their right hands, Senator Cummins read the vice president's oath, Mr. Dawes repeated the words as they were spoken, and, as the result of this brief ceremony, the country had a vice president for the first time in 19 months.

Inauguration of the President.

The assemblage within the senate chamber thereupon began moving in order of precedence to the inaugural stand outside.

A commodious steel canopy had been erected so that President Coolidge could take the oath of office in full view of the waiting thousands, and not be compelled to go through the exercises inside the capitol building, unless the weather was unusually severe.

Stretching to the right and left of the President as he faced the crowd, and at the lower level running from north to south, were long rows of temporary benches for the seating of the several thousand persons invited to places at the ceremony. Each senator and representative had some seats at his disposal, but none had enough for all the demands made on him.

Immediately in front of the President's stand was the marine band, resplendent in scarlet coats and gold-braided caps.

Coolidge Takes Oath on Family Bible Used in 1923

Washington. — President Coolidge took the oath of office on the family Bible used in his Vermont home for many generations. This is the Bible the President used when he took the oath of office under the kerosene lamp in his ancestral home after the death of President Harding.

The Bible has been in possession of the Coolidge family for many years and ... the dates of the births and deaths of several generations of Coolidges. Colonel Coolidge, who administered the oath to his son in August, 1923, brought the Bible to Washington for the inauguration ceremony.

Airplanes Bomb Island

Schematic Diagram of Three-Tube Receiver Which Works Well and Is Very Easily Constructed.

Fans who would like to experiment with a receiver that will tune in the very low wave-lengths so that they may listen to the broadcasting relay stations which operate on this lower band, will find such a receiver here described.

Fans who are contemplating learning the code should find such a set useful because one trans-Atlantic station at Tuckerton operating on a low wave, near 100 meters, sends slowly and gives the code learner a chance to try his skill. The new code fan will also find hundreds of amateur stations sending, the reception of which should give him practice.

The accompanying diagram shows a receiver of very neat appearance which works well and is also very easily constructed.

The following material is necessary to build the set:

Instruments Needed.

One panel, 7 by 18 by 3-16 inches.
One Globe low-loss tuner (short-wave type).
One low loss variable condenser, .00025 mfd. capacity.
One Midget variable condenser.
Two audio transformers, ratio 3 to 1.
One grid condenser, .00025 mfd.
Three sockets, standard base.
Three rheostats.
One subpanel.
One double-circuit jack.
One single-circuit jack.
Two four-inch dials.
Seven binding posts.
Three tubes.
One grid leak, two megohms.

The filament and plate battery leads may be embedded in a special subpanel, and this greatly simplifies the wiring of the receiver.

The transformers and tube sockets should be mounted on the subpanel in the positions shown.

Grid Condenser Mounting.

Mount the grid condenser directly on the grid terminal of the detector tube socket. To facilitate the wiring, all possible connections to the instruments on the subpanel should be made before attaching the subpanel to the main or control panel. These connections are as follows: The positive filament connection to all tube sockets; all connections to the first audio-frequency transformer (or detector jack if one is used), and the secondary terminals of second audio transformer.

The drilling of the main control panel is next in order. The distance between the center shaft of the tuner and the center shaft of the secondary condenser is approximately five and one-half inches. The center hole for the detector filament control is three and three-quarters inches from the shaft hole of the variable condenser. Inasmuch as drilling templates are supplied with all these instruments, it is a simple matter to locate the mounting holes.

When the control panel has been drilled and the various instruments mounted in place, it should be fastened to the subpanel. Be sure that you have carefully followed the factory instructions for connecting the detector filament control. The small black bushing must be placed over the smaller of the two mounting screws so as to insulate the soldering lug, to which the battery lead is connected, from the metal end-plate of the filament control.

Make all leads as short and direct as possible and prevent them from paralleling one another, particularly the plate and grid leads.—Philadelphia Public Ledger.

Good Ground Connection Is of Great Importance

A good ground connection is vital to the best operation of the radio receiver. On crystal sets, where the amount of energy employed is small, the additional volume resulting from the use of a good ground or several good grounds is readily noticeable. The increase in volume with tube sets is not so pronounced, but the range of the receiver improves as the efficiency of the ground connection is increased.

The best ground connection is made by connecting to the cold water pipes, or to a pipe or iron rod driven into the ground until it reaches moist soil. In either case the connection between the ground wire from the set and the metal of the pipe is of utmost importance. Simply wrapping the wire around the pipe is a makeshift.

It is difficult to solder a wire to a pipe, especially if the pipe contains water. Scrape or file the surface of the pipe until all paint and rust have

Clamp Supplied With Winged Nut for Tightening.

been removed. Place a ground clamp around the prepared spot, tighten the clamp and then solder the ground wire to the clamp. In this way a good connection is assured.

Inasmuch as the ground clamp is usually located in some out-of-the-way place, to be forgotten after it is installed, it is most important that it be constructed of good material that will not rust or corrode. When buying a ground clamp try to secure one that is constructed of copper, is rugged and substantial, that has a wide band, so that a good surface contact can be secured all around the pipe instead of in one or two points, and can be easily installed.

Brass Angle Brackets Are Cheap and Useful

Short brass strips bent in the form of a right angle and with screw holes bored near each end are now in stock in most radio supply stores. Such brackets can be made at home by the radio fan but the stores sell them so cheaply that home construction is not worth while. They are useful for mounting a subpanel on the front panel or for mounting the panel in a vertical position on the baseboard.

HERE'S THE WAY TO CARE FOR BATTERY

KEEP the battery charged.

Never lay tools on top of a battery or they may cause a complete discharge by short-circuiting it.

Add nothing except distilled water.

Acid should never be added unless some has been spilled from the cells accidentally.

Boiled water is not distilled water.

A discharged battery will freeze easily, while a fully charged one will not freeze in this climate.

To find the positive and negative poles of a battery when no marks are visible fill a glass vessel half full of salt and cover with water. Run a wire from each terminal of the battery and hold them about one inch apart in the solution. Bubbles will rise from the negative wire. Also, there is usually more greenish corrosion around the positive terminal than the negative.

Never light a match and look in the vent cups. The hydrogen gas in the battery is liable to explode and cause serious injury to the eyes.

Keep the battery charged and don't let it get "thirsty."—Chicago Evening Post.

When Necessary Amount of Power Is Lacking

Many good sets fail to deliver sufficient volume on the loud speaker because they are not supplied with the necessary power to do so. Forty-five volts on the plates of the amplifiers will not deliver enough current to the magnets of the loud speaker to produce loud signals. Ninety volts will give much better results, and is certainly worth the additional cost. An extra grid bias is sometimes necessary with higher voltage, and this is supplied with a 4½ volt C battery, which is connected between the F post of the transformer and the filament. The negative terminal of the battery connects to F and the positive terminal to the filament.

Care of Headphones

Never remove the caps from headphones. This is decidedly harmful to the receiver; that is, it impairs the efficiency of the units for the following reason: When the phones are tested in the factory the receiver caps are tightened until the pressure upon the diaphragm is just right. This test is made with delicate instruments.

Standard Coil in Roberts Circuit

Suggestion That Will Be of Interest to Builders of Radio Sets.

By C. C. SHUDER

Here is a suggestion that might be of interest. Most of the ready-made coils for the Roberts circuit are rather costly and in some instances appear to be somewhat weak mechanically as regards the adjustment of the tickler.

I have used two Crosley varinds such as is shown in Fig. 1 and while I have not a permanent installation,

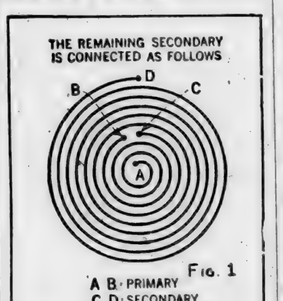

Fig. 1

they give promising results. The tapped coil on one of the varinds may be used as a single circuit for the primary or may be used as the primary and secondary of the antenna coupler by dividing it into two sections as shown in Fig. 2.

On the second varind, the tapped coil was replaced with a winding of larger-sized wire for the secondary, the sliding coil used as the tickler and the coil intended for the tickler on the

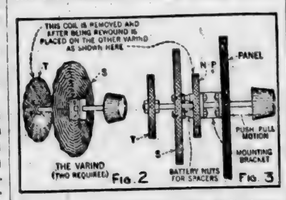

Fig. 2 Fig. 3

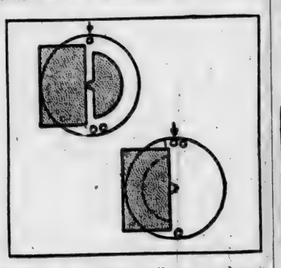
first unit, constituting the N-P form. See Fig. 3. This latter coil must be rewound with a pair of wires to provide the N-P winding.

A pleasing panel appearance is produced and the units are mechanically substantial.

Things to Know About Low Loss Condensers

In the midst of much talk about low loss coils and low loss condensers there seems to be much uncertainty on the part of buyers as to just what constitutes a low loss part of either variety. In a word, it may be said that the less dielectric or insulation



there is in either coil or condenser the lower the losses, all other factors being equal. This means thin winding forms for coils, preferably none at all, as in the basket-weave coil. For condensers it means barely enough insulation to separate the rotor and stator plates.

Crystal Detectors and the Reflex Circuits

The crystal detector is coming into wide use today through the medium of reflex circuits. One thing in favor of the crystal detector over the vacuum tube is that it is stable in operation and is noiseless. However, there are so many crystals on the market that one has to be careful in making a selection. When purchasing a crystal detector the first consideration is the maximum voltage that it will stand. Under ordinary conditions the detector should be able to stand up under a potential of at least 90 volts—a higher voltage if desirable. The fixed type of crystal detector is to be preferred. After the detector has been placed in the circuit it should be reversed to test for better results. It is characteristic for a crystal detector to work best in one direction. It is wise to have at least two detectors for the circuit using the crystal and each one should be given about a month's service. In other words, change your detector once a month.—New York World.

Detector Tube Should Be Correctly Wired

The best arrangement for the wiring of a soft detector tube is to connect the filament side of the secondary circuit to the negative terminal of the detector tube socket. When a hard tube, such as the UV-201A, is used as a detector, the filament wire from the secondary circuit should be connected to the positive socket terminal. Remember this point as well as the resistance of the rheostat when you change from one tube to the other.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Nature's Wisdom

The decree of battle is not alone nature's means for the development of animal and vegetable strength and perfection, but she arranges for the development of armaments and fighting and defense appliances to meet every improvement in the status of any species. Works on biology teem with examples showing the manner in which the mechanism of Mendelian heredity works.

Hate and Love

When I hate, I take something from myself. When I love, I become richer by what I love. To pardon is to recover a property that has been lost. Misanthropy is a protracted suicide. Egotism is the supremest poverty of a created being.—Schiller.

His Last Breath

Doctor—Poor fellow; circulation almost gone.

Sick Editor—You're a dumbbell. We have the largest circulation in the city.

Immense Statue

J. W. McSpadden in his book on American sculptors says that to carve such a huge figure as the statue of Lincoln in the Lincoln memorial from a single block would be impossible. Twenty-eight blocks of Georgia marble, perfect and without fissures or seams, were used in creating this statue. The total mass measured over 4,000 cubic feet. The statue weighs 270 tons.

Arizona

Authorities differ as to the meaning of the name "Arizona." Some say the name is derived from the Spanish words "arida zona," or arid zone. Others maintain that the word comes from "arizuma," meaning "silver-bearing."

Heard in a Shoe Store

"Why did you advise that man to buy a pair of light, instead of heavy shoes?"

"I'm in love with his daughter."

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

THE HEALTH VALUE OF SWIMMING

SWIMMING is not only a delightful recreation, it is also one of the most valuable of health exercises. It is a natural method of locomotion for practically all animals and is as natural for primitive races as walking. Savage peoples learn to swim about the same time that they learn to walk. Civilized man has gotten out of the habit of swimming, so he has to learn. The earlier in life he learns to swim, the nearer he is to the savage, and the easier and more natural swimming becomes.

As a universal exercise swimming is even better than walking, since it exercises the muscles of the legs and trunk quite as well and develops the arms and chest even better. For this reason, it is free from the objections made to some sports which develop only certain parts or groups of muscles. A few moments' study of photographs of champion swimmers, both men and women, will show that in no other class of athletes is the body so symmetrically developed.

Not only is swimming a splendid means of muscular development; it is equally valuable in developing the nerve control of the muscles, co-ordination of different groups of muscles, self-control, presence of mind and self-confidence. It develops the heart without overtaxing it and so is a much safer form of exercise than many land sports, such as sprinting, hurdle racing, football or baseball, which are apt to be carried to extremes. Swimming is so safe from the danger of overexertion that it is often ordered for weak persons or those below par, since by it weak muscles may be developed without danger. Physicians advise swimming for persons crippled as a result of infantile paralysis. The body being supported by the water, the patient is relieved of the fear of falling, his comfort is increased, and he is able to exercise his muscles with a freedom not possible on land. Tanks for the use of victims of infantile paralysis are found in most of hospitals for crippled children.

Many of our universities, colleges and high schools require ability to swim a certain distance as one of the conditions of graduation. Every child should learn to swim as naturally as it learns to walk. If a lake, river or pond is available, open-air swimming is best, but if there are no natural advantages artificial tanks can be easily and cheaply constructed in these days of concrete building. If every schoolhouse had a swimming tank as part of its equipment we would have stronger and healthier boys and girls.

GOITER IN COLORADO

AS SOON as a new method of treatment or a new and better reason for the existence of a disease is announced, scientific men all over the country begin to investigate conditions in different localities.

The interest in goiter in Ohio, Michigan, Wisconsin and other states, has caused a study of this condition everywhere. In a recent issue of "United States Public Health Reports," Dr. Robert Olsen, surgeon of the United States public health service, presents a report on the prevalence of goiter in Colorado. Doctor Olsen was sent to this state at the request of the Colorado board of health to determine the extent of goiter in that state and, if possible, to ascertain the cause.

A survey of the Denver city schools showed that out of 9,656 girls between the ages of eight and twenty-two, 2,643, or 27 per cent, had some kind of enlargement of the thyroid gland. A Red Cross survey in eight cities showed that out of 1,762 children, or 825 boys and 937 girls, between the ages of nine and twenty, thyroid enlargement was found in 53 per cent of the boys and 73 per cent of the girls. In Colorado Springs, 38 per cent of the boys and 44 per cent of the girls had enlarged thyroids. The total results for the entire state showed about the same proportions.

As usually happens when special attention is given to any particular disease, it was found that goiter was much more common than had been generally supposed. On account of lack of time and money, the survey was confined to the cities, no attempt being made to find out how prevalent goiter is in the country districts or whether it is more or less common there than in the towns.

Regarding the cause of goiter, it is now pretty generally agreed that most of simple enlargements of the thyroid are caused by lack of iodine, either in the food or the drinking water. Naturally, the easiest way to remedy this condition is to provide enough iodine for the body. Iodine is found in sea water, sea weeds, and sea foods of all kinds. It is lacking, both in the soil and in the water, in localities far removed from the sea coast. Perhaps this need of the human body for a certain amount of iodine is due to the fact that all life came originally from the sea and we still need some of the elements furnished by the sea to keep us strong and healthy.

Harsh Old English Law

Less than a century ago a child of nine was condemned to death in England for stealing paint to the value of twopence-halfpenny.

Just a Little Smile

JUST LIKE A WOMAN

"You swear you love me?" she asked.
"Yes," said he.
"There's no one else?"
"No."
"Never will be?"
"No."
"You can't live without me?"
"No."
Her eyes blazed. "How can you stand there telling such lies?" she cried.

No Trouble at All

"You seem to be very fond of jazz music," said a man to another, in the lounge of a fashionable hotel now given over to dancing.

"Yes, I like it best of all," was the reply. "You don't have to put on formal attire when you listen to it, nobody asks you who wrote it, and you don't have to pretend you understand it."

The Complete Raconteur

Two men were talking at the club.

"When I am telling a man a story," said one of them, "I stop short if I see a peculiar gleam in his eyes."

"Does it mean that he has heard the story before?" inquired the other.

"No," answered the first; "it means that he isn't listening, because he is thinking of the one he intends to tell me."

He Knew

They were doing a cross-word puzzle.

"Horizontal 18 is a conjunction, three letters," said big sister. "Johnny, you know what a conjunction is?"

"Sure," answered Johnny, "a conjunction is a place where two railroad lines meet."

IMPROVING IT TOO LONG

Wifie—Bobbed hair continues to improve the neck.

Hubby—You're improving it too long!

Our Scotch Friend

The bagpipes skirl horrendous, and
His tall plumes wave and dance—
He'd be the wonder of the world,
If he'd only wear some pants!

Impossible

Mrs. Sambo—Sambo! Sambo! Wake up.

Sambo—I can't.

Mrs. Sambo—Why can't you?

Sambo—I ain't asleep.—Centre Colonel.

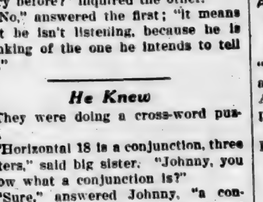
A Total Loss

Absent-minded One (starting for business)—My dear, do you know what has become of my hat?

Wife—Why, it's on your head!

"Oh, never mind, then. I'll look for it when I return home."

BEST ROMANCE



"That magazine carries the best romance I've ever read."

"Yes; its ads are particularly interesting, I think."

Theories and Facts

We seek for theories exact
To pacify these earthly scenes;
And then there comes an ancient fact
That punctures them to smithereens.

Headwork

"What is the secret of Wyse's success as a bill collector?"

"When a debtor tells him to call at four he calls at three and catches him in."

Where's the Dictionary?

"Dear Romeo," wrote the ardent Minerva to her steady, "don't 'fale' to come over Sunday."

Without a moment's delay Romeo wrote in a large, bold hand, "Dearest Min, there is no such word as 'fale'."—Capper's Weekly.

'Tis Legion

He—Tell me the name of the villain that kissed you before I did.

She—What's the use? He'd be too many for you.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

Most headaches due to lack of internal cleanliness

WHEN you are constipated, poisons form in the accumulated food waste and are carried to all parts of the body. Headaches follow. Biliousness, insomnia, lack of energy, all result from constipation, which if unchecked will lead to serious results.

Avoid Laxatives—Say Doctors

A noted authority says that laxatives and cathartics do not overcome constipation, but by their continued use tend only to aggravate the condition.

Medical science has found in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Thus, Nujol brings internal cleanliness.

Nujol is used in leading hospitals and is prescribed by physicians throughout the world. Nujol is not a medicine or laxative, and cannot gripe. Like pure water, it is harmless.

Take Nujol regularly and adopt this habit of internal cleanliness. For sale by all druggists.

17 Bridge Contracts Let by Co. Board

The DeKalb county commissioners probably established a new record in the number of bridge contracts let at one time, when seventeen contracts were awarded Wednesday afternoon.

The contracts were let in three groups, No. 1 going to Levi Pabst of Woodburn, group No. 2 to O. F. Romke of Woodburn and group No. 3 to J. E. Mullendore of Columbia City.

In group No. 1 are the following bridges: Tomlinson, Mason, Waterman, Bordner and Smart bridges in Wilmington township and Houlton bridge in Franklin township. In group No. 2 are the Platter bridge in Newville township, the Elson bridge on the Jackson and Concord township line and the Shank, Swineford, Krafft and Scott bridges in Wilmington township In group No 3 are the Hopewell bridge in Jackson township, the Carmer bridge in Union township, the Collins bridge in Smithfield township and the Clark and Auburn Junction bridges in Keyser township.

The bids follow

Group No 1: Mr Pabst, $5,990; Walb Construction Co. of LaGrange $6,165; Hartung & Surfus Fort Wayne $6,290; J. E Sweet & Sons of Woodburn, $6,752 45; F. Scholes of St. Joe, $6,477 50; Mr. Mullendore, $6,063.75

Group No 2: Mr. Romke, $4,721 60; J. E Sweet & Sons, $5,330 55; Frank Scholes, $5,116.60; Mr Mullendore, $4 824 27.

Group No 3: Mr. Mullendore, $3,547.17; Mr Romke, $3,545 24; J. E Sweet & Sons, $3 971.80; Mr Pabst, $3,588

A. J. Countryman of St. Joe, submitted bids on the Platter, Shank and Scott bridges, the Elkhart Bridge & Iron Co. on the Clark and Auburn Junction bridges and Mr Pabst on the Elson, Shank and Scott bridges, but the commissioners found after considering all the bids that it would be cheaper to award the contracts for these bridges in their respective groups.

County Engineer Calvin C. Kain submitted plans for the Goodwin bridge in Smithfield township and the Showalter bridge on the Wilmington-Franklin township line and the auditor was directed to advertise for bids to be received April 8.

LODGE NOTES

Degree work was put on Tuesday night at the I. O. O. F. hall and thirty-eight visitors from the Auburn lodge were present and took charge. Following the work a feed was enjoyed by a large crowd, given in honor of the new candidates and visitors. A dandy time was had and by the looks of things several more such gatherings will be enjoyed as a line of new members is being formed. Butler lodge will be here next Tuesday to confer degree work.

Christian Church Notes

Bible School at 9:30, communion service immediately following. Morning service.

The Loyal Delta Alpha class meeting was postponed from last Wednesday evening until Wednesday evening of this week The meeting to be held at the home of Wm. Vallieu and wife at Spencerville.

Mrs. Belle Keesler will entertain the Missionary meeting Friday afternoon of this week.

Better Eggs

A rooster by perseverance rolled an ostrich egg in the chicken yard. He called the hens and said: "Now I'm not casting any insinuations or reproaching any of you hens, but I just want you to see what is being done in other places."—Everybody's Magazine.

Old Religious Houses

Double monasteries were religious houses comprising communities of both men and women, dwelling in contiguous establishments, united under the rule of one superior and using one church in common for their liturgical offices. Ireland presents only one known example—Kildare.

His Name Unhonored

Herman Blennerhasset was born in England the 8th of October, 1764. He married his own niece and was socially ostracized. He came to America and settled near the Ohio river, where he developed a princely estate. He was involved in the scheme of Aaron Burr to form a Southwestern empire and was arrested and tried on the charge of conspiracy.

Mother's Cook Book

Mary had a little lamb
With fleece as white as snow;
The rest of all the tragedy
Perhaps you may not know.
It followed her to school one day,
According to the book;
Alas! the school where Mary went,
They taught her how to cook.
—Lippincott's.

SEASONABLE FOODS

FOR a luncheon or dinner dish the following will be enjoyed:

Browned Pressed Veal.

Cook three and one-half pounds of veal and one-half pound of lean pork until the meat falls from the bones. Season and reduce the liquor to three-quarters of a pint. Pour this over the meat and mix thoroughly, then pack in a pan. When cold, slice, dip in egg and crumbs and brown in butter.

Banana Fluff.

Cut seven bananas into slices, sprinkle them with lemon juice and shredded coconut; let stand an hour on ice. Put the fruit through a fruit press and add one cupful, lacking a tablespoonful, of powdered sugar. Fold into the mixture the stiffly beaten whites of four eggs and turn into a freezer; turn until it begins to turn hard, then add a pint of cream that has been whipped until stiff.

Cream Cheese and Walnut Salad.

Make small balls of cream cheese and put together with a walnut on each side. Arrange on lettuce and serve with French dressing.

Creole Soup.

Take one quart of tomatoes, three pints of water, one-fourth cupful of rice, one large onion, one tablespoonful of curry powder, three slices of carrot, one tablespoonful of beef extract and one tablespoonful of sugar. Cut the vegetables fine and cook with the water and tomatoes for half an hour. Strain; rub as much as possible of the pulp through the sieve. Return to the fire, add the rice, salt, pepper, sugar, beef extract. Cook the butter and flour with the curry powder to a cream, then stir it into the soup; cook for another half hour. The curry may be omitted if not liked.

Curried Bananas.

Put a cupful of desiccated coconut into a dish with a cupful of milk; if the fresh coconut is used add its own milk, if enough. Peel and slice a half-dozen bananas and put them with two tablespoonfuls of butter in which a tablespoonful of curry has been heated; brown lightly. Add a teaspoonful of the essence of anchovies, a teaspoonful of worcestershire sauce, one-half teaspoonful of salt, a dash of cayenne and, last of all, the coconut and milk. Simmer for fifteen minutes, then stir in a well-beaten egg. Serve in a well of freshly boiled rice.

Nellie Maxwell

The Appleton Family

Mr. Lysander John Appleton
Mrs. Lysander John Appleton
Miss Daysey Mayme Appleton
Master Chauncey Devere Appleton

MRS. LYSANDER JOHN APPLETON, recently visited Grant's tomb. She gave a passing glance at

it, and then said: "What a pity to waste all this fine grass when it would keep a cow."

—x—

When Lysander John Appleton gets cross his wife gets no sympathy from Daysey Mayme. "You married him," she will remind her mother. "Whatever made you marry a man like that?" Then Mrs. Appleton replies in a low mumble, and Lysander John knows she is apologizing to her children because she didn't marry a prince, or a duke, or at least a banker.

—x—

Daysey Mayme Appleton, though a devout member of church, can't resist the desire to be revenged if some one offends her. A girl recently stole her beau, and Daysey Mayme got a sweet revenge. She cut up a loaf of baker's bread into thin slices, put ham between, and tied them with baby blue ribbon. Then she made some lemonade, and invited 12 girls in to spend the afternoon, and left the Hated One out. Oh, it was sweet when she passed the ham sandwiches tied with baby blue ribbon, and watered the lemonade a little more, to reflect on what her rival was missing. "She will be sorry," said Daysey Mayme, when she returned to the kitchen with an empty plate, "when she finds out what she has missed."

The hostess served vegetable salad, sandwiches and coffee. Everyone stayed unusually late due to the fact that Mrs. Ed Leighty proved to be terribly interesting as a character reader.

Simple Way To End Night Coughing

No matter how long you have been troubled with exasperating coughing at night, robbing you of valuable sleep and thereby weakening your system and laying you open to dangerous infections, it can usually be stopped at once by a very simple treatment. Most people have found that they can sleep the whole night through undisturbed often the first time they try it.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring and hold it in your throat for 15 or 20 seconds before swallowing, without following with water. The prescription has a double action: It not only soothes soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct *cause* of the coughing. The result is you usually sleep soundly the very first night, and the entire cough condition goes in a very short time.

The prescription is for coughs, chest colds, hoarseness, bronchitis, spasmodic croup and almost every throat irritation. It contains no opiates or other harmful drugs. Economical, too, as the dose is only one teaspoonful. On sale at all good druggists. Ask for

What they think about it

TELEPHONE PATRONS KICKING ON RURAL SERVICE

While we are discussing through the News columns some things that need attention in the way of improvement for the benefit of St. Joe citizens, it strikes me that the time is opportune to call the attention of the manager of our telephone exchange to the deplorable state of our service. Prior to the disaster that befell the system on December 17th. last year occasioned by a glaze storm, our service was unsatisfactory to say the least The wires, some of which, no doubt have been in service since the installation of telephones in this vicinity, were corroded to the last degree, only a touch being necessary to break them in two. Then, when that storm came, the whole system, barring a few exceptions, was a complete wreck. Now, we are not going to ask the impossible, we realize that in emergencies like these, it would be unfair to the management, to expect that by a miracle, he could restore at once the havoc that nature wrought in a single night, but we do expect, that he will, in time, restore to his subscribers the lines they were originally connected to, and not, as at present, be summoned to answer a call that may or may not be intended for them.

It is exasperating to the last degree to be put to the inconvenience of waiting to put in a call of business importance only to find the line in use by a lot of people who are anxious to retail the latest bit of gossip. We have been informed that it is Mr. Geauque's intention to run fewer lines in rural districts; this can mean but one thing, loading the lines to their limit You can imagine the service we will get then With receivers going click, click, click, way down the line, you might as well open your door and yell your business to the world, your voice would reach as far. Economy is a good thing, but a good thing may be, at times, stretched to the breaking point, and this is just about what is going to happen if this policy is carried too far, a number of people are going to have their phones removed, they are saying it in no uncertain manner. Of course, Mr. Geauque is not altogether to blame for his bad luck, notice I say altogether, but had the system been more diligently cared for in the past it would not have been quite so bad. But the thing we are kicking about is the intention to give less service than we had before the catastrophe, and at the old rate. It won't work.

Rural Citizen.

PLOT REVEALED BY PAT

There has been considerable comment on the condition of our streets through the columns of the News and as Pat Mulligan has been reading some of them he believes there is a deep plot connected with the bad street proposition. The Irishman writes:

Faith and Hello:—Be jabers and I have got it. There is a deep plot connected with the rough streets of St. Joe. The Town Dads and the Merchants are in Ka-hoots. They leave the streets get rough to help jar people loose from their money when they come to town to do their trading. Fort Wayne has a short strip of "jar 'em loose" roads just before you enter the city to spend your money. They are wise too.

The band boys are advocating rough streets for this season. When they are marching down the street they sound one note on top of a mound and the next note down in a hole. In this manner the band occupies two different positions making the music come from different positions simultaneously, which leads the average person to believe that there are two bands playing. The band can draw two checks from the town.

Another scandle uncovered. The fire department finds that i a fire run that water and chemicals are thoroughly mixed when they arrive at the fire, which enables the crew to put the fire out of town before the fire puts the window light out, makes labor less for the same pay. Moral—economy.

Tourists come this way because they imagine they are in the mountains while going through town. The beautiful scenery of the town fails to inform them differently. Transit travel through our city is thus very heavy.

Automobile salesmen contribute financially to creating strong lobbys to use their power at the meeting of the law making body at the town hall to kill all municipal legislation favoring good roads. They

(Continued on Page 8)

Sprouting

Falling Limb Takes Life of Jake Gratz

A life, as toll of the winter sleet storm, was given last Saturday forenoon, when Jacob Gratz, who resided west of Spencerville, met his death without a moment's warning. He and his son, Daniel, had gone to the woods to cut wood and they were felling a tree, as the tree started to fall they both stepped back and a limb that had broken off by the sleet and lodged in the tree, fell and hit Mr. Gratz across the head, fracturing his skull and scratching the face of Daniel quite badly. The son took his father to the house on a mud boat and Dr Minnick and the Kinsey ambulance were called and removed Mr. Gratz to the Garrett hospital where he died shortly after at 1 o'clock. He never regained consciousness before death.

Jacob W. Gratz born in Stark Co, Ohio, near Massillon, August 2 1854 and was killed by the accidental falling of a limb from a tree on his farm on Saturday morning, March 14, 1925, age 70 years, 7 months and 12 days

He came with his parents to Indiana when nine years old and has lived in this community ever since, residing in his present home for forty-four years, which had been the home of his parents He was married in December 1876 to Rebecca Watson and to this union six children, 2 boys and four girls were born, and all living as follows: Daniel, Russell, Josephine Herrick, Olive Carpenter, Blanch Culbertson and Ruth Gorrell. Besides these are five living grandchildren. The wife passed away November 12 1920. He was baptized in the Lutheran church in infancy and always believed in the doctrines of the church.

H was a kind hearted man, a splendid neighbor and a good citizen. He was an excellent husband and father and did his duty as he saw it. He will be sadly missed in the home and in the community.

Funeral services were held from the home Tuesday afternoon at 2 o'clock, Rev. S. D. Steffey, officiating. E. R. Kinsey, funeral director. Burial at Leo.

Manessah Ruppert an old soldier died on Saturday morning at the age of 79 years of a complication of diseases, at the home of his son-in law, Charles Scott. Mr. Ruppert had been confined to his bed only a few weeks. He leaves to mourn his departure seven children four daughters, Mrs. Rosa Long of Auburn, Mrs. Ida Cope of Angola, Mrs. Minnie Packet of Michigan, Mrs. Daisy Dorsey of Scipio and three sons, Julius Ruppert, somewhere in the west, Oscar, of Antwerp and John of this place, one brother of Fort Wayne and many grandchildren. The funeral was held on Tuesday afternoon at one o'clock from the Methodist church, Rev. Brown, officiating Interment at the Scipio cemetery.

Howard P. Berry, age 36, son of Mr. and Mrs. Winfield Berry of Jackson township, died in an Indianapolis hospital, following a mastoid operation. For three years he has made his home there, traveling for C. Schrader Co. About a year and a half ago he was married to an Indianapolis lady, who was engaged in teaching.

Howard was well known in St. Joe and was sent from DeKalb county overseas with the Fifth Division and fought in the World

(Continued on Page 4)

Widney Elected President Of Farm Agents

B. V. Widney, farm agent for Whitley county, has been elected president of the northeastern Indiana district of county agents composed of thirteen counties, at a meeting held in Fort Wayne. He will serve for the coming year. Ten of the thirteen agents were present and discussed various farm problems. B. H. Repp, DeKalb county, was elected secretary.

Mr. Widney, who was formerly agent of Noble county, is one of the very active agents in this part of the state and is thoroughly familiar on all farm problems of this community. His ability was recognized by the other agents of the district in naming him president of the organization.

District Meeting Of P. T. A.

Members of Parent-Teacher councils and associations from six adjacent counties will assemble in Auburn Saturday, April 18, in an all day meeting, according to plans announced Saturday by Mrs. Clarence Green of Auburn, the district president.

The meetings here-to-fore have always been held in Fort Wayne On the date mentioned organizations from Allen, Whitley, DeKalb, Steuben and LaGrange counties will be represented and well known speakers will have places on the program. The chief attraction will be the address of Superintendent Borden of the South Bend city schools. Mrs. Esther Bowman of St. Joe is the DeKalb county president.

Road Petitions Being Circulated

Three road petitions are being circulated in Concord township, for improved gravel roads, starting at Newville and running through Orangeville to H M Widney's corners is the first The second commences at Widney's and e tends 3 miles west to Concord and the third thence west to township line

The farmers along this route are working for its establishment and they have every belief that the commissioners will act favorable upon the request.

Local Postmaster Resigns Office

A civil service examination for St. Joe postoffice will be held at Auburn April 15, due to the resignation of S. W Armstrong J. N. Grover of Auburn will conduct the examination. The local office pays a salary of $1,100 a year. The vacancy occurred March

INDIANA ASSEMBLY ADJOURNS SINE DIE

Senate Passes Penrod Bill—Lafuze Auto Measure Approved.

Indianapolis.—The much discussed Penrod "Gerrymander" bill, which caused the bolt of Democratic senators over the state line to Ohio recently, was passed by the senate 27 to 0. None of the Democratic senators voted. It was generally understood that the bolting senators had received assurance that no effort would be made to press the bill and that they had returned to the state with such a guarantee. The closing sessions were extremely stormy. In the house at the last minute the members strove to complete as much business as possible before the close. The assembly, the seventy-fourth regular session, adjourned sine die.

Auto Bill Passed

The Lafuze bill to recodify the laws pertaining to the registration and licensing of automobiles, was passed by the Indiana senate by a vote of 37 to 8.

In addition to recodifying the motor vehicle laws, the measure also makes some increase in license fees on trucks and certain types of cars, increases penalties for speeding, reckless driving and driving when under the influence of liquor, requires dimming of bright lights and makes other changes in the existing law.

As amended in the senate, the measure would place busses engaged in interstate commerce under all the provisions of the act, and other state laws affecting motor vehicles.

The senate also passed the Hull bill to authorize county councils to make appropriations not to exceed $5,000 to assist the state veterinarian and United States bureau of animal industry in employment of bovine tuberculosis inspectors, by a vote of 40 to 2.

Road Bill Passed

The house passed, by a roll call vote of 58 to 36, the Kissinger bill which seeks to abolish immediately the present state highway commission and lodge in the governor the power to name within thirty days after the passage of the bill a new commission and also to name the highway director.

Magazine Bill Killed

By a close vote the house killed the anti-salacious magazine bill which passed the senate. The action of the house overturned a majority committee report which favored the passage of the measure. It is one of three measures which have appeared in the assembly designed to curb the sale of obscene magazines and other literature.

Referendum Bill Approved

The English senate bill to provide for a referendum at the 1926 general election on four proposed amendments to the state constitution now awaits the signature of Governor Jackson. It passed the house, 93 to 0, after having passed the state senate some time ago.

The amendments to be voted on have passed the 1923 and 1925 sessions. The Steele amendment proposes to give the legislature the right to levy an income tax. One of the English amendments proposes to change the basis for legislative apportionment from the enumerator of voters to the vote cast for secretary of state so that the women vote will be counted.

Another prohibits the increase of any officer's salary during the term for which he was appointed or elected and the other proposes to give legislative power to classify counties, townships, cities and towns into classes for registration purposes.

Soldier Bonus Bill Is Killed

The Freeman house bill, which would provide for a referendum on the giving to all veterans of the World war of a bonus of $15 for each month served after two months, the total not to exceed $300 and the minimum not to be less than $30, was killed.

Indiana State News

Hammond.—Jesse Lowman of Calumet City was killed at the Standard Oil plant at Whiting when a locomotive crane swung around and caught him in a scissors grip, snapping his spinal column. Lowman was employed as locomotive crane fireman.

Boonville.—The home of Mrs. Mabel Haskett, coal operator, one of the most beautiful homes here, burned. The loss is $20,000. The household goods, personal effects and jewelry, including several thousand dollars in diamonds, were lost in the fire.

Sullivan.—Escaped gas from an old working caused by falls and squeezes caused the blast which took 51 lives at the City Coal company's mine here February 20, witnesses testified at a coroner's inquest.

Indianapolis.—Using a pen carried by the father of E. S. Shumaker, superintendent of the Indiana Anti-Saloon league, Gov. Ed Jackson signed the "bone dry" bill, which, when it becomes effective on the promulgation of the acts of 1925, about June 1, will set up more strict provisions to prohibit the use of intoxicating liquor in Indiana.

Portland.—Fire, believed to have started in some machines stored at the rear of the building destroyed the Studebaker garage, owned by H. J. McConachy, entailing a loss of $30,000

$12,000 SPENT TO SAVE $60,000,000

Indianapolis.—In a letter to Governor Jackson, outlining the activities connected with the eradicating of the European fowl pest, Dr. R. C. Julien, state veterinarian, said that less than $12,000 had been expended in the campaign and that more than 2,500,000 fowls had been examined. A total of 1,197 fowls were destroyed, for which owners received a total indemnity of $840.11, the letter said.

Included in the communication to the governor are comments by Dr. J. R. Mohler, chief of the United States bureau of animal industry, in which he says that by the prompt action of the Indiana general assembly, together with "the wise and effective policy inaugurated by the state live stock sanitary board," the poultry industry is in better condition in Indiana than in any other state in the Union which has been invaded by the disease.

He has sent his congratulations to the state veterinarian for the prompt and efficient action of the authorities. The result of this action, he said, not only saved $60,000,000 to the poultry industry in the state, but has given valuable service to the entire nation.

Indianapolis.—Arraignment of five and possibly six of the defendants indicted by the Marion county grand jury on charges of irregularities in connection with the sale of used war materials of the state highway department will be April 6 in the Criminal court. Five of the men indicted, John D. Williams, director of the highway department; Earl Crawford, a member of the highway commission; Moses and Victor Goldberg, dealers in junk, and C. William Whaley, a dealer in machinery and power equipment, have been released on bond.

Indianapolis.—Debate in the legislative halls traveled backward through time to the days of the Civil war and its heroes when the Indiana house, by a bare constitutional majority, paid honor to James F. Lanier, characterized as the man who "made Governor Morton's success possible," by passing a bill to rehabilitate his beautiful old home in Madison and to turn it over to the department of conservation to be maintained as a patriotic shrine. The sum of $12,500 was appropriated for the purpose of restoring it to its original condition.

Hillsburg.—Mrs. Armilda Wayman observed her one hundred and first birthday anniversary at the home of her daughter, Mrs. John M. Dunn, two miles south of Hillsburg. Her children and other relatives visited her. Last year, on the one hundredth anniversary of Mrs. Wayman, a special dinner was served and the event was made the occasion for a community celebration. This year the anniversary was observed quietly. Neighbors, however, called at the Dunn home.

Indianapolis.—Harold Moore, 1011 East Twenty-first street, was found guilty by Judge Delbert O. Wilmeth in the city court of three charges out of six affidavits made against him as the result of two separate accidents. The sentences were for operating a motor vehicle while intoxicated, $100 and costs and 120 days on the Indiana state farm; for drunkenness, $5 and costs; for assault and battery, $1 and costs and 120 days on the farm.

Lafayette.—The school board of Lafayette has rejected recommendations of the special parent-pupils committee of Jefferson high school which seeks settlement of the strike of more than 800 Jefferson high school pupils who for several days refused to attend classes. The strike was the result of the dismissal of F. J. Crosshams as athletic director.

Bloomington.—Twenty-eight Indiana university students who completed their work at midsemesters have received degrees, it was announced by S. E. Stout, dean of the college of arts and sciences. The department having the largest number of graduates was English, in which seven degrees were granted.

South Bend.—After deliberating less than an hour the jury in Circuit court which has been hearing the evidence in the case of Raymond Moseley, twenty-two-year-old slayer, who pleaded guilty to murder, recommended a sentence of life imprisonment.

Washington, D. C.—Representative Fred Purnell of the Ninth Indiana district, has designated as candidate for West Point, subject to examination, Carroll McDole, Noblesville; Joseph A. Delo, Kokomo, and Emerson M. McNeeley, Crawfordsville.

Hillsboro.—Mrs. Eva Lough, age sixty-five, widow of Charles Lough and a resident of this place all her life, committed suicide at the home of her daughter, Mrs. Lough saturated her clothing with kerosene and then set fire to it.

Indianapolis.—Senator Dickerman's bill providing that the cost of engineer's plans in flood prevention work shall be charged to flood prevention funds was carried by the senate, 31 to 6. A bill by Senator Hill, giving county commissioners authority to condemn land for widening highways on petition of 12 freeholders, also passed.

Winchester.—The Indiana, Columbus & Eastern traction line from Union City to Dayton, Ohio, a distance of 50 miles, is to be abandoned, according to a ruling of the public utility commission of Ohio.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1925, Western Newspaper Union.)

Past It Ran the Historic "Road to Oregon"

To write the history of the great West without mention of Fort Laramie would be like playing Hamlet without the melancholy Dane. Few posts have played a more stirring part in the story of the frontier than it. From the date of its establishment in 1834 by Robert Campbell, who named it Fort William in honor of William Sublette, his partner in fur trading, down to the end of the Sioux wars, Fort Laramie was always an important center of activity in the northern plains.

The American Fur company renamed it Fort John, in honor of John Sarpy, one of the partners in that company. But even before they dismantled the post and moved it a mile further up the North Platte, some time in the middle 40's, it became known as Fort Laramie, thus helping perpetuate the memory of a certain La Ramie, an early French-Canadian trapper who had lost his life in an encounter with hostile Indians near there.

Although Fort Laramie was one of the best known rendezvous of the old-time mountain men, the most important era in its history began in 1849 when the government purchased the fort from the American Fur company, and it became the military sentinel at the eastern foot of the Rockies. As such it saw that epic migration, the long trains of "covered wagons" go winding past along the Oregon trail, bound for Oregon or California.

The Fort Laramie of a later period was fully as important as it was in the fur trading and emigrant days. Here in 1851 gathered 10,000 Indians of the plains to make a treaty guaranteeing safe conduct for the emigrants, a treaty which was soon reduced to a scrap of paper; from Fort Laramie in 1865 was begun the road to the new Montana gold fields which brought on the Red Cloud war of 1866-67, and the next year Fort Laramie saw the signing of another treaty of peace in which the great Indian leader achieved his greatest triumph by forcing the commissioners to grant him virtually everything he asked.

When war broke out again in 1876, Fort Laramie was the center of activity for the military expeditions sent against the hostile Sioux and Cheyennes, but when that war was over the principal reason for Fort Laramie's existence ended, and from that time on its glory and importance waned.

The Fort on the Great Inland Sea

The story of Fort Ashley, Utah, is the story of a Ashley-Smith exploration, of two great men to whom history has given but small measure of the credit due them—William Henry Ashley and Jedediah Strong Smith. That story goes back to 1822 when Ashley organized the Rocky Mountain Fur company and set out upon a trading and trapping expedition up the Missouri. In that company were men whose names were to loom large in western history for the next half century—Andrew Henry, David Jackson, William Sublette, Milton Sublette, Jedediah Smith, Robert Campbell, Thomas Fitzpatrick, James Bridger, Samuel Tulloch, Etienne Provost (for whom the city of Provo, Utah, is named) and James Beckwourth.

The 1822 expedition went up the Missouri to the mouth of the Yellowstone. The next year Ashley led another to the Arikara villages on the Upper Missouri. In 1824 his company penetrated to the Green river valley and the next year to the great Salt lake on whose banks he built the little stockaded post which bore his name. The next year he made another trip to his post, bringing with him some small cannons on wheels, the first time in history that artillery of any sort ever penetrated this wilderness.

Although Fort Ashley in itself never became as important as a number of other fur trading posts in the Rockies, Utah can take pride in offering it as her most important fort solely because of its connection with the name of Ashley and his men, especially Jedediah Strong Smith, the "American Ulysses" whose explorations much more richly deserve for him the title of "The Pathfinder" than do those of Gen. John C. Fremont.

Here are some of the achievements of Ashley and his men: They were the first white men to travel the central overland route to the Pacific in the winter, the first to use that variation of South pass, named Bridger's pass, after one of their number; they were the first Americans to investigate the mountains of northern Colorado; they were the first to enter the Great Divide basin; the first to cross almost the entire length of southern Wyoming; and the first to navigate the dangerous canyons of the Green river. When Jedediah Smith pushed on to California from Fort Ashley he was the first American to reach California by land and he was also the first to traverse the full length of California and Oregon by land. With such a list of "historical firsts" to the credit of the men who founded Fort Ashley, it can well take its place in the front rank of American forts.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for March 22

THE FORTY DAYS AND THE ASCENSION

LESSON TEXT—Luke 24:13-53.

GOLDEN TEXT—"Ye are witnesses of these things."—Luke 24:48.

PRIMARY TOPIC—Jesus Goes Back to His Father.

JUNIOR TOPIC—Jesus Ascends to Heaven.

INTERMEDIATE AND SENIOR TOPIC—The Forty Days and the Ascension.

YOUNG PEOPLE AND ADULT TOPIC—The Ever Living Christ.

I. The Walk of Two Discouraged Disciples (vv. 13-15).

Emmaus was seven and a half miles northwest of Jerusalem. Just why they were walking this way we do not surely know. Perhaps their home was there, or they were merely walking to seek relief from their stunning sorrow. If they had believed what Jesus told them about His death and resurrection they would have escaped this great disappointment. The topic of conversation was the tragedy of the cross and the resurrection rumors. If they had believed what He said about coming forth from the grave they would have been expecting to hear just such reports as were being circulated.

II. The Unrecognized Companion (vv. 16-24).

1. Who He Was—Jesus (v. 15).

While they reasoned together on the wonderful events of the last few days Jesus joined them. Even when He questioned them concerning their sadness they did not recognize Him. Many times we are so taken up with our sorrows and disappointments that we do not recognize Jesus walking by our side.

2. His Question (v. 17).

Perceiving their sadness and perplexities, He sought to help by calling forth a statement of their grief.

3. Their Answer (v. 18).

His question so surprised them that they jumped at the conclusion that He was a stranger in Jerusalem, for the condemnation and crucifixion of the great Prophet of Nazareth were so recent and notorious that no one that had lived in Jerusalem could be ignorant of them. One valuable feature of the unbelief of the disciples was that it revealed the fact that they were not credulous enthusiasts, but hard to convince. Out of this incredulity of the disciples developed unshaken faith in Christ's resurrection.

III. The Scriptures Opened (vv. 25-31).

1. His Rebuke (vv. 25-30).

He did not rebuke them for not believing the strange stories that they had heard, but for ignorance and lack of confidence in the Old Testament Scriptures. They had only accepted such parts of the Old Testament as suited their notions. Men and women who do not believe all that the Scriptures say about the work of the blessed Savior are entirely blameworthy. The very center and heart of the Old Testament Scriptures set forth the death and resurrection of Christ. It is ignorance of the Scriptures and unbelief of the wonders and complete redemption wrought by Christ that robs us of many joys, and power and efficiency as workers for Christ.

2. Jesus Recognized (vv. 31-35).

While sitting at meat with the disciples their eyes were opened as they saw Him bless the bread and distribute it to them. We, too, can see the Lord on such common occasions as eating a meal, if we have open eyes.

Indeed we ought to see Him when eating, selling, buying and in our recreations, for He has promised us His presence. They were so filled with joy over this revelation of the Savior that they hastened back to Jerusalem to tell the other disciples of His resurrection.

IV. Jesus Stands in the Midst of the Eleven (vv. 36-47).

1. He said, "Peace be unto you" (vv. 36-47), but they were terrified and affrighted. Sinful man in the presence of God is ill at ease.

2. He showed them His hands and His feet (vv. 38-40). In order to convince them of His personal identity He gave them tangible evidence that He was not a mere spirit.

3. He ate before them (vv. 41-45).

4. He commissioned them to evangelize the world (vv. 46-49).

They were to testify concerning His shed blood and resurrection, and on this ground they were to preach repentance and remission of sins to all nations.

V. Jesus Ascends Into Heaven (vv. 50-53).

Having given them the parting message to evangelize the world, He ascended into heaven. Just as we treasure the last words of our departed loved ones so we should ponder this farewell message of the Lord.

Banks of the Sabbath

The streams of religion run deeper or shallower, as the banks of the Sabbath are kept up or neglected. A preacher in Holland called the Sabbath "God's Dyke," shutting out an ocean of evils.—Calcott.

Must Have Him in Hearts

They only can understand the Holy Ghost who have Him dwelling in their hearts. They only can worship in the Spirit who have the Holy Spirit as an abiding comforter.—N. H. Mack.

EXCURSIONS IN CORRESPONDENCE

By THOMAS ARKLE CLARK, Dean of Men, University of Illinois.

Answering Letters

I THINK I have written more letters that have not been answered that anyone else in the world. Perhaps the reason of this lies in the fact that I have had to ask people to do a great many things they did not want to do, to pay obligations they had no desire or intention of paying; I have been the purveyor of ill tidings, the announcement of which they saw no reason to acknowledge.

Most letters require an answer especially if they are in any way personal. Even circular letters may often with propriety be acknowledged. The man who gets the reputation for answering his letters promptly has developed a good business asset. When a man does not answer his letters, I begin to distrust his reliability and his business acumen. I have in mind now a man of prominence and position. I have written him three times during the last few years concerning personal matters with which he was connected and which involved some financial responsibility. He has acknowledged none of these letters, though I know from other sources that he received them. His failure to do so shows a certain weakness, I feel.

Many people reply only to letters which are a matter of self-interest or advantage. If a reply gets them nowhere, earns them no money, why should they spend time and a postage stamp on it, they ask. It is a selfish point of view.

I had a special delivery letter a short time ago from an old acquaintance of mine whom years ago I had helped out of a hole by loaning him twenty dollars. I had written him at intervals, calling his attention to the fact that he was still delinquent and that I was still needy, but I had so far had my trouble for my pains. This time he wanted a letter of recommendation to help him to land a job down in Arizona. I wrote him that I would answer his last letter when he had replied to mine. Immediately I got a reply promising quick payment, but I have never heard from him since.

I wrote a letter not long ago to Burton, asking for his son's address. He had been in college the year before and the letter I had sent to him at the last address given had been returned. I got no reply. Then I wrote again saying that I found that the boy in leaving had forgotten to collect his military deposit, and that if I could get his address I would send it to him. I received a letter in the next mail. It makes all the difference in the world whether it is your ox or mine that is gored.

I have officially a good many unpleasant things to write to the fathers of the young men with whom I am associated—letters concerning unpaid laundry bills, and room rent, and violation of regulations, and scholastic delinquencies. These are letters which are not pleasant to receive and are sometimes not easy to answer. In more cases than otherwise, they are not replied to at all, and when I do receive an answer in a majority of instances it is from mother rather than father, who like Adam in the Garden of Eden has ditched the whole matter, and thrown the responsibility upon the woman. She usually explains the fact of her writing by saying that her husband is a very busy man, and so has not had time to reply to my letter, but has asked her to do so. But I know that this is all bosh; it was a job he didn't like, and so he wished it on her. I know, too, that it is the busy man who is most likely to reply to his letters. He has no time to waste; so he does at once what has to be done.

If letters are to be answered at all they should be answered promptly. The prompt reply gives confidence and satisfaction. Some people do not reply quickly to letters because they claim that if you wait a while there are a good many letters that answer themselves, and so you are saved the bother, but such people will never be likely to get far in a business way.

There are various reasons why people do not reply to letters, though few of them are good. They do not always know what to say, and so, put off the task, hoping for an inspiration. They procrastinate until the time is past when a reply would be fitting. They are selfish, and seeing no personal profit in replying, let it go. Proper material is not always at hand.

The man who seems to me the most punctilious in answering his letters has all his materials at hand, both at home and at his place of business. If a moment of leisure comes he does not have to look for paper, or ink, or pens, or stamp; they are all there, and his only task is to write the letter.

Feel Achy After Every Cold?

ARE you lame and stiff; tired and nervous—constantly troubled with backache and twinges of pain?

Have you given any attention to your kidneys? Grip, colds and chills, you know, are apt to be mighty hard on the kidneys. And if the overtaxed kidneys fail to properly filter the blood, impurities accumulate and throw the whole system out of tune. Then may follow daily backache, rheumatic pains, headaches, dizziness and annoying kidney irregularities.

In such conditions a good stimulant diuretic should help the kidneys flush the poisons out of your system. Use *Doan's Pills*. *Doan's* have helped thousands. Are recommended by folks you know. *Ask your neighbor!*

An Ohio Case

John Goodchalk, contractor, 312 N. Front St., St. Marys, Ohio, says: "A cold settled on my kidneys and I had stinging pains in my back. This made my work hard and standing all through the day tired me out. I was stiff and lame and my kidneys were congested and inactive. I heard about Doan's Pills and got some. My back and kidneys were put in good shape."

Doan's Pills

Stimulant Diuretic to the Kidneys

Children Cry for

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher
Prescriptions on each package. Physicians everywhere recommend it.

WATERLESS WATER

"What are you doing with that water, sir?" the little boy asked his teacher.

"Analyzing it, my lad."

"Analyzing it? What's that?"

"Finding out what it contains."

"Well, what does it contain?"

"Two-thirds hydrogen and one-third oxygen."

"Gee," said the little boy, "then there ain't no water in it at all, is there?"

The Schemer

Mrs. A—I saw a perfect love of a hat today.

Mrs. B—Did you buy it?

Mrs. A—Not yet. I've got to pick out a more expensive one for my husband to refuse to buy so that we can compromise on this one.—Kentish Observer.

Her Memory

Hubby (after climbing National pass)—Struth, I wonder who the bloke was who started this idea of going to the mountains?

Wifey—I think it was some chap the name of Mohammed, my dear.—Sydney Bulletin.

Poetic Prose

Lady to Tramp—Did you notice that pile of wood in the yard?

"Yes'm, I seen it.

"You should mind your grammar. You mean you saw it."

"No'm. You saw me see it, but you ain't see me saw it."—Christian Evangelist.

A BURNING DESIRE

Mary—Why on earth will May continue to use cigarettes?

Maud—She says she can't tell—just has a burning desire to smoke.

Place Grabber

We use both eloquence and wit
To manage the affairs of earth.
The grip germ doesn't care a bit,
But always finds a cozy berth.

Flattery

Judge—Prisoner, the jury finds you guilty.

Prisoner—That's all right, Judge. I know you're too intelligent to be influenced by what they say.

The Explanation

"Say, Tompkins, how did you obtain a divorce so quickly?"

"The judge who tried the case was my wife's first husband."

The Patriot

Little Mary—Mother, why do people vote for President?

Frivolous Mother—Because everybody else does, dearie.

NO FRIENDS, NO TALK

Mrs. B.—There goes Mrs. Jenks—I've never heard any unpleasant talk about her at all.

Mrs. W.—No—they say she hasn't a single friend.

Walks for Complexion

She walks five miles or so each day
For her complexion, so they say;
If my complexion were that far
I rather think I'd take a car.

An "X" of Affection

Little Dorothy (watching mother vote)—Mamma, you voted for the man you love best, didn't you?

Mother—What do you mean, dear.

Dorothy—I saw you put a kiss after his name.

Didn't Mean It That Way

Mistress (to maid)—Goodness, Ann, what will my husband say when he finds you've broken his favorite vase?

Ann—I'm awfully sorry. I'd rather have broken everything else in the house.

Serious Question

Governess—Methuselah was nine hundred years old.

Robin—What happened to all his birthday and Christmas presents?—The Humorist.

ROAD BUILDING

PLAN TO DRY UP IOWA MUD HOLES

A determined campaign to "pull Iowa out of the mud" by giving the state control of the road system, imposing a 2-cent-a-gallon gasoline tax and raising $85,000,000 for roads by a bond issue, is being waged throughout Iowa by the Iowa Good Roads association.

Iowa today has more than 600,000 motor vehicles. It stands to lose $2,000,000 a year, federal aid road money, unless it places its primary road system under state control for construction and maintenance. Driving over unimproved roads is estimated to cost the people of Iowa $25,000,000 a year in increased gasoline and oil consumption and wear and tear on cars and tires. On a "pay-as-we-go" basis it will take 16 or more years to complete the state's primary and secondary roads.

Under the program advocated by the association it will be possible to complete improvement of 6,000 miles of primary road in six years after funds are made available and to drain and bring to grade 11,000 miles of county roads within eight years. The program provides for paving 3,500 miles of primary road, so as to connect all the 99 county seats, and to surface the remaining 3,100 miles of primary road with gravel or sand-clay.

It is figured that the 2-cent gasoline tax will provide four and a half million dollars a year, of which one and a half million dollars would go to the primary road fund and three million dollars to the counties for county road work.

The state legislature is being asked to submit to the general election in November, 1926, a bill authorizing the $85,000,000 bond issue.

At present, property abutting paved roads is subject to a disproportionately heavy paving assessment of 12½ per cent on assessed valuation. It is proposed, as part of the roads program, that this special assessment be abolished and that $3,000,000 already paid under it be refunded to property owners.

First Rubber Street Is Constructed in Boston

The first rubber street ever laid in America has been put down in Boston.

The rubber pavement consists of blocks 6 by 12 inches and 1 inch thick. The great difficulty in the way of success of rubber block pavement heretofore has been the inability to keep the blocks down, and to prevent them from creeping. Cementing to the foundation would not accomplish the result. It is now being constructed with two semi-circular flaps on one side and one flap on one end of the base of the block, which fit into corresponding recesses in the base of the adjoining block.

Drive spikes are driven through holes in the flaps into the bridge flooring, or the special device used for concrete road foundations. The blocks are laid in hot rubberized cement, uniting the blocks together and to the foundation, making a water-tight roadway over the street or bridge foundation.

The speed and accuracy with which this rubber pavement can be laid was exemplified by a crew of four bridge mechanics, a cement pourer, cement layer, paving block placer and a spiker, who laid the first hundred at the rate of sixty square feet per hour.

The first section of rubber pavement laid has been in constant use for some time, and much to the surprise of all observers, the sharpest horseshoe calks, or the heavy steel tires make no scratch or mark on the pavement.

As the horses and vehicles pass over the rubber paved section the lack of noise is at once noticed, showing the desirability of this class of pavement for streets around hospitals, particular residences and high-class office buildings.

Good Roads Facts

Elimination of grade crossings, either by relocation of highways or rail lines, is urged by many as the only perfect solution of the grade-crossing problem.

* * *

Much progress has been made in highway construction during the past decade, yet the proportion of improved roads to the entire road system is relatively small.

* * *

In place of color bands for making main highways, New York state will use a system of numerals to designate different routes. The numbers will be painted in black on poles bearing a nine-inch band of yellow.

Autos Rout Camel Train

London.—A plan to substitute a motor car service over the deserts between Bagdad and Persia and Constantinople and Persia, to take the place of the old caravans, is being undertaken by an English firm. The firm at present is operating a service between Haifum, Damascus and Bagdad.

Royalties amounting to $36,659,810 were paid the Indians last year from oil and gas leases on their lands.

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear If You See the Safety "Bayer Cross."

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 23 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Motorists Relieved

An Iowa statute that had been on the statute books for 30 years has been repealed. The statute read: "The traveling motorist is ordered to telephone ahead to the next town of his coming, so that owners of nervous horses may be warned in advance."

TANLAC FOR YOUR HEALTH

SPOHN'S DISTEMPER COMPOUND

Don't take chances of your horses or mules being laid up with Distemper, Influenza, Pink Eye, Laryngitis, Heaves, Coughs or Colds. Give "SPOHN'S" to both the sick and the well ones. The standard remedy for 30 years. Give "SPOHN'S" for Dog Distemper. 60 cents and $1.20 at drug stores.

SPOHN MEDICAL CO. GOSHEN, IND.

Beware Of Coughs That Hangs On

Pneumonia and serious lung trouble usually start with a cough. So if you have a cold or cough—stop it at once with a few doses of that fine old medicine, Kemp's Balsam. This famous Balsam soothes the nerves of the throat, stops the tickling cough and nature does the rest. No form of cough syrup so good for children's coughs. 20 cents at all stores.

For that Cough! KEMP'S BALSAM

Northern Florida and Southern Georgia

Land values in some parts of Florida have advanced faster in recent years than in any other part of the eastern United States. Every year a million or more Florida tourists pass lands in northern Florida and in southern Georgia where prices are still low and general farming conditions offer attractive opportunities for investment and profitable farm operations. Write to W. E. Price, General Immigration Agent, Southern Railway, Room 660, Washington, D. C., for full particulars.

MEN'S FINE CAPS 75c

SEND NO MONEY

We will make you a snappy cap from your own cloth, new or old, or from a discarded coat, trousers, skirt or any goods you may have, for 75c C. O. D. postpaid; or send 65c with order and save C. O. D. charges. Caps are sateen lined and have leather sweatbands. First-class work guaranteed. Give size wanted. Have your cap made by us and save money. J. A. JOHNSON CAP CO., 166 W. Adams St., CHICAGO, ILL. Makers of Special Order Caps since 1910.

PARKER'S HAIR BALSAM

FARM FOR SALE OR TRADE FOR MDSE or rentals. 160 acres, well improved, 1 mile to town. Gravel road. $125.00 per acre. WILLIAM RIFFLE, WINAMAC, IND.

More Hair

"Where are your parents?" "At the barber's. Mother's having her hair cut and father is having his waved!"

75% of disease avoided through internal cleanliness

WHEN you are constipated, poisons are formed in the accumulated food waste, and reach all parts of the body. The first results, headaches, biliousness, a feeling of "heaviness", etc., serve as warnings of graver diseases to follow if this intestinal poisoning continues unchecked.

This is why intestinal specialists state that constipation is the primary cause of three-quarters of all illness, including the gravest diseases of life.

Physicians Advise Lubrication for Internal Cleanliness

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste, and thus hastens its passage through and out of the body. Thus, Nujol brings internal cleanliness.

Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless. Take Nujol regularly and adopt this habit of internal cleanliness. For sale by all druggists.

Mine Excavations Work Havoc in British Isles

The tremendous mining excavations in many parts of the British isles, are held largely responsible for what are frequently called earthquakes. At Cradley Heath, on one occasion, dwellers in the vicinity were greatly alarmed by a tremor and a dull roaring sound. Part of one street began to sink. Windows of shops bulged and fell out, gas mains cracked, the street car lines twisted. The ground over a considerable area sank as much as five feet, and enormous damage was done. The cause was the falling in of old mine galleries. Shildon, in Durham, and Abertillery, in Wales, have both had similar unpleasant experiences. At Shildon a new $20,000 school was completely wrecked about a year ago. At Preesall, near Preston, salt is mined. Early last year rumblings were heard. The earth shook and a big hole opened in an orchard. Week by week the subterranean rumblings went on, and by degrees the hole enlarged until half the orchard had disappeared into the earth. There is now a great crater of enormous depth and the farmhouse itself seems doomed to be swallowed up.

Imagined Lark Was Voicing a Complaint

Secretary C. L. Brace of the Children's Aid society said in a brilliant address in New York:

"Quaint, indeed, are the remarks of slum urchins when for the first time they get a country holiday.

"A little daughter of the slums on her first day in the country saw a lark motionless, high in air, pouring forth its lovely music.

"She listened a moment, then she ran to the matron.

"'Oh, Miss May,' she said, 'there's a sparrow up there, and he can't git up and he can't git down, and he ain't doin' a thing but holler about it.'"

Hapsburgs Back in Vienna

Three members of the Hapsburg family recently visited in Vienna—former Archduke Karl Albrecht, his wife, Alice, and his mother, the former Archduchess Maria Theresa. Karl Albrecht is the son of Archduke Karl Stephan, formerly a high admiral and large estate owner of Saybusch. The three Hapsburgs came to Vienna to settle up some matters pertaining to their property. They are all citizens of Poland. Karl Albrecht is an officer in the Polish army. They have given up all rights as Hapsburgs in Poland and declared themselves ready to do the same as regards Austria.

Peanut Industry Big

Little peanuts are the basis of a big industry in Petersburg, Va., where there are several great factories exclusively devoted to making peanut butter, oil and other products from the tiny groundnuts which are too small and imperfect to find a market in the usual nut-vending channels. The factories were started some years ago when an enterprising business man discovered that the residents of the peanut-growing sections would eat only the larger kernels. Today, however, the smaller nuts, because of their flavor, demand the higher prices.

Nobel Fund Increases

Doctor Nobel, who founded the Nobel prizes in peace, literature, chemistry, physics and medicine, originally bequeathed about $8,750,000; if he were alive today he would see his fund greatly in excess of that amount, despite the fact that many prizes have been awarded since 1901, when the first was given. The fund now exceeds $10,000,000, due to natural increment and the fact that on 12 occasions the prize has not been awarded for lack of a conspicuous candidate.

Sports for the Deaf

A sporting league exclusively for the deaf has been formed simultaneously in Amsterdam and Rotterdam. The members will specialize in football, and a match between Amsterdam and Rotterdam elevens was arranged. From the two deaf teams a national eleven will be selected which is to meet a Belgian team of deaf players at Antwerp next May.

Strictly Business

A Somerville cross-word puzzler who telephoned a doctor for a seven-letter word meaning "windpipe" received the answer "trachea"—also a bill for $2 for professional services.—Boston Transcript.

Emotions of Anger and Fear Analyzed

Prof. W. B. Cannon of Harvard university, and his collaborators in physiological research, have discovered a way to operate on the brains of animals that will make them permanently angry and at the same time remove all sense of pain. Cats so treated show many signs of emotional excitement. The cat's hair stands on end, its claws are drawn out, and it scratches and spits. Sweat pours out over the paws, there is a great increase in the heart rate, and the blood pressure is high. These symptoms, however, are only incidental to the main purpose of the research, which is to discover what changes in the chemistry of the blood and body tissues accompany the emotions of anger and fear. The two most notable changes are greatly increased secretion of the adrenals, which are ductless glands located near the kidneys, and a fivefold increase in the concentration of sugar in the blood.

PULLING AWAY

"I never see him but what he's pulling away, pulling away!"

"Must be a hard worker—what's he do?"

"Smoke cigarettes."

Alloy Replaces Platinum

Platinum laboratory vessels, indispensable in certain chemical operations, have become very expensive, due partly to the increased use of platinum jewelry and partly to the virtual cutting off of the Russian supply, formerly the principal source of the metal. Dr. A. Gawalowski, an Austrian chemist, reports the successful use of vessels made of an alloy of silver and aluminum, thinly coated with platinum by an interesting process. The alloy was dusted over with "platinum black," a microscopically fine dust of platinum, and then hammered or rolled under heavy pressure. This peculiar method of plating gave the alloy sufficient protection against the strong acids and alkalis of the chemical laboratory.

To Study Avalanches

An observatory for avalanches, believed to be the first of its kind, has been erected in Tamischbachturm, in the province of Steiermark, Austria, by the state railway. Its object is both scientific and practical. It has been fitted with instruments for the recording of exact data, and it will also send out warnings to stations below when avalanches threaten. It is also planned to "set off" incipient avalanches, and so prevent them from launching themselves later spontaneously and without warning.

Overlooked Gold Vase

Two brothers, plowing a field near Pleven, Bulgaria, to plant it to grapevines, recently turned up some heavy objects that to their ignorant eyes seemed like gold. They were vases and statuettes, 15 in all. To be on the safe side the two men gathered up their finds and disappeared. But rumors of the occurrence got out and the local authorities started to investigate. They found in the field the cover of a vase that had been overlooked. It weighed 90 grams and an assay proved it to be pure gold.

Just So

Counsel—You say that the fence is eight feet high and that you were standing on the ground—not mounted on a ladder or anything?

Witness—I do.

Counsel (triumphantly)—Then perhaps you will kindly explain how you could see over a fence eight feet high and watch the prisoner's action.

Witness (calmly)—There's a hole in the fence.—Vancouver Province.

Youthful Statesmen

Younger men are taking their places in the British house of commons. In 1914 the average age of the members was fifty-one. Now it is only forty.

American Legion To Have Meeting

Thursday evening of this week, the Legion members of this community will meet at the Town Hall and talk over plans for the Endowment Fund drive. Calvin Kain of Auburn, is county chairman. Every Legioner ought to be present. Also all ex soldiers.

HERE AND THERE

Wanted some maple syrup at News office.

Edith Widney was a Sunday dinner guest of Will Hamilton and wife.

Will Hamilton, wife and daughter, were Thursday supper guests of Abner Trostel and wife.

Leon Sechler and family of Fort Wayne were Tuesday guests of his parents, Frank Sechler and wife.

J. E Sturgis was in town Wednesday morning calling on relatives and friends enroute to his home at Cincinnatti from Grand Rapids.

The closing day for mortgage exemptionf is the first Monday in May; for veteran's exemptions, April 30. Mortgage exemptions are allowed not to exceed $1,000. Veterans must be 70 years of age and and widows of veterans 60 years of age to enjoy $1,000 exemption.

Community Building

Make Careful Selection Before Planting Trees

For windbreaks and screens the white pine and firs, skirted with shrubbery, are very satisfactory. For shade the native trees are best. The oaks are hardy, comparatively free from insect pests and diseases, long-lived and stately. The American elm is graceful and clean, though not suited to close grouping; where the soil is moist, it is unexcelled for street planting. Where there is room the tulip poplar may stand alone or form the center of a group. In the native forest the poplar will be found in the moist, rich coves. It is a magnificent forest tree, grows rapidly, is beautiful alike in bole and branch, leaf and flower.

The hard maples are favorites because of their beautiful form, abundant foliage and rapid growth. The soft maples and Norway and Carolina poplars produce a quick shade, but are short-lived and otherwise undesirable. Some of the nut trees and the cherry and apple, with their wealth of flower and fruit, may find a place in the background.

Shrubs and flowers may break or conceal the foundation lines of the house. They may be grouped in angles and be planted as screens. The species—and there are so many elegant ones to select from—should be chosen because of their fitness for the purpose and to harmonize with the surroundings.

Interior of Home Calls for Careful Planning

The most important part of building a house is very often accomplished before actual construction begins. The economy, comfort, convenience and even the appearance of a house are largely dependent upon the care and thought employed in devising the plan. A well-planned house is a joy to those who live in it, while one that is badly planned costs as much or more to build and is a continual source of dissatisfaction and annoyance.

The results which can be secured by intelligent planning intimately concern every member of a household and are too important to be deliberately neglected. The home is the housewife's laboratory and workshop where the routine essential to a well-ordered home life is organized and carried on. Therefore, it is logical and imperative that careful consideration be given to these elements of the plan which simplify and lighten household operations. The welfare of the entire family is improved when proper attention is paid to the details of the arrangement and equipment which serve to add to the comfort of the individual. Economy must always be considered, but too often the opposite results when the plan is neglected or when it is the outcome of hurried, unwise or misdirected effort.

Papuan Mourning Customs

In Papua, widows mourn for a deceased husband for more than a year, and it is a custom for them to remove all their clothes and cover themselves with white pipe-clay. The costume consists of a grass skirt.

NEWS OF THE TOWN

For Sale: Good Gang Plow.
Wm. Staman, Jr. 12tf

S. D. Gee came home ill Tuesday from his work on the Wabash.

Miss Ima Bray spent Saturday and Sunday at her home in Indianapolis.

For good glasses see Griest at American Building Hicksville, Ohio.

Pickle prices advanced for this year's crop. Get a contract signed up now. 12tf.

Milo Provines, wife and children of near Auburn and Foster Gee and family, were Sunday guests of S. D. Gee and wife.

A new fertilizer that will work in your drill perfectly, absolutely guaranteed to. Curie.

Mr. and Mrs. Samuel McNally of Adrian, Michigan, were St Joe business visitors, Saturday.

Charley Koch and wife were Sunday afternoon guests of Mrs. Arline Rhoades at Spencerville.

14 members of Harlan I. O. O. F. surprised the local order Tuesday evening. A smoker was enjoyed after degree work was given

Mr. and Mrs. Fred Thornton entertained at six o'clock dinner on Tuesday evening, Dennis Burley and George Swinsford, in honor of latters birthday.

Miss Edna Jackson returned to Angola, Monday, to resume her school work after a short visit here in her home. The new term began Tuesday.

J. P. Buckingham and Mrs. J. E. Foltz went to Continental, Ohio, Friday to visit for a few days in the homes of Joe Cox, C. J Foltz and Mrs. Margaret Foltz

Warner's Hat Shop offers the best in Styles and Prices.

The first 1500 ears of corn were taken from the tester and it was found that some tested 99 5 and other batches only 10% good Now from the results the seed corn situation needs some careful attention.

Rev. and Mrs. Frank Osbun of Westville, visited Mrs. Anna Dilley several days last week. The three spent Thursday as guests of Mr. and Mrs. Frank Baker on the state road.

H. O. Waltz and wife, their son, Harold of South Bend and Miss Anna Beerbower of Spencerville were Sunday dinner guests of Mrs. Alice Getrost and family near Hicksville.

An income for the family this summer would be fine. Contract pickles for St Joe Salting Station

Mrs. Caroline Chorpenning of Auburn, returned home Monday after helping in the care of Mrs Sam Kees, who has been ill with influenza.

Have you seen those Hats at Warner's Hat Shop?

Plans are well under way in the organising of a Pickle Club for St Joe. All that is needed are members 12-18 years and grow a quarter of an acre. Local prizes will be given. Particulars come later. Plan on making some real money besides having these prizes to work for. For information see Ralph Sechler or Howard Renner.

John Philip Sousa, famous band leader and idol of the American people for half a century, pays Indiana a high honor this summer by stopping over at Winona Assembly on a great transcontinental tour and leading his great band of a hundred and fifty pieces in several concerts in the William A Sunday Tabernacle. For twenty years the management of Winona has been trying to bring to Winona this noted musical director and composer of marches that have thrilled the world, but all previous efforts have failed.

Lutheran Notes

Sunday School 9:30.

Preaching service in the evening.

Prayer meeting Thursday eve at 7:00 o'clock.

S. D. Steffey, Pastor.

SINNERS in HEAVEN

by CLIVE ARDEN

COPYRIGHT BY THE BOBBS-MERRILL COMPANY

Without doubt this story is the work of a master. The characters are real human beings. They were faced with a thrilling situation involving a problem too trying for the average sinner and probably too great for a saint to handle; nevertheless there were smug individuals ready to condemn them.

If you regard black as always black and white as always white, you may decide that the first word of the title is most appropriate; but if you can see varying shades of gray between black and white, you will be able to observe the peculiar fitness of the last word of the title. Any way you view it, it is a great story.

A Prize Novel to Be Printed Serially in

St. Joe Weekly News

SECOND INSTALLMENT commencing with this issue. Subscribe now and get complete story

It begins to look as though some one is about to loose a job.

A new fertilizer 25% lime, 14% phosphoric acid. See Curie.

Robert Baily and family of near Scipio were guests of his parents, Monday.

Harold Waltz, of South Bend, spent over Sunday here with his parents, H. O Waltz and wife.

For Sale: Good Gang Plow.
Wm. Staman, Jr. 12tf

Time to begin to think about contracting for the raising of pickles this summer. Contracts at S. S. Widney's and News office.

Mesdames Minnie Gee, Gladys Murphy and Cora Waltz were recent guests of Mrs. Jessie Sommers

Death Notices Cont'd

(From Page 1)

War. During the year in service he was shell shocked. The body was returned to Auburn where burial was made.

Members of the Masonic lodge and relatives of St. Joe and Spencerville attended the funeral Tuesday afternoon at M. E. Church, Rev. Trippeer officiating. Burial was made in Woodlawn cemetery. Death occurred March 14.

CARD OF THANKS

We, in this manner wish to thank all neighbors and friends and especially the Masonic order ar Spencerville for their kindly words and deeds, the beautiful floral tributes, in this our hour of sorrow

Mr. and Mrs. W. S. Berry,
Mrs Howard Berry.

Ernest Dale, son of Clarence F. and Nina Ayers, was born in Hicksville township, Defiance county, Ohio, December 30, 1924 and departed this life March 14, 1925, aged 2 months and 15 days. Two brothers having preceded him in death, leaving to mourn their loss father, mother, three sisters, one brother, his grandmother Ayers, grandmother and grandfather Dunhams besides a host of relatives and friends.

The funeral service was held from the house Tuesday forenoon with burial at Hicksville. Rev. Killian of near Scipio officiating. K R Kinsey, funeral director.

CARD OF THANKS

We desire to thank the neighbors and friends for their kindness during the sickness and death of our baby.

Mr. and Mrs. C. F. Ayers.

Mr. Ayers and family moved from Ohio this winter and are living on the Mrs Walter Abel farm near Coburntown.

It is with reverence that we have come to lay the mortal remains of Mary Jane Wasson-Hull in the silent city of the dead. She was born March 21, 1859, and died March 15, 1925. She was the tenth child of Samuel and Eliza Wasson. Into the home of this pioneer couple, Samuel and Eliza Wasson twelve children were born. All have passed into the other land but two, they are Matilda Isabelle and Milton Elsworth.

Mary Jane lived in the neighborhood of Spencerville during her young womanhood. She lived there until she became the wife of John Hull. They came into the neighborhood in which she died to make their new home. To this couple were born two boys, Ralph, who lives at Willard, O, and Fred who lives at St. Joe.

She has been a devoted wife and mother. They are the ones that shall miss her love and care.

She has not been in the best of health for some time, but she became much worse and has been confined to her home most of the winter. A dreaded disease fastened itself upon her and she succomed to its ravages Sunday evening. She suffered much but did not complain. She was ready to meet her Saviour. Her christian life and gentle nature made her many friends. As a Sabbath School teacher and a church officer she was faithful and true to her trust. This was evidenced by her old Sunday School scholars that came to visit her during her illness. She became a member of the Concord church almost thirty-five years ago and was a devoted member of that organization. She was a helpful neighbor. It is evidenced by the affiliation she had with other fraternal and beneficial organizations. She was a member or the W. C. T. U. and the Ladies Aid of the Concord church. She was a member of the Rebecca lodge of St. Joe and she served as chairman of the membership committee of the Ladies Farm Bureau.

We are sure that the Christ weeps with her family for the loss of their love, but they sorrow not as those that have no hope.

The funeral was held Wednesday afternoon from the St Joe M. P. Church, Rev. C. H. Havens, officiating. E. R Kinsey funeral director.

The funeral of Mrs. Amanda Brown, aged about 74 years, wife of Wm. Brown, will be held Thursday afternoon at two o'clock at the Church of Christ. Her illness extended over several weeks. Surviving are the husband, three grandchildren, Mrs. Walter Baker of Concord, Virgil Perry of this place and Wilbur Perry of Fort Wayne, three great grandchildren, four sisters, Mrs. Delia Wade of Petoskey, Mich., Mrs. Wallace Abel of near Newville, Mrs. Ella Wilmot and Mrs. A D. Perry of near here and one brother, Calvin Coburn of Hicksville. Burial will be made in Alton cemetery, east of town.

Value of Home Ownership

Home ownership is a very important factor entering into the extension of credit to the average individual. Those merchants who are willing to lead merchandise to people on a promise to pay at some future date are influenced to a large degree by home ownership.

The man who buys a lot and builds a home thereon, no matter how humble that home may be, gives evidence, in most cases, that he has been thrifty and industrious. In extending credit the merchant takes into account a man's habit of thrift and industry, and to acquire a home usually means thrift.

Paint Up in Winter

In prosperous times it is estimated by the United States Department of Labor that an average of 2,000,000 men are unemployed in this country annually. The cause for this situation can be explained on the grounds of seasonal occupations.

From the middle of October to the middle of February is what is known as the dull season. There should be no dull season for the painter because winter months are ideal months for interior painting and there is approximately five times as much interior painting as exterior.

Pay Yourself Rent Profit

Have you ever figured up what you may have paid out in rent in the past five, seven or ten years? Everybody has to pay rent—rent on the other man's property and invested money or on his own investment, or a combination of the two. But the renter naturally has to pay the landlord a profit for the privilege of renting a place, a profit that he might be paying into his own pocket.

Boost City's Industries

City building is done through boosting your industries and home enterprises more than in locating new ones. If the enterprises which are already in Sylacauga can be made to grow into big ones, our town will also grow into a metropolis.—Sylacauga (Ala.) Advance.

Community Worth

The largest building in the world isn't worth as much to a town as the largest building and loan.

A Good Thing - DON'T MISS IT.

Send your name and address plainly written together with 5 cents (and this slip) to Chamberlain Medicine Co., Des Moines, Iowa, and receive in return a trial package containing Chamberlain's Cough Remedy for coughs, colds, croup, bronchial, "flu" and whooping coughs, and tickling throat; Chamberlain's Stomach and Liver Tablets for stomach troubles, indigestion, grassy pains that crowd the heart, biliousness and constipation; Chamberlain's Salve, needed in every family for burns, scalds, wounds, piles, and skin affections; these valued family medicines for only 5 cents. Don't miss it.

SPENCERVILLE

William Lake spent the weekend with Fort Wayne relatives.

William Markle was a Sunday guest in the B. F. Markle home.

Dr. C. R. Baumgartner spent Sunday with his parents at Decatur.

L. V Myers and wife of Wayne, spent Sunday in the James Vallieu home.

At last you can sow lime and phosphate in your drill. Car will be in soon. See Curie.

A contest will be held Friday evening between members of the high school at the Methodist church.

Mrs. Vern Wilmot and Mrs. Donald Kimes and son were guests of friends at Fort Wayne, Thurs day and Friday.

Henry Grill and wife of Garrett and David Grill of Fort Wayne, were recent guests of David Baughman and wife.

Make your selection early at Warner's Hat Shop.

Mrs. Priscilla Hardesty returned to her home at Paulding after a weeks visit at the home of her son, J. C. Vallieu and family.

Mrs. Herman Reasoner was call to Auburn Tuesday by the serious illness of her neice, the little daughter of Charles Davis and wife.

Come in and see the list of prominent farmers who have already placed their order for the new lime and phosphate fertilizer. At Curie's.

R U. Bowser, wife and daughter Ada, were Monday guests of the former's brother, Homer Bowser and family of near Huntertown.

The sale of Mrs. Vernie Kelley was largely attended and she has moved her household goods to the home of her parents, Vol Hay and wife, where she will reside.

Mrs. Arline Rhoads, who spent the past week with Mr. and Mrs. Frank Wise at Auburn, returned home Sunday, accompanied by the Wise's who remained for a short visit with friends.

CONCORD

Miss Ilene Johnson is able to get out again, while Mrs James Goings is not much improved.

Louis Howey took Sunday dinner with Ira Bone and wife.

Miss Cleota Morr came home for over Sunday and Howard Krise and wife spent Sunday afternoon in the Charley Morr home.

Ford Jackson, wife and baby and Chas. Jackson and family spent last Sunday with Holl Jackson and wife, north of St. Joe.

Elevating Family Life

In the crowded life of today there is danger that we may lose sight of the high standards for the home and the stimulus they afford. We all do better when we have a high ideal to live up to. The Better Homes in America movement aims to give practical demonstrations of comfortable, healthful and attractive homes, and to direct attention to the means by which family life may be elevated. It recognizes, however, that it is not the wish, but the will; not sentimental desire, but vigorous, well-judged leadership, that moves our national life forward. —Secretary Hoover.

Citizens As Town Builders

Our industries and business enterprises must grow and prosper before our town can make headway. The idea is to boost industries and enterprises, and as they prosper, new industries and enterprises will locate here. Real town building is done through a citizenship boosting the industries and enterprises which are already located. Never knock a home enterprise. When you do you create a tendency to lower real estate values, salaries and every prospect your town has of growing.

Home Should Be One's Own

"No family," says the New York Herald-Tribune, "can ever feel for a rented house that deep-seated affection which is naturally developed for a home they own. There is little incentive to adorn and beautify the house and the yard which belong to another. But when the place that shelters the family group is their own every added beauty, every tree and shrub and flower planted adds new charm to life and strengthens the ties that bind the home hearts."

Waynelite Co., Incorporated

Herman Reasoner, known to practically all our readers, and for the past three years has been engaged in the construction and installation of a farm lighting system that has met with renowned success in this community and for miles about. The volumn of business has become so great that Mr. Reasoner was compelled to enlarge his organization and launch out in extended territory, with headquarters at Fort Wayne. Mr Chas W. Scherer has been chosen as president and Mr. Reasoner will act as vice president and secretary. The new incorporation will bear the name "Waynelite Company."

A branch will be conducted at Spencerville by Mr. Reasoner, where he will be located to care for patrons just as in the past. This week the new company is installing a large lighting plant at Spencerville for Dr. F. W. Silberg and Harvey Beams jointly. A new radio is being installed this week for Roy Harper, making him a user of both products.

Mr. Scherer is a man of experience in the battery business, which will add to Mr. Reasoner's experience and guarantee the users of Waynelite products donble satisfaction.

Home Bureau Activities

Mrs. Daisy Woodcox

The Home Bureau Club of Concord township met last Friday at the home of Mrs. Orange Herrick. In spite of the weather there was a good attendance and an interesting program given. The principal feature of the program was a demonstration of home needle work given by Mrs. Wm. Hamilton. Mr. Miser also demonstrated the Standard Oil Co, lamp burner and chimney. Delicious refreshments were served by the committee in charge.

A dime goes a good ways when you buy a Ladies Home Journal at News office. We have all kinds of good magazines.

Floyd Ridgway and wife and Samuel Armstrong and wife spent Sunday as guests of O. D. Inhofe and wife at Butler.

Hall's Catarrh Medicine

Those who are in a "run-down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that while Catarrh is a local disease, it is greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years. Sold by all druggists.
F. J. Cheney & Co., Toledo, Ohio.

WOMEN
Like to Come to
This Bank

There's a spirit of friendliness and cordiality about this bank that radiates and promotes a Good Will not found in a bank that is merely a stronghold of stone and steel. And that's why women make this their headquarters for their financial dealings. They like the cheerful atmosphere and the sincere courtesy. You too, will see a difference when you come in to get acquainted.

Farmers' & Merchants' State Bank
Spencerville, Ind.

NEWVILLE

Mrs. Bessie Shaffer and little son Russel, spent Wednesday in Butler with Henry Shaffer and wife.

Byron Miller and parents spent Wednesday afternoon in Auburn, guests of Dewey Miller and family.

A car of the new lime and phosphoric fertilizer will be here soon. Get your order in soon.
Wm. Curie.

Mrs. Helen Woodring, who spent the winter at Butler with her daughter, Mrs. Eva Hook, has returned to the home of her son, Orla Woodring, north of town.

Members of the Christian church held a penny social in the Seely hall Thursday evening. One feature of the evening was a spelling match in which Mrs. Fern Benner was the winner.

One of our Newville girls, Miss Daisy Richmond was married on Tuesday of last week to Harry Brown of Garrett. The bride is the daughter of Chub Richmond and wife. The family accompanied the couple to Auburn where the ceremony was persormed.

Mrs. Romeo Cole received the sad news of the death of her seventeen year old sister who was killed in an automobile accident the first of last week. Her people live in Kansas. We feel a great sympathy for Mrs Cole in this hour of sadness. The distance being so far she was not able to go to the saddened home.

Night Coughing Stopped Quickly By Simple Treatment

Thousands who are troubled with persistent coughing at night, or by robbing them of valuable sleep weakens their systems and makes them open to contagion, can quickly get to the root of the trouble through a very simple treatment. People who have been unable to rest at all on account of coughing spells have found that they sleep the whole night through undisturbed often the first time they try it.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring, and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. The result is you usually sleep soundly the very first night, and the entire cough condition goes in a very short time.

The prescription is highly recommended for coughs, chest colds, hoarseness, and bronchitis, and is wonderful for children's coughs and spasmodic croup—no harmful drugs. Economical, too, as the dose is only one teaspoonful. At all good druggists. Ask for

DR. KING'S NEW DISCOVERY FOR COUGHS

Daniel Herrick of Auburn, after five years of service with the Indiana Service corporation as agent at the Waterloo terminal of the traction left the employee of the company March 17.

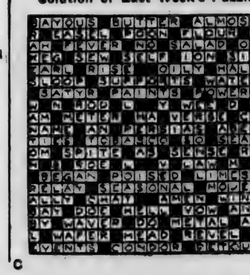
The solution will appear in next issue.

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Hellenist

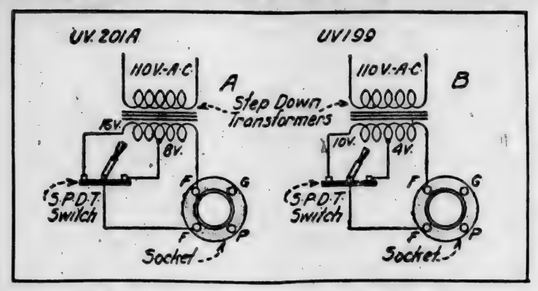
Hellenes was one of the names of the inhabitants of ancient Greece, and the word Hellenist meant one who affiliated or imitated Greek manners, especially a person of Jewish extraction who used the Greek language as his mother tongue, as did the Jews of Asia Minor, Greece, Syria and elsewhere. Many of the Jews scattered through the provinces of Asia Minor during the first century of the Christian era were Hellenists.

Can't Soar Up

Birds cannot fly to a higher altitude without moving their wings, Maurice Boel, Belgian army expert, says after a study of South American birds. Some students of bird flight had asserted this was possible. The condor holds his wings rigid and flies along at a gradually decreasing altitude by working his tail feathers with a movement similar to that of a sculling oar, but he cannot gain altitude in this manner, Boel says.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)



Showing How to Connect Transformer, Socket and Single Pole Double Throw Switch, for -01A—Also Connection for -99 Tubes.

By J. B. BAYLEY

A number of radio fans have had the very discouraging experience of tubes failing to operate although the filament still lights. This usually occurs to -01A and -99 type tubes, and is a condition often brought on by excessive filament voltage.

Outside of the fact that the tube has been operated at a voltage in excess of its rating, the actual cause for the tube to become inoperative remains a complete mystery to many fans. What actually takes place inside of this delicate piece of apparatus is:

The three-electrode vacuum tube depends for its operation on the fact that a heated filament throws off electrons. These electrons are thrown in all directions and are minute charges of negative electricity. The plate is given a positive charge and therefore attracts these small negative charges. In the -01A and -99 tubes the filament is thorium treated wire. The reason for using thorium is that this metal is one of the best-known emitters of electrons. Now if we use an excessive filament voltage, the tiny filament wire will be heated to a much higher temperature than the temperature at the normal filament rating. This excessive heat boils all the thorium off the filament. When the thorium has been removed from the surface of the filament wire the tube becomes dead as far as reception is concerned, due to the absence of electronic emission to form the conductor from filament to plate.

Obtain Step-Down Transformer.

First buy, beg or borrow a small step-down transformer that will give you the following voltages: 16-10-8-4 volts. One of the small toy step-down transformers such as is used to run toy trains or to light the small lights on a Christmas tree will answer the purpose. These small transformers are usually arranged so that you can usually obtain any voltage between 2 and 20 in 2-volt graduation.

In A is a diagram showing how to connect the transformer, socket and single-pole double-throw switch, for -01A, and in B is shown the connection for -99 tubes. Below you will find a table of the correct voltages and the exact length of time that you must keep the voltage on. Use a watch; do not try and guess the time.

For -99s: First on ten volts for 30 seconds; then on 4 volts for 10 seconds.

For -01As: First on 16 volts for 30 seconds; then on 8 volts for 10 seconds.

Makes Tubes More Sensitive.

This excessive alternating voltage applied to the filament boils the thorium from the inside of the filament wire and brings it to the surface. If this treatment were continued for any length of time it would soon boil all of the thorium from the surface, but you will notice that this excessive voltage is used only for 30 seconds. We now apply the lower voltage which bakes the thorium on the suface, thus bringing the tube back to life again.

Tubes that would not draw the least amount of plate current and therefore would not operate were treated in the above manner and are now working efficiently.

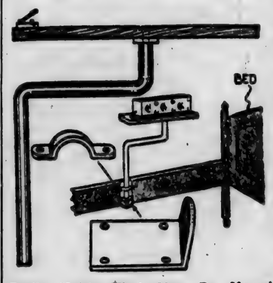
Many times detector tubes can be made more sensitive by this treatment. Taking everything into consideration it is an inexpensive method of salvaging tubes.—New York Sun.

Radio Set Table to Be Used Near or Over Bed

All radio tables to be used near or over the bed are constantly jarred along with the sick person's nerves by stumbling feet and careless bumps. The following is a plan for a radio set table that may be instantly removed without lifting or disturbance of any kind.

The top is of wood, long and wide enough to hold the set and any switches needed. The metal parts are all easily obtained from a plumber's supply store. For the table illustrated a piece of three-ply basswood was used.

Material List—1 top 28 inches long, 15 inches wide and ¾ inch thick; 1 ⅛-inch iron pipe 42 inches long;



Radio Table That May Be Moved Without Disturbance.

1 ⅛-inch flat headed bolt 8 inches long; 1 piece of pipe that is large enough to just fit over the pipe used for the arm, 8 inches long; 2 iron straps of the proper size for the arm.

The arm may be made of one piece of pipe bent into shape or it may be made of short lengths put together with elbows. The holder which carries the arm is fastened to a wooden bed inside the side board with iron straps. If to be used on an iron bed, fasten with bolted collar straps.

When properly constructed the top will turn and also the arm at the side of the bed. The set can be instantly swung out of the way.

The top should be stained and waxed and the iron parts enameled black.

In making the table adjust the measurements to individual needs and requirements.—Radio Digest.

When Using Loop Antenna

To get good results out of a loop antenna a set should be used that is designed especially for this purpose. Such a receiver contains from one to three more stages of radio-frequency amplification. For loud-speaker operation at least four or five tubes should be used, unless the receiver is of the reflex variety, in which the tubes do double duty.

Adjusting Voltage on Your Amplifier Tubes

Most of us know it is an advantage to be able to closely regulate the plate voltage for the detector tube, especially when a soft or gassy tube is used. For the amplifier it is customary to use a single plate voltage in the order of 67½ to 90, or in rare cases 120, for the two tubes, and let it go at that. This practice has been general up to date because it was found by early experimenters in radio that a critical adjustment of the plate voltage on amplifier tubes was not needed.

Quite a few experimenters are using a lower plate voltage on the first audio tube than is used on the second one, with somewhat better results, getting away from all possible distortion due to overloaded tubes.

But there is still another case where the adjustment of the amplifier plate voltage is of a distinct advantage, and where the improvement in the signal is more easily noticeable, and that is when any one of the B battery eliminators now on the market is used as the source of supply.

Experiments conclusively prove we have not been getting the most out of the amplifier until this voltage is closely regulated. While it can be noticed with the signals from the local stations, it is more noticeable on the more distant stations.

It seems that the plate voltage is determined somewhat by the particular filament temperature that is used. For example, when we have the rheostat three-quarters of the way on we get the best signal with a plate voltage of 45. Increasing this to 50 or 60 volts only gives us a signal that is very mushy and far from clear. This can be cleared up somewhat by advancing the rheostat until we have a similar condition, which gives us the mushy signal and we must again advance the rheostat.

It is a well known fact that constant increase of the filament brilliancy will reduce the life of the tube.

From the above one would think all that would be necessary then would be to have either the plate voltage adjustable or a variable filament resistance. This is not the case, however, as it is best to have both adjustable; the perfect balance which is desired cannot be obtained with one adjustment.—New York World.

New Style in Binding Post

Binding posts on subpanels back of the set are the latest style in homemade as well as factory-built sets. The unsightly posts on the base of the panel with various loose wires leading to the cabinet are no longer in vogue. The rear mounted posts are supported on a small strip of insulating material. Do not mount the posts on the wooden back of the cabinet or on the baseboard.

Bottle Insulator for Your Lead-In

Simple, Economical Bushing That Can Be Easily Made at Home.

BY HARRY R. LUBCKE

The efficiency of many good aerials is decreased by improper insulation of the lead-in.

It is desirable to have the down-lead in the clear as much as possible. It should be strung so that it is the shortest and most direct path from the antenna proper to the set. For highest efficiency it should come near the building only once, the point at which it enters. At this point we must be scrupulously careful about the insulation.

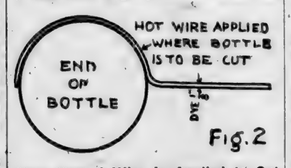
Fig. 1 shows an economical bushing that can be made by any one and still meets all the requirements for a low loss insulator. The insulating portion consists of a large bottle 12 inches or more in height, the bottom of which has been cut off. This

Bushing That Meets All Requirements for Low Loss Insulator.

fits in the support "S" and projects through the roof as shown.

It is essential that the bottle be at least 12 inches high because the larger it is the longer the leakage path will be from the lead-in wire to the roof. The bottom can be removed easily by the following process: A scratch is first made at the place where the bottle is to be cut with a file moistened with turpentine. Then a piece of iron wire about one-eighth of an inch in diameter is bent to conform with the curvature of the bottle, heated to redness and applied at the scratch. This is shown in Fig. 2. In a moment a crack will start directly under the wire. The wire is again heated and applied successively until a crack has been made all around the bottle. The bottom will then fall off.

The bottom piece of the support has a hole in it slightly smaller than the



How Heated Wire Is Applied to Cut the Bottle.

inside of the bottle. It is held in place by two triangular-shaped side pieces and an end as shown.

A cork is used to hold the lead-in wire as it enters the bushing. A hole should be burned through it with a hot wire of the same size as the lead-in. When the affair is in place the cork and the junction between the bottle and the roof should be coated with asphaltum roofing cement to make it watertight.

If it is desired to bring the lead-in through the side of the building a hole should be cut of such size that the bottle fits snugly. This should be backed up by a board with a slightly smaller hole than the inside of the bottle. The bottle can also be held by a board of such length that it extends all the way across a window and about six inches in width. The board can then be put in the upper part of the window frame and held in place by pushing up the sash.—New York Sun.

Sheet Brass Is Used in Making Switch Stop

Most radio dealers carry regular switch stops which can be placed at each end of the row of switch points to keep the lever from moving too far. Sometimes there is not room on the panel for these regular stops. An easy way to make one is to cut a small rectangle from a piece of sheet brass and drill a hole near one end, large enough to pass over the stem of the switch point. After you have bolted the switch point to the panel, it is a simple matter to bend up the end of the brass against the side of the switch point to form a stop for the lever.

Try Interchanging Tubes

A set that is equipped with three or more tubes will work better if the tubes are changed from one socket to another. The amplification factor of a given type of tube is generally said to be the same for all tubes of this type, but actually the amplification factor, like other individual characteristics of a tube, varies slightly for each tube

MRS. WM. BUTTS WAS VERY SICK

Gives Full Credit to Lydia E. Pinkham's Vegetable Compound for Remarkable Recovery

Wellston, O.—"I took Lydia E. Pinkham's Vegetable Compound to make me strong. I was troubled with my back and sides hurting me till I could not do my work, and whenever I caught cold it made me irregular. Since I have taken the Vegetable Compound my side and back don't bother me and I can do my housework and care for my children now, where before I did not feel like doing anything or going around. After my first child was born about four years ago I saw an advertisement in the paper about the Vegetable Compound. I knew it would help me, but I was afraid to try it because people said it would help you to have children and I knew I was having children fast enough. But I thought if it would help me it would be better to have a whole house full of children and have good health. I became stronger from taking it and my husband says I look like a live woman instead of a dead one. When Spring comes I am going to take your Blood Medicine as I am very thin. I will answer letters from any woman who wishes to ask about your medicine."—Mrs. William Butts, Wellston, Ohio.

Printer's Sick Stomach and Headaches Almost Cost Job

Mr. K. M. Collins of Woodhaven, N. Y., says, "Instead of plodding through my work wearily on account of sick headaches and sour stomach, I now enjoy good health and ambition, can do more and better work and life is worth living. I have never before given my name to advertise a medicine, but you cannot imagine how different I feel since I discovered Carter's Little Liver Pills."

Carter's Little Liver Pills tonic the whole system through the liver and bowels. They act as a mild and effective laxative, in a gentle manner without any bad after effects.

Recommended and for sale by all drug stores.

Sympatny

Joe—"I've got a bad head this morning." Bill—"I'm sorry, Joe. Hope you'll be able to shake it off."

Why buy many bottles of other vermifuges when one bottle of Dr. Peery's "Dead Shot" will work without fail? Adv.

Don't leave slander lying around where it will twist the tongue of a gossip.

Praises Old Friend

Alsey, Ill.—"I have taken Dr. Pierce's medicine for over 40 years. I am 68 now and in excellent health and I can say Dr. Pierce's Golden Medical Discovery has done me more good than any other medicine I have ever taken. I have been so ill that I could not walk across the floor and the 'Discovery' is the only medicine that did me any good. I have a daughter who had the 'flu and the doctors gave her up; she took the 'Golden Medical Discovery' and is well today."—Mrs. John Hepworth, Box 44. All dealers. Tablets or liquid. No harmful ingredient.

The man who has found life full of interest has found himself.

WRECKED

SYNOPSIS.—Living in the small English village of Darbury, old-fashioned and sedate place, Barbara Stockley, daughter of a widowed mother, is soon to celebrate her marriage to Hugh Rochdale, rich and well connected. Barbara is adventurous, and has planned, with an aunt, an airplane trip to Australia. Major Alan Croft, famous as an aviator, is to be the pilot. At her first meeting with Croft Barbara is attracted by his manner and conversation, different from the cut-and-dried conventions of her small town.

PART ONE—Continued.

—2—

She knit puzzled brows, trying to follow his meaning. What keynote could there be to all the jumble of separate entities that make up life?

"What keynote the world uses, I suppose, what you want to discover?" he asked.

"Do I? Is that it?" Eagerly she leaned toward him. "Oh, I wonder—What do you think it is?"

He blew out a cloud of smoke; then smiled. "Goodness knows! Perhaps there isn't one. What private ones do we all use? Don't you often wonder, when you meet a number of new people—"

"But I never do meet them! It is quite an event to meet a stranger," she assured him.

"Well, you shall soon meet plenty—of all nationalities. Even natives, in the Philippines."

Barbara came back to practical realities with a start. "Natives! Are they black? I should loathe them."

"Oh, no; surely not. I like them immensely."

She looked at him incredulously. "But why the Philippines?"

"I have to go to Borneo and the Philippines for the firm." He plunged into details of the journey, and she listened enthralled. To flash like a meteor over France, Italy, Egypt, India, with a few days at each landing place, and the detour to the Pacific, exceeded all she had ever dreamed. The world—at last!

Abruptly he broke off.

"But I have not yet discovered, in strange lands and crowded cities, what is wrong with the world! I hope you succeed in your 'heart's desire.' It's a tall order."

A subtle change in his manner gave her the impression that, inwardly, he laughed at her.

"Anyway, it is a wonderful chance. I am grateful to you for giving it to me," she replied, with stilted politeness.

"To me?" he asked; then gave a short laugh. "Oh, not at all. I am merely the pilot!"

She flushed crimson, remembering her own words at the sweets-stall. With a sense of relief, she saw Hugh hailing her from the terrace steps.

"Are you fixing up the trip?" he asked, joining them. Placing his hands on the girl's shoulders, he smiled across at Croft. "Look here! Will you please satiate Bab with travel, with sight-seeing, so that she returns fed up to the teeth? That will insure a peaceful honeymoon, and I shall be eternally obliged!"

Barbara explained:

"Hugh wants to spend his honeymoon in his father's farm yard; and I want to go—"

"Somewhere in the moon," Hugh broke in. "So our only hope of a 'happy issue' as the prayer-book calls it, lies in you."

"Good lord!" laughed the other. "It's a rather curious position! When is the wedding?"

"On December twentieth. Be sure you send her back in time!"

Croft's face grew sober. In his quick, decided fashion, he swung his legs over the parapet and stood up, facing Hugh.

"You are quite willing for her to go, I suppose?"

Both glanced at him, surprised at the earnestness of his tone.

"I know you will take the utmost care of her," Hugh replied.

"Of course."

Suddenly and unexpectedly the younger man held out his hand. Croft took it in a close grip; but Barbara gave an amused laugh.

She struck down lightly with her fingers; and the two hands fell apart.

III

Glittering like dragon-flies, several machines hummed and buzzed near the airdrome, some rising on trial trips, others soaring far overhead, a few "looping" or diving down in spirals, as though intoxicated with the exhilaration of the summer morning.

A small crowd of people, including reporters and photographers, stood near the monster which loomed up stationary after a final trial flight. The sunlight flashed upon the four propellers and the engines, now so placid and silent.

Barbara, clad in the beaver-lined flying cap and leather coat which Hugh had given her, stood close beside him, watching the giant plane and its attendants somewhat nervously. It was, after all, a big adventure to embark upon. . . Hugh was very dear. . . .

Mrs. Field had bidden Barbara farewell some days ago, and had gone to the famine area of Central Europe on an organization campaign. Noticing the wistfulness of the girl's face, something had compelled her to turn back and kiss her again, when they part

"You don't regret going, Bab, dear?" she had asked.

Barbara shook her head vigorously. "No! I feel a little depressed over leaving Hugh; that's all. It seems as though something—I don't know what—were ending. I suppose that's natural upon going away for the first time? Is it?" she added anxiously.

Mrs. Field knew when to keep her thoughts to herself.

"Quite natural," she replied cheerfully. "And—Bab," she went on, hesitating a little, "if you need Alan's friendship for any reason, I think you would find it worth having."

"Oh," the girl said hastily. "I don't think he—we—I shall never quite understand him."

Feeling that to be likely, Mrs. Field said no more. She had sown the seed, if ever it were needed. . . .

Then the last night at home— She had looked around her familiar little room with mixed feelings. When next she slept here, what would she have learned of the things beyond that life-long barrier of hills visible from her window?

With a warm rush of tenderness, she remembered that, upon her return, her new life as Hugh's wife would begin.

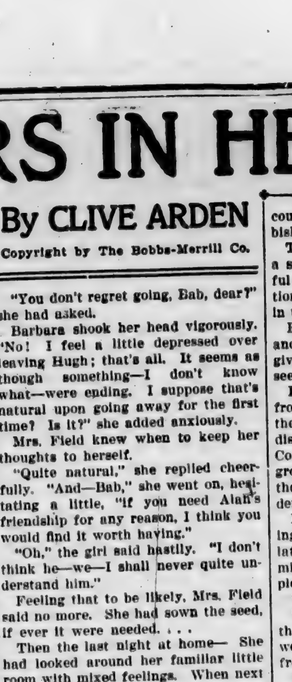
Taking the large photograph of him from the wall, she placed it carefully within her packed trunk.

* * * * * * *

And now the moment of departure had come. Croft appeared, looking big and alert in his flying kit, with an air of confidence about him which communicated itself, in some subtle way, to Barbara. Having been detained over a matter of form in the office, he hurried their start.

Hugh followed Barbara into the cabin, where she turned and clung to him. He drew her into his arms and kissed her with more passion than usual.

"We shall be married directly you return, Bab, darling," he said huskily,



Barbara . . . Stood Close Beside Him, Watching . . . Nervously.

feeling a suspicious lump in his throat. "I—I'll meet you, when you come back. It won't be long."

Hugh knew that his Barbara's warm-hearted impulses occasionally resulted in moments of embarrassment. Gently loosening the clinging arms, he bade Aunt Dolly farewell. Then he turned to the cabin door, hesitated, came back, kissed Barbara's wet cheeks passionately again, and ran down the steps.

Croft leaned down and waved farewell; then he gave the signal. Slowly, the machine glided away.

But with quick transition, the movement merged into the swift run of a bird seeking cover. Faster and yet faster, it became a wild roaring race across the grass, which soon the little wheels failed to touch, as, at an incredibly short distance, the airplane rose lightly from the ground.

Thrice she circled, high above the heads of those who watched. Then, sure of her capabilities, she turned, with a final upward curve, and settled down to her work.

* * * * * * * *

The days wore on to weeks, full of the important trifles that constitute daily country life. For a time Darbury felt a little flat, lacking in sensation. There seemed to be a dearth of subjects for conversation; and when a community has nothing to talk about, it is in a bad way.

Letters from Barbara were frequent and full of enthusiasm. Croft was evidently fulfilling the part allotted to him to the letter, during the calls at each sight-seeing place; and Hugh felt grateful.

When letters became more infrequent, owing to distance, wireless messages stated that all was well. . . .

With delightful suddenness a fresh thrill was provided for Darbury by Jenny Grant, a village girl. She had, it was rumored, "got into trouble" with a sailor who had recently been on leave in the neighborhood. Mrs. Stockley, with commendable charity, placed a large part of the blame on the girl's mother. The mother had seceded from the church; therefore, of course, she was no favorite with the bishop's descendant. . . .

There is, proverbially, a lull before a storm. Darbury, during those peaceful days of late summer, had no intuition of the most terrible thrill of all, in these days of thrills.

Hugh, especially, was of too bright and wholesome a nature to have misgivings, when the sun shone and all seemed well.

Returning one day with a friend from a morning's cubbing, it was therefore with no sense of impending disaster that he reined up at Lake Cottage and proposed calling. A small group of people, talking together near the main road, turned and cast wondering looks in his direction.

It was one of those glorious mornings at the end of September in which late summer and early autumn intermingle. Hugh glanced round with a pleased sense of appreciation.

Then he rang the bell.

The face of old Martha, who opened the door, was red and swollen with weeping. Her limbs trembled, as if from sudden shock.

For a moment she gazed at him blankly, half in astonishment, half in fear; then, without a word, she burst into hysterical sobs and turned back into the house.

The color ebbed a little from Hugh's face. He looked at his friend in vague apprehension, and they silently followed the woman into the drawing room. Instead of being bright and fragrant with the flowers Barbara loved about her, it seemed strangely cold, gloomy and deserted.

A chill fell on Hugh.

"Where is Mrs. Stockley?" he asked uneasily.

"Upstairs," sobbed Martha. She walked to the little bureau and picked up a telegram. Turning slowly, she half held it toward him, and the flimsy paper trembled violently in her hands.

Hugh took the telegram slowly from the woman. For a moment he looked uncertainly at her frightened face, then round the familiar room, as if dreading to read it. . . . At last, with an obvious effort, he raised the sheet, and turned away. . . .

The telegram fluttered, unheeded, to the floor; and Hugh raised shaking hands to his head, in a vague uncertain manner. He turned slowly, his face ashen, haggard and old all at once. His lips moved a little, but no sound came; he looked at his friend with the bewildered eye of a dumb animal awakening to some terrible pain of which, as yet, it is not wholly conscious.

Tom Westwoods picked up the telegram.

It was from the London agents of Croft's firm. He read the few bald sentences so fraught with tragic meaning. The airplane, it stated, in characteristically crude words, was missing. The lifeless body of the mechanic had been found in the water, where, it was feared, the rest had perished. Search was in progress, but with small hope of success. A typhoon had swept across the seas verging upon the Philippine Islands. One wireless message of distress had come from the machine.

Then silence fell.

PART TWO

The Rising Orchestra

I

Dawn broke at last, the first dull lines of gray merging into a myriad pearly tints. Birds awoke in the forest; rustled amid the leaves; shook their wings; then flew forth to hunt for breakfast; their brilliant plumage reflected the sun's rays in a thousand bright hues as they flashed from beneath the shadowy trees.

Upon the sloping shore of a tiny cove, the waters of the lagoon lapped in a gentle, rippling murmur. Farther away, the surf of the open sea boomed like distant thunder against the barrier reef; waves swirled angrily through the gap which formed an inlet.

Partly telescoped upon a jagged promontory jutting inland from the entrance, rising and falling helplessly at the mercy of the tide foaming through, loomed a mass of something dark. It looked strange, shapeless, forlornly tragic, as if flung down by a ruthless hand and forgotten.

Upon the ground of the opposite cove, near a heap of wet coats, little rivulets trickling from her drenched garments, lay the inert form of a girl. A man, likewise sodden from head to foot, knelt beside her, anxiously forcing brandy between her pale lips from a small pocket-flask. Presently he paused, a sudden dread in his heart, and with his head close to her wet blouse, listened. . . . Then, with renewed energy, he set vigorously to work again.

At last she gave a little quivering sigh. Her hands moved gropingly. Soon, with another, longer sigh, she opened her eyes and gazed blankly, as one newly awakened from a troubled dream, into his face. Raising a hand to her head, the vacant gaze changed to one of feeble wonder.

"Why, are you—hurt?" she half whispered.

Until then he had not recognized that the stream trickling down his face was blood. With his fingers he traced what was apparently a long jagged cut stretching from his temple to the left ear: it smarted when touched. Taking the wet handkerchief from his pocket, he sat back and dabbed at it with the clumsy movements of a man unused to troubling over personal injuries. His look was still fixed upon the girl's face.

As she gazed round the unfamiliar scene, an expression of bewilderment crept into her eyes. Remembrance slowly returning, this merged into concern, then fear. . . . Quickly it grew to terror. . . . Sitting upright, she turned wildly to the man at her side.

"Where are we? Where are we?"

"We crashed on that reef," he replied quietly. "The last engine gave out—"

"But—how—did we get here?"

"I found you in the water, and swam in."

Fearfully she looked toward the dark mass, as if measuring mentally the distance from shore, scarcely understanding the full meaning of this feat. Then she looked about her as if seeking somebody . . . finally turned to him, mutely asking the question her troubling lips dared not frame.

He laid a hand upon her shoulder, instinctively fortifying her for the complete realization of the dread that was dawning in her brain.

She caught his arm in a feverish grip, her eyes wild. "Captain Croft—tell me! The others? . . . Where is Aunt Dolly?"

A look, so full of anguish that it seemed as though the soul behind were in the tortures of hell, was her only answer.

She gazed, awestruck, for a breathless moment, at his haggard eyes and drawn blood-stained face, at the features usually so cloaked with reserve now betraying unbearable agony—then, with a hoarse moaning cry, she collapsed in an abandonment of horror at his feet. . . .

Presently Croft raised his head, and stood up. He gave one long look seaward, to the grave of such unlimited pride and hope; to where, also, those who had risked their lives with him now lay hidden beneath the smiling blue. With a long sigh, he turned away, setting his teeth and squaring his shoulders . . . then looked at the figure lying face downward at his feet.

Dropping on his knees, he gently raised her, so that she leaned against him.

"Come!" he urged, with forced brightness. "We must buck up, you know, and see what can be done."

"Tell me—first—what happened," she besought. "It seems like a—a hideous nightmare—" Shuddering violently, she hid her face again.

"We had some engine trouble soon after leaving the Philippines, as you know, which obliged us to return there to land," he replied. "We got caught in the center of a typhoon near the coast, and were driven completely out of our course—"

"It was awful—awful! That terrible deafening roar!" She began again to tremble violently.

"We were hurled into an air-pocket which caused us to drop nearly a thousand feet," he continued hurriedly. "That put two more engines out of action and injured the fourth. Only a miracle prevented our being dashed straight into the sea. After a bit I saw land here, and hoped to reach it in time; but she crashed too soon—" He stopped, perceiving the state of her shattered nerves. Standing up, he raised her with him; and she clung convulsively to his arm, every limb shaking as if with ague.

Unclasping her hands, he drew her arm through his, turning their steps inland; his own feelings being almost beyond his usual iron control, he spoke roughly:

"For heaven's sake, don't talk or think about it all, just now! We shall go raving mad if we do!"

The words and tone acted as a tonic. Something of her first feeling of inferiority in his presence returned, causing her to struggle fiercely against the weakness that threatened to overcome her.

"There's generally an opening in a brier reef opposite a fresh-water river," Croft observed.

"Why?" she inquired, without any interest. To talk of anything however, was better than the silence which encouraged thought.

"It's supposed that the sediment it contains injures the reef-building polypes, preventing their working opposite. The polypes can't live and work below a certain depth—about twenty fathoms or so. Awfully interesting, coral! Don't you think so?"

She confessed entire ignorance on the subject. This little digression, however, had served its purpose for them both. Drawing her arm free she proposed bathing their faces in the cool stream. Revived by this, she became aware of their bedraggled state, of the discomfort of wet clinging garments, and of Croft's ineffectual efforts to staunch the wound on his head.

Shyly she went to him where he knelt upon the bank.

The man seems to be efficient and the girl fairly strong. What next?

(TO BE CONTINUED.)

Bad Day

The beggar was so obviously neither blind nor lame that the "Help the Blind and Crippled" sign he carried only made him seem the more robust.

"Say, mister, I haven't taken in anything for 24 hours," he whined, as he shoved his hat under the nose of a passer-by.

"Then don't expect to begin by getting me in now," said the intended victim, as he ran for a street car.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, by Western Newspaper Union.)

BOTTLING SUNLIGHT

WHETHER Moses or some other man wrote the book of Genesis is for Biblical experts and critics to decide. Whoever wrote it says that before any life appeared on the new world God said, "Let there be light." Whether God made the universe in six days, as the orthodox say or in six hundred million years, as geologists say, doesn't matter. That's a question of detail. What does matter is that the more man knows the more he realizes that before there is any life there must be light.

And in our universe the only light there is, is sunlight. Wood, candles, coal, oil, electricity, all depend on sunlight.

What sunlight is we do not know. It is not the simple thing it was thought to be for centuries. We know there are some rays in sunlight that are invisible to the human eye but which can be detected by special instruments. There are probably many more of whose existence we have not even guessed.

Neither do we know much about the effect of sunlight. But we do know something about the effect of the lack of sunlight.

Rickets is a common disease among children. Fifty per cent of all breast-fed babies and nearly 100 per cent of bottle-fed babies will develop it unless proper treatment is used. It is caused by lack of lime and phosphorus in the growing body. Cod liver oil has long been used in its treatment. Then it was found that cod liver oil, after being exposed to the sun, gave off ultra-violet rays which affect a photographic plate. So the oil must have absorbed these invisible rays and given them off to the body.

Then the investigators went a step further. They exposed other oils, such as cotton seed oil, to sunlight, and found that it, too, gave off ultra-violet rays after exposure and caused a rapid and complete cure when given to animals suffering from rickets.

Apparently the oil absorbs the sunlight and then gives off its healing rays after it is taken into the child's body.

And now Dr. Henry Steenbock, professor of agricultural chemistry at the University of Wisconsin, finds that placing food in the sunlight will give it growth-promoting qualities which it formerly did not possess. So the vitamines we have heard so much about may be simply the imprisoned sunshine which is found in leafy vegetables.

CARBON MONOXIDE DEATHS INCREASING

EVIDENCE of the danger of carbon monoxide continues to accumulate. Almost every morning paper tells of at least one case of death from automobile exhaust gas. The United States public health service has issued a special bulletin on the subject. Many state and city health departments have warned the public of this danger. Yet needless and preventable deaths still occur.

Everyone who owns or drives an automobile or auto truck should know that any internal-combustion engine, in burning gasoline, generates and throws off a poisonous gas, carbon monoxide, which will kill anyone exposed to it in a few minutes. If the carburetor is properly adjusted and the combustion of the gasoline is complete, there is less gas given off and so less danger.

But if the carburetor is not properly adjusted, or if the mixture fed to the machine is too "rich," then more gas is generated with greater risk.

In the open air, with a wind blowing, the gas is blown away before it can do any harm. But even outdoors no one should crawl under a car in which the engine is running and the exhaust open.

In a closed space, such as a garage, the engine of a car will generate enough gas to overcome one in a few minutes. Engines should never be allowed to run in a garage, unless the doors and windows are open enough to get a through-and-through draft to carry out the gas.

Carbon monoxide is produced in other ways than by gasoline engines. Most of the cases of gas poisoning in this country, at least in previous years, are due to flueless gas stoves, gas grates and gas heaters without drafts. Gas hot-plates and cooking stoves used in rooming houses, gas water heaters in bathrooms and the so-called "radiant heaters" are the most dangerous.

In Ohio alone, in the winter of 1922-23, carbon monoxide poisoning caused 61 deaths of which 42 were due to gas heaters.

Any gas heater or cooking stove should have a flue of some kind to carry off the gas that is produced by combustion. Water heaters in bathrooms are particularly dangerous on account of the small size of the rooms and the fact that the doors and windows are usually kept tightly closed while the heater is running. A water heater can generate enough gas in 15 minutes to cause suffocation.

Carbon monoxide is colorless, tasteless and odorless. Don't run any kind of a gasoline engine or gas stove in a closed room.

Pat Mulligan Speaks

(Continued from page 1)

find that a new car in looping the loop down main street will look like a stage coach in a few weeks. A business stimulation.

The Fish & Game Association have ordered a large shipment of ocean toads, eels and beavers to stock the bodies of water during the damp seasons. Another encroachment on personal liberty by turning our fair city into a barn yard and summer resort

Farmer's journals are protesting against the propaganda that hog and chicken raising in town are responsible for the dirt on our street. The hogs are not guilty, nothing ever escapes from their pen in summer but the smell.

The two literary clubs advocate rough streets because they have discovered that as the pedestrian changes position very rapidly in going down street it likewise changes the mind for the better in equal velocity. The literary clubs whose aim is intellectual and moral developement of its membership and environment, have deducted the theory that it is an absolute necessity for people to be jarred loose from their personalities and reputation and at the same time get a change of mind necessary to improve living. In short, they believe that any man who will ride down main street in a Ford at the speed of thirty miles an hour will be a changed man. They are right.

The Bunco club says "let the streets alone, they keep the husbands loosened up financially, thus increasing their domestic utilitarian value by making them buncoable and at the same time increases the shaking ability of its members—a movement necessary in ceremonial activities.

The press is also in favor of the present corrugated surface because it supplies material of both laughable and serious natures for regular publication

The undertaker believes that the present streets shorten life from twenty-five to thirty years His phone number is

Testing Seed Corn At Schools

The testing of seed corn by the use of the modified rag doll in a large artifically heated community corn tester has many advantages over other methods of testing.

Some of the advantages are:

1 It is the most reliable germination test.

2. Its use reduces the number of barren stalks.

3. It causes fewer small ears and nubbins and more large ears

4. It reduces the number of down stalks.

5. It reduces the amount of smutted ears and stalks.

In a test recently completed at the Spencerville high school by the Vocational Agriculture class it was found that some corn here tests 100% and some tests below 50% The amount of root rot which causes barren stalks, nubbins, down stalks and smutted stalks was found to be small in this first test. This is due to the fact that the corn testing high was stored in a dry well ventilated place and the corn testing low had so many dead kernels in that the root rot did not show because there were no roots on which the disease is detected.

Those interested in seed corn testing would do well to inspect the work being done by the schools at St. Joe and Spencerville

Trustees Elected For Newville Cemetery

An election of five trustees for Evergreen Cemetery at Newville was held at the U. B church recently. These trustees serve for 2 years and are as follows: Neff Culler, John Platter, Adron Beree, S S. Wyatt and Mrs Ida M. Traxler. These persons served on the board during 1923 and 1924 and they submit the following report for the past two years: Endowment fund $229 92 and Assessment fund $255 04, making a total of $484 96 deposited in the bank after all expenses were paid

The board retained the same officers: Neff Culler, president; Ida M. Traxler, secretary and John Platter, treasurer. Lot owners who contribute to the Endowment fund are exempt from assessments. In doing so they are doubly protected as the secretary and treasurer give bonds, double the amount of money handled, and the bank retains the principal of the amount deposited, only the interest being used. Lot owners who are delinquent in their assessments should remember that no further burials are allowed until all assessments are paid.

Try This Scheme When You Begin A New Puzzle

Here are a few tips on the solving of cross word puzzles. Many readers of The News already have discovered them.

First, when you start a new puzzle, read through the definations until you reach one which you recognize, and if you are fairly sure of your guess, jot down the word in the proper squares. Most puzzles contain several words which appear again and again—words such as "emu," "boa," "ai," "ra," and several others whose meanings are so limited that it makes variation in definations almost impossible. Consequently, if you go thru the entire list, you will find quite a few words at the beginning which will give you a good start.

Another thing to be careful of is the proper interpretation of definitions. Many words have several meanings or shades of meanings, which are likely to give the solver a wrong impression. Sometimes the word may be used as either a verb or a noun, but the definition, of course, will give only one meaning. For instance, think of the many ways of defining each of the following words: mop, heat, air, run, view, drop, etc.

Of course, there are no set rules for this fascination game; perhaps that is one reason for its popularity, but in any event these suggestions may help you through a tough puzzle. Turn to the one in today's paper and see how long it takes you to solve it.

We make and supply poultry raisers supplies. Bowser & Feed.

VOL. XXXIX ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MARCH, 26 1925 NO. 13

St. Joe Meat Mkt.

Wm. Harman, Prop.

We are pleased with our trade and we try our best to give the BEST MEAT in return for your money.

What they think about it

TheNews, the first of the week received a copy of a book phamplet entitled, "The Constitutional Rights of the People of America" The preface to the work gives the Author's viewpoint. In this he gives specious arguments why, in his opinion, the eighteenth amendment should be removed from the Constitution

The Peoples Rig ts Publishers request a copy of a paper from the various publications in our land containing comment upon the above proposition, pro or con. We as publishers of the St. Joe News gladly and cheerfully comply to this request. On a subject of this kind fraught with things of such moment to the welfare of citizens of this, our republic, we feel that we would be guilty of the infraction of a public trust, a public duty, if we would pass this thing by lightly as if of no import. We wish to state to the anonymous writer of this treatise that we regard ourself as a law abiding citizen, and as such we propose to stand by the Constitution with its amendment in toto.

Furthermore the eighteenth amendment was adopted with the full concurrence of the law making body of Congress and in a manner, as prescribed by law also with the consent and good will of a majority of our citizens. This being true it behooves us as loyal and obedient citizens to stand by it to the last extremity.

You have indulged in a great hair splitting contest in your contention that anything was amiss in the manner in which it was adopted. Your mental contortions and gymnastics are certainly wonderful. You speek feelingly of liberty. What is your conception of liberty? In our opinion, you and you, ilk mistake liberty for license. Liberty for what? To make a fool of yourself? To debase humanity, to degrade, to impoverish, to sow the seeds of crime and disease, to increase taxation, to deprive childhood of its just inheritance? Yes, it must be so, no one not actuated by the basest motives, no one not avaricious, no one not bestial in mind and boby would be guilty of advocating a return of conditions as they were prior to the enactment of the Volstead act Even were it true; which it is not; that Volsteadism took away a lawful right; we would be justified in its enactment, its enforcement, in view of partial results obtained. Then again—the preamble to the constitution says, "We, the People in order to form a more perfect union" Would liquor aid here? "Establish Justice." Does a besotted brain aid justice? "Insure domestic tranquility." Answer, washer women! "Provide for the common defense, promote the general welfare." Does liquor help in these things? Could we divorce liquor from religion and morals, we would then have perfect justification for the Volstead law and the eighteenth amendment for the purely material gain it would give us. To speak of liberty in connection is a profanation, a lying hypocriey, a thought to shame the devil and cause him envious pangs.

In conclusion, this country needs men. Yea—"God give us men for times like these demand strong minds, great hearts, true faith, and ready hands. Men whom the lust of office does not kill; men whom the spoils of office cannot buy; men who possess opinions and a will; men who have honor; men who will not lie; men who can stand before a demagogue and damn his treacherous flatteries without winking; tall men, sun-crowned, who live above the fog in public duty and in private thinking. For while the rabble with their thumb-worn creeds, their large professions and their little deeds, mingle in selfish strife. Freedom weeps, wrong rules the land and waiting Justice sleeps. God give us men; men who swerve not for selfish booty; but real men, courageous, who flinch not at duty; men of dependable character; men of sterling worth! Then wrongs will be redressed and Right will rule the earth. God give us men!

Samuel Keesler, Mgr. Grain Dept. **Bert Jackson,** Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

Plan as Far Ahead as Your Hopes

You should make your plans extend as far ahead as your hopes. For instance: You hope to live ten years longer and you hope to build up your business and increase your prosperity through those ten years.

But by what means do you expect that this hope is going to be fulfilled? Will it be accidental? Will circumstances work around until they carry you along to that success you hope for? It is unlikely. You do not drift into success. You must walk, run, crawl, swim or fly in to it by positive effort.

Having this in mind, it is not entirely logical that you should sit down and plan several years ahead the general outline of your farm management program? Many men who have done that have found it the key to their success. You cannot make a new set of plans every time the wind changes and expect to get anywhere You must drive ahead and build and fulfill your plans regardless of circumstances. Come in and talk over with us your plans for the next ten years. It may be that our experiences in such arrangements and knowledge of general business conditions can help to direct your plans more nearly correctly. If so, we are at your service.

The St. Joe Valley Bank, A STATE BANK

W. C. T. U. NEWS

The W. C. T. U. will meet Friday afternoon with Mrs Lora Leighty. The following is the program:

Obituary

Barbra E. Bair was born in Allen county, Indiana, Nov. 11, 1846 and died at her home in St. Joe, Indiana, March 18, 1925, aged 78 years, 4 months and 7 days.

Her entire life was spent in this community and she has made her home in St. Joe for a number of years. She was married August 27, 1868 to Daniel Oberholtzer, who lived together 58 years, 6 months and 18 days, and to this union the following children were born: Mrs. Cora E. Maxwell, St. Joe; William Oberholtzer, Butler and Mrs. Mirtha J. Souls Spencerville; also one sister, Mrs Etta Elson, of Garrett, besides she is survived by her aged husband, 4 grandchildren and 7 great grandchildren. Two grand children are dead.

She joined the Lutheran church at Spencerville in early life and remained a faithful member there until death. She was an excellent neighbor and friend and a wise, faithful and loving wife and mother who leaves many to mourn their loss. She was sick nearly a year with an incurable and very painful disease but was confined to her room for only about two weeks. She died in peace and so may in the hope of eternal life, may those who mourn be comforted.

Funeral was held at the Lutheran church Saturday morning at 10:00 o'clock conducted by Rev. Steffey. Buriat at St. Joe.

Susan Amanda Coburn was born February 25, 1851 in Springfield township, Allen county, and died March 16, 1925 at her home in St. Joe, Indiana at the age of 74 years, and 19 days.

She with her parents and younger sister moved to DeKalb county in the year of 1853 and spent the remainder of her life in and around this neighborhood. At the early age of twelve she gave herself to Christ and was baptised by Elder Lockhart and has always lived a steadfast christian life, she can certainly say with Paul, I have fought a good fight, I have kept the faith, henceforth there is laid up for me a crown of rightousness, not only for me, but for all that love his appearing

In the year of 1871 she was united in marriage to Jacob Shafer. To them were born two children, Dallas A. and Alice D., who with their father have already preceded her to the life beyond. She again was united in marriage on October 7, 1920 to Wm. Brown who survives to mourn the loss of a dear and devoted wife.

She leaves to mourn her departure, a husband, three grandchildren, one brother, four sisters and numerous other relatives and friends.

She has gone but her good works will live in the hearts of those who knew her, for to know her was to love her In the church and in sickness she was always faithful always to be depended upon for help and assistance She was kind and very sympathetic. It was her greatest pleasure doing good for others.

The funeral was held from the Christian church Thursday afternoon at 2 o'clock Rev. J. O Rose officiating assisted by Rev. Konkle, local pastor. Burial at Alton cemetery.

CARD OF THANKS

We, in this manner, wish to thank all neighbors and friends for their kindly words and deeds, the beautiful floral tributes, in this our hour of sorrow. Husband grandchildren.

Rev. Denham Was Killed Saturday

Rev. W. W. Denham a former pastor of Newville Christian church but lately taking charge of Butler work, moving from near Edgerton was killed Saturday afternoon by New York Central train, 2 miles west of Edgerton. He was buried Monday and the entire Butler congregation attended, The crossing was free from obstruction and why he drove upon the tracks no one knows. His body was badly mangled by being carried down tracks.

Rumor Is False

To Whom This May Come:

The information has come to me that there is a rumor current to the effect that I requested the resignation of Mr. Samuel W. Armstrong as postmaster at St Joe Such rumor is an injustice to Mr. Armstrong as I made no request, his resignation being wholly voluntary on his part

Respectfully submitted;
David Hogg.

R. W. Brodbeck has installed a radio, also Frank Bowman and Chas. Miser are among the late purchasers.

Temporary Appointment to P. O. Made

Mrs. Esther Bowman received a temporary appointment last Wednesday as acting postmistress for St. Joe office, pending a civil service examination to be held April 15 when a regular appointment will be made. Mr S. W. Armstrong's commission expired March 3 and because of ill health he resigned. Mrs. Bowman is Republican committeewoman of Concord township and was in line for the appointment by recommendations to the President from the County Chairman and Congressman.

TORNADO KILLS HUNDREDS IN THREE STATES

Illinois, Indiana and Missouri Towns Destroyed—Many Children Die When Twister Destroys Schools.

Chicago.—A tornado tore through southern Illinois after lashing eastern Missouri, and then caused heavy damage in Indiana before it died out. A total of 3,714 persons were killed or injured.

830 Die; 2,884 Hurt.

Estimates which came in through various sources with ever increasing totals placed the total dead at 830 and the injured at 2,884.

The destruction of property was enormous, several towns being almost entirely wiped out.

Such populous places as West Frankfort, Ill., and Murphysboro, Ill., lost whole blocks of buildings. One hundred persons were killed at West Frankfort.

In the town of Parrish, which has only 300 inhabitants, 7 were killed and 52 injured.

School Falls on 245 Pupils.

At Murphysboro, where the dead totaled 200, a schoolhouse was blown down over the heads of 245 pupils.

At De Soto, Ill., estimates placed the dead at 140 and the injured at 300 out of a total population of 703.

A schoolhouse at De Soto was razed and only 3 of the 250 occupants escaped unhurt, while 88 bodies already have been taken from the ruins.

Heavy Losses in Indiana.

Indiana suffered almost as much as Illinois. Princeton reported 100 dead and twice as many injured. The latest tabulation at Griffin placed the dead at 75 and as many more hurt.

Owensville also reported 75 dead and 100 injured.

Poseyville had a loss of 5 dead and a score hurt.

Buildings Carried Far.

In some places, where the wind struck hardest, whole buildings were moved from their foundations, a grain elevator at De Soto having been carried intact some forty feet.

The storm was not so severe in Missouri, but it laid waste a number of towns and many farms before it jumped the Mississippi river into Illinois.

There the tornado was at the height of its fury for miles as it careened from Murphysboro to Parrish. It rose above the treetops for a considerable distance, but lapped the earth again just west of the Indiana line, creating more damage at Carmi.

As it passed into Indiana the tornado lifted slightly again, split into two sections, and swept northeast and southeast through Princeton, Griffin, Owensville, and Poseyville.

Relief Work Starts Soon.

Relief trains bearing doctors, nurses, wreckers, and goodly supplies of medicines and food were dispatched from Chicago and St. Louis, as well as other points within a few hours after the disaster became known.

Gov. Len Small ordered troops and the medical corps of the Illinois National guard to proceed to the devastated regions.

While the storm started in Missouri shortly after one o'clock, it did not reach Illinois until around three o'clock, and it was nearly dusk before it took its last savage blow in Indiana.

West Frankfort in Ruins

Working under lights from automobiles and from bonfires built from wrecked framework of houses, hundreds of rescuers were searching for bodies of victims of the tornado which swept West Frankfort, Ill.

Public buildings, lodge halls, and churches were converted into temporary hospitals and morgues. Eighty-five bodies already have been recovered. The injured number 350, many of whom will die.

Hundreds of injured were rushed from there in automobiles and on special trains to nearby towns, where they received care.

The town is a picture of ruin. Scores of buildings are demolished and the streets are strewn with wreckage. Tangled wires and splintered trees litter the streets. Naked walls from which the rest of the structure has been torn stand out as grim silhouettes.

And all of this thrown into fantastic contortions by the flames from a dozen fires which sprung up here and there among the ruins. Fire departments from surrounding towns aided the local department in checking the flames.

Fire Follows Fire

As they put down one blaze another sprang up in another section. And through it all the firemen were constantly called on to leave their work and help in rescue.

The picture after the storm was one of pathetic suffering. Dead and injured were strewn about the streets, and among them ran frantic men and women, or crying children, some almost unclothed, seeking their loved ones.

Miners streamed in from the mines, just outside the town, and rushed to their homes, where they had been seeking their wives or children. Those who had escaped the wrath of the storm immediately joined in the rescue work.

In some cases entire families have been wiped out.

Many Children Killed.

The number of dead and killed in the tornado which swept De Soto was estimated to run between 150 and 400, most of the victims being children, caught under the crumbling debris of the two-story school building of the town. The population of the town is estimated at 600.

Five buildings, including the railroad station, were left standing, the others being twisted and blown into a mass of destruction.

Cars Filled With Bodies.

Train No. 1, a southbound passenger, on the Illinois Central that left Centralia with three empty refrigerator cars, stopped at De Soto and filled the cars with bodies, Conductor Redus reported. There was no building over ten feet high left standing in the town, Redus said.

Railroad men who came through the stricken area declared many bodies were carried a mile or more from the various towns.

Carried Out 30 Bodies.

A. A. Hodge of the Milton Oil company, Centralia, who was in De Soto, said he saw 30 bodies carried from one room of a business establishment.

So terrific was the storm at Parrish and West Frankfort, eyewitnesses said, that in some cases bodies were blown about a mile and a half out of town.

The advices also indicated that Murphysboro, Carmi, Orient and scores of other towns sustained severe damage.

200 Dead in Indiana.

Evansville, Ind.—At least 200 persons are believed to be dead as the result of a tornado that struck southern Indiana, razing the towns of Princeton, Griffin, Owensville and Poseyville.

The death toll:

Princeton—75 to 100 dead; hundreds injured.

Griffin—60 to 75 dead; 200 injured.

Owensville—25 dead; scores injured.

Poseyville—5 dead; 30 injured.

Elizabeth—3 dead.

Thousands are homeless as a result of the storm and rescue work was being carried on against trying circumstances,—of darkness, fire and lack of equipment.

Property Loss in Millions.

The property loss cannot be estimated. It will run into millions of dollars, it is said, however.

Princeton is under martial law declared by Capt. N. E. Hart, commander of Battery D, Nineteenth field artillery, stationed there. His men are aiding in the rescue work. Fifteen bodies have been recovered.

Griffin, a town of 400 people, is a total ruin. Projecting above the debris are parts of four buildings, all that remains standing out of more than 200. Fire swept the town and brought death to many injured who could not help themselves. Nine bodies have been recovered.

In Owensville, the public library has been converted into a temporary hospital. Twelve bodies have been recovered and identified.

Send Volunteer Workers.

Miss Grace Wright had organized a special train carrying several scores of volunteer workers to Griffin, where the scenes were said to be horrible beyond description.

Open cisterns claimed some of the rescue workers as they searched through the ruins after dark. The only way to locate the injured was by listening to their cries. Persons who were stunned are believed to have been caught by the flames that quickly followed the disaster.

Eight Dead in Kentucky.

Eight dead and more than fifty injured was the toll exacted in Kentucky by the tornado, which crossed into this state from Indiana, but soon spent its force thereafter. Property damage will run into the tens of thousands of dollars.

Sees Children Die in School.

Centralia, Ill.—A dramatic eye-witness story of the death of a score or more of children in the school at De Soto and of the virtual destruction of the town was told here by Max Burton.

Burton is telegraph operator for the Illinois Central at Tamaroa, a few miles from De Soto, and on receiving a flash of thte destruction he motored there, being the first outsider to arrive, and found the town a mass of debris, with dead and injured strewn in the streets.

All Houses Destroyed.

"It seemed to me there was not an entire house in the town," Burton said. "People were hurrying out on the road, north and south, with a few belongings clutched in their arms, more for protection against the storm than anything else, so far as I could see.

"I went directly to the schoolhouse, after running and walking two and a half miles, and the first thing I saw there was the bodies of about twenty little children laid out on mattresses and blankets. There was no one there to claim them, so I thought the people whom I had seen on the road were their parents, but I learned later that the children's parents had been killed or injured, and those who were not dead were being hurried by automobile, special relief train and ambulances to hospitals in Carbondale and Duquoin.

"The principal of the school was there trying to identify the bodies of the pupils. He also was worrying over the safety of two girl teachers who were unaccounted for. The principal was bloody from his injuries and staggered in his walk. He had barely escaped with his life.

Carried Bodies From Ruins.

"About twenty-five bodies of school children were piled up just outside the playgrounds, and a search was being made for others in the ruins. While I stood there they took some of the bodies away and brought others out of the building, which by then was a mass of smoldering ruins, fire having destroyed what the cyclone did not.

"The hallway of the school had caved in, and what few rescuers were on hand were trying to uncover other bodies of pupils and locate the two missing teachers.

"I walked out beyond the school grounds and near the city limits I saw the bodies of two babies, apparently about six or eight months old. They were dead and their baby clothes had been torn from them.

Sees People Fleeing Town.

"Every tree that was left standing and every fence had garments, bedclothes and household goods hurled against the west side of them. This indicated the storm traveled eastward. I saw furniture, automobile tops and clothing scattered everywhere, and saw many people fleeing from the town with hardly any garments.

"The business section was practically destroyed by fire and wind and nearly every home was flat on the ground.

"I saw about forty automobiles piled up in one big pile and thought this was a garage that had been struck.

"Then I saw another car just outside of town that looked like the people were trying to get away, but had failed. The car had blown from the road over to the railroad right of way and was wrecked, but I could find no bodies.

Firemen Aid in Rescue Work.

"I offered what help I could, and they told me the bodies were first taken south to Carbondale, but that the hospital there was soon filled and they then took the injured to the Duquoin hospital, north of De Soto.

"Automobiles were stretched along the hard roads north and south of De Soto for nearly three miles, a short time after the cyclone.

"The fire departments of Duquoin and Carbondale were sent to De Soto, but they were unable to do anything and the firemen pitched in to do rescue work. I could see them digging the bodies out of the schoolhouse and other buildings.

"I met two girls on the road on my way back to Tamaroa. Their faces were bleeding and their clothes were torn. One of them said: 'How did you get out', and the other answered, 'I climbed out of the window,' and said, 'how did you get out?' The first said, 'I don't know.' They were wandering up the road and seemed not to know where they were going."

Casualties in Towns Swept by Tornado

The latest list of casualties of Wednesday's storm, with the towns listed in the order in which they were struck, follows:

	Dead	Injured.
Annapolis, Mo.	2	50
Biehle, Mo.	10	20
Altonburg, Mo.	1	10
Cape Girardeau, Mo.	12	50

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. H. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1925, Western Newspaper Union.)

Lesson for March 29

CLOSING PERIOD OF CHRIST'S MINISTRY—REVIEW

DEVOTIONAL READING—Rev. 1:9-18.

GOLDEN TEXT—"Jesus Christ the same yesterday, and today and forever."—Heb. 13:8.

PRIMARY TOPIC — How Friends Cared for Jesus and Paul.

JUNIOR TOPIC—Helping the Missionaries by Our Gifts.

INTERMEDIATE AND SENIOR TOPIC—Living Lessons From the Quarter.

YOUNG PEOPLE AND ADULT TOPIC—Closing Scenes in Christ's Life.

The lessons of the quarter have been so rich and full that perhaps the best method of review will be to summarize the outstanding teachings of the quarter. The following suggestions are offered:

Lesson I—The so-called triumphal entry was the official presentation of Jesus of Nazareth to the Jewish nation as their Messiah. He was the predicted king coming in the name of the Lord (Psa. 118:26).

Lesson II—Coming judgment is absolutely certain. The judgment portrayed in this lesson is that of the nations living on the earth when Jesus comes. The judgment pronounced—reward or doom—will be on the ground of the attitude of the nations towards Jesus as expressed in their treatment of His brethren, the Jews.

Lesson III—Before Jesus went to the cross He instituted a memorial of His broken body and shed blood. This should be gratefully and strictly observed by believers until Christ come again.

Lesson IV—Many are the trials through which the believer must pass as he goes through this life. The sure cure for "heart trouble" is the assurance that Jesus has gone to prepare a place in His Father's house, and will come again and receive His disciples to Himself.

Lesson V—Jesus is the true vine and believers are the branches. Abiding in Him will result in fruitfulness, success in prayer, fellowship in the love-life of God, fullness of joy and love-life like that of God.

Lesson VI—It is not the purpose of God that Christians should be taken out of the world at once when they believe on Christ because the world needs their influence and testimony. Christ needs them as His representatives and they need the trials of the world to strengthen the grace of God in their hearts. Those whom God has given to Christ are eternally secure even though they must pass through great trials.

Lesson VII—The agony of Gethsemane was due to the fact that Jesus was bearing the burden of the sins of the world.

Lesson VIII—The heart of this lesson is that Christians should be obedient to civil authority because human government has been ordained of God. The more loyal the believer is to Jesus Christ, the more loyal he will be to rightly constituted authority (This lesson has no logical connection with the others of the quarter and should be omitted where time is limited).

Lesson IX—Jesus Christ gave clear proof that He was the Messiah promised in the Scriptures, but the wicked nation rejected Him and chose a murderer instead. Both Pilate and the nation went down under the guilt of the rejection of Christ.

Lesson X—Christ on the cross is the supreme expression of unselfish love, a revelation of the moral nature of the world, and stands as an exhibition of a cross section of the world in any generation.

Lesson XI—Christ's resurrection is an absolute certainty. This unquestioned fact certifies that He is the divine Son through whom we get eternal life.

Lesson XII—The various appearances of Jesus Christ after His burial demonstrate the reality of His resurrection, confirm the truthfulness of the Scriptures and reveal Him as not only the supreme and grand center of the Scriptures, but the supreme interpreter of them.

"Did Milton Visit Heaven?"

Certain facetious critics are poking fun at Eli Siegel of Baltimore, the reported winner of the annual poetry prize offered by the Nation. The ground of the criticism is simple. Mr. Siegel's poem is called "Hot Afternoons I Have Seen in Montana," and he confesses he has never been in Montana. The critics find this humorous.

Mr. Siegel's reply should be simple. He should point out that two previous poets—John Milton and Dante—wrote poems on heaven and hell long before either of them had even seen either place.—Baltimore Sun.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 23 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Nothing to Do

The pupils of the fourth grade in the Scipio schools were preparing an essay on the subject of what their three wishes would be if they were to have their wishes granted.

Miss Green, the teacher of the class, was somewhat chagrined when the following wish was read by one of the class while four visitors were present:

"I wish I had lots of money, so that I could go to college, and be a teacher and wouldn't have to work."—Indianapolis News.

Cuticura for Pimply Faces.

To remove pimples and blackheads smear them with Cuticura Ointment. Wash off in five minutes with Cuticura Soap and hot water. Once clear keep your skin clear by using them for daily toilet purposes. Don't fail to include Cuticura Talcum. Advertisement.

Silver Foxes for England

A dispatch from London states that England's first venture in silver fox farming will get under way soon, as a result of a shipment of twenty pair of foxes from Chunda to the Old country. The forty animals, which cost $40,000, will be installed on a plot of ground near Oxford, and it is claimed by the promoters that the climate of England is ideally suited for the rearing of silver foxes.

Fresh, sweet, white, dainty clothes for baby, if you use Red Cross Ball Blue. Never streaks or injures them. All good grocers sell it.—Advertisement.

Plague's Terrible Toll

In India alone more than 10,000,000 people have perished by bubonic plague since 1896.

Wisdom that is attained at the age of sixty is chiefly of the "let things alone" kind.

Sure Relief FOR INDIGESTION

6 BELL-ANS Hot water Sure Relief

BELL-ANS

PORTER'S Pain King SALVE

An efficient and quick-acting ointment, made of wool fat (lanoline) combined with antiseptic, healing, pain-relieving medicine.

Recommended for burns, cuts, sores, wounds, bruises, chapped and cracked skin, boils, piles and felons.

Used as a local application to relieve colds on the chest, croup, lumbago, varicose veins and eczema.

The Geo. H. Rundle Co., Piqua, O.

Goodness Outshines Genius

Man is created for virtue. It is his supreme endowment coupled with his capacity for affiance in God. Ever and anon a trumpet sounds. From the hidden battlements of Eternity, summoning him to noble living. If he refuses to obey the summons he sinks in the scale of being. He surrenders manhood to accept animalism. The degree in which a man is striving after virtue and obedient to the law of duty determines his real value. "Goodness," says Emerson, "outshines genius, as the sun makes the electric light cast a shadow."—Rev. R. P. Downes, LL. D.

God's Best Messages

God sends His best messages to people who are faithful and busy.—Presbyterian of the South.

Song of the Stars

All the stars of heaven sing the faith of Bethlehem.—Western Christian Advocate.

Modesty and humility are the sobriety of the mind; temperance and chastity are the sobriety of the body.—Winchcole.

Order Comes First

Order is the sanity of the mind, the health of the body, the peace of the city, the security of the state. As the beams to a house, as the bones to the body, so is order to all things.—Southey.

Not Bidding

"Any part of the city for 50 cents!" yelled the taxi driver.

"You can't sting me again," retorted Silas. "I bought the city hall last year and they wouldn't give it to me."

Odd and Interesting

The melting point of thorium oxide, the substance of which gas mantles are made, is more than 6,000 degrees Fahrenheit, approximately twice as high as the melting point of platinum.

John Taylor came riding into Maysville, Ky., from his home near Higginsport, Ohio, on an old-time hearse, into which he had loaded 980 pounds of tobacco. Taylor said this was his first tobacco crop, and since he did not have a wagon he borrowed the hearse from the undertaker.

Power in Good Clothes

When a man goes in for better clothes he courts higher things. A change of suits may mean a change of luck. A clean shirt tickles the ribs. Good clothes make a good impression and good impressions win the day. The right man with the right suit makes the pomp of emperors seem ridiculous. Good clothes are the bootstraps by which a man pulls himself up in life. Personality is a great deal, but personality plus clothes is a put hand.—Progressive Tailor.

Health and good looks
—the reward of internal cleanliness.

IF YOU do not keep clean internally your looks and health are undermined together. A clogged intestine breeds poisons that reach every part of the body. These poisons ruin the complexion and undermine health. Constipation brings on such ailments as headaches, bilious attacks and insomnia, each of which sape your health and vitality.

Avoid Laxatives—say Doctors

Laxatives and cathartics do not overcome constipation, says a noted authority, but by their continued use tend only to aggravate the condition.

Medical science has found at last in *lubrication* a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Nujol is not a medicine or laxative and cannot gripe. Like pure water, it is harmless.

Take Nujol regularly and adopt this habit of internal cleanliness. For sale by all druggists.

Nujol

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1926, Western Newspaper Union.)

The Fort That Was Built by a "Tenderfoot"

Just when the term "tenderfoot" was first used in unknown. But it is pretty certain that it could have been applied to Nathaniel J. Wyeth of Boston. Back in 1832 he decided that a profitable salmon fishery could be established on the Columbia river in the Pacific northwest, to be operated in connection with the fur trade, enlisted a group of New Englanders in his enterprise and started West.

Not one of the party had ever seen an Indian, handled a rifle nor had the faintest idea of plainscraft. Fortunately for them, at Independence, Mo., they fell in with two veterans of the plains, Capt. William Sublette and Robert Campbell, partners in the Rocky Mountain Fur company, who were bound for the annual trappers' rendezvous at Pierre's Hole far up in Wyoming, and, traveling with them, the easterners learned their first lesson in the frontier's hard school.

Then followed several months of exciting adventure and despite the loss of several men in fights with the fiercest Blackfeet Indians and the desertion of others, Wyeth pushed on with 11 men into the Snake river country and finally in October, 1833, reached Fort Vancouver, the Hudson's Bay company post on the Columbia. Here most of his men deserted him, but undaunted, the leader, accompanied by only two of his followers, started on the back track. After another perilous journey he reached St. Louis in safety and organized the Columbia River Fishing and Trading company.

Then he set out again and in the summer of 1834 built a fort in what is now Idaho on the left bank of the Snake river above the mouth of the Portneuf. It was finished on August 6, 1834, and named Fort Hall in honor of Henry Hall, the oldest partner in the company. He raised over it a "flag made of unbleached sheeting, a little red flannel and a few blue patches, saluted with damaged powder and wet in villainous liquor" and thus the American flag was first unfurled over that part of the great wilderness of the West.

In 1836 Wyeth sold Fort Hall to the Hudson's Bay company. In the days of the great migration over the Oregon trail it was an important post, since it marked the place where many emigrants turned off to seek their fortunes in the gold fields of California, and in the '70's it played a leading part in the Bannock and Piute war. But the greatest fame of Fort Hall lies in its early history when it was the living symbol of the indomitable courage of Nathaniel J. Wyeth.

In Honor of the Great Western Expansionist

When the fur trade died in the great West, there died with it many of the posts which had been the centers of this industry. One notable exception was Fort Benton in Montana. Built in 1844 by Alexander Culbertson of the American Fur company, it was originally named Fort Lewis in honor of Meriweather Lewis, the explorer. In 1846 this post was moved to the head of navigation on the Missouri, rebuilt with adobe, and on Christmas day dedicated amid great festivities as Fort Benton, thus honoring Thomas Hart Benton, the great western expansionist and a trusted friend of the "A. F. C."

In its first period Fort Benton ranked with Fort Union in North Dakota as a fur center, and later it became the main center of trade in buffalo robes, when Fort Union was abandoned. The fact that from 20,000 to 50,000 buffalo robes were shipped from Fort Benton each year tells briefly why the buffalo vanished from the northern plains.

The greatest glory of Fort Benton came about the year 1866. When the Red Cloud war stopped the rush of miners to the new gold fields in Montana over the Bozeman trail, they were forced to fall back upon the water route, the Missouri river. Before 1866 not more than six steamers arrived at Fort Benton annually, but in that year the number leaped to 31, and from then until 1869 the number of arrivals constantly increased.

Fort Benton became the principal departing point for the diggings, and no less than 600 wagons gathered there each year to make the long haul of supplies, sometimes as much as 5,000 tons a year, to the gold camps from 150 to 250 miles away. In these years there was no more picturesque place in the country than Fort Benton. Miners from all parts of the land, ex-soldiers from both the Union and Confederate armies, fur traders, hunters, trappers, good men and bad, they all made up the constantly shifting population of this post.

In 1869 the government established a military post there, and in 1877 purchased the American Fur company's old fort, but soon abandoned it. When the Great Northern railroad pushed into Montana, Fort Benton waned rapidly until today there remains only a few crumbling walls of what the late Emerson Hough once characterized as "the most famous and most picturesque of all the historic posts on the Upper Missouri."

POINTS ON KEEPING WELL

(© by Western Newspaper Union.)

HARVESTING THE WINTER'S CROP

THE highest point in the pneumonia death rate comes not in the depth of winter, as one might expect, but in March and April. Yet it is easy to understand why this should be the case.

During the coldest months everyone instinctively takes greater precautions. Warmer clothing is worn, greater care is taken to prevent chills, exposure and wet feet. Elderly persons, those whose resistance is lowered, or those suffering from coughs and colds, naturally avoid any unnecessary exposure, as far as possible.

But with the coming of warmer days, many of our midwinter precautions are relaxed. Yet our early spring days are really more dangerous than the middle of winter. A mild, clear morning is, suddenly and without warning, followed by a raw, chilly afternoon. The light coat that was warm enough when we left the house after breakfast is not enough to protect us by dinner time.

But the principal reason why the toll of deaths is greater in the spring is that we are, most of us, suffering from the effects of reduced resistance, due to infectious "colds" which we have accumulated during the winter. "Colds" are infections of all or part of the mucous membrane lining the nose and the upper part of the throat. The nose is the strainer of our breathing machine. As we draw outside air into the throat through the nose, it passes over the moist, warm lining of the nose, which warms it, moistens it and catches dust particles, germs and other foreign bodies. If the nose is free from obstruction and if the lining is normal, then the clean, warm, moist air goes down into the lungs without causing any irritation. But if the nose is "stopped up," then we breathe the cold, dry, germ-laden air directly into the lungs.

Frequent continuous infection of the nose not only increases the chances of lung infection, but it also, in time, is very apt to extend the inflammation from the nose itself to the sinuses or cavities opening into the nose. These cavities in the bones surrounding the nose are all lined with the same mucous membrane as the nose itself. The large cavities, one on each side, are called the maxillary sinuses, because they are located in the upper jawbones. The two small cavities above the nose, just behind the eyebrows, are the frontal sinuses. The cavities behind and above the nose are the sphenoidal and ethmoidal sinuses.

Infection of any of these cavities causes the production of pus or matter in these bony spaces.

The nose is the body's sentinel. Avoid colds or have them promptly treated if you have one. Keep the nose free and open during the winter and you will be in much less danger from pneumonia in the spring.

PREVENTING FIRE LOSSES

LAST year fire killed 14,542 persons, injured 15,110 more and destroyed over $500,000,000 worth of property. Ninety per cent of this loss was due to carelessness and 100 per cent was preventable.

Sixty-five per cent of all fires are in the home. Over 900 homes burn up each day of the year or near 300,000 a year.

While the number of fires is greater in the cities than in the country, the relative loss is greater in the country. This would naturally be the case, as smaller towns do not have as complete fire-fighting equipment as do the larger cities, and fires once started are apt to cause greater destruction.

How can fires be prevented? By using as far as possible, fireproof materials in building. The development of concrete and cement as building materials will probably in time reduce the number of fires.

But how about existing houses? A few rules drawn from statistics as to the causes of fires might be adopted in every household.

Keep matches only in safe containers out of the reach of children and mice. Don't leave matches lying around loose, especially don't let them get scattered around on the floor.

Be sure a match has gone out before you throw it away.

Don't allow gas light near woodwork, curtains or other inflammable material. Don't have curtains hanging near enough to open fireplaces or gas stoves, so that the curtain can blow into the flames.

Have your furnace, grate or stove chimneys or flues cleaned and repaired every spring and inspected in the fall before starting fires.

If you use electricity, disconnect irons, toasters and other electrical fixtures when not in use. Be sure the insulation is perfect in all points needing it.

Don't allow rubbish to collect in cellars, basements, woodsheds, under stairs, in closets or garrets.

Put hot ashes in metal cans. Don't start fires with kerosene or gasoline. Don't use benzene or gasoline for cleaning. There are a number of non-inflammable substitutes made that are perfectly safe.

Keep your eyes open for possible fire risks and teach your household habits of fire prevention.

Children Cry for

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving natural sleep.

To avoid imitations, always look for the signature of Chas. H. Fletcher
Absolutely Harmless - No Opiates. Physicians everywhere recommend it.

To Preserve Shoes

Beeswax or mutton suet may be rubbed around boots and shoes in wet weather to keep out the dampness. To preserve kid shoes rub them at night with a little petroleum jelly and polish them in the morning. The treatment applies to patent leather.

Sore and inflamed eyes, sties and granulations healed promptly by nightly use of Roman Eye Balsam. 35 cents. Adv.

Women carry their logic in their hearts; men in their heads.

Wholesale Serenading

In front of the apartment houses in Spanish cities it is no unusual thing to see three young men standing side by side in the street, looking up and pouring out impassioned protestations, each to a girl on a different floor.

The United States imported nearly 1,800,000 bushels of onions last year and all but 400,000 bushels of them came from Spain and Egypt.

Hear first and speak afterward.

Genuine BAYER **ASPIRIN**

SAY "BAYER ASPIRIN" and INSIST!

Unless you see the "Bayer Cross" on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians 24 years for

Colds	Headache
Pain	Neuralgia
Toothache	Lumbago
Neuritis	Rheumatism

Accept only "Bayer" package which contains proven directions.
Handy "Bayer" boxes of 12 tablets—Also bottles of 24 and 100—Druggists.
Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Appropriate Name

"I can never understand," said Thompson to his friend, "why you insist on calling your new house a bungalow."

"Well, it's very easily explained," was the reply. "In the first place the job was a bungle, and in the second I still owe for it."

Men must be either the slaves of duty or the slaves of force.—Joseph Joubert.

Fatal to Friendship

No man ever forgives you after you are forced to pay the note you indorsed for him.—Rochester Times-Union.

Do You Know

When making an omelet, if a teaspoon of Calumet Baking Powder is added to every four eggs, and beaten in thoroughly, the omelet will be considerably lighter, more attractive and tasty.

A woman is as young as other women think she looks.

Start the Winning Fight Today

DO you get up in the morning, still tired and worn out? Do you suffer from indigestion and gas on your stomach? Do you ache all over, complain of rheumatism?

What you need to pep you up and win back your lost strength and energy is a natural tonic and builder like Tanlac. Millions of men and women have been helped back to health by this marvelous remedy. Our files are filled with enthusiastic letters of thanks.

By the famous Tanlac formula, Tanlac is a compound of roots, barks and herbs gathered from the four corners of the earth. It has a way of getting right down to the seat of trouble without delay. It revitalizes the blood, rejuvenates the stomach, adds pounds of needed weight and brings the flush of health back to faded cheeks.

Don't you let your system run any farther downhill. You, too, can win the hard fight against the sickness that is dragging you down if you will only enlist Tanlac in the battle. Get a bottle at your druggist's now. Start the winning fight today!

Brought Back Old-Time Vigor

"I had lost weight steadily until I was a mere shadow of my former self. Then I turned to Tanlac. It built me up rapidly; put rich blood in my veins and brought back my old-time strength and vigor."
E. Walter Tripp
264 Simpson St.
Atlanta, Ga.

Front Yard Considered Part of Public Street

The planting in the front yard of a city or suburban home occupying a rectangular lot of ordinary size is as much part of the public street as is the parkway. It should be developed with this in mind.

While fault has been found with the Americans' method of discarding walls and fences and setting their homes where all may see, no defense is needed other than the example of the beautiful results which this practice has achieved in our garden suburbs.

But these results depend upon the extent to which the planting in front yards is in keeping with the nature of our front yards. The planting should harmonize with that in adjoining grounds. It should enhance the merits and screen the faults of the house architecture. And it should express the occupants of the home as their clothes should express them. The public aspect of the home grounds should not be out of keeping with the character of its occupants.

A woman who would not wear an evening gown uncovered on a street car should not make her front yard a flower garden. The objection to conspicuous flowering shrubs in the front yard is based on the same feeling that discourages conspicuous public attire. Another ground for such objections is the fact that front yards are on view the year round, while flowering shrubs are brief in session; so that foliage effects are more important because more lasting.

Scientific Proof That Paint Is Life Saver

Paint saves life, says Dr. Max C. Starkloff, health commissioner of St. Louis, as quoted in Health. The connection between paint and health would seem to be remote, yet Doctor Starkloff shows that they have a very close relation. "In a lying-in hospital," says Doctor Starkloff, "at a given period there were over a hundred cases of puerperal fever with a high death rate. In an effort to clean up the hospital and make it sanitary to the last degree, the entire place was painted, including floors, ceilings and inside walls. After the painting, cases of puerperal fever almost entirely disappeared. The New York health department is using paint rather than fumigation for sterilizing rooms which contagious disease patients have occupied.

"As further proof of the value of paint as a disinfectant, Mr. Henry A. Gardner of the institute of industrial research at Washington painted a wall surface and then sprayed it with liquid cultures of different germs. A similar area, unpainted, was also saturated with germ cultures. Microscopic study showed that the unpainted area gave abundant growth of germs while the painted area showed that the germs had developed very little."

Striving for Ideal Home

The ideal home as pictured is not impossible to have. It really should be the kind of home found in every community and on every farm. The ideal certainly is worth striving for, and it may ultimately be attained. Only by aiming for high ideals can we make progress toward better things, and this is true especially in home-making and community building. —Anniston Star.

Look to Old Age

"Parents who save in order to own their home are able to look forward with confidence to a happy old age, whereas the great majority who do not save become dependent on someone else as they grow older. It is by the familiar experiences of family life that thrift, honesty, straightforwardness and self-discipline are best instilled.

Make War on the Rat

In every way the rat is a nuisance and a threat to health and property. No town or community is free from their damaging activity. No home, unless it is a very new one, is free of them. They serve no useful purpose and always are doing damage. A wholesale elimination of the whole rat population would prove a blessing.—Anniston (Ala.) Star.

Economy

Every dollar spent for paint saves $5 or $10 or $100 what would otherwise be spent on repairs or lost through depreciation. When properly protected by paint, a frame dwelling will last for generations and the maintenance cost will be greatly reduced in so far as renewal and repairs are concerned.

Satisfactory Statistics

In one year there were 104 villages that were given mail-carrier service and 164 small towns that got city service, according to the report of the postmaster general at Washington. This indicates the steady growth of small communities in the country better than anything else.

"Knocker" Never Popular

Knock your town to a stranger and he will have a worse opinion of you than of the town.

Many Happy Marriages Arranged by Brokers

Berlin has no fewer than 1,000 marriage brokers. They are divided into three classes: First-class brokers, who deal only with clients of high social standing; brokers of the second class, who handle love affairs of the bourgeoisie, and the third-class brokers, who deal only with the workers.

One of the leading brokers, a woman with an "upper class" following, boasts of having made 36 matches in three years. She says the photograph of no client has remained in her album for more than a year.

Many of the marriages she arranged, she declares, really turned out to be love affairs.

This broker admits that most of her clients were women with dowries whose beauty did not equal their fortunes.

She said the most annoying feature of her work was the disposition, both by men and women, to understate ages. A properly authenticated birth certificate must eventually be produced, and the truth often led to the breaking off of potential matches.

Was to Be the Finish of Little Buddy Cohen

When the smallpox struck the town, naturally the offices of the doctors were as crowded as they are on the first day of the new prescription allotments. All the girls were there with their roll-down sox.

"My heavens," exclaimed a prominent physician. "Vaccination used to be simple in the old days but now it's a problem to find some place to put them where they won't show!"

And it was while all the pretty girls were in the middle of trying to explain where the vaccinations should go, that little Buddy Cohen rushed into the office shouting:

"My mother sent me down here to get assassinated."—Los Angeles Times.

With Accessories

There is quite a bit of rivalry up on Maltman avenue, on the edge of Hollywood, over two babies. Little Ethel was quite proud of her tiny sister, and even though it was as bald as the usual run of babies, she thought nothing of it until Frank Atkinson's latest subdivision came into the world.

Little Doris Atkinson viewed the new baby for several days with ever-growing interest and finally went next door to Ethel's. "My gosh," she said. "Your mother's baby isn't so much; why, the new one we've got at my house came with a nice black bob already growed."—Los Angeles Times.

Boy Carries Bobcat Home

Norman Cain, nine years old, a St. Albans (Me.) boy, was out in the woods with a dog, when a bobcat was spotted. When the dog started to investigate, the cat made a leap for Norman's pet. Coming to the rescue, the lad struck the bobcat twice over the head with a stick and the animal toppled over. Grabbing it by the hind legs and swinging it over his shoulder, the boy started home. When he arrived there, his father discovered that the animal was only stunned and quickly ended its life with his shotgun.

Works to Find Thrill

Miss Martha Prewitt, daughter of David Prewitt, one of the wealthiest landowners in Lexington, Ky., and a student at the University of London, took a job recently as servant in order to get a new thrill and to learn exactly how an English home was conducted. While waiting for the vacation period at the university to be over she applied at an employment bureau for a position as maid of kitchen work. She worked in the home of a rich stock broker who maintained eight other servants.

Byron Manuscripts Shown

Following the example set in the United States, the First Edition club of London has opened a unique exhibition of Byron manuscripts, proof sheets and first editions. The display is made up of exhibits from private sources and several of the books shown are the only ones in existence. Many of the books are accompanied by the Mss. and proof copies.

Rains Cut Up Rail Lines

So great were the rains in parts of Nicaragua last fall that railroads were unable to restore traffic for months afterward.

HEARD AROUND THE CORNER

Mrs. Will Miller spent Saturday and Sunday with relatives at New Haven and Fort Wayne.

At last you can sow lime and phosphate in your drill. Car will be in soon. See Curie.

J. C. Hull, wife and son were Sunday dinner guests of Wm. S. Quance and family at Auburn.

Miss Sarah Bartlett of Waterloo, came Sunday for a visit with her nieces, Mrs. Harry Kees and Mrs. C. C. Woodcox.

For Sale: Good Gang Plow.
Wm. Staman, Jr. 12tf

Mrs. Harman of Angola, spent from Friday until Monday a guest here of her son, William Harman and wife and assisted in the care of their little son, Louis, who has been very ill.

J. E. Foltz and Mrs. J. P. Buckingham spent Monday night returning Tuesday guests of their brother, C. J. Foltz, at Continental, Ohio, who has been very ill but is some better.

For Sale:—Ford delivery truck body with top. Sherman Meek, 1½ miles east of Coburntown. 13 t f

A fat Ladies Home Journal for a thin dime is still the world's best buy. For all housewives who want their fiction, fashion, art, household helps, needle work and children's section inside the same two covers—Get one at News office.

Miss Gladys Snyder spent Saturday at Fort Wayne.

Arlene Hart spent over Sunday with friends at Fostoria, Ohio.

Mr. and Mrs. M. T. Bishop were Auburn visiters from Friday until Sunday afternoon.

Earnest Baxter and wife of Butler, were Saturday and Sunday guests of Charles Cochran's Claud Mason and family were also dinner guests.

Bulk Garden Seeds—Curie's shipments are now in and are selling. Better get yours now. Seeds that will grow are going to be high priced.

Francis Hickman and family were Saturday and Sunday guests of their parents, P. A Baylies and wife. Mrs. Baylies returned home with them for a few days visit.

E. J. Smith, Lester Coburn, Francis Hickman, John Crothers, Leon Kees, Tom Brunson, Harvey Hull and C P. Bassett, attended Legion meeting at Auburn Monday evening

Mr. and Mrs. Alva Baker and A. M. Baker and wife of Wabash, motored here Sunday, the latter couple returning home after spending part of the winter in Wabash. The former couple visited in the Jacob Baker and W. E. Henley homes.

STOUT PERSONS incline to full feeling after eating, gassy pains, constipation. Relieved and digestion improved by CHAMBERLAIN'S TABLETS. Cleansing and comforting - only 25c

Mrs. E. J. Smith spent the first of the week with relatives at Holgate.

An income for the family this summer would be fine. Contract pickles for St. Joe Salting Station

Mrs. Willis Wilcox of Ft. Wayne spent the past week here with her parents, Chas Cochran and wife.

Mrs. Ada Berry spent Saturday and Sunday with her daughter, Mrs. Hazel Steward and family at Spencerville.

John Hart, wife and two sons of Fort Wayne, Dan Myers and family of Hicksville, were Saturday guests of Mr. and Mrs. Sam Kees Wm. Beam, wife and son of Blakesley, Ohio, were Sunday guests in the same home.

A one-half cent postage stamp will be issued for the first time by April 1. The new denomination has become necessary because of the new postal rates on third class mail effective April 15. The new stamp bears President Harding's picture. The design and color of the new half center have not yet been decided.

When the armistice was signed at the close of the world war, our citizens held a rousing jolification, and one incident on the program was the burial of the "Kaiser" on the lot that is now being excavated for the New Citizens Bank building This grave was disturbed last week by the workmen, and when the incident happened those who knew nothing about the occurrence were considerably excited as they viewed the coffin containing the Kaiser dummy.—The Monroeville Breeze.

Mrs. Nan Lysher was a Hicksville visitor Thursday.

For Sale: Good Gang Plow.
Wm. Staman, Jr. 12tf

Morris Curie and family visited Sunday in the James home at Harlan.

George Wilmot and family have moved onto the O K. Shull farm, east of town.

John Betz and wife spent Sunday afternoon at Spencerville with Joel Betz and wife.

Sam Keesler and family spent Sunday in the Mrs. Jane Coburn and Clay Coburn homes.

A dime goes a good ways when you buy a Ladies Home Journal at News office. We have all kinds of good magazines.

G F. Thornton of Dunlap, came Monday for a visit with his nephew, F. M. Thornton and family.

The Misses Phyllis Rickett and Dorothea Scholes attended an Operetta at Butler Wednesday evening.

Time to begin to think about contracting for the raising of pickles this summer. Contracts at S. S. Widney's and News office.

Wilbur Yeiser is at Kendallville working for the McCray Refrigerator Plant, having gone there last Tuesday.

Come in and see the list of prominent farmers who have already placed their order for the new lime and phosphate fertilizer. At Curie's.

March 23, 1925 13t3

Parent-Teacher Association

E. R. KINSEY, - - Reporter

St. Joe was given a rare treat on Friday and Saturday evenings when the religious drama, called "The Rock" was presented by the Parent-Teacher Association.

It is seldom that a community the size of St. Joe possesses sufficient talent to put on such a drama. St. Joe has the talent as was demonsnrated in this play.

Each character seemed fitted for the part taken.

This drama was the prize religious drama for 1924. It has been given in many places during the past few months, but we are sure none could have been any better rendered than it was here.

Many were given a new insight into the characters of those that were gathered around Jesus when he began the work of His Kingdom. It also, gave an insight into the reaction that these characters made under the teaching of Jesus.

The part of Peter with all his impetuosity was well demonstrated. Peter's developement in the discipleship of his Master, gives one a new idea of the task Jesus had in gathering men as his representatives.

Those who took the parts in the play proved themselves able actors.

It took a great amount of work. The costume committee gave wonderful assistance by planning such rich costumes for the players.

The committee on properties gave able assistance in planning such an appropriate stage.

It was a fine entertainment and this was evidenced by the large audience on both evenings.

Practice Kindliness

How easy it is for one benevolent being to diffuse pleasure around him, and how truly is a kind heart a fountain of gladness, making everything in its vicinity to freshen into smiles.

HERE AND THERE

Flossie Keeler is ill with quinsy.

Wanted some maple syrup at News office.

E B. Smith, wife and baby and Miss Rosella Mendallshon were Friday guests of Mr. and Mrs. E. D. Burch at Hamilton.

Willard Maxwell came home Friday to spend his spring vacation here with his parents. He is attending the Muncie Normal.

For Sale: Victrola and Library Table. Mrs. Chas. Rice.

An unusual incident took place last Thursday, by the time the Amanda Coburn-Brown funeral train arrived at the Alton cemetery, the grave was filled with water, due to the heavy rain. Interment was delayed until Tuesday of this week.

The Progressive Bunco Club was entertained Saturday evening, by Mrs. Wm. Staman, Jr., at the home of her sister, Mrs Vernie Monroe Prizes were won by Mrs. Ed Leighty receiving first, Mrs. Chas. Jordon second and Mrs. Vervie Monroe receiving third. Last but not least a lovely lunch was served.

St. Joe Boy Was Near Tornado

The vastness and horribleness of the tornado last week, which swept over a portion of southern Indiana and Illinois, is growing as rescuers are finding bodies bur ed in the debris. The death toll is now over 1,010 and many of these are Indiana folks.

The following clipping was taken from the Vincennes Commercial, relative to George Ridgway, a former St. Joe boy and a son of Mrs. Belle Ridgway:

"G. W. Ridgway, of the circulation department of The Commercial, was twelve miles south of the city on the Dixie Bee road at the time the storm struck Princeton. He reports that the wind was so strong at that point, that his car was all but turned over and that it probably would have been overturned but for the fact that he succeeded in gaining shelter on the north side of a building. He stated that it became almost as dark as night; that in the residence where he took temporary refuge, lamps had to be lighted. He said that the rain fell in torrents"

Sunday School Report.

Hall's Catarrh Medicine

Those who are in a "run-down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that while Catarrh is a local disease, it is greatly influenced by constitutional conditions.

HALL'S CATARRH MEDICINE is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years.

Sold by all druggists.

WOMEN
Like to Come to This Bank

There's a spirit of friendliness and cordiality about this bank that radiates and promotes a Good Will not found in a bank that is merely a stronghold of stone and steel. And that's why women make this their headquarters for their financial dealings. They like the cheerful atmosphere and the sincere courtesy. You too, will see a difference when you come in to get acquainted.

Farmers' & Merchants' State Bank

Spencerville, Ind.

NEWVILLE

Mrs. Effie Hutching of Wayne is the guest of Alfred Smith and wife at the present time.

Mrs. Ethel McCullough and Mrs. Doris Kline of Mt. Pleasant, were Newville visitors Sunday.

The little folks who have been sick and unable to attend school were Darrel and Vivian Richmond, Joyce Fusselman and Connie Harter. Argyl Richmond, 14, also has sore throat and unable to attend school.

Harry Fuller and wife of Garrett were Sunday guests in the John Miller home. Dewey Miller of Auburn, Roy Kinney of Defiance and Mrs. Omo Richmond and two children were callers in the same home a short time.

A new fertilizer 25% lime, 15% phosphoric acid. See Curie.

Frank Griest and wife and Mrs. Maggie Griest and little Hilbert of Hicksville, were Newville visitors Sunday.

Byron Miller, John Miller, Mrs. Wm. Miller and Mrs Bessie Shaffer and little son Russell, were St. Joe visitors Thursday.

Alonzo Kline, wife and son of Traverse City, Michigan, are the guests of J. H. Benner and wife and Hugh Traxler and family.

Stop Night Coughing This Simple Way

People who have persistent, annoying coughing spells at night, and who through loss of valuable sleep are weakening their systems and laying themselves open to dangerous infections, can stop their distressing trouble promptly by a very simple treatment. Hundreds who have hardly been able to rest at all for coughing, have gotten their full night's sleep the very first time they tried it.

The treatment is based on a remarkable prescription known as Dr. King's New Discovery for Coughs. You simply take a teaspoonful at night before retiring and hold it in your throat for 15 or 20 seconds before swallowing it, without following with water. The prescription has a double action. It not only soothes and heals soreness and irritation, but it quickly loosens and removes the phlegm and congestion which are the direct cause of the coughing. The result is that you usually sleep as soundly as a babe the very first night, and the entire cough condition goes in a very short time.

The prescription is highly recommended for coughs, chest colds, hoarseness and bronchitis, and is wonderful for children's coughs and spasmodic croup—no harmful drugs. Economical, too, as the dose is only one teaspoonful. It is on sale at all good druggists. Ask for

DR. KING'S NEW DISCOVERY FOR COUGHS

Putting the Hog on a Normal Basis

Photo Copyright, Underwood & Underwood, N.Y.

Many years of study and experiment have ended uncertainty as to what is best for the hog, says a recent report. In pork raising, as in building up any other source of profit on the farm, much can be learned through the experience of others.

The U. S. Government and Agricultural Colleges spend big sums each year at their experimental stations. Both the Government and the Agricultural Colleges issue literature which tells about these experiments in detail. Anyone interested can secure the literature without cost by writing the U. S. Department of Agriculture or such Agricultural Experimental Stations. The great value in Government bulletins lies in the fact that they are based on the results of observation and study by trained, experienced men and at an expense which makes it prohibitive for the farmer to make these experiments himself.

Generally speaking, hogs have a normal period of growth and development. Many raisers ship before the hogs are finished—others hold their hogs and feed them beyond the period that the herd would be most profitable for them. It is natural, with high feed prices, that the raiser is reluctant to hold his hogs any longer than absolutely necessary, even though the hog market is good; but it is a mistake to start raising a market herd and quit before the job is really finished.

Judging from prices of the past few months, a fat hog is the one that is commanding a premium and, experts say, will continue to do so for some time. That is because of the large numbers of unfinished hogs that have been and are still being sent to market. Using the Chicago hog market for a day in mid-December, 1924, a 170 lb. hog brought $14.10, while a 265 lb. hog brought $26.55, or a difference of $12.45.

The average hog raiser knows that it takes about 400 lbs. of corn and 40 lbs. of tankage to bring in that last 100 lbs. of weight, or in dollars and cents, approximately $10.00 for the last 100 lbs. in feed expense, leaving more than $2.25 per pig for the additional trouble.

Shipping weights of hogs are reflected in the feed crop. Last year the corn crop in many sections was small and therefore most of the hogs sent to market ranged around the 175 lb. class. Unless relative market prices on either hogs or feed are extremely abnormal, it pays the raiser to go through with his feeding program up to that stage where he can secure the greatest benefit from his efforts and the best market price for his pork.

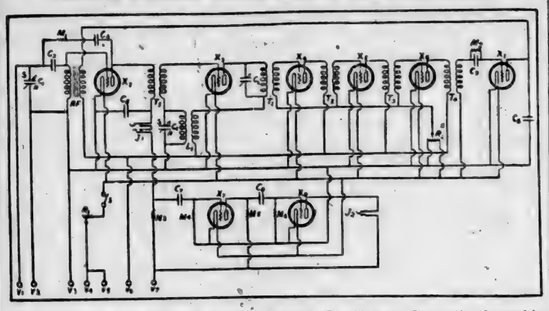
Solution of Last Week's Puzzle.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

RADIO

(Edited by G. Douglas Wardrop, Editor of Radio Merchandising.)



By Following the Diagram Anyone Should Be Able to Correctly Assemble This Set.

By R. B. WILDER.

One fact stands out clearly among the things that we can predict for the future of radio. Either the type of receiving sets in use must radically change or the fans must learn how to operate their sets in such a manner so as not to create interference with surrounding receivers.

To listen in some evening in the crowded residential districts of any large city you will be amazed at what you hear: Squeals and howls surround the location of every distant station. Either the squeals must go or the enjoyment and pleasure of listening to distant stations will be taken from all of us.

Most of the blame for this condition has been foisted upon the owners of regenerative receivers. If the truth were known, the improperly neutralized neutrodyne and poorly balanced superheterodynes are causing more trouble than regenerative sets. At the same time, their owners are in the happy frame of mind that their receivers cannot possibly be the cause of any disturbance.

For the good of the whole future of radio, it behooves each and every one of us to tune our sets with consideration for others or else build sets that cannot cause interference even if improperly handled. A great many superheterodyne receivers can be classed among the worst offenders and the worst squealers.

Interference Is Obviated.

A new type of super-heterodyne, as devised by Laurence M. Cockaday, positively will not radiate energy and interference with other receiving sets. In addition, the receiver effects the saving of two tubes and will be capable of bringing in stations with loud speaker volume from distances up to 1,500 miles with a loop aerial.

The first tube amplifies the current at radio frequency and also performs double duty by again amplifying the current at audio frequency. This tube stops the feeding of energy back into the loop and makes the receiver non-radiating.

The second tube acts as both a detector and a heterodyne oscillator, thereby dispensing with another tube. The next three tubes are intermediate frequency amplifiers that operate on approximately 2,200 meters. The next tube is a detector, the output of which is reflexed back into the first tube.

The stages of resistance coupled audio frequency amplification are used to increase the volume. The use of resistance amplification eliminates considerable distortion and gives the receiver a remarkable tone quality.

Two dials are used in tuning the receiver, the settings of one closely following the other. This makes for simple tuning and positive logging of stations. While at first glance this may seem to be a complicated receiver, by following wiring diagram anyone who has had even a limited experience in construction of radio receivers should be able to correctly assemble the set.

To construct the receiver, you will need the following apparatus:

Material You Will Need.

C 1 .0005 mfd. low loss variable condenser.
C 2 .001 mfd. low-loss variable condenser.
C 3 .0005 mfd. variable grid condenser.
C 3 and 4 .0001 mfd. fixed mica condensers.
C 5, 6, 7 and 8 .006 mfd. fixed condensers.
C 9 .00025 mfd. fixed grid condenser with grid-leak mounting.
T 1 super-heterodyne input transformer.
T 2, 3 and 4 intermediate radio-frequency transformers.
L 1 precision autodyne coupler.
A F medium radio audio-frequency transformer.
X 1 standard vacuum tube socket.
X 2, 3, 4, 5, 6, 7 and 8 standard vacuum tube sockets.
J 1 and 2 double and single-circuit telephone jacks, respectively.
R 1 2-ohm rheostat.
R 2 potentiometer, 400 ohms.
M 1 ¼-megohm grid leak.
M 2 5 megohm grid leak.
M 3 .005 megohm resistor.
M 4 ½ megohm resistor.
M 5 and M 6 ¼ megohm resistors.
T 5 radio-frequency transformer 200 to 600 meters.
S filament battery switch.
V 1 and 2 loop binding posts.
V 3 negative A battery.
V 4 positive A battery.
V 5 negative B battery.
V 6 positive 65-volt tap on B battery
V 7 positive 135-volt B battery.

The seven binding posts are necessary for the loop and battery connections. These should be mounted on a bakelite or hard rubber binding-post strip and supported to the baseboard by means of small brass brackets. The receivers can be assembled on a panel 7 by 24 inches with a baseboard 9½ by 22¾ by 1½ inches.

Use With Spiral Loop.

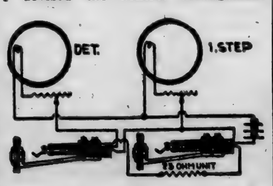
The receiver should be used with a spiral-type loop which will cover the broadcast range when tuned with a .0005 variable condenser. UV 201 A or C 301 A types should be used throughout and it is suggested that you try shifting the tubes around in the sockets to find the arrangement that works best.

Turn the loop aerial in the direction of the stations you wish to receive and slowly move both condenser dials over the scale until the signal from a station is picked up. Increase the settings of the potentiometer and the variable grid condenser until maximum signal strength is received.

Filament Control Jack Saves Overloading Tubes

By H. S. DOLESKI

The illustration shows a filament control jack for two tubes. I experienced a blown tube when turning out the second tube. To guard against any further trouble of the same kind I devised the control arrangement



Showing Control Arrangement to Protect Tubes.

with a resistance as shown. To balance the resistance, first turn on both tubes and adjust the maximum volume, then plug in the first tube only and adjust the resistance for the best volume, but do not touch the rheostats. With this arrangement no tube will be overloaded with either plug in use.—Radio Digest.

Loop Antenna

The directional properties of a loop are spoiled by the presence of magnetic materials situated near it. The steel framework of a building has a detrimental effect on the direction of a loop. These buildings have the characteristics of casting shadows across the loop, aside from destroying the directional properties. This condition is particularly true of a pancake loop. It is wise to keep the loop away from metal stairways and radiators.

Amplifying Transformer Very Important Factor

The amplifying transformer is the microscope of radio.

The scientist looking through a microscope gazes upon a fascinating world of cell and germ life so tiny as to be invisible to the naked eye. The microscope magnifies them. Likewise the amplifying transformer magnifies or amplifies faint sounds to clear, distinct volume so that a whole roomful of people can hear them on a loud speaker.

But it is very important that the amplifying transformer does not distort the sounds at the same time it increases their volume. A transformer that distorts is like a microscope that blurs the vision. The amplifying transformer not only increases the volume but must also give it exactly like the original sound—pure in tone and quality, loud and clear in volume.

The amplifying transformer is a very important factor in good reception. It is through good transformers that amplification without distortion can be secured. Without a good transformer no set, whatever else it may have or how elaborate the case containing it, can give satisfactory results.—New York World.

Cover Coils While Soldering

Place a piece of paper over the windings of coils when you are soldering a connection which lies directly over or near the coils. This will prevent solder or soldering paste from spattering on the windings. Many good circuits and sets are discarded just because the coils are damaged in the process of soldering. Cover up the coils while you are doing this job!

Device Prevents Squeal Nuisance

Stopping Condenser and Radio Frequency Choke Coil Needed.

A device that will promptly and permanently cure all re-radiation ills has just been released. There is nothing complicated about its structure despite the popular belief that an instrument of this type would be more intricate than the mechanism inside a Frankenstein monster. In fact, it consists of a small stopping condenser (between .0005 and .001 mfds.) and a radio frequency choke coil; nothing more is required.

If you should desire to change your regenerative set, the following explanation plus a few minutes' work will relieve you of the worries of a "squealer":

First, disconnect both antenna lead-in and ground wire. Second, connect the radio frequency choke coil in the plate circuit of the first audio frequency amplifying tube. It is very

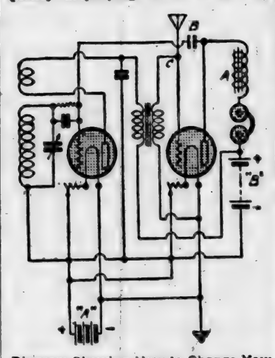


Diagram Showing How to Change Your Regenerative Set.

important that this choke coil is connected directly to the binding post on the tube socket. To do this, it will be necessary to break the connection in the plate circuit of this tube and to connect one end of the choke to the plate binding post. The wire which has just been removed can then be connected to the free end of the choke coil.

Third, take a lead from the plate of this same tube and connect it to the stopping condenser. The free side of this condenser should then be connected directly to the grid binding post on detector tube socket.

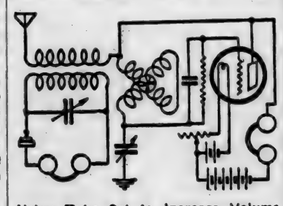
The fourth and last step is to connect the antenna to the grid binding post on the first audio socket and the ground wire to A battery minus.

After making this change you should be able to face your neighbors with a clear conscience, regardless of the type of set you are using.

Wave Trap Coupler in Crystal and Tube Sets

By EARL LETT

While experimenting with a compound wave trap consisting of two loosely coupled coils, one of which was tuned with a .0005 variable condensed, I conceived the idea of using the wave trap as a coupler for a crys-



Using Tube Set to Increase Volume of Crystal Set.

tal set when the tube set was not in use.

Upon trying it out it was found that it worked fairly well. They say that small things lead to greater ones. I believe it is so, for later on I tried tuning in with the tube set while the crystal set was in operation and found that I could not only receive two stations at once but that somehow the tube set increased the volume of the crystal set almost three times.

It was found, however, that allowing the tube to oscillate destroyed the sensitivity of the crystal at that particular point. With this I have repeatedly received two stations varying widely as to wave length and over far greater distances than a crystal set is supposed to receive.—Radio Digest.

What Fans Should Know About Use of Wave Trap

A wave trap is a coil shunted by a condenser, inserted in series with the antenna lead-in or ground wire of the receiving set to eliminate interference. By tuning the wave trap to the wave length of an interfering station the undesired signals can generally be eliminated. The wave trap offers high impedance to the wave of the undesired station and at the same time offers normal impedance to the station the operator wishes to hear. A good wave trap for use on the wave lengths used for broadcasting can be made by using a honeycomb coil No. 75 and a 23-plate variable condenser with vernier control. If interference is caused by a station using higher wave length than employed by broadcasting stations a larger honeycomb coil should be substituted.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

No evil propensity of the human heart is so powerful that it may not be subdued by discipline.

For Colds and Throat Troubles

Father John's Medicine Builds Strength

IN THIS BOOK THE PRESCRIPTION FOR FATHER JOHN'S MEDICINE WAS WRITTEN OVER 69 YEARS AGO

If mirrors portrayed us as others see us we would not use them.

A Woman's Health!

Joplin, Mo.—"I have used Dr. Pierce's Favorite Prescription and consider it a wonderful tonic for women and superior to any other remedy. It built me up in health and strength and relieved me of all the distressing feelings which usually go with feminine weakness. That is just what other remedies, which I had tried, failed to do."—Mrs. Ada Hatley, 1317 Virginia Ave.

If you want to be well, start at once with this "Prescription" of Dr. Pierce's. Get it at your neighborhood store, in tablets or liquid; or send 10c to Dr. Pierce, Buffalo, N. Y., for trial pkg., and write for free advice.

"A God-sent Blessing"

is what one mother writes of Mrs. Winslow's Syrup. Thousands of other mothers have found this safe, pleasant, effective remedy a boon when baby's little stomach is upset. For constipation, flatulency, colic and diarrhoea, there is nothing like

MRS. WINSLOW'S SYRUP

The Infants' and Children's Regulator

It is especially good at teething time. Complete formula on every label. Guaranteed free from narcotics, opiates, alcohol and all harmful ingredients.

Put Naturalist Down as "Poor Innocent"

The patient devotion of the naturalist to observations that seem to the ignorant onlooker trifling and meaningless often creates in the minds of those onlookers a reasonable doubt of the scientific man's sanity. In the "Human Side of Fabre," by Mr. P. F. Bicknell, there is an amusing incident in point that the great French naturalist was himself fond of relating.

Ever since daybreak, he says, I had been sitting in watchful waiting on a stone at the bottom of a ravine. The digger wasp of Languedoc was the subject of my morning's study. Three women, grape-pickers, passed me on their way to the vineyards. Glancing at the man sitting there apparently lost in thought, they gave him a polite good morning, which he as politely returned. At sunset the same three grape-pickers passed again on their homeward way with their heaped-up baskets on their heads. The man was still there, sitting on the same stone; his eyes were turned upon the same spot.

My immobile attitude and my long-continued station on the one spot all alone must have struck them as something extraordinary. As they passed me I saw one of them touch her forehead with her finger, and I heard her whisper to the others in their patois: "A poor innocent. Oh, poor man!"

Then they all three crossed themselves.

An innocent she had called me, an innocent—that is, an idiot, a poor devil, harmless but bereft of his reason—and they had all three made the sign of the cross, for in their eyes an idiot was marked with the seal of God.—Youth's Companion.

Sympathy

Let us cherish sympathy. By attention and exercise it may be improved in every man. It prepares the mind for receiving the impressions of virtue; and without it there can be no true politeness. Nothing is more odious than that insensibility which wraps a man up in himself and his own concerns and prevents his being moved with either the joys or sorrows of another.—Fenelon.

"Console"

Console is a French architectural term applied to an upright corbel in architecture which forms a stone bracket. In the case of the console table, the name is derived from the shape of the legs, which resemble scroll-shaped brackets. They are usually richly ornamented.

Beggars of Rank

The "blue-gowns" was the name given to xedesmen, or beggars, who received alms from the Scottish kings, because they wore blue gowns and pewter badges. They were allowed to beg in any part of Scotland.

Bees Have Short Lives

Bees known as workers are supposed to live from one to nine months, while the duration of the life of the queen bee is rarely more than three years.

ACHES AND PAINS ALL OVER BODY

Mrs. Proctor Reports Great Benefit by Taking Lydia E Pinkham's Vegetable Compound

Sharpsburg, Pa.—"I recommend Lydia E. Pinkham's Vegetable Compound to all suffering women. I have taken four bottles of it and I feel 100 per cent better. I was dizzy and weak with no appetite, no ambition and with a tired feeling all the time. I had aches and pains all over my body and had the headache a good deal. I saw your advertisement in the Pittsburgh Press' and thought it might help me. I have been greatly benefited by its use and highly recommend it for all ailments of women."—Mrs. J. H. PROCTER, Box 1, East Liberty Station, Pittsburg, Pa.

Such letters prove the great merit of the Vegetable Compound. These women know by experience the benefit they have received. Their letters show a sincere desire to help other women suffering from like ailments. Let these experiences help you—now.

In a recent canvass of women purchasers, 98 out of every 100 report beneficial results by taking Lydia E. Pinkham's Vegetable Compound. Sold by druggists everywhere.

Priests Raise Cats

Siamese cats, now the fashion for wealthy women, are bred in the royal palace of Siam and are attended by Buddhist priests.

"O Happy Day" sang the laundress as she hung the snowy wash on the line. It was a "happy day" because she used Red Cross Ball Blue.—Advertisement.

There is an art of reading, as well as an art of thinking and an art of writing.

If Worms or Tapeworm persist in your system, use the real vermifuge, Dr. Peery's "Dead Shot." Only 50 cents at your druggist or 372 Pearl St., N. Y. Adv.

Life is short, and it only takes two seconds to fight a duel.

FOR OVER 200 YEARS

haarlem oil has been a world-wide remedy for kidney, liver and bladder disorders, rheumatism, lumbago and uric acid conditions.

correct internal troubles, stimulate vital organs. Three sizes. All druggists. Insist on the original genuine GOLD MEDAL.

A friend in need
Keeps Resinol on hand for cuts, burns, rashes etc.

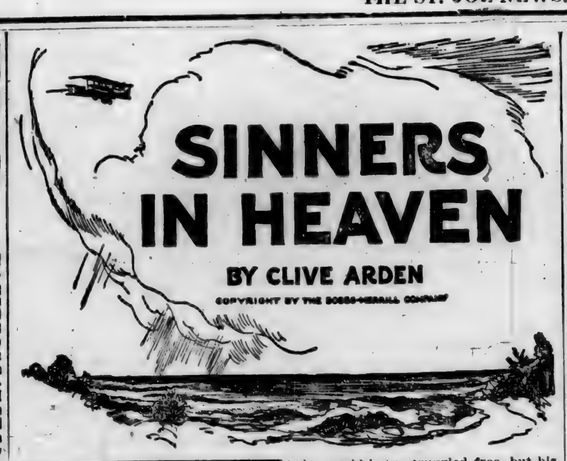
Oakland, Cal., March 3:—"About four years ago I had a rash on my ankle caused by the heat. It itched all the time and I could get no relief. I tried many things, but nothing did any good until I tried your Resinol Ointment. That cured me in a very short time. I always keep a jar of it on hand now for cuts, burns and other small ailments." (Signed) E. Condrey, 2422 Grove St.

When Children Cough Act Quickly

Watch your child closely when he gets a "cold" and begins to cough. Many a case of croup and serious illness has been turned aside with a few doses of that fine old medicine, Kemp's Balsam. Act promptly. Don't be discouraged because ordinary cough syrups fail to help—stick to Kemp's Balsam. Just a few doses bring the relief you are looking for. Only 30 cents at all stores.

For that Cough / KEMP'S BALSAM

Clear Your Skin With Cuticura
Soap to Cleanse
Ointment to Heal
Absolutely Nothing Better



"OH, HUGHIE!"

SYNOPSIS.—Living in the small English village of Darbury, old-fashioned and sedate place, Barbara Stockley, daughter of a widowed mother, is soon to celebrate her marriage to Hugh Rochdale, rich and well connected. Barbara is adventurous, and has planned, with an aunt, an airplane trip to Australia. Major Alan Croft, famous as an aviator, is to be the pilot. At her first meeting with Croft Barbara is attracted by his manner and conversation, different from the cut-and-dried conventions of her small town. They set out, Barbara, her aunt, Croft, and a mechanician. Word in a few days comes to Darbury that the plane is missing and its occupants believed lost. Croft and Barbara, after the wreck of the airplane in a furious storm, reach an apparently uninhabited island in the Pacific ocean. The other two members of the party had perished.

PART TWO—Continued.

—3—

"Let me do that. Shall I?" she asked.

"Don't you mind blood?"

"Of course not!" she answered indignantly.

He handed her the blood-stained wet handkerchief without a word, inclining his head toward her. In a few minutes he rose to his feet, all traces of blood washed away, his head bandaged adroitly with her own handkerchief twisted in his.

"I'm going up that hill, to view the land," he said, with abrupt decision, proceeding toward it as if oblivious of her presence.

"I'm coming too!" she exclaimed, hastening after him. "I'm not going to be left alone down here! There may be alligators and things!"

He gave an impatient smile. "Come along, then; I'll help you up."

"Oh, no, thanks! I can manage quite well," she replied rather coldly, nettled by his tone and manner.

He said no more, but began to climb the rugged rock-strewn hillside with the agility of a mountain goat.

Barbara struggled after him, slipping, bruising herself, panting for breath. The shock had left her weak and unnerved. She sank upon the ground, drawing hard sobbing breaths. Croft, without a backward glance, was disappearing among the larger boulders at the summit. Fearful of being left, she rose again and scrambled on. Her aching head throbbed wildly now; sudden dizziness caused everything to swim around her. . . . Stumbling over a half-concealed rock, she fell prone upon the ground. . . . There she lay, conscious of a terrible silence. No other sentient being seemed to move within a world so full of awful loneliness that it appalled her; it was almost tangible. A great wave of fear, grief, loss, homesickness, wild—almost childlike—longing for Hugh, swept her away. For the first time since the horror began, she found relief in tears. She lay there alone, sobbing weakly. . . .

From the top of the hill Croft scanned what was visible of the land along the north, east and west coasts. This was, he concluded, an island of volcanic origin, with the exceptionally high reef more or less surrounding it, sometimes at a considerable distance from, and sometimes fairly near, the shore. He surveyed the view critically, a purpose forming in his mind.

The gradient inland culminated in a short, fairly steep rise to a grove of cocoa palms, near which a clearing was visible, covered with little groups of something—possibly caves or rocks. Nowhere did there appear to be sign of human life.

It would be easy, he saw, to reach those possible caves by following the neck of high ground running inland from the top of his hill. Turning seaward, he shaded his eyes with his hands and scanned the horizon.

No indication of life was visible. No smoke, no mast, no sail.

He swept the small island with another keen critical glance. From his knowledge of the South Pacific—in which ocean, somewhere, this island must lie—he guessed it to be of little or no use for trade, either in copra or other exports, in spite of its patches of luxuriant verdure. Therefore, probably, it was never visited by the outside world! Unless there were habitations in the south, it was conceivably uninhabited—possibly unknown.

For some moments he stood motionless, facing these probabilities. Then, with a grim face, he turned in search of his companion.

Barbara, her head buried in her arms, did not hear his approach. It was with a start of surprise that she found herself suddenly lifted bodily, as if she were but a featherweight. Feeling again very small and ashamed, she would have struggled free, but his grip tightened.

"Keep still! It's a rough climb." He spoke abruptly, ever his way in moments of stress. The tears of weakness rose again in her eyes. She closed them, but too late to hide what she felt he would despise. She turned her face away into his wet shoulder; and he strode along in silence.

Stray rocks lay about the ridge; small shrubs, interspersed with ferns and club mosses, made progress difficult; but he never paused until they were among the tall trees of the palm grove. Then he set the girl upon her feet.

"Where are we going?" she asked.

"Listen!" he commanded, without answering her question.

From near at hand came the noise of rushing water. He turned farther inland, amid tall avenues of bamboo, toward the sound, Barbara closely following. Presently a pleased exclamation escaped his lips, and he halted.

From the high ground the river tumbled down, a sheer waterfall of dancing crystals splashing from great boulders high up among the forest trees to smaller ones on the lower level; thence hurrying and gurgling over little rocks, which encircled small pools of translucent green, into a clear, softly flowing stream some six feet deep. This after a time spread out and grew shallow, finally disappearing between rustling walls of bamboo canes toward the cove where it joined the lagoon. From the nature of this deeper stretch of water and the comparative clearing of undergrowth on the banks, Croft judged it to be partly the work of man's hand, not entirely the result of nature. But he forebore to suggest this to the girl.

Croft led the way back to the grove, then on to the clearing beyond.

Suddenly Barbara stood still, with a little cry.

"What's that?"

He stopped, looking aside in the direction indicated. Stooping swiftly, he lifted a queer bleached object and examined it closely. She drew near, glancing curiously at the hideous thing.

"Let Me Do That; Shall I?"

"It's a skull! Isn't it?"

"Yes," he replied, "and—of the negroid type!"

She looked up, startled. Until then it had not occurred to her to wonder concerning the island. The past with its tragedy had expunged all else from her mind.

He continued to examine the skull, with puzzled brows.

"There are some curious holes which I cannot understand," he said. "They might have been caused by bullets. But it is doubtful if natives would possess bullets here."

"Do you think there are any here now—any natives?"

He met the eyes raised in trepidation to his own. "I can't tell, yet. But they are friendly enough to white people." Throwing away the skull, he went on toward the open space.

The apparent caves proved to be moss-covered ruins of bamboo huts. Many had fallen into rough heaps upon the ground; of others, bits of all remained standing, guarding like sentinels the broken portions resting wearily against their base. Lying about, half-hidden in undergrowth, were oddly shaped household utensils made of wood or rough kind of pottery; also large shells, rude cups fashioned from coconut shell, broken spears.

The scene was desolate, giving the impression of Death, of the relentless hand of Time sweeping away everything that once had seemed strong and full of life.

"It's quite possible," he said, "that the whole colony which lived here has died out. Populations dwindle very much in the Pacific islands."

She gave a little shudder.

"It's horrible here—I don't know why! Let's go down to the shore. There seems to be a hut standing down there." She pointed toward a small, sheltered structure half-way down the lower slope, sheltered beneath the hill which they had climbed. Croft hurried in its direction.

It consisted of one small room. The bamboo walls were intact, but the thatch forming the roof showed large rents; on the ground within, amid musty, dead leaves, were scattered utensils similar to those which they had already seen.

Croft glanced round critically, then at the girl, who had followed him, then out through the opening seaward.

"We can make this sufficiently habitable to carry on with," he observed.

His words went out into silence. They brought instantly a vivid realization of the immediate present to her mind, followed quickly by thoughts of the future. A new fear shot up, clutching her heart with a horrible, clammy hand. She looked with sudden dread at her companion's profile; and something about his tense lips seemed to confirm the awful foreboding. The faint color revived in her cheeks by exercise ebbed away, leaving her white. She clenched her teeth and her hands; then, with an effort, put her dread to the test.

"We—shall soon be rescued? Ships are certain to—call here? It will only mean a few hours—or days?"

The moment which Croft had dreaded, yet known to be inevitable, was at hand; and he felt the utter inadequacy of his sex in dealing with delicate situations.

From his prolonged silence Barbara guessed the truth of his convictions; words were unnecessary. She clasped her hands in agony, uttering a little moaning cry like some dumb animal receiving its death-wound.

Croft turned quickly. He looked down at the quivering, girlish form, meeting the frightened eyes turned to him, trusting in his judgment and resource. And all at once he realized that, in this ghastly predicament, her very life lay in his hands. He leaned forward and took her clasped hands in both of his.

"Don't give up hope," he said earnestly. "It's very doubtful if ships call; but they may pass this way. We will do all we can."

She clung to his hands, breathing hard, seeming to find the old magnetism of his personality draw her up, deriving mental as well as physical support from his grip. Her eyes fixed upon his, as if searching for help. . . .

Suddenly, like a plucky ray of sunshine in a stormy sky, a faint smile flitted tremulously across her pale lips.

"We must—as you said—buck up," she whispered, the trembling words scarcely audible.

II

At mid-day the heat became excessive. Mercilessly the sun, like a quivering mass of molten steel, beat down upon the shore; no breath of wind stirred the hot air; the lagoon, with its almost indigo blue, assumed an oily, sluggish appearance, as if sinking to sleep with the lowering tide.

Within the shade of the angle formed by one side of the hut and the hill behind, Barbara lay inert upon a soft, if simple, couch of sun-dried coats. Finding that the ground swayed and rolled like a mountainous sea if she endeavored to rise, she gave up the attempt, and lay motionless, with closed eyes.

Nearby were some untouched bananas and a broken coconut, the shell of which was filled with water and placed upright between three stones. From within the hut came the noise of splitting sticks, as if somebody were breaking the bamboo canes which, crossed and interlaced, formed its structure.

The girl listened, wondering dully at the endurance of her companion, full of a miserable sense of shame at her own weakness. Without pausing for rest, after fetching their coats and procuring food, he had begun clearing and improving this dreary abode—carrying down broken portions from the ruins above for a door, fetching other canes and palm-leaves for mending the thatched roof.

Presently, hot and disheveled, he appeared. He had shed all his clothes except breeches and shirt, and looked, she thought, strangely in keeping with the scene around them. This was her first experience of a man whose life had been spent chiefly in wild surroundings, often upon but the fringe of civilization; whose abundant vitality responded to the call of untamed nature in a way that proved he had not been shackled by chains of convention closing around him, fetter by fetter, as the years passed.

"That's done!" he said briefly. He sat down and proceeded to peel and eat bananas with considerable relish.

"I feel so useless!" she exclaimed, miserably. "Such a hindrance instead of a help. It would have been wiser to have left me in the water. You would get on better alone. We shall only die lingering deaths here, if rescue doesn't come."

"Dashed if I mean to die!" he protested, between two large mouthfuls of fruit. "Nor shall you!"

Throwing away his banana-skins, he rose and surveyed the water; then he came close to her, towering over her, as it seemed to her excited fancy.

"I'm going to try to reach the machine. I may be able to rescue our luggage and provisions—"

"Oh! no, no, no!" she cried wildly. "Suppose you get drowned? Never mind luggage! What does that matter? Oh! don't leave me all alone—" Terrified, she tried to reach some part of him, to restrain him by force.

He caught her arms, raising her to her feet and supporting her.

"Listen!" he commanded in a tone which checked her agitation. "It's not only luggage! I want to save the wireless transmitting set—"

"Wireless!" Radiant relief overspread her face. "Why—then—we can soon get rescued after all? I forgot about that."

"You mustn't rely too much on it. It will be only the short range set. The long range used on board obtained its electrical energy from a generator run from one of the engines, and is therefore useless now."

Her eagerness for this new hope to be tested was still modified by fears concerning the risks of his venture. He pointed out the shallowness of the water and the scattered little coral islands. "The tide's low enough now for me to wade to that one nearest the reef. From there it's quite a short distance, if swimming is necessary."

"I will wade with you—"

"The devil you won't!" He suddenly wheeled round upon her. "Look here! You're never to go in the lagoon! Bathe in the river, but don't ever go in the lagoon. Swear to me!"

She gazed at him in stupefied amazement and anger.

"Why not? If—if you go in—"

"I—er—I understand these waters. They're treacherous. Promise me—"

"Oh!" she interrupted impatiently, "I don't want to bathe—ever—anywhere! I'll sit and watch you go."

"In this blazing sun? No, indeed! You must lie down in the hut and sleep."

Vainly she remonstrated, fearing a recurrence of the tangible loneliness

"Now, Stay Here Until I Return."

she had experienced upon the hillside. His jaw set in a way she was to know well. With a vise-like grip he drew her toward the hut.

The interior was cleared now of rubbish, and a rough aperture for window had been made at the end facing inland. The shade was cool and welcome. Croft fetched the coats and spread them upon the ground.

"Now," he said, "stay here until I return."

"You understand? You promise to remain? Or must I barricade the door?"

She pulled her hand away, and let her aching head fall back upon the fleece lining of the coat.

"Oh, don't bully me!" she protested irritably, trying to control the quaver in her voice. "I won't endure it. Please—go."

He looked down at her in silence for a moment, his brows knit in perplexity. Then he turned and went out, setting up the improvised door behind him.

Lying motionless in the comparative gloom, a prey to rising fever, new fears assailed her. Shrinking in horror, she faced the fact of her isolation. Sundered from all the sure harbors of civilization with this man of uncertain moods—a man whom she neither liked nor understood! . . .

A care for her physical welfare had certainly been shown today. But in everything her will had been overpowered, even to the extent of physical force.

It was not to be borne! What might not happen? . . . The fears accumulating, grew into feverish terror. She struggled to her feet, and hurled herself weakly at the door, with some frenzied idea of escape. . . .

The door was barricaded on the outside!

As a caged beast, half-mad with terror and impotence, she staggered up and down the little hut, her brow clammy, her clenched hands shaking. . . . With a rush of hysterical tears, she flung herself upon the ground. "Hugh!" she sobbed, distraught. "Oh, Hughie! Hughie!"

The man intends to live. The girl is hysterical. Is he strong enough for both?

(TO BE CONTINUED.)

Resolutions Of Respect

Whereas it has pleased God in His wisdom to remove from our midst, Sister Jane Hull, who has been taken from our earthly lodge to her eternal home.

Resolved, That in her death this Order loses a worthy sister and our community an honored and upright citizen.

Resolved, That we as sisters of the same Lodge to which our deceased Sister belonged when on earth, tender to the family our heartfelt sympathy in their bereavement, and commend them in their hour of sorrow to Him "who doeth all things well"

Resolved, That a copy of these resolutions be sent to the family of our beloved sister and a copy be recorded on the minutes of this lodge.

Com { Mary Betz, Ada Berry, Tena Engle.

Celebrate 55th. Wedding Year

Last Sunday was a day of interest and pleasure to Mr. and Mrs. F. Buchanan. The occasion being the fifty-fifth anniversary of their married life, which event was celebrated at the home of their daughter, Mrs. Flossie Rhoades of Spencerville. The couple enjoyed an elegant wedding dinner. The hostess was ably assisted in serving the dinner by her husband and daughter. The guests were Mr and Mrs. Will Lucas and Mr. J. Haifley of Spencerville. Beautiful pink and white carnations were presented to the bride and groom by the host and hostess and cards good wishes and congratulations were received.

Mr. and Mrs. Buchanan were married March 21, 1870 at noon at the home of the bride's parents in Auburn by the Rev. S. B. Ward pastor of Baptist church. They went to housekeeping in a log cabin on the farm of the groom. Both of them are enjoying good health and feel they have been wonderfully blessed throughout their lives. As yet there has been no break in their family which consists of one son and two daughters: Harry L Buchanan of Portland, Oregon, Mrs. J. E. Sturgis of Cincinnati, Ohio and Mrs W. F Rhoades of Spencerville.

Literary Eliminating Contest Held

The preliminary for the Music and Literary contest was held last Friday evening at school house, before a good crowd. The double quartet composed of Kenneth Ryan, Paul Hadsell, Velma Kinsey, Hilda Koch, Verba Haner, Harriett Wasson, Harcourt Miser and Joe Woodcox, sang two songs

The constitutional discussion by Roy Mann and John Meek. The honors were given the latter.

Piano solos were rendered by Joe Woodcox and Hilda Koch and she received first honors.

Thelma Curie carried honors in the reading class against Priscilla Borthwick. Joe Woodcox won in vocal solo rendering over Paul Hadsell and The Child Labor Discussion by Evelyn Knight and Frank Shull was given to Miss Knight.

Friday night the winners go to Butler for further elimination and the final will be held at Auburn

Faith in the Home Town

In an editorial on "Believing" the Albany (Ala.) Herald says:

"It is believing that what people do counts for more than the natural advantages of a region or a community. It is believing that the contribution of every man is important as all face a common task, and that every one who 'lays down on the job' neutralizes in some material measure the results of what others do.

"Find a town whose people believe in it—believe that it is destined to grow and prosper—and you can no more keep it down than you can keep the sunshine from warming the earth."

Health in Cleanliness

Buildings with smoke-covered walls are taboo in Berlin. Regular scrubbing of building at monthly intervals is required by a new city ordinance. The measure primarily was passed to beautify the city, but advocates of the law say clean buildings also will be conducive to improved health conditions.

Ownership vs Rent

Only about 38 per cent of the American people own their homes. The remaining 62 per cent pay money to landlords. Rent money will, in a comparatively few years, pay for the house rented, but the landlord will still own the house.

Move in Right Direction

Nearly 700 American communities now maintain public play centers, and more than 12,000 men and women are employed as recreation directors.

Six Centuries Since Windows Were Washed

There are windows in the York minster of Hull, England, which have not been washed in more than 600 years, it was announced recently by the dean of York in making an appeal for a local fund for the preservation of these antiques which are still in active service. There is no collection of English glass in the world approaching that at York minster, said the dean, and if the public allowed these windows to disappear their like would never be seen again.

Some of these windows which have been in place for six centuries were being cleaned for the first time, the dean asserted, and it had been found that the belief that washing might destroy the mellowing effect of time on the glass was without foundation.

GREEDY

"What do you say to a little kiss?"

"I prefer a big one."

Safer Locomotive

The entire status of steam railroad transportation may be revolutionized by a new and safer type of locomotive capable of developing one-third more power with one-third less consumption of fuel and water. Such a locomotive has been built and it was installed by the Delaware & Hudson company recently in its shops at Colonie, near Albany, N. Y. Officials of the Delaware & Hudson estimate that the economies effected will make their new engine approximately twice as efficient as locomotives for similar purposes in general use today.—Santa Fe Magazine.

No Cheap Airplane Yet

Cheap, light airplanes for popular use and ownership are still a development of the future, says Prof. E. M. Low, in charge of the light airplane competition recently held in England to encourage hope for an era of flying flivvers. The public interest still is apathetic, he said, and the manufacturers of light airplanes have not succeeded to any extent in perfecting their machines. The small, light planes are very noisy, dirty, dangerous and uncomfortable, according to Professor Low.

Holds Mail Sacred

Due to the many requests of marshals, sheriffs and other law-enforcement officers, that mail carriers open first-class mail addressed to crime suspects, in the hope of getting some clew, the Post Office department has issued a warning to all who handle the mails that these requests if granted render a postal employee liable to prosecution. The sanctity of first-class mail is held paramount to the search for criminals. The government provides for such co-operation with law officers as is possible in another way.

Alberta's Highways

About 400 miles of main highways were completed in Alberta during 1924 under the five-year program authorized by the legislature last session, which contemplates a total expenditure of $3,500,000. The work was done on the chief tourist highways in the province, and as a result a total of $250,000 has been earned by the province of the federal aid grant. Next year's program contemplates the building of about 500 miles of highway.

England Follows America

Following the idea of the night air-mail service in the United States, plans are under way for having mail from continental England carried to London by train and then by airplane to Paris, giving all England overnight service to France.

Princesses Learn to Work

A school where exiled Russian princesses are taught to earn a living is being conducted in England.

Children's Division workers in Allen county will have a number of conferences during the first week in April and the meeting of interest to workers in this section will be held at Fort Wayne, Thursday, April 2, at 2 and 7:30 o'clock, in the Salem Reformed church, first door south of postoffice.

Dan M. Link, former judge of the DeKalb circuit court, was chosen as special judge at Fort Wayne Wednesday to preside in the Allen circuit court during the retrial of Walter Arnold, charged with burglarizing the former headquarters of the Ku Klux Klan in Ft Wayne. Arnold was once a klan organizer. Judge Link's name was chosen from five lawyers who were nominated. Arnold was tried several weeks ago before a jury but one of the members was ill and unable to be in court when the finding was read, so Judge Wood refused to accept the verdict and ordered a retrial of the case. Arnold filed a motion to dismiss the affidavit several days ago, alleging that he had once been in jeopardy for the offense, but Judge Wood overruled the motion.

What they think about it

HOME TOWN TALKS

During the past weeks articles of a criticising nature written by local citizens, appeared in the News and this week we desire to turn your mind to just a few things in a more constructive way that may bring forth more good to St. Joe if heeded, than you can imagine. The News columns are open to your suggestions.

Save for a home.

If you are going to live here, give here.

Don't paint the town; paint your house.

Build to last, and don't be the last to build.

Be an example to your family, not a problem.

Only a blind man needs to buy sight unseen.

This town would move faster maybe if you did

Shed your machinery so it can shed the rain.

The smaller the town the bigger the possibilities.

Don't be a fellow who never runs to anything but a fire.

Nail the loose planks about your town and the loose lies.

Is yours the best looking house in the block, or the worst?

Don't be a hair-trigger knocker and a slow-fuse booster.

A penny's worth of paint will save a dollar's worth of damage.

Any man who has feet can kick, but it takes brains to boost.

Money talks, but if you send it far away don't complain if you can't hear it.

Samuel Keesler, Mgr. Grain Dept. **Bert Jackson,** Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

Accurate Records for Business Success

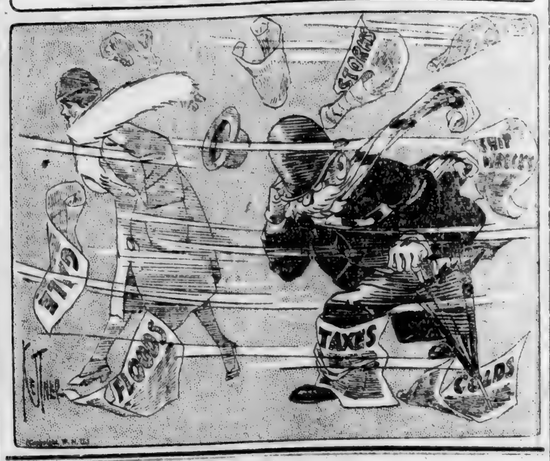
Whether you are running one of the largest corporations or managing but a few acres of land, you will find accurate records are the basis of business success. Who can expect to know your standing and financial worth if you yourself do not?

It is almost impossible to make constructive plans for the future unless you have accurate records of past transactions. The only experience that is useful is the experience you can apply to future dealings. What did you pay for feed last year? What did the seasons crop net you? Avoid burning your figures a second time because you can remember the pain and suffering of the first time.

Farm business is jsst like any other business. Market changes influence our returns. Therefore we should know where to reduce expenditures to meet declining incomes, or where to expand to make the best use of rising incomes. Luck is too uncertain to insure the family its daily bread.

The St. Joe Valley Bank, A STATE BANK

Beware the Ides of March



Why We Should Aid And Protect Our Birds

The following essay was written by Lucile Curie. The biology class had just finished the study of birds last week and this essay was chosen as the best in the test, hence we are glad to publish

The question, "Why should we protect our birds? You say they eat insects and weed seed, but they do not eat enough to amount to anything," has often been asked Is there any other animal that destroys our harmful insects and weed seeds? If you would stop to consider, even though the bird should eat very few weed seeds and insects (although they eat many) does not one weed produce millions of seeds the next season? Also, the insect will produce several broods (sometimes hundreds in each brood) in one season.

Many people kill the birds for sport, as they do not see any good in them. I will give you an example of this: In Italy and Japan they have killed until there are but few remaining; and as the result, both countries are suffering from great losses due to insects. Can you not see from this what vital importance they are to the farmers and crop raisers of America?

There is another angle we can discuss this topic from. Many times when you are blue and you take a walk to console yourself, don't the birds cheer you up and console you with their beautiful notes of cheer? Oft times when you wake up in the morning a bird will be perching on something by your window singing his cheering song, which seems to say "good morning." This has helped many people to "start" the day with a smile. Many sick people, invalids and cripples are cheered by the notes of a bird cheerfully singing by their window. The saying, "Everything in this world is here for a purpose," applies very well. God must have had some reason for putting birds in the world or he wouldn't have put so many.

In closing I will say; people (esp farmers) if you are interested in a large reaping of crops, protect and aid the birds. Put a few bread crumbs or some other food on your window sill; or build bird houses and put them up; aid and protect the birds in any way you can and become friends to them.

Bulk Garden Seeds—Curie's shipments are now in and are selling. Better get yours now. Seeds that will grow are going to be high priced.

The DeKalb county American, published at Waterloo has hit the rocks, after a very short existance. The plant will be moved to Butler and engage in job work. The facts were, Waterloo did not need a second paper, hence the lack of support.

Special Train At St. Joe Monday

Next Monday morning at 8:30 a special soil improvement train will stop at St. Joe on the B. & O tracks and remain here until noon. Instructions on lime and soil fertility building will be given by men of experience from Purdue University.

The Indiana Soil Improvement Special is bringing to our community the means of helping to improve the soil. Bring samples of your soil to the train and have them tested by the experts. They will indicate to you the amount of liming material necessary to correct the acidity in your soil. At each stop, twenty farmers will be invited to back their wagons up to the train and take home, without cost to them, enough liming material to correct the acidity on one acre of their land.

Farmers who are in access to this demonstration ought not fail to be here. Just let your work go for the half day and learn something far more valuable than a half days work. The community is fortunate in having this train stop here and without local expense! Just phone your farmer friends and come.

Church Notes

Commencing Lord's Day evening April 5, the Church of Christ will hold services each night during the week preceding Easter. The following topics will be discussed:

Lord's Day evening, April 5, What think ye of Christ?

Monday evening, April 6, Conversion of three thousand.

Tuesday evening, April 7, Conversion of a heathen.

Wednesday evening, April 8, Conversion of a woman.

Thursday evening, April 9, Conversion of a moral man.

Friday evening, April 10, Conversion of a religious man.

Saturday evening April 11, A model conversion.

Lord's Day, April 12, A proper division of the Word.

There will be a special song service consisting of solos, duets and choruses.

"Search the scriptures for in them ye think ye have eternal life—John 5: 39.

A cordial invitation extended the public to attend these services.

I. Konkle, Minister

Clarence Hull and wife are entertaining their grandchildren from Fort Wayne this week.

E. R. Kinsey is remodeling his garage at the rear of his residence making room for four cars. He expects to install a heating plant so that his cars will always be ready for calls in cold weather.

In Society

Twenty three members and three guests of the Ladies Literary Club very pleasantly entertained at the home of Mrs. Floyd Reasoner on last Wednesday night, in honor of Mrs. E. J. Smith who will soon leave for Paris, France.

A short program was rendered consisting of numbers by the club quartet, a solo by Mrs. Paul Curie, musical reading by Mrs. Floyd Reasoner, a reading by Mrs. Rolla Wiers, playlet by Mrs. Paul Curie and Mrs. Floyd Reasoner and a a group of dialect readings by Miss Faye Bangs.

A social hour was then enjoyed, during which the hostesses Mrs Reasoner and Mrs. Bowman assisted by a committee served a delicious lunch of sandwiches, fruit salad, cake and coffee.

Just before leaving the club joined in singing a farewell song for Mrs. Smith.

Besides the honor guest, Mrs. Smith, there were three other guests, Mrs Harmon of Ft. Wayne, Mrs Russel Wade and Master Jacques Smith.

Lutheran Notes

On next Sunday evening at 7:30 we will begin a week's services. There will be preaching each evening and the service will be concluded on Easter Sunday morning at 10:30. The new members will be received at this service and the holy communion will be celebrated. Don't miss any of these services.

The Sunday School meets every morning at 9:30 Many new pupils are being enrolled and a fine new class has been organized for young married people.

The prayer service will be held on Thursday and will be in charge of Bro. J. R Shilling, as the pastor is preaching this week at Spencerville. You are cordially invited to all these services.

S. D. Steffey, Pastor.

Notice To Farmers

While the nice weather continues the Grist Mill will be open only during the afternoons. Should the weather become bad, the mill will run all day. Phone 13-7. 14t1.

Students Divide Honors At Butler

Three regional music and literary contests were held among the high schools of DeKalb county Friday evening The winners will participate in a county contest that will be held at the Auburn Methodist church next Friday evening at 8 o'clock.

The winners in the Butler St. Joe-Waterloo contest held at Butler of interest to this community were, vocal solo, Joseph Woodcox and reading, Thelma Curie.

In the Spencerville-Ashley-Corunna contest at Ashley Doris Beams won the vocal solo.

Card Of Thanks

The family wishes to thank all the neighbors and friends for their help and care during the illness and death of our wife and mother, also for the beautiful floral offerings.

Famous Forts in U. S. History

By ELMO SCOTT WATSON

(©, 1925, Western Newspaper Union.)

When the Piutes Rode the War Trail

Life was never dull in Nevada in the sixties. If there wasn't trouble among the rough characters of the silver mining camps, the Piute Indians could always be counted upon to lift a few scalps and burn some cabins. Early in 1860 they had been so active that the settlers had to appeal to California for help.

Several hundred volunteers immediately rode over from the gold camps to help their silver-mining brethren. But more important was a force of 150 regulars from Alcatraz island, led by Capt. Jasper Stewart of the Third artillery and Capt. E. F. Flint of the Sixth infantry, which took the field and formed the nucleus for a force of 800 men that kept after the Indians until they were brought to bay near Pyramid lake. There a three-hour battle was fought on June 3, and the Indians were defeated.

The soldiers remained in the region until the middle of July and put in their time by building Fort Churchill on the Carson river, 35 miles below Carson City. This fort was the most important of several that were built in the territory and when the Piutes broke out again in 1862 it was made military headquarters for the Third California volunteers, under the command of Colonel Conners, commandant of the military district of Utah and Nevada. For the next six years the Piutes kept up a desultory warfare and expeditions were constantly being sent out from Fort Churchill against them so that it is no overstatement to say that the settlement of Nevada might have been delayed for many years had it not been for the presence of this fort.

Fort Churchill is also noted for its connection with another historic occasion. It was on the route of the Pony express and one day when "Pony Bob" Haslam, one of the riders, arrived at Fort Churchill, the man who was to carry the pouches on to the next station was unable to go. So "Pony Bob" took his place and this resulted in his famous ride of 380 miles with scarcely 11 hours rest from the time he started until his job of "getting the mail through" was done, over every mile of which he was in constant danger of death at the hands of hostile Indians.

By 1872 the troubles with the Piutes were definitely over, the Pony express was a thing of the past, the garrison at Fort Churchill was withdrawn and its career as the protector of an infant state was at an end.

Where Ruled the "Emperor of the West"

At Fort Union, N. D., Kenneth McKenzie once reigned as the "King of the Missouri"; at Bent's Fort in the Arkansas Col. William Bent enjoyed almost unchallenged sovereignty over the vast territory along the Santa Fe trail; but the greatest uncrowned monarch of them all was Dr. John McLoughlin, officially chief factor for the Hudson's Bay company in Oregon but spoken of far and wide as the "Emperor of the West," a benevolent despot who for 22 years ruled over an empire 400,000 square miles in extent, of which his post, Fort Vancouver, Wash., was the capital.

From 1670 to 1810, though theoretically belonging to Great Britain, the Pacific northwest was dominated by the Hudson's Bay company. From 1816 to 1846, under the terms of the Treaty of Ghent, this vast territory was under the joint occupancy of Great Britain and the United States but in reality the word of the H. B. C. was the law, and the Hudson's Bay did not look any too kindly upon American interlopers. The one exception was Dr. McLoughlin, to whom we owe an eternal debt of gratitude.

Fort Vancouver was the result of the merger in 1821 of the Northwest company, which had put John Jacob Astor's Pacific Fur company out of business on the Columbia, with the Hudson's Bay company, which had in turn crushed the opposition of the Northwest organization. McLoughlin was an employe of the Northwest company but after the coalition he was retained by the H. B. C. as chief factor for the Oregon country. In 1824 he began this fort on the Columbia, 60 miles above Fort Astoria.

He soon won the affection of the Indians who called him "The Great White Chief" and his power over them, as well as over all whites who came into contact with him, made him a man whom not even the officers of the Hudson's Bay company dared oppose. Time and again he saved American missionaries and American settlers from massacre or from starving when they arrived in the new country. Incidentally, his reward was the basest kind of ingratitude. In 1846, when the Hudson's Bay company forced him to resign because he would not follow its policy in regard to the American emigration, he was a comparatively poor man, made so by his loans to settlers who never repaid him. History is full of the legend that Marcus Whitman saved Oregon to the United States. But the simple truth is that that honor belongs to Dr. John McLoughlin, the "Emperor of the West" who ruled at Fort Vancouver.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(© by Western Newspaper Union.)

TALKING TO THE DEAF

MUCH has been written for those who are ill or afflicted but little has been written to help those who have to live with them. Yet I have often thought that the family of a chronic invalid deserved quite as much sympathy as the invalid did.

In a recent issue of the Volta Review, Miss Elizabeth Nevinson gives some advice to those who live with or have to come in business or personal relations with the deaf. Much, she says, has been written to help the deaf but little for those who have to talk to the deaf.

Many persons are dull of hearing but not deaf enough to have to use trumpets or phones. They cannot hear well, but they don't like to admit it. They resent having their deafness noticed or remarked on. How can they be handled tactfully? Miss Nevinson makes some valuable suggestions on this point.

Nearly all deaf persons have one ear better than the other. They try to get any one they are talking to on the side of their "good ear." Find out the "good ear" of any deaf person and stay near it.

Don't shout. This embarrasses the listener, without helping him. A voice raised too high is as hard to hear as one too low. Find out what tone each deaf person can hear best, and stick to it.

Note the distance at which your deaf friend can hear you best. It varies greatly in different persons.

Speak naturally. Don't "mouth" your words in an effort to make the deaf person understand. All instruction in lip reading, now so common among the deaf, is based on the expectation of natural speech. "Mouthing" only confuses the deaf person.

Speak slowly and distinctly, especially if the deaf person is a comparative stranger. Slow, distinct speaking is much more effective than raising your voice.

Look directly at the person to whom you are speaking. The voice carries more clearly and the deaf listener can see your lips.

Emphasize the most important word in the sentence, the "key word" on which the meaning hinges.

If the deaf person, through confusion or inability to hear, "gets lost" or "gets out of the conversation," bring him back with a question or comment, which will again put him in touch with the conversation.

Don't drop your voice at the end of the sentence. Don't let your face show impatience or irritation if your deaf friend does not understand. Put him at his ease and he can hear better than he can if he is shouted at, irritated and confused

IS CONSUMPTION HEREDITARY?

FOR many years it was generally believed that consumption was inherited. This view was, in many cases, held by doctors as well as laymen. There were so many instances in which the children of tuberculous parents developed consumption that it seemed reasonable to assume that the disease was handed down from parent to child.

So it was, but it was by close and constant association, by living in infected houses, by eating and sleeping and living with infected persons that the disease was transmitted and not by inheritance. More careful study proved that tuberculosis could not be inherited and that an adopted child or an inmate of the same household, in no way related to a consumptive, was just as apt to develop the disease as a child of the patient.

Then the believers in heredity fell back on their second position. They said that the disease itself was not inherited but that the child of consumptive parents inherited a "tendency" to the disease, that they had weaker lungs and consequently were more apt to develop the disease in later life.

But facts are stubborn things and are better than theories. Doctor Droiet has just reported the results of a careful study of 7,500 tubercular patients at Bellevue hospital in New York. In 1,695 children, he finds more tuberculosis among children of healthy parents than among those of tubercular parents. Among 2,500 patients admitted for other diseases but without tuberculosis, one-third had tubercular parents but had not tuberculosis themselves, while of 2,800 patients who had tuberculosis, only one-seventh had tubercular parents. In other words, the children of tubercular parents had less than half as much tuberculosis as the children of healthy parents.

It was also found that the children of tubercular parents who did have tuberculosis had twice as good a chance of getting well as the children of healthy parents.

Doctor Droiet concludes that the children of tubercular parents do not inherit the disease. They do not even inherit a tendency to it. Instead, they inherit a greater amount of resistance to it and a greater immunity to it than do the children of healthy parents.

EXCURSIONS IN CORRESPONDENCE

By THOMAS ARKLE CLARK
Dean of Men, University of Illinois.

The Business Letter

THE business letter is different from other letters only in that it is not to please, or to amuse, or to appeal to the imagination, unless, perhaps, one is trying to sell oil stock or blue sky. Its object is to give information, to present facts, or to ask for them. Its appeal is to the understanding, or the judgment of those to whom it is written.

In writing a business letter, there is no reason for using different language, or different sentence structure than we use in friendly letters, or in letters of courtesy. We should use complete sentences, and correct spelling, and put the letter into as good form as if we were writing a note of thanks, or an invitation to a dinner party. It is true, we should be clear, direct, and to the point, but that does not mean that we are to leave out subjects of sentences, and articles, and principal words, and write as if we were composing a telegram, and were trying to save money on words. It simply means that whatever is unnecessary, or extraneous to the subject in hand, should be omitted. We are writing mainly to be understood, and clearness and directness are, therefore, the points to be emphasized. Terseness does not necessitate the omission of the main parts of a sentence.

Certain business firms who do largely a mail order business with illiterate and badly trained people, hold to the opinion, or once did at least, that accuracy of form in a business letter is not necessary; that what the average person wants in such a letter is a clear statement of fact, and that it makes little difference if the spelling is incorrect, the arrangement of the matter on the page careless, and the punctuation erratic. If the reader understands, that is sufficient.

There came into my hands not long ago, a letter of such a sort which I reproduce here without change excepting as to names and location. The typing was evidently done by one who was learning, the spelling has the merit of originality, the punctuation by the omission of a single period makes the weekly rate seem a little high, but that is a mere detail which perhaps did not convey a wrong impression, and may very well be overlooked, since the writer was apparently attempting to follow the prevailing custom of cutting the punctuation down to a minimum.

Bentonville, Va. March 20, 1924

Yor of March The 18th receved
Yor in quarey for rates & rout to bentonville receved & I will give yo the roome with 2 beds & make every than as nice for you & yor wif as psible
our rate is $1250 pr weak & the best way out of casey is to take a motor car at the k&A depo for jonesville Va & we will meet you thare with a car for bentonville, 28 Miles rail & 14 otomobiel if Mr. Shean is coming yot will have some one that will take yot out to see the Mountains.
hope this will bee satsfacter & you will come for a month are too we have some find cenury & good Mountal wat ter fine fishing,
yers Truly

The letter indisputably has originality, but one must feel that if the writer's hotel is conducted like his correspondence, it will be a place full of surprises.

Many people feel that abbreviations figures instead of words, and contractions and elisions of every sort are signs of efficient business methods in writing. These things, more often than otherwise, are an indication of haste, of carelessness, and of a lack of training. They suggest shirt sleeves at a party. The only excuse for using figures in a business letter is that figures economize space, and appeal more directly to the eye than do written words. The most careful writers now use them sparingly.

Letters written by business men who pay any attention to form are not now marred by sentences without subjects, or clipped off at one point or another, to suggest conciseness, such as "Yours rec'd; glad to have order and will see that it is shipped at once."

Such a sentence is more like a telegram than a real letter, and pleases very few people. Brevity is a very desirable quality, and one which should be generally sought in business letters, but it is not dependent upon bad grammar, or the omission of necessary parts of a sentence, nor upon abbreviations. It is best attained by directness, and the omission of all unnecessary details.

What Is Most Harmful?

What is the particular thing the people are doing that is most harmful and foolish? It would be interesting to know, but probably we never will, since what some say is civilization's greatest blessing others say is its greatest curse. So every one must decide for himself, and woe unto him who makes a mistake.—Ed Howe's Monthly.

Wedge the Ax Handle

If the handle of your ax persists in coming off, try driving a broad screw into the top part of the wood that projects through the metal. This expands the wood and so keeps the head snug and firm. It will be necessary to hollow out a small space to receive the head of the screw and have the latter flush with the edge of the wood. —Pathfinder Magazine.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for April 5

THE BLESSINGS OF PENTECOST

LESSON TEXT—Acts 2.

GOLDEN TEXT—"Repent and be baptized every one of you in the name of Jesus Christ for the remission of sins, and ye shall receive the gift of the Holy Ghost."—Acts 2:28.

PRIMARY TOPIC—Jesus Makes People Glad.

JUNIOR TOPIC—What Happened on the Day of Pentecost.

INTERMEDIATE AND SENIOR TOPIC—The Story of Pentecost.

YOUNG PEOPLE AND ADULT TOPIC—The Holy Spirit in the Church.

I. The Day of Pentecost Fully Come (vv. 1-13).

1. Significance of the Day (v. 1).

Pentecost is from a Greek word meaning fifty. It was the feast held fifty days after the wave sheaf offering (Lev. 23:16). The wave sheaf typifies the resurrection of Christ (1 Cor. 15:20-23).

2. The Gift—Holy Spirit (vv. 2-4).

On this day the Holy Spirit descended upon the disciples. This does not imply that the Spirit was not in the world before this, for throughout all the ages He has been in the world giving light and life to it. It means that from that time forth He would work on a new basis, having the crucified, risen and ascended Christ to present to the world.

3. Upon Whom the Spirit Came (v. 1); cf. 1:13-15.

The twelve and others, both men and women to the number of 120, showing that the gift of the Holy Spirit was for all believers.

4. The Marks of the Spirit (vv. 2-4).

(1) External.

a. The sound of a mighty wind (v. 2). This is suggestive of the mysterious, pervasive and powerful energy of the Spirit.

b. The tongues of flame (v. 3). Each of the 120 was crowned with such a tongue. Tongues show the practical purpose of the Spirit's gift-witnessing, and the fire indicates the purifying energy burning up the dross and making effective witnessing for Christ.

c. Speaking in foreign tongues (v. 4). This was a temporary endowment for this special purpose.

(2) Internal.

This is seen in the transformation wrought in the disciples. Though a little while ago they were trembling with fear, they now have great courage and self-possession.

5. The Effects (vv. 5-13).

(1) The multitude were filled with amazement and wonder. The gift of the Spirit transforms common men into men of power and influence.

(2) Some mocked and foolishly attempted to account for this remarkable occurrence. They accused the disciples of being intoxicated. The world today mocks men and women who testify in the power of the Holy Spirit.

II. Peter's Sermon (vv. 14-47).

Peter's sermon is as wonderful as the gift of tongues. It demonstrates the presence and power of the Spirit, since Peter was a Galilean fisherman without literary training. His analysis is perfect. He begins with a brief defense and scriptural explanation of the phenomenon of tongues (vv. 14-21). This is followed by a threefold argument to prove the messiahship of Jesus (vv. 22-36). The conclusion is an appeal to repent and be baptized in the name of Jesus.

1. The Introduction (vv. 14-21).

(1) Defense of the disciples against the charge of being drunk (v. 15).

(2) A scriptural explanation. He showed that this was a partial fulfillment of that which Joel predicted would come to pass (vv. 16-21; cf. Joel 2:28-32) before the messianic judgment, viz., an outpouring of the Holy Spirit and the salvation of all who call upon the name of the Lord.

2. The Proposition, or Theme (v. 36).

This was the messiahship of Jesus.

3. The Argument (vv. 22-36). It was threefold.

(1) From Christ's works (v. 22). He was approved of God among the Jews by His miracles, wonders and signs which God did by Him in their midst.

(2) From His resurrection (vv. 23-32). The Old Testament Scriptures had foretold the death and resurrection of Christ (Ps. 16:8-10).

(3) From His ascension to the right hand of God (v. 32). The proof that He had ascended on high was the wonderful miracle of the Spirit's operation in their midst, for He had said that upon His ascension into heaven He would send forth the Spirit.

4. The Effect of the Sermon (vv. 37-42).

Many people were convicted of their sins. Some three thousand repented and were baptized.

The American Sabbath

To say nothing of the divine law, on mere worldly grounds it is plain that nothing is more conducive to the health, intelligence, comfort, and independence of the working classes, and to our prosperity as a people, than our Christian American Sabbath.—Tyron Edwards.

Path Led to Calvary

The path that started from the manger of Bethlehem led to Calvary. —Western Christian Advocate.

Scraps of Humor

DIPLOMACY WINS

"Go away at once," she said. "We don't want any pots and pans."

"But I want to see the lady of the house," insisted the peddler.

"Well, use your eyes then," retorted the lady.

"But surely you are not the lady of the house," insisted the man. "I should have sworn that you were the youngest daughter."

"I'll have that cabbage strainer," she said.

NO GREATER LOVE

Miss Mouse—Are you sure you love me?

Mr. Mouse—More than I do my cheese, dearest!

Ostentation

The honest hen unheeded goes.
For praise she'll feebly beg.
The way the rooster struts and crows—
You'd think he laid the egg!

Had Trouble

"Didn't you say this car would do seventy-five miles an hour without any trouble?" asked the recent purchaser of the agent.

"Yes," was the reply. "Didn't she?"

"She did seventy-five all right, but the trouble I got into cost me $20 and costs."

Puzzled Her

Four-year-old Dorothy had just heard her mother giving a grocery order over the telephone.

"Mamma," she said, "did you order some corn starch?"

"Yes, dear."

"What for?" asked Dorothy. "Is you goin' to launder your corns?"

Fed Up

Wife—Would you like some nice waffles this morning, dear?

Hub—No, thank you, Helen. They look too much like fried cross-word puzzles, and I'm fed up on those.

BORN REAL ESTATE MAN

"You say he's a born real estate man?"

"Undoubtedly; he's made no end of people believe they'd enjoy a mile walk from a house to a car line.

One Way to Hold Him

When Joy is on his journey
We ask him in to stay,
And give him such a high old time
He never goes away!

Chance of a Lifetime

The 80-pound husband was the defendant and the 200-pound wife was the plaintiff.

"And why did you slap your wife's face instead of helping her when the automobile knocked her down?" inquired the judge.

"Well, your honor," replied the diminutive husband, "opportunity knocks but once."—American Legion Weekly.

Found the Hole

"I meant to have tould you of that hole," said an Irishman to his friend, who was walking with him in his garden, and tumbled into a pit full of water.

"No matter," said his friend, blowing the mud and water out of his mouth, "I've found it."

Mourning Not Becoming

Mr. Glummer—If I should die before you I hope you won't wear mournin'.

His Wife—I won't. I tried on some last winter when you were so ill and it made me look ten years older.

A Rare Opportunity

Father—So you are finding out that married life has its troubles?

Daughter—Yes. Sometimes Henry simply won't listen to reason.

Father—He ought to be ashamed of himself. Not every married man has the chance.

Under No Obligations

Mr. Bluff—Whatever I have accomplished, I owe it to myself.

Mr. Wire—How delightful it must be to feel so clear of debt!

Help That Achy Back!

Are you dragging around, day after day, with a dull, unceasing backache? Are you lame in the morning; bothered with headaches, dizziness and urinary disorders? Feel tired, irritable and discouraged? Then there's surely something wrong, and likely it's kidney weakness. Don't neglect it! Get back your health while you can. Use *Doan's Pills*. *Doan's* have helped thousands of ailing folks. They should help you. *Ask your neighbor!*

An Ohio Case

Mrs. A. F. Troyer, Main St., West Liberty, Ohio, says: "If I stooped to pick up anything, sharp, knife-like pains darted across my back. Black specks danced before me, blurring my sight and making me dizzy. My kidneys acted irregularly. One box of Doan's Pills made my back strong and my kidneys were regulated."

DOAN'S PILLS 60c
STIMULANT DIURETIC TO THE KIDNEYS
Foster-Milburn Co., Mfg. Chem., Buffalo, N. Y.

SPOHN'S
Best for 30 Years for Distemper, Pink-Eye, Influenza, Laryngitis, Catarrhal Fever, Epizootic, Coughs or Colds.
For Horses, Mules & Dogs.
SPOHN MEDICAL CO. GOSHEN, IND.
DISTEMPER COMPOUND

Worse Than Cross-Word

The note reproduced below was left on the desk of a social settlement worker in Cleveland. It is intended to be English. It is a message which was taken down just as it sounded to this foreigner, who did not know how to write English correctly. Here it is:

"Mrs. Goltmeus gallop ans sezet suns jukum hom pliz galerop sez no mer howlyt agonbi sez galerop."

The meaning of this is: "Mrs. Goltmeus called up, and says that soon as you come (jukum) home please call her up. Says no matter how late it's going to be, says call her up."—Christian Evangelist.

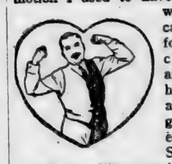
Right Word

Cross-Word Enthusiast (suddenly after prolonged, but vacant stare at fat stranger)—I've got it! An elephant!

Wind puffs up empty bladders; opinion fools.—Socrates.

S.S.S. stops Rheumatism

"MY Rheumatism is all gone. I feel a wonderful glory again in the free motion I used to have when my days were younger. I can thank S. S. S. for it all! Do not close your eyes and think that health, free motion and strength are gone from you forever! It is not so. S. S. S. is waiting to help you. When you increase the number of your red-blood-cells, the entire system undergoes a tremendous change. Everything depends on blood-strength. Blood which is minus sufficient red-cells leads to a long list of troubles. Rheumatism is one of them." S. S. S. is the great blood-cleanser, blood-builder, system strengthener, and nerve invigorator.



Free Booklet
Send name and address to S. S. S. Co., 111 S. S. S. Bldg., Atlanta, Ga., for special booklet on Rheumatism & Blood.

S. S. S. is sold at all good drug stores in two sizes. The larger size is more economical.

Tells Why He Can Now Eat Hearty

"A letter which I read in the paper about Carter's Little Liver Pills fitted my own case so closely that I could not help trying them and am very happy I did." So writes Mr. Frank J. Trumbull of Jersey City, N. J., whose letter goes on to say, "I had heard about Carter's Little Liver Pills for years but never knew they helped overcome poor appetite and sour stomach, until I read about another man in the same plight who took Carter's with good results. I tried them and can honestly say that they freed me of nasty gas on stomach, so that I can now eat without getting bilious, and they improved my appetite fully 100%. You can rest assured that from now on I will boost Carter's Little Liver Pills whenever I can."

Recommended and for sale by all drug stores.

NR

TO-NIGHT

Tomorrow Alright

NR a mild, vegetable laxative to relieve Constipation and Biliousness and keep the digestive and eliminative functions normal.

Hoosier News Briefly Told

Griffin.—Parts of only four houses were left standing in the little town of Griffin, following the tornado and fires that swept southern Indiana Wednesday, according to Raymond Bright of Indianapolis, director of visual education for the state board of health, who reached Griffin a short time after the disaster and labored night and day to rescue bodies from the burning debris. "It seemed that every one who was not killed by the storm or crushed beneath the falling timbers, was injured by the flying debris," he said. "I took out eight bodies myself, but many, whom we could not reach in time, were slowly burned to death. The town was so utterly demolished that there was no place left in which to administer to the suffering."

Indianapolis.—Committees and team workers in Indiana who have been engaged in raising Indiana's quota of the American Legion endowment fund for disabled men and the orphans of veterans were urged here Friday by Marcus Sonntag, state chairman of the Legion endowment committee, to direct their organized energies to aid in raising money for the relief of sufferers in the devastated areas of southern Indiana. T. S. McConnell, state commander of the Legion, also issued a call to Legion members to aid in the relief work and to co-operate with the Red Cross and civic committees.

Indianapolis.—An appeal to Indiana citizens to refrain from disturbing the relief workers in the storm devastated regions of the southern part of the state was issued by William H. Kershner, adjutant general of Indiana. It was explained that plans have been made for motorists to pass through the Princeton area on one-way streets. As for the Griffin area, it will be useless for sightseers to attempt to enter this zone. It is under martial law and no cars except those of the workers with proper credentials will be allowed to enter within three miles of the spot where Griffin stood before the storm wiped it out.

Seymour.—Damage exceeding $60,000 was done in Jackson county by the tornado, according to revised estimates. The tornado dipped down in three places, all in the vicinity of the Muscatatuck river. The heaviest damage was caused in the community south of Vallonia, 15 miles west of here. Buildings also were destroyed in the vicinity of Dudleytown, seven miles south of Seymour, and the third place visited by the wind was seven miles southeast of this city. At the last place the C. L. Grantham home was destroyed.

Indianapolis.—Following the reduction of dog taxes in some counties in the state under the provisions of an act of the recent legislature, the question has arisen as to whether county clerks in such counties had authority to reimburse dog owners who had paid the higher rate before the new law became effective this year. In an opinion given by Arthur L. Gilliom, attorney general, to Lawrence F. Orr, state examiner of the state board of accounts, it is said that the excess amount collected under the former rating should be returned.

Evansville.—The thing most to be feared in the wake of the disaster at Griffin, says Dr. Herbert T. Wagner of Indianapolis, on Red Cross relief duty at Griffin, is an outbreak of influenza and pneumonia among those subjected to exposure in the hours immediately following the tornado. Physicians engaged in the relief work are prepared to combat such an outbreak, and, if possible, to prevent it. Tetanus among persons who were burned or injured likewise is feared and precautions are being taken against this.

Indianapolis.—Opening a relief station at Princeton, to give aid to sufferers in the storm in the rural districts of southern Indiana, the Indiana Farm Bureau federation arranged to send an observer over the district by airplane to determine the extent of the damage in the rural districts and ascertain whether all persons hit by the storm had been reached by rescuers and relief workers.

Logansport.—Charging that the will of James W. Rodgers, now on file, under which the widow, Mrs. Oleana Rodgers, holds the $300,000 estate, was not the last will and testament of the former Logansport merchant, four relatives of Rodgers have filed suit in the local Circuit court to have the will set aside and the probate revoked, and asking that the alleged last will be established and probated.

Vincennes.—The state of Indiana on relation of Floyd G. Young, prosecuting attorney for Knox county, filed suit in the Knox county court against George H. Shepard, county treasurer, and his bondsmen, demanding judgment for $50,000. The suit is filed to force Mr. Shepard to collect $3,398.80 tax against Anna Bruner, formerly of Vincennes, and $37,671 tax assessed against the estate of Louis A. Meyer.

Muncie.—Capt. Fred Puckett and Detectives Samuel Goodpasture, Mervin Collins and Harry Brown, the Muncie police, who several weeks ago captured Gerald Chapman, the nationally known mail robber and suspected murderer, departed for Hartford, Conn., where they will testify against Chapman in his trial for the murder of a policeman.

Rockport.—William Triggs, age twenty-seven, died from inhaling gasoline fumes when his automobile exploded while he was repairing it at his home in Gentryville.

May Call Special Session to Aid Tornado Victims

Indianapolis.—At the request, he said, of many leaders in relief work in the storm-stricken district of Indiana, Bruce E. Cooper, representative from Posey, Vanderburg and Warrick counties, came to Indianapolis to suggest to state officials that a special session of the legislature be convened to appropriate a sum for relief and rehabilitation. After a conference with the governor, he said he understood the governor would make a personal tour of the district.

Pliny Wolfard, secretary to the governor, said, however, that the calling of a special session was not now being considered.

Representative Cooper, who lives at Stewartsville, near the towns and cities in which great damage was done, plunged into rescue and relief work soon after the torpado had passed. He gave the governor, it is understood, a graphic description of the toll of destruction taken by the storm.

Representative Cooper said the leaders in the storm zone feel that the maximum amount hoped for from public subscription will fall far short of the sum necessary to put this stricken area "back on its feet." A state appropriation, they believe, is the only other resource, and they feel that the action of Illinois where the legislature has begun steps to provide $500,000 should serve as an example to Indiana. Missouri also appropriated $25,000 for relief work in that state.

Evansville.—Richard Waters, sixty years old, a widowed farmer who lived one mile from Johnson, went to his grave after a life of sorrow and suffering. He was killed in the tornado. Thirty-five years ago Waters' home was destroyed by a wind storm. He was injured. A year later his wife was burned to death when an oil stove exploded. Wednesday's twister killed him instantly.

Indianapolis.—Because Judge James A. Collins in the criminal court refused to grant a change of venue to John Thomas Shaw, colored youth, when he was on trial for murder of Mrs. Helen Hager Whelchel—a murder that stirred Indianapolis in November, 1923, the Indiana Supreme court reversed the conviction and sentence to death of Shaw and ordered the criminal court to grant him a new trial.

Indianapolis.—William A. Dugan, Marion druggist and politician, and Matt Bott of Marion, ex-Grant county weighmaster, were found guilty of violating the national prohibition law by a jury in Federal court here. The verdict was reached after deliberations of only about half an hour. Judge Robert C. Baltzell deferred sentence on the defendants until Monday morning.

Sullivan.—Seeking to facilitate adjustment of compensation claims that have resulted from the mine disaster in Sullivan, the state industrial board has moved forward its date for holding hearings, and beginning with Monday these cases will be reviewed. The hearing will be in the Sullivan courthouse. Dixson H. Bynum and Eph Dailey will be the members hearing questions pertaining to compensation.

Princeton.—Riley Williams, age twenty-one, and Byron Williams, age nineteen, brothers, of Owensville, admitted robbery of the general store of George Wellborn at Owensville the night of March 10. They were sentenced by Judge C. A. Smith in the Gibson circuit court to serve two to fourteen years in the Indiana reformatory. Their sentences were under the second degree burglary statute.

Indianapolis.—The final report of the dental survey conducted among children of the Marion county schools, outside Indianapolis, by the Indianapolis Dental society, in co-operation with the county board of health and the Marion County Tuberculosis association, revealed that an average of four teeth were defective in each of the 6,988 children examined.

Jeffersonville.—Mrs. James Shelton, twenty-five years old, of Louisville, Ky., is dead, and her husband, James Shelton, thirty years old, is believed dying of wound in his breast inflicted by his wife after the two had quarreled in an automobile parked on a road near Jeffersonville.

Anderson.—Capt. F. M. Vanpelt, state commander of the Grand Army of the Republic, said at Anderson it might be necessary to defer the annual state G. A. R. encampment arranged for June 9, 10 and 11 at Princeton because of tornado damage.

Bloomington.—Katharine McClure of Indianapolis was elected president of the Young Women's Christian association, of Indiana university, in the annual election.

Princeton.—Probably the largest number of automobiles ever gathered in one locality in southern Indiana jammed the roads leading to and from Princeton, filled with 100,000 sightseers to view the devastation wrought by the tornado. More than 25,000 autos passed through the city during one day.

Indianapolis.—Dr. T. B. Rise, director of the state board of health, left Indianapolis for Princeton to make a sanitary survey with a view of preventing the spread of contagious diseases, prevalent ordinarily in great disasters.

GOOD ROADS

PAVED HIGHWAYS SHOW BIG GAINS

According to American Automobile association officials, substantial progress is being made in the development of a national system of highways. The association cites as an example the fact that it is now possible for a motorist to start from the zero milestone in Washington and make a circular tour of 2,350 miles back to Washington over a continuous dustless paved highway.

This is but one of many numerous long stretches of paved highway, says the A. A. A. touring and transportation board. The highway from Vancouver B. C., to San Diego, covering a distance of more than 1,700 miles, is another example. Each year constantly increasing mileage of continuous paved highway is added to the national highway system of the country as the various states fill in gaps on trunk line highways.

The greatest need for continuous paved highway is between northern and southern points, as the South during the winter months offers climatic and scenic attractions which no other section can provide. The same is true of similar attractions for the motorists of the South, which are to be found in the northern states in the summer months. Even in the South marked progress is being made. The southern states were naturally slower in getting started in their development of trunk line highways. The resources which can be drawn upon for road building purposes are not as great. Among the eastern seaboard states North Carolina is leading the way for her sister states.

The barrier between the northern and southern travel through the central tier of states has been the mountain ranges in Kentucky and Tennessee. Both of these states have spent millions on the removal of these barriers. In both states definite proposals of the issuance of $50,000,000 to $75,000,000 in state bonds are being considered. This will give these states ample funds to complete the work under way and provide the same facilities of easy travel as between the North and South as now exist in the North between the eastern and central states.

Paved Roads Increase Motor Vehicle Travel

Paved highways increase the amount of motor vehicle travel.

Every motorist has seen instances of where comparatively little-used roads become arteries of heavy traffic almost as soon as the pavement of the new surfacing was ready for use.

An instance of a well-known highway will serve to bring out this point. In 1919 a stretch of the Pacific highway near Medford, Ore., was paved. In 1919 4,448 tourist automobiles passed over the stretch of road, while in 1920 the number increased to 22,000.

Plainly, the paving of highways means that the traffic over them must be increased. This must result in congestion of vehicles unless the roads are built wider than was necessary in the case of the dirt or gravel highway.

And we find that everywhere today it is the policy of road builders to lay wider pavements on the highways. They realize that this is the only way of making motor traffic safe and efficient to the highest possible degree. We find that in many places, where old pavements have become inadequate because of the constant increase in the number of motor vehicles, those in charge of road-construction programs have made them wider by adding new strips of pavement at the side.

The user of roads must recognize the need of wider pavements and do his part in the work to bring wider highways for his community. Such work on his part will make driving more safe and more comfortable for him as well as all other users of the roads.

Good Roads Squibs

What's the issue, from the standpoint of the autoist's pocketbook, good roads or sad inroads?

• • •

Thirty-one states and Alaska share in the pro-rata distribution of funds made each year by the forest service to those states and territories containing national forest lands.

• • •

More than $10,000,000 has been spent in highway construction—paving, grading and bridges—to bring the famous Bankhead—Old Spanish trail route through the Southwest—to its present all-year-round perfection.

• • •

Traffic laws which differ in different states and different towns in the same state are a cause of confusion, accident, loss of property, and loss of life. Uniform traffic laws, the same the country over, will promote safety.

• • •

Plans for a highway from New Orleans to Portland, Ore., which will follow as nearly as possible the boundary lines of the old Louisiana Purchase, have been officially launched. It will commemorate the purchase of the territory by the United States.

HOW TWO WOMEN AVOIDED OPERATIONS

The Following Letters of Mrs. Thurston and Mrs. Beard Carry an Encouraging Message to Other Sick Women

MRS. ETHEL THURSTON
824 N. PINE STREET, LIMA, OHIO

Lima, Ohio.—"I want to tell you how your medicine has helped me. For weeks I suffered with awful pains from inflammation and I was in such misery that I had to bend double to get relief. I could not be touched or jarred, had awful pain all over my abdomen and could not touch my feet to the floor. It was impossible for me to straighten up and the pains never ceased. I took treatments for some time and finally was told I would have to have an operation. I do not believe in operations, and I had read so much about Lydia E. Pinkham's Vegetable Compound that I told my husband I would try it before I gave up. I soon began to feel that it was doing me good. The awful misery began to leave me, also the backache. I have a good appetite and am gaining in weight. Taking the medicine was the best thing I ever did. I feel like it has saved my life and I do not hesitate to say so to my friends. At least it saved me from a dreaded operation and I am still taking it. I am willing to answer letters from women asking about the medicine."—Mrs. ETHEL THURSTON, 824 North Pine Street, Lima, Ohio.

Mrs. Beard's Letter

Eddy, Texas.—"I will write you a few words, thinking it will do some one else good. Two doctors said I would have to be operated on because for nearly twelve months I suffered from a weakness from which I could get no relief. I was restless and nervous and was not able to walk across the house. They said it was the Change of Life. I saw Lydia E. Pinkham's Vegetable Compound advertised in the newspapers, and as I could not get any help from doctors I thought I would give that a trial. I began with the liquid and it helped me some, then you advised me to take the tablet form and I began to improve rapidly. I have gained in weight from 105 to 170 pounds. I recommend it to all women with this trouble."—Mrs. M. E. BEARD, R. No. 1, Box 143, Eddy, Texas.

Women in Reichstag

The number of women members in the German reichstag has been increased from 28 to 32 as a result of the latest elections.

Visitors in Switzerland

So greatly does Switzerland depend on its visitors that the revival last season of tourist traffic brought a glow of prosperity to the entire country.

Letter From Tornado Survivors in Ill.

Murphysboro, Ill.
March 27, 1925.

St Joe News:

Thinking that you people at St. Joe might be interested in hearing from one who was in the stricken town. I will give just a few details.

Ourselves, our children and their families lived here and all survived the great catastrophe. Our homes are in the east end of town where the storm hit the lightest, the west and north parts were literally demolished. Where some of the finest dwellings and business places stood there is nothing but a pile of debris and it is blown promiscously over the territoy.

To add to the horror of it fire followed the storm and the water system was so damaged that it could not be controlled. The dead and injured number up in the hundreds. Some have never been found. Many of our friends escaped with only the clothes they had on their backs. This morning I can look from my window and see U. S. tents where houses were, the town now looks like an army camp. Oh, I can not explain it as horrible as it is but will say we are just thanking God that we are all spared. With best regards, I close,

Mrs. Ida E Bates,
421 Lucier St.

SPOT MADE SACRED BY SAVIOR'S AGONY

Garden of Gethsemane Now Beautiful Spot.

The Garden of Gethsemane lies without the walls of Jerusalem. The way to it leads through the eastern gate, over the little stone bridge which spans the dried-up course of the brook Cedron, and up to the foot of the Mount of Olives. Here many a time Christ retreated with His disciples. Here He was found on that night after the Last Supper, when the soldiers, guided by the kiss of Judas, made Him their prisoner. And here come the thousands of pilgrims today, on their tour of the Holy land.

The Gethsemane they see is not that of the time of the Savior. The majestic olive trees of a thousand years ago still rear theif heads in silent guardianship of the solemn spot. But a white wall encloses the garden square; tiny monuments of stone edge the path, each indicating a station on the way to the Cross; graveled walks run between dainty parterres, where wondrous flowers revel in colorful oriental profusion.

There they are in their little round stone-rimmed plats—the hyacinths and the lilies and the tulips and the jasmine flowers that grow so sweet and so sturdy in the warm sunshine that bathes the long slopes of the sacred mount. Their beauty and their fragrance make it almost a perpetual Easter there. The garden is now in the keeping of Franciscan monks, and it is they who have so transformed it.

To many the change seems incongruous. Pierre Loti, the French novelist, criticizes it severely in his book on Jerusalem. He objects to its dainty modernity. The memories which make sacred the garden are sorrowful and scarcely to be symbolized by color and light.

But on the many who visit the place the setting makes no impression. To them, Gethsemane is the Garden of the Agony, whither the Savior retired to pray for strength in the last dread crisis before the end.

It is one of the few spots where Jesus trod which man still knows after nearly 1,900 long years. Birds twitter and sing all the long, warm day, and the gay flowers blush in all the colors of the rainbow, but there is a solemn, sanctified stillness everywhere which takes the reverent visitor back through the ages—always!

Daily Jots

Do you know that some men of great promise are sometimes sued for breach of it?

About all the average city-bred man knows about farming is what to do when the dinner bell rings.

Just as soon as a woman gets so she can do something real well, she loses interest and begins reading new recipes and experimentin'.

Nothing is funny at five o'clock in the morning.

For Sale: Good Gang Plow.
Wm. Staman, Jr. 12tf

What is a cross word of four letters meaning that your sweetie has lost his collar button?

Wilbur Perry and wife of Fort Wayne, were over Sunday guests of the former's brother, Virgil Perry and wife.

Mrs Jennie Sechler has returned home from several weeks visit at Auburn with her daughter, Mrs. Everett Mavis and family.

An income for the family this summer would be fine. Contract pickles for St. Joe Salting Station.

Mrs. Emma Bassett has returned to her home at Hicksville after helping in the Wm. Brown home during the illness and death of Mrs. Brown.

C. R. Brunson of Ft. Wayne was the guest of C. C. Bassett's Tuesday evening and is spending the remainder of the week with his mother, Mrs. A. D Brunson.

Mr. and Mrs. J L. Rhodenbaugh had as Sunday guests, Art McNamara and wife of near Rebobeth. Elmer Hart, wife and daughter, Loa, of Napoleon, Ohio, were also callers.

The paving of 11 3 miles of road east from Waterloo to the state line will probably be done this summer. Low bids for construction work indicates that the Highway Commission will extend its program The DeKalb Motor Club is working hard for this road and also for improvements on other main roads.

A fat Ladies Home Journal for a thin dime is still the world's best buy. For all housewives who want their fiction, fashion, art, household helps, needle work and children's section inside the same two covers—Get one at News office.

The plan to be followed is to cut off corners at all intersections and widen them at these points about twenty-five feet, making curves instead of sharp turns. The Butler-Fort Wayne road is an example. Through the efforts of H. M. Widney of St. Joe this highway has been about completed in this respect. Not only has the land been given to widen intersections, but landowners have donated labor to assist in carrying out the improvement.

Christian Church Notes

Bible School at 9:30, communion service immediately following. Preaching service in the evening

The choir met Wednesday evening for practice.

The Martha Society will meet all day Thursday to quilt at the church. All the ladies of the church are invited to attend.

Verba Haner will entertain the Delta Alpha class Thursday evening.

The radio gives many speakers a chance to air their views.

Mrs. D. J. Baker spent Friday a guest of Mr. and Mrs. Joe Hull, north of town.

At last you can sow lime and phosphate in your drill. Car will be in soon. See Curie.

Mrs. H. C. Hathaway of Auburn was a guest the first of the week in the M. T. Bishop home.

"He had to sell his shoes to pay what he owed." "Well that showed he was willing to foot the bills."

The Wabash creek bridge is being repaired by a gang of workmen with camp cars located on the St Joe siding.

Don Keller is moving his family to Stryker, Ohio, this week. Mrs. Hazel Monroe is moving into the house they are vacating.

Mrs. Chas. Bishop and two children of Cleveland, spent part of Tuesday and Wednesday here with Mr. and Mrs. M T. Bishop.

Time to begin to think about the annual Home Coming for St Joe this summer. Many towns have already made their plans.

For Sale:—Ford delivery truck body with top. Sherman Meek, 1½ miles east of Coburntown. 13 t f

Spring cleaning up of rubbish has already commenced in St. Joe The nice weather has brought this about a little earlier than heretofore

DeKalb county has fourteen patients out of one hundred and fifty in the Irene Byron Sanitorium. A number of our county folks visited the place last Sunday as guests of the DeKalb society.

The Choral Society had a farewell party last Thursday evening at the home of Merritt Sechler in honor of Mrs. E. J. Smith. A bountiful supper was served and a social hour enjoyed.

The County W. C T. U Spring Institute will be held April 7th, morning and afternoon at the Lutheran church. The leader will be Mrs Lola Wells Kiger of Daleville Indiana. Mrs Kiger is the state L. T. L. superintendent.

Earl J. Smith wife and son, Jacques, Frank Curie, wife and son Frank and Merritt Sechler of St Joe, were the guests Sunday of Everett Mavis and wife at Auburn. Mr. Smith and family drove from Auburn to Churubusco where Mrs. Smith and son are guests for the week of Mrs Frank Kocher.

There were no applicants Saturday for the examination for county attendance officer. E. W. Koons of Auburn has filled the office for the past year. Providing no applicants appear at the April examination it is probable that the present incumbent will continue to serve as he is not required to pass an examination after having once qualified for the office.

Lilies, cassé and ivory
Innocence and chastity.

Graceful, slender, tall and bright,
Dawn that follows darkest night;

Lovely lilies, bridal days,
Angels on unsullied ways,

Resurrected dreams of youth,
Resurrected souls of truth.

Life Immortal Was the Savior's Promise

The Resurrection is a fact of history. That Christ was crucified, died and was buried in the tomb, there can be no question.

And that, on the third day thereafter, He rose again and appeared many times to His disciples and the people, is as much a confirmed and authenticated fact as that George Washington was our first President.

If it be that we are merely dreaming that Christ rose from the dead, then we are surely dreaming about any other fact in our possession.

It doesn't enter into question at all what form of religion any man practices, or whether he practices no form of religion whatever; it doesn't matter whether he be Jew or Gentile, Confucian, Mohammedan, Hindu, heathen or pagan, as far as the fact is concerned that Christ suffered death and that He rose from death and lived again.

Now, Christ promised that He would rise from the dead and he also promised that we shall rise from the dead.

And He never made a promise that He did not keep. It is on Easter morning that the world recalls this promise and rejoices in it.

Truly He Is Risen

The fact of the Resurrection is not a bit of ancient history; it is, more than any other event, verifiable in the present. Just as we cannot separate our Lord's life from those in whom He lived—from the Apostles to the latest convert in His church—so we may not sunder the Resurrection from the lives of those in whom its reality has been vindicated and demonstrated in millions of cases. Our Lord comes to us in His risen presence so oft as we allow Him to make Himself manifest. We have the age-long evidence of Christian experience as the standing proof that He is risen.—Christian Evangelist.

Easter Rabbits

The association of rabbits with Easter dates from earliest times. It should be remembered that Easter, to some extent at least, is the Christianization of a heathen festival. In both India and Egypt the rabbit and eggs, as the symbols of fertility and reproduction, were closely identified with the spring festival which corresponds to our Easter. "Easter" itself is indirectly derived from an old Saxon word meaning "rising." Easter was the festival welcoming the return of spring. It is the season of new birth. Since the rabbits and eggs were associated with this festival from earliest times, it was natural for the imagination of man to link the two together and invent the story that the rabbits lay the Easter eggs.—Pathfinder Magazine.

IMMORTALITY.

At this time countless millions bend the knee in reverence and worship of Him whom Christians hail as their Master. This is the date they assign to His resurrection, with its promise to mortals of salvation and life everlasting.

The priest at the altar delivers the message of promise and now comes Nature, a supporting witness, revived with the forces of spring, bursting with the pressure of bud and leaf and blossom, greening and rising from a wintry death that proves to have been only a sleep, to bear witness to the continuance of life.

This is the time of mystic renewal of life, which comes to lighten the burdens of man, to brighten his road and restore his hope and faith. The hope of immortality is an indestructible part of the human soul. It would live if the world were clad in perpetual ice. But Nature's resurrection is a welcome reinforcement of man's hope, and in itself it gives him new courage.

Hare-Pie Festival

Every Easter sees a strange custom enacted at Hallaton, in Leicestershire, England, a custom which has continued for long decades. This is what is known as "the Hare-Pie Festival." There is a procession formed which, led by a brass band, marches through the chief streets of the village to the church. Here, after a short service, the rector, assisted by two or three chosen officials, cuts up a large hare pie which has been specially made for the occasion. The pieces of pie are scrambled for down a steep bank in the village known as Hare Bank, and it is considered a noteworthy feat to secure the largest possible portion.

Later on there is feasting in the village, and a stated quantity of ale has to be given to the villagers in accordance with the traditions of the hare pie.

Vigorous Easter Dance

There are many old-time English country dances more weird and wonderful than the jazz.

The coconut dancers of Rossendale, in Lancashire, celebrate the anniversary according to ancient custom by a dance the like of which is to be seen nowhere else on earth.

They caper, they prance, they twist round and round like whirling dervishes, and perform many other startling evolutions. Their costumes, too, are unique. They wear floral turbans, embroidered kilts, white stockings, and fancy clogs. And attached to various parts of their clothing are boxwood cymbals made to resemble coconuts, which striking together cause a din that would make the most exacting of jazz band conductors envious.

Easter

Awake, wintry earth—
Fling off thy sadness!
Fair vernal flowers laugh forth
Your ancient gladness!
Christ is risen.

Let all the jubilant sounds of earth rise up and in a resonant wave of triumphant song proclaim:

Spring bursts today,
For Christ is risen and all the world's at play.

Again, amid the season of sun and shower—Nature's smiles and tears—seed so long in darkness sleeping have burst the bonds of winter's snows. Invisible germs imprisoned in the bosom of the earth are born again, and live again in the radiant Eastertide of Nature's resurrection.

We may have borne the burden of sorrow, felt the sore sting of disappointment; have wept above the still form, and "sighed for the touch of a vanished hand, the sound of a voice that is still," but let us robe ourselves anew in the sunny gladness of a hope so bright—the hope that defies the grave and goes forth to meet the shadowy future fearlessly and unafraid.

The glory of Easter and a risen Lord bring healing to earth's wounds, and as the vernal sun lifts the mists and shadows from the mountain-tops, so the pledge of Easter holds before our eyes, the vision of immortality, the blessed hope—the promise, "Because I live, ye shall live also.—Farm and Ranch.

President Wilson Not a Horseman, and Knew It

Edward W. Bok met with a decided presidential veto when he wanted to publish a picture of the late Woodrow Wilson on horseback. The story is told in "Twice Thirty," the new book by Mr. Bok.

"'Pictures of you playing golf,' suggested the editor of the Ladies' Home Journal, 'walking out, driving, on horseback—'

"'Stop right there,' the President interjected, 'Not on horseback. Ever see me on horseback? No? Well, you have missed something in your young life. I saw myself once. I met a man on the road carrying a large mirror. I stopped him purposely so that I could take a look at myself on a horse. I wanted to find out whether folks I met stared at the President or at the grotesque figure on the horse. One glance was enough. I looked like nothing else so much as a smokestack gone wrong. "Me for golf after this," I said to myself, and golf it has been. I pride myself on a sense of humor, but it didn't carry me far enough to that stack on a horse.'"

TRUE LOVE

"Would you marry a man for his money?"

"Sure. If I loved him I wouldn't care how many millions he had."

Club His Refuge

Blinks—How does it come that you are spending your evenings at the club? I thought you were a great homebody?

Jinks—I go there to keep my self-respect.

Blinks—Huh! What do you mean by that?

Jinks—Well, all my kids have gone nuts over the cross-word puzzle fad and they spend the whole evening working over them, and if I can't tell them what a three-letter word meaning vocalization is right off the bat they think I am the biggest dumbbell in seven states.—Cincinnati Enquirer.

Rare Wines in Storage

Four carloads of Rhine wine dating from 1870 are stored in the cellar of the Von Dippe family at Quedlinburg, Germany, but the members of the family are all total abstainers and neither will drink the old vintages nor sell them. The grandfather of the present generation made a large fortune selling seeds after the Franco-Prussian war. He invested his profits in wine, as money was unstable and he desired to prevent his earnings from shrinking. The wine is all of the sort which improves with age.

Coal Statistics

Total exports of coal in the United Kingdom during 1924 amounted to about 61,651,000 long tons, as compared with 79,450,000 in the preceding year and 73,400,000 tons in 1913. The decrease is due to the increased production in the Ruhr district. While exports to certain continental countries, such as France, Italy, Germany and Belgium, were smaller in 1924, increases have been noted to Norway, Sweden, Denmark, Spain and Argentina.

Gasoline From Plants

A French scientist who has succeeded in making gasoline from plants has proposed that 500,000 suitable acres in western Africa be set aside for this vegetation, which would produce 90,000,000 gallons of petroleum annually. The plants are of a fibrous nature, commonly known as broom plants.

Lions Broke Up Picture

While a film company was enacting the life of David Livingstone, the explorer, in South Africa recently, they were attacked by four lions and had to fight their way to safety.

SPENCERVILLE

Moees Price of Black Creek was a Sunday guest in the Joel Betz home.

Just what your ground needs—the new fertilizer 25% lime, 14% phosphate. Curie.

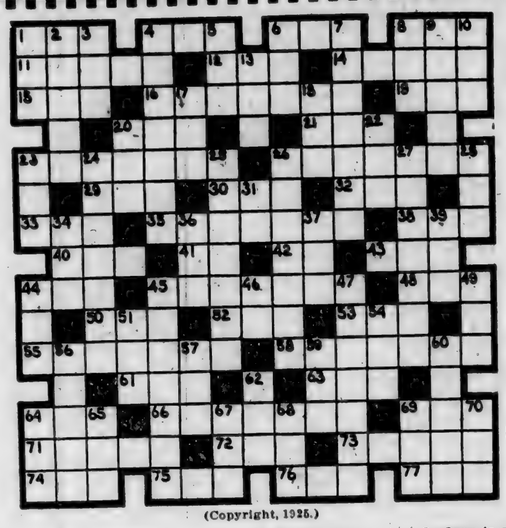
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—An insect
4—A club
6—A vehicle
8—To hunt or track
11—To waken
12—Girl's name
14—Over
15—A metal
16—Visioned
19—To capture
20—Famous mountain in Asia Minor near the site of Troy
21—The end
23—Feeling painful uncertainty
26—Receives
29—A book of the Old Testament (abbr.)
30—A tree
32—Adverb meaning "of each an equal quantity" used in medical profession
33—The nutritious seed of a fabaceous herb
35—Disturbance (arch.)
38—The uppermost part
40—Related
41—Invoice book (init.)
42—Branch of the British war service (init.)
43—The Assam silk worm
44—A number
45—Moving smoothly
48—Badly
50—Pronoun
52—A plot of ground
53—Entire man considered as unit
55—Things done
58—Eccentric
61—Prefix meaning "in behalf of"
62—A little devil
64—A vessel
66—A city of Spain
69—A body of water
71—A queer African animal
72—A preposition
73—Heady and foaming
74—The lair of a wild beast
75—A card marked with a single spot
76—A spring month
77—Consumed

Vertical.

1—Human ingenuity
2—A din
3—A wine cask
4—Material used on a piece of furniture
5—An article of clothing
6—A curved wedge used for clamping two pieces together
7—One who advocates sweeping changes in politics
8—To put on
9—Open to view
10—To obtain
13—To catch suddenly
17—Moved rapidly
18—And so forth
20—Wrath
22—An implement used in writing
23—A dude
24—Preposition
25—Small jerboalike rodents of Asia
26—Any of an ancient Palestinian people
27—One who loves his country
28—To soak in liquid
31—A pound (abbr.)
34—To increase by effort
36—To be sick
37—A tavern
39—An unctuous combustible liquid
44—A liquid containing tanin
45—A southern state
46—To accomplish
47—A European country
49—A resinous substance secreted by a scale insect
51—A part of the body
54—A mountainous ravine
56—To strangle
57—A negative
59—To dispose of
60—Unsuitable
62—A single unit
64—A dry seed vessel
65—A color
67—A monkey
68—A human appendage
69—A mineral spring (obs.)
70—Yes

The solution will appear in next issue.

Solution of Last Week's Puzzle.
